"There is but one way to meet the financial necessities of the people, and that is to have the Government support all the people in whatever useful industry they may be engaged. The Government must withdraw from the banks the exclusive monopoly control of financing the people and give to every legitimate and necessary enterprise impartial governmental support. It is absolutely necessary to an independent people that the Government should stand ready to do that. Then the bankers, seeing that they no longer have an exclusive monopoly, would exercise

the office of an agency instead of holding the hand of mastery. With that purpose in view, and to pave the way for very early permanent relief to the people, I offer the following amendments to the Glass bill:

"Strike out the title of the Glass bill and substitute the following for its title:

"A bill to amend the national banking laws, to provide a revenue system by which the Government taxing powers shall be represented by United States currency drawn on the people of the United States to be disbursed through the governmental agencies on appropriations by Congress for services rendered or to be rendered the Government, to inaugurate, develop, and maintain an American financial policy and currency system which will liquidate and eventually abolish debt, National, State, and municipal, and put the public and private enterprises, industries, and exchanges upon a sound economic basis, and remove the power of private interests to monopolize the mediums of exchange, and for other purposes.

"Also strike out all of the Glass bill following the enacting clause, except sections 26, 28, and 29, and renumber said sections so as to be numbered sections 18, 19, and 20, respectively, and in lieu of the part thus struck out insert after the enacting clause the following:

"FISCAL DEPARTMENT.

"SECTION 1. That there is hereby established a new fiscal department of the United States as an adjunct to and within the jurisdiction of the Treasury Department of the United States. The board of said fiscal department shall consist of eight members. This number shall include the Secretary of the Treasury, who shall be member ex officio, but without voting power except as specifically in this act provided, and seven others, nonpartisan, to be selected by the President, by and with the advice and consent of the Senate, and whose term of office shall be for 10 years: *Provided*, That in naming the first board one shall be named for 2 years, one for 4 years, one for 6 years, one for 8 years, and three for 10 years, and always subject to removal by and with the consent of the Senate. The salaries of the seven members thus appointed shall be fixed by Congress annually in the appropriation bills. The Secretary of the Treasury shall be the chairman of said board and shall select a first and second vice chairman, who shall, in the order named, preside at meetings in the absence of the Secretary of the Treasury. The Secretary of the Treasury shall have no vote except in case of a tie vote, when he may vote to break the tie. Five members shall constitute a quorum. The seven members on the board appointed by the President and confirmed by the Senate shall devote their entire time to the business of the fiscal department and do the principal part of the work in order to establish in practical working order a new fiscal department; that said board shall have authority to employ such assistance and incur such expenses as may be necessary in the performance of their duties, and for such purpose there is hereby appropriated \$100,000, or so much thereof as may be necessary, to be paid out of the moneys in the Treasury not otherwise appropriated upon vouchers approved by the Secretary of the Treasury.

"UNITED STATES CURRENCY.

"SEC. 2. That in aid of Congress in pursuance of the power conferred by the Constitution upon Congress to coin money and regulate the value thereof the fiscal department is hereby authorized to issue a new United States currency, which shall be in the form of public-service certificates, and these shall state upon their face in substance that the bearer has performed a public service of the value stated in the certificate, that each separately is issued and circulated for value received under the provisions of this act, and the same shall be the lawful money of the United States and shall be receivable at par for all debts, dues, and demands, public and private, within the jurisdiction of the United States, created after the passage of this act; that the same shall be printed and engraved by the Bureau of Printing and Engraving from plates and dies devised by the fiscal department, and shall be issued from time to time in such quantities and in such denominations as the public interests require, and in all cases, except where otherwise provided in this act, shall first be placed in circulation by being earned in public service of the Government or in the supply of some material needed for Government use, and then for its full par value, and shall not after returning to the Government be again reissued or circulated except for a like purpose.

"DISTRIBUTION OF UNITED STATES CURRENCY.

"SEC. 3. That to carry out the appropriations made by Congress the fiscal department shall issue the United States currency authorized by this act to the various departments of Government for all public purposes that require or may require the expenditure of public funds. That when funds have been appropriated by Congress and the United States currency is issued to cover such appropriations the fiscal department, for the convenience in the transaction of business through the Government disbursing agencies, may deposit such currency, as well as checks, drafts, and other receipts of the Government, in national and other banks, or in postal savings banks, for checking accounts, but banks shall not be required to pay interest on such accounts. Deposits of checks, drafts, and other evidences of dues to the Government may be made in the banks, but otherwise the United States currency only shall be deposited in the banks by the Government, which currency when so deposited shall be held as a specific fund to special deposit, but checks and drafts and other evidences of dues to the Government deposited by the Government shall not be distinguished from or have any privileges or preference over other deposits of individuals, whether private or otherwise, in the same banks. No deposits shall be made in banks for the purpose of creating surplus therein, but merely to facilitate the transaction of public business. The banks shall, so long as there remains a credit to the Government's general account, pay checks drawn by the Government agencies out of the general account, and the use of the special deposits of United States currency in payment of such checks is hereby prohibited until the general account shall have been exhausted, in which case payment may be made out of the special deposit.

"CANCELLATION OF EXISTING CURRENCY.

"SEC. 4. That from and after the passage of this act all United States notes, currency, gold and silver certificates, and national-bank notes shall be full legal tender for all debts and dues, public and private, in the United States, its Territories, and possessions, except debts or contracts existing at the time of the passage of this act, which by their

terms are payable in some other form of money or material, but while in circulation the present money and currency aforesaid, as well as all existing coins, shall not be deprived of its present qualifications, and the outstanding United States notes, currency, gold and silver certificates, and bank notes shall be redeemed on demand in such other form of money as now provided by law; and as soon as practicable after any United States notes, currency, gold and silver certificates, and bank notes come into the possession of the Secretary of the Treasury for redemption the same shall be canceled and destroyed: *Provided*, That when such redemption is of national bank notes the amount canceled shall operate in liquidation of an equal amount of United States bonds securing the same, except that any national bank may, by giving the fiscal department such notice as the said department may require, have the national bank notes redeemed, reissued by complying with the laws as to the maintenance of security, and no such notes, currency, or other certificates shall be reissued except as in this act provided. All existing laws for reissuing or recirculating any such notes, currency, or certificates are hereby repealed. That when gold or silver becomes the property of the United States their legal-tender quality, except as to subsidiary coin required for circulatory purposes for small change, shall cease and the gold be reserved for use in the redemption of outstanding obligations and for use and in aid of interstate exchanges when the Government shall in any way be interested. That the fiscal department may purchase gold from time to time at the marketable value, if necessary, for either of said purposes, and also when, in its judgment, the national debt can thereby be better and the sooner be extinguished, and except as authorized by this act, the United States shall receive gold for coinage only, the purpose being solely to affix the governmental stamp of weight and fineness to such coins, but all coins so made after the passage of this act shall have no legal-tender quality. A charge equal to the cost of coining the same shall be made, which coin shall forthwith be removed by whoever it may have been coined for, and no department of Government shall hereafter give storage facilities to any gold bullion or coins not belonging to the United States and shall issue no more gold or silver certificates.

"SEC. 5. That on and after three years from the passage of this act a storage charge equal to the cost of maintaining the same shall be charged and collected on all gold and silver held against outstanding certificates, it being the ultimate purpose and policy of this act to remove the Government fiat from all metals and reduce metals to their commercial commodity value.

"AID TO THE STATES.

"SEC. 6. That all States of the Union whose laws now or hereafter confer upon them, or their executive or other State functionary, the power to borrow money on the credit of the State or to guarantee the obligations and debts of their counties, towns, boroughs, villages, cities, municipalities, school districts, or political divisions for any just and recognized public use, may apply to the Secretary of the Treasury to secure loans of United States currency for the purpose of defraying the current expenses of the State or any of its political subdivisions aforesaid for which the people of the State or political division aforesaid are taxed. The Secretary of the Treasury shall certify to Congress as often as practical, not less than once annually at the beginning of each session and oftener when practical, an abstract of such applications and the details so far as practicable in regard thereto, to the end that Congress may in its discretion appropriate United States currency in such sums as it deems best for the use of such State or States applying therefor, and to be loaned by the Federal Government to the States only. Before any such loans shall be made the fiscal department shall recommend uniform rules and regulations, so that Congress may not discriminate or allow discriminations by the fiscal department in making such loans, and shall prevent the States, in the use of the funds secured, from allowing any discrimination in the administration of the system. Such proposed rules and regulations shall provide for a uniform expenditure by the States, so that the issue of United States currency and the volume shall conform to the demands of business, public and private, avoiding alike redundancy and insufficiency, and shall provide that no State shall pay out said currency secured from the Federal Government except for the full face value of the same in service to the public for public purposes for which the people are annually taxed, so that the currency may be returned in the payment of such taxes through the usual methods; and before any State shall be extended a loan it shall establish and submit to the fiscal department the rules by which it would be governed in the expenditure, which rules must be satisfactory to the fiscal department. All rules and regulations thus proposed shall be referred to Congress for such action as Congress may adopt.

"SEC. 7. That the charge for loans to the States and the manner of guaranty by the States and the form of guaranty to insure the proper expenditure of the same shall be adopted by the fiscal department and shall in every respect be uniform to the States and subject to review and confirmation by the Senate.

"NATIONAL PUBLIC WORKS AND IMPROVEMENTS.

"SEC. 8. That the fiscal department shall devise a plan whereby Congress may be guided in the enacting of legislation to authorize the fiscal department to establish a system of national public works and improvements adapted at all times to give immediate relief to all congested labor conditions within the territorial jurisdiction of the United States and render available all surplus labor and insure against enforced idleness and the ills incident thereto by means of the inherent powers of the Government to establish justice and promote the general welfare, and shall report such plans and the outlines of a policy to Congress with recommendations.

"AID TO THE AGRICULTURAL AND HORTICULTURAL INTERESTS.

"SEC. 9. That the fiscal department shall proceed with all reasonable expedition to communicate and cooperate with the authorized representatives, organized and unorganized, of the agricultural and horticultural interests of the Nation, with a view to the adoption of a plan and policy of systematizing the production, storage, transportation, and distribution of agricultural and horticultural products, to the end that both the producers and consumers of such products may have complete emancipation from the present extortions of speculators and manipulators in these products and of organized and trustified storage, elevator, and transportation combinations now monopolizing the same and controlling and manipulating the prices of such products both to the producers and consumers, and shall, if practical, propose such an extension and enlargement of the postal savings system and, if need be, increased issue of United States currency in aid thereof as will provide for a system of Government loans to owners and operators of improved agricultural and horticultural lands, upon such terms as will amply insure the repayment of such loans, at a rate of interest not to exceed 4 per cent, payable semiannually. Such interest shall be reduced to a

nominal interest barely sufficient to reimburse the Treasury as soon as the national debt can be extinguished, and such plan shall be reported to Congress with recommendations.

"GOVERNMENT LOANS TO WAGE EARNERS.

"SEC. 10. That the fiscal department shall proceed with all reasonable expedition to communicate and cooperate with the organized and unorganized wage earners to consider and devise a plan and policy for a system of Government loans to wage earners at the lowest rate of interest consistent with the cost and integrity of the service, which loans will enable them to provide homes independent of real-estate speculators with an adjunct and department of wage and salary advances to further protect wage and salary workers from the overcharge made by loan agencies. These plans shall be submitted to Congress with recommendations.

"AID TO MANUFACTURING INDUSTRIES.

"SEC. 11. That the fiscal department shall proceed with all reasonable expedition to an inquiry into the conditions of the manufacturing industries of staple products in the United States and Territories with a view to ascertain the state of such industries and devise plans for the inauguration of a policy to aid and assist such of those manufacturing interests as are not involved in monopolistic combinations, or are able and disposed to extricate themselves from existing monopolies, which plans shall involve a system of Government loans and advances to such manufacturing interests as are able to insure the repayment with the lowest rate of interest consistent with the cost and the integrity of the service, which plans shall also be reported to Congress with recommendations.

"IN GENERAL.

"SEC. 12. That it shall be the duty of the fiscal department to investigate into the financial conditions of all legitimate industry, work, and enterprise of whatsoever character, the pursuits and results of which, under proper conditions, promote the general welfare, and ascertain what plan or plans, if any, can be contrived for their aid by extending Government loans to them or such of them as require aid. The fiscal department shall report to Congress from time to time thereon with recommendations.

"SEC. 13. That the fiscal department in its administration shall take notice of the economic fact that payment by the Government for a service to the Government involves a collection from the people of an equal amount plus the expense of collection, and that the issue of United States currency in payment of Government expenses creates a demand on the part of the people equal to the currency required to be returned to the Government in cancellation of taxes or dues; and further, that economic private enterprise (eliminating speculation) for the production of commodities or the rendering of services for the use of others legitimately involves the return of commodities or services of equal value, whether the same is accomplished by direction or indirection, and that whenever actual commodities or services are not immediately or directly exchanged in a cancellation of the respective obligations, then a credit representative is necessary, and so far as possible, in a practical sense, when applied to the affairs of the people as they exist, the obligations of credit should be liquidated without the burden of a greater charge than is consistent with the cost and integrity of an honest and just system. Therefore in the supply of United States currency, guaranteed by the credit of the people as a medium of exchange, the volume to be placed in circulation should conform to the needs of commerce, avoiding alike both redundancy and insufficiency, and with that as the purpose the fiscal department shall make estimates and report to Congress, for under the Constitution no money shall be drawn from the Treasury but in consequence of appropriations made by law.

"AUTHORIZING NATIONAL BANKS TO BORROW RESERVES.

"SEC. 14. That the national bank act is hereby amended so as to permit national banks to borrow from their own reserves by complying with the provisions of this section. That any national bank having its capital and surplus unimpaired may apply to the fiscal department to borrow from its cash reserves maintained in its own vaults. The bank so applying shall set forth in detailed description the securities it proposes to deposit with the fiscal department for the loan, which securities shall be of the same character as is by law and practice now required or as may be hereafter required for the deposit of Government funds in banks. If in the opinion of the fiscal department the public interests require the extension of any such loan or loans, the same shall be authorized by said department to the extent it deems wise; but before a bank authorized to borrow from its reserves shall be allowed to do so its securities shall be approved and deposited with the fiscal department in such amounts as the fiscal department shall demand, and the bank or banks having complied with all the rules and regulations of the fiscal department, on order from said department, there shall be transmitted from the nearest subtreasury to the bank or banks to which such authority is extended United States currency to the extent of the amount authorized to be borrowed from the reserves, and the bank shall specifically retain the United States currency thus received in its vaults, and then may loan or pay to its depositors or pay its other obligations from its other cash reserves held in its vaults to the extent authorized, and shall substitute the United States currency thus paid out to be kept as reserves and for the benefit of the bank's creditors to the extent of the actual amount of the reserves that have been borrowed and paid out by the bank, as herein authorized. Any bank thus borrowing shall pay interest to the fiscal department on the amount of United States currency loaned to it under the provisions of this section at a rate which shall not be in excess of 4 per cent per annum for the first three months, which rate shall be increased thereafter monthly at the rate of 1 per cent per annum for each additional month until paid, but subject to the fiscal department requiring the payment when in its opinion the public interests require it. For the special purpose of carrying out the provisions of this section and the following section there is hereby appropriated, in addition to all other sums appropriated by this act, the sum of \$1,500,000,000 of United States currency, authorized by this act to be specifically retained by the fiscal department for said purpose, and to be specifically retained by the fiscal department for said purpose, and to be printed and engraved in advance in such amounts only as are necessary to insure a sufficiency immediately when required.

"STATE BANKS.

"SEC. 15. That from and after the passage of this act any bank or banking association or trust company organized or incorporated by special law of any State, or organized under the general laws of any State, or of the United States, and whose capital and surplus is unimpaired, may make application to the fiscal department for the right

to borrow from its cash reserves maintained in its own vaults on complying with this act and the rules and regulations of the fiscal department: *Provided*, That the same shall be consistent with the laws of the State under which such bank or trust company is organized: *And provided further*, That a majority of the stockholders in the bank or trust company of such applicants shall sign in writing their consent with the fiscal department to bring the banks so applying within the laws, rules, and regulations that govern national banks in securing such loans, except that no bank shall be refused the privileges and advantages in regard to such loans on account of the amount of its capital and surplus so long as the same remains unimpaired. All such banks having complied with the provisions named shall be entitled to like privileges accorded to national banks.

"The substance of what I offer in amendment above is embodied in a bill that I introduced August 8, 1913. Sections 14 and 15 provide for an emergency currency that would absolutely relieve the banks of difficulty to furnish funds to move the crops, and would save the Nation from the burden of establishing another retinue of officials for 12 or more central banks, such as the Glass bill provides. With these amendments that I offer enacted into law, the many economic evils now existing in our social conditions would directly cease. Furthermore, the bankers would then be instrumental in carrying out the great reform. Once their exclusive privilege and monopoly is taken from them, we shall have the benefit without the burden of their practical dealings.

"The bill that I have offered as a substitute for the Glass bill has all the elements of a complete system, and would reach its perfection through the work of the board of the fiscal department, which board would give all its time to that purpose. It would not discard the present system, but would require it to stand on its own merits. If the old system would respond to the demands of freedom in trade, that system would continue in use, but if it failed, the new system would respond. The issue of currency would be scientifically regulated to meet the demands of trade. It would be controlled by the Government instead of by the banks. While this is not a party question, the following plank in the Progressive Party platform states the correct principle:

"The issue of currency is fundamentally a Government function and the system should have as basic principles soundness and elasticity. The control should be lodged with the Government and should be protected from the domination or manipulation by Wall Street or any special interest.

"GOLD STANDARD RESPONSIBLE FOR MANY OF THE SOCIAL EVILS.

"It will be objected to my bill that it discredits the gold standard. It is difficult to remove a prejudice such as that existing in favor of the gold standard.

"On March 14, 1910, after an adroit campaign carried on by the special interests covering a considerable period, Congress passed an act which called for the permanent establishment of the so-called 'gold basis' for all of our money. Since then there have been new inventions made for mining gold which make the available amount more plentiful, with the result that the 'gold basis' is puzzling the Money Trust. But there is a still further complication, and that is that the people are becoming familiar with the fallacy of the 'gold standard' and they are becoming dissatisfied in proportion to their understanding of its bad effects.

"The dollar is worth less now than it was in 1900; that is, it will buy less. That fact, particularly, does not satisfy the creditor class. They have had enormous interest returns, but they have lost a part of that advantage because of the depreciation of the purchasing power of the dollar. To a greater or less extent all of the people are dissatisfied with it, many for selfish reasons, and they only desire a remedy to be adopted which will help them alone, but there are fewer of these than there are of those who seek a reform which will better the conditions of all.

"We have seen many comments in the press lately in regard to a plan devised by Prof. Irving Fisher, of Yale University. Mr. Fisher is no doubt an honest and earnest worker who is trying to reform the gold standard. He has arrived at the inevitable conclusion that every capable student must finally adopt, and that is that the present gold standard is not the standard by which we can secure honest money.

"Prof. Fisher has given a most thorough analysis of the production and supply of gold and shown quite extensively the effect of its present use as a money standard upon the prices of commodities. I have given below a synopsis of his plan as stated in the Boston News Bureau of December 28, 1912. It is as follows:

"Prof. Fisher is one of the most distinguished economists in this country, if not in the world. He is eminently practical and not merely theoretical in all his work and writing.

"All who have to do with long-time contracts recognize the desirability of a monetary unit of fixed purchasing power.

"The following is Prof. Fisher's plan for converting the gold dollar into such a composite unit, thus standardizing the dollar. Such standardization would be effected by increasing or decreasing the weight of

gold bullion constituting the ultimate dollar in such a way that the dollar shall always buy the same average composite of other things.

"Every dollar in circulation derives practically its value or purchasing power from the gold bullion with which it is interconvertible. Every dollar is now interconvertible with 25.8 grains of gold bullion (nine-tenths fine), and is therefore worth whatever this amount of bullion is worth.

"The very principle of interconvertibility with gold bullion which we now employ could be used to maintain the proposed standardized dollar. The Government would buy and sell gold bullion just as it does at present, but not at an artificially and immutably fixed price.

"At present the gold miner sells his gold to the mint, receiving \$1 in (say) gold certificates for each 25.8 grains of gold, while on the other hand the jeweler or exporter buys gold of the Government, paying \$1 of certificates for every 25.8 grains of gold. By thus standing ready to either buy or sell gold on these terms (\$1 for 25.8 grains), the Government maintains exact parity of value between the dollar and the 25.8 grains of gold. Thus the 25.8 grains of gold bullion is the virtual dollar.

"The same mechanism could evidently be employed to keep the dollar equivalent to more or less than 25.8 grains of gold, as decided upon from time to time.

"The change in the virtual dollar (bullion weight of gold interconvertible with the dollar) would be made periodically, or once a month, not by guesswork or at anybody's discretion, but according to an exact criterion. This exact criterion is found in the now familiar 'index number,' which tells us whether the general level of price is, at any time, higher or lower than it was. Thus, if in any month the index number was 1 per cent above par, the virtual dollar would be increased 1 per cent. Thus the dollar would be 'compensated' for the loss in the purchasing power of each grain of gold by increasing the number of grains which virtually make the dollar.

"Prof. Fisher has performed a great service to his country and to the world by discrediting the gold standard so convincingly. When a man of his prominence and ability has the courage to state his beliefs, the more timid of those holding like views, of which there are many, ought to take an active part in supporting the indictment of the gold standard.

"While the professor has clearly indicted the gold standard and conclusively shown that it is a false one, I do not agree with the remedy that he proposes. Instead of proposing to abandon gold as a standard and relegating it to its natural place among the articles of commerce, he advocates its reform and would still retain it as a standard by making the weight of the dollar variable and determining its value from time to time according to a commodities index. The professor is surely correct in his assumption that commodities have actual value worth considering in connection with the establishment of a true exchange system based upon the actual value of services and commodities. It is to be regretted that Prof. Fisher has complicated the conclusions he arrives at by continuing to consider the gold standard entitled to any greater recognition than is accredited to commodities in general. After proving its falsity he should have suggested the abandonment of the gold standard.

"If we were compelled to change the weight of the dollar monthly, quarterly, or even annually, as we would have to do with a commodity dollar, if we tried to keep it of the same purchasing power all of the time, it would give us more trouble than we now have in changing the tariff schedules; but while Prof. Fisher has performed a world service in being instrumental in giving general publicity to the falsity of the gold standard, that publicity is pushed by the influence of selfish interests, because they are pleased with the remedy he proposes. If he had not proposed to standardize the gold dollar, his proof that it is not an honest measure of value would have received no publicity greater than he himself and his friends and a few others could give to it. It would have been ridiculed if he had not proposed a remedy that suited the interests, for the money sharks demand some measure that is favorable to them and not fair to the people. They have always sought to make the world believe the gold standard to be sacred and, therefore, that the people were bound to support it, no matter how much it wronged them. These selfish interests have simply seized on this proposed remedy, which I believe Prof. Fisher to have erroneously suggested without his having given as much thought to the remedy as he had to the facts which conclusively prove gold to be a false money standard.

"It may seem strange to some people that this remedy suggested by Prof. Fisher should be advertised all over the world now, but there is nothing strange about it, for the all-powerful Money Trust interests are quick to observe anything that might be made use of by them, and immediately upon its appearance they seized upon the idea of standardizing the gold dollar and were instrumental in having the plan advertised in order, if possible, to induce the people to accept it as a remedy.

"It may not be generally realized by the people that this is a critical period in the establishment of governmental policies, but the interests are especially alert to that fact. Everything is being done to make the people accept some worthless makeshift, and in some cases actually harmful, so-called 'remedies,' which, if accepted, will delay the adoption of real substantial remedies

until another generation shall enter public life. It is because of that fact that I fear the Glass bill may delay a true remedy. Simultaneously, in all countries where they have the gold standard—and that is in most countries, and in the others equally unjust standards are used—articles were published which were substantially the same in substance as the following, which was published in a Washington paper on April 12, 1913:

"TO ASK INTERNATIONAL GOLD-DOLLAR AGREEMENT.

"One of the features of the proposed currency legislation which will be considered by Congress is the initiation of a movement for an international agreement for the purpose of preventing the depreciation of the gold dollar.

"Such action has been suggested by eminent economists. It is widely held that the enormous increase in gold supply and the consequent depreciation of the gold dollar is the real cause of the high cost of living and high prices.

"Democratic leaders, especially Senator OWEN, chairman of Banking and Currency, feel that if the cost of living is to be reduced the gold situation must be taken into account.

"Not all of the articles appearing in the press directly discuss the gold standard, but many of them are adroitly written in order to impress the reader and prepare him to receive the information that the gold dollar is not now a good standard, but further designed to make the reader come to a wrong conclusion on the question of a remedy. When the first half of an argument is true, unless the reader is very careful it goes far toward making him believe that the second half is also true, and that is frequently the case even when the conclusions are wholly erroneous, as long as the material is adroitly handled. That is where the danger comes in the discussion of the gold standard from the side of the special interests alone. Innumerable articles are now published, in fact the plan is systematically advertised for that very purpose. But there are other articles which are written and published in good faith, and in these there is no intention to deceive. An article was published in Collier's Weekly, also on the date of April 12, 1913, which I quote:

"THE DISCOURAGEMENT OF THRIFT.

"The people of the United States have now saved up well over a hundred billions, as measured by current money standards. The aggregate is amazing, and, while the amount per capita is not large, nothing like it was ever known before in any country. This saving takes on many forms—the largest, of course, being in the rearing of children, which shows itself in the steady increase in the value of land. The next is ownership of enormous amounts of securities of railway and industrial companies and the like. Then probably comes life insurance. The savings in banks are relatively small. The increment in land values goes to much less than one-half of the population, even in theory, and a comparatively small number of people get the benefit which is made up of the efforts of all. The larger amount of the securities outstanding represents a more or less fixed value. The eighteen billions of insurance in force is of absolutely fixed value. While these securities and insurance obligations were being created the relative worth of the dollar has been rapidly declining. The forehanded folk who saved and loaned this money get for it an average return of less than 5 per cent, and if they received back the principal now it would buy of land or food one-third less than 12 or 15 years ago. This is a savage penalizing of thrift. We believe that events will soon focus public attention upon this serious problem. The procedure of the insurance companies, which in part is enforced by law, is of special interest. The companies collect above \$600,000,000 annually from policyholders, and from this loan largely on long-time notes. They act simply as money brokers, but with this effect, that with the rapid depreciation of the currency in the last 15 years, they are now returning to their policyholders, on death claims or matured policies, relatively far less than the average amount of money which the policyholders have paid in. Roughly speaking, the policyholder has been paying in \$1 bills; he will get back 66-cent pieces. Theoretically, the compounding of the interest on premiums ought to pay the companies' expenses and yield the policyholders a profit on the average payment. In point of fact, with the extravagance of the companies and the decline in the purchasing power of the dollar, there is a serious loss. This is not as it should be. A remedy might lie in a radical change of investment. A larger part of the insurance money is loaned directly or indirectly on land. Actual ownership of the land ought to be as safe as loans, and, if gold inflation is to continue, more profitable. It is something to think about.

"Surely Collier's states the truth when it says that it is something to think about. We have indeed been buncoed long enough—so long that we ought to think about it seriously. It is up to Congress right now.

"I believe that the remedy is necessarily twofold: First, and concurrent with the establishment of a new system, the old system should be so amended that some of its most serious administrative defects would be diminished. It should then serve as a vehicle for carrying out the equitable relations and obligations already existing as a result of the legitimate business based upon it.

"Second, an entirely new system should be instituted, which would be founded upon the natural demands of commerce and trade and divorced from personal favor or property preference. This new system should be the basis for the establishment of a permanently solid and equitable means of exchange.

"In order to completely accomplish the latter we will have to cease monetizing gold. But that prohibition would not prevent, nor should we desire to prevent, the use of gold as a means of exchange. The Government, on being paid the cost of stamp-

ing, may properly stamp the weight and quality on any commodity of commerce and let it pass in exchange on a basis of its own intrinsic value. Anyone who demands more than that privilege for the use of a metal or other commodity is intentionally unfair to the rest of us, or ignorant. In most cases it is because the persons accept seeming facts without actually understanding the conditions which surround them. If the owner of gold, silver, or other commodity desires to pay the Government the expense of the operation, there need be no objection. To so stamp gold and make it legal tender is simply to decrease the value of our labor, and of our property—if we have any—unless we also possess gold enough to offset, which most of us do not.

"The owners of gold claim that it has an intrinsic value which makes it the most practicable commodity to use as money. Because of its small bulk it is a convenient commodity to ship and store. But it can be used as a means of exchange without making it legal tender. The Government could still stamp its weight and fineness, and then it could be exchanged in the same way that it now is if it really is intrinsically worth what they say. If it is not, then it should be exchanged for only what it is worth. When the owners of gold ask anything more, they, in effect, admit that it becomes more valuable with the legal-tender privilege than without. They would not demand it if that were not true. It can not be made legal tender except by governmental act. A governmental act is the act of the people, and there is no reason why the people should stamp gold or any other commodity that belongs to individuals with a special privilege. This results in a tax against themselves. Let gold be weighed and tested and given credit only for what it is. Existing coins will retain their legal tender while in circulation, but when the Government acquires any such, their legal-tender character should be removed, and after that bullion should be stamped with its weight and quality and should become an article of commerce standing on its own merits.

"If the owners of gold are correct in their statement that gold circulates on its intrinsic value, instead of partly on that and partly on the additional value it acquires by reason of the demand created by the legal-tender stamp, it is useless for them to ask that it be made legal tender, and if gold is not commercially worth what it circulates for as legal tender, then the owners are unjust in asking the public to support the value added to gold by the Government stamp. Let them take whichever side of the proposition they wish. In the one case the legal-tender quality would be useless. In the other it would be a burden placed upon the public and supported for the benefit of the owners of gold.

"To cease monetizing gold or metal is to drop a practice long indulged in for the benefit of the money lenders. The people have become accustomed to paying them for the credit supported by themselves. I can not say that it can be entirely stopped. There are many practices that injure the people generally, but are nevertheless followed. I simply call attention to certain facts that can not be successfully disputed. I know, and so does any careful student know, whether he admits it or not, that the fact that the Government stamps legal-tender privileges on gold creates an increased and artificial demand for it, and consequently a merchantable value that is very much in excess of what it would be if the gold did not have impressed upon it this legal-tender privilege. It now partakes of the character of monopoly. Every additional cent of credit given to it above intrinsic worth as an article of commerce, by reason of the Government's stamping it legal tender, is first extorted from the people's own credit, next accumulated in the form of so-called 'capital,' and after that becomes the basis for charging them compound interest for generations—perpetually—if they shall not emancipate themselves by an abandonment of this false practice. As far as the principle is concerned, there is no difference between the Government stamping gold as legal tender and giving the owner the advantage of its increased value, and the same stamping process being applied to plain paper.

"Under the present practice all value in excess of what gold is actually worth as an ordinary article of commerce is fiat credit added to it by the people. If the same stamp were affixed to paper, it would all be fiat. It is simply a question of degree, and neither can be extended to the individual as a free privilege without robbing the people of all that is added by their credit.

"The whole problem simply reduces itself to a question of how long will the people submit to remaining industrial slaves to the system. The gold owners ridicule fiat greenbackers, yet they themselves are fiatists. If they are not, why do they object to gold circulating on its own commercial merits? Why do they wish to coin it with any other designation than its weight and fineness and why force the people to take it as

legal tender? They are inconsistent in claiming a special privilege for gold. If gold is worth all they claim for it, it needs no extra function. If, on the other hand, it is not able to retain its present relative value without being legal tender, then that is positive proof that it should not be made legal tender. In the one case it is unnecessary; in the other case it is unjust. The Government will have to cease monetizing gold or any other metal as soon as the people generally realize its present imposition on them.

"You may say that some losses would be suffered in a readjustment. That will, of course, be admitted, but the losses would not begin to equal those that are continually taking place now. The excessive interest and expense of maintenance resulting from the use of the false system under which we operate is so great that, notwithstanding all of the modern inventions that have immensely increased the people's productive energy, most of us fail to secure the ordinary advantages that are due from this civilization to every honest, industrious person. The interest, dividend, and rent charges alone, compounded as they are now, are absolutely sure to keep the greatest number of people in want and many in misery.

"I do not say demonetize gold. I simply say cease to monetize it. Coin no more metal with the legal-tender character attached except that required for small change. Our gold will circulate in foreign markets on its weight and quality equally well without the legal-tender privilege as long as foreigners will use it for their legal tender. Gold will do that as an article of commerce, and foreign nations may convert it into their own legal tender if they like, but any nation that uses gold as legal tender after a great Nation like our own ceases to do so will be adding additional burdens to the present burdens of its people. Whatever gold we have in excess of what we need for the sciences and arts we can dispose of for such articles of commerce as we actually require, and it will be that much to our advantage as against the present practice of hoarding it. We have more gold than any other nation, and if we cease to monetize it the other nations will soon do the same. The common intelligence of the people generally has reached a point where they ought to take the lead in forwarding a plan which will prove the use of any commodity as legal tender to be a fallacy and result in the eventual discontinuance of such a practice. America should lead in doing this.

"Let us consider in concrete form the effect that the money loaners' dollars (which, by the way, are the dollars that we use) have on the cost of things—and when I say cost I mean the expenditure in human toil necessary to acquire the necessities, conveniences, advantages, and luxuries appropriate to human life. I shall not burden anyone with detailed figures, because a mere statement will satisfy those who are sufficiently interested to study the present practices in the light of their own observation and experience. I have examined the table of prices of various staple articles for a period covering 45 years and have come to the conclusion that the money loaners' dollar is not a measure fitted to the requirements of a people desiring equitable relations with each other. It is simply a gambling dollar, and prices are regulated by a manipulation of it instead of by the intrinsic value the commodities possess as articles of necessity. The people who are engaged in useful occupations producing commodities or serving other demands of society are prevented from making the natural interchange of their products and services, because of the injection into their commerce of a fake currency and banking system, by the use of which speculators and financiers, so called, are able to pillage on all the exchanges. The system built up by these pillagers is an unnatural and unjust one.

"It often happens that the aggregate value in money of a large quantity of a useful commodity will command less in one year than that which a smaller quantity brought in another year. Who, for instance, will claim that 3,000,000,000 bushels of wheat (supposing that to be the world's crop) is worth less in the aggregate for food and seed than 2,700,000,000 bushels, other things being equal, except money, which seldom is? No one claims that 3,000,000,000 bushels of wheat are actually worth less than 2,700,000,000. It is a fact, however, that the lesser quantity will often sell for as much, and sometimes more, than the larger quantity. A difference of 10 cents a bushel will accomplish that result, if the 3,000,000,000 sold for 90 cents and the 2,700,000,000 sold for \$1. Illustrative of that fact, let me quote the following from the Saturday Evening Post of March 15, 1913:

"THE VICIOUS CIRCLE.

"We harvested bumper crops last year, you remember. May wheat at Chicago is worth 10 cents a bushel less than a year ago; corn and oats about 15 cents less. Yet commodity prices, as a whole, have declined scarcely at all. The index number, which compounds the price of many leading articles, is almost as high as ever, which means the cost of living is still about at the top notch.

"The bumper crops stimulated trade in many lines, and that usually brings higher prices; while wheat went down, iron and steel products went up. What you saved on flour you lost on the pan to bake it in. And Wall Street echoes with complaints that investors, spurred on by higher cost of living, are demanding more interest, thereby raising the cost of manufacturing and transportation. This higher cost must be offset by higher prices, to overcome which investors must demand still more interest.

"Meanwhile labor, so to speak, chases its own tail, demanding higher wages, which result in higher prices that consume the increased wages—which naturally induces a demand for still higher wages that result in still higher prices.

"Every farmer knows that a difference of 10 cents a bushel between the price a commodity brings in one year and the price it brings a different year is not uncommon, but the railways charge full price for shipping every bushel, and the larger the crop the more they get, while the farmer must handle the additional wheat and get less for it. A farmer having the equivalent of 300 bushels of wheat to sell in a year when crops are generally abundant expects to receive a little less per bushel than he would receive per bushel for 270 bushels in a year when crops were not abundant, but he does not expect to give away the 30 bushels difference because he has more wheat than the year before. If that were to be the result, it would pay him, from his own individual financial standpoint, to burn up a part of his crop when it was abundant. In fact, the cotton farmers of the South started to do that a few years ago when there was a large crop and the price was very low. If the credit of the people had been coined into their own money instead of into the money loaner's money, no thought of so destructive a nature would ever have occurred to the cotton growers or to any other producer of commodities.

"There should be no legal tender other than that issued by the Government, and no individual ought to be able to obtain it without giving its equivalent in return. If such were the case the problem of interest (as a disturbing factor) would cease, and a new era would dawn upon the world. The present difficult problems created by our arbitrary and ridiculous banking and currency system would then give place to natural selection. I use the term "natural selection" in its scientific sense, because we can not run the Government in the interest of the people unless we follow the supreme laws that will unquestionably govern in the end. When we do there will be no choking up of the system by the arbitrary acts of the financial kings, for they are but a product of the arbitrary and unnatural practices that the people have fallen into the habit of using as a means of conducting their business; nor will the majority of men be paying penalties in the form of overwork, worry, and discouragement.

"The bankers have a true system of clearing exchanges. As an example of that, I call attention to the fact that in 1911 there was cleared through the 140 clearing-house associations \$92,420,120.092. Their scheme is a good one for taking care of the exchanges of the country, and it helps the country as long as we have not a better one. By its use only \$47.80 of actual cash was required in order to handle each \$1,000,000 (of checks on the banks) that passes through the clearing houses. But unfortunately for us, the fees the bankers charge for putting our own credit on their books, before we are even enabled to draw checks, is so great that the people generally are overburdened by reason of it.

"Of course these exchanges should go on wherever they serve the general welfare, and since we ourselves have not provided a better method we are under obligations to the bankers for having honored and made current and merchantable our own credit. But since these exchanges relate to our business and are used directly by most of us at some time, and indirectly by all of us all of the time, we should establish a system that will give us the least costly service. The main thing for us to do is to eliminate most of the interest charges and make it practicable for the human family to thrive by industry by having industry available to all people who wish to be and are industrious. That does not mean that the banks should be superseded by new exchange agents, but it does mean that the banks should be required to adjust to a new system that will cost the people less. It means also that there would be fewer banks, because under any economic system of exchange there would be no more necessity for several banks in cities of less than ten or twenty thousand people than there would be a need for several post offices in towns of that size.

"Let us take up the discussion from still another viewpoint in order that no one shall possibly misunderstand. Money as such is not a thing of prime necessity. It is merely a convenience which enables us to make such exchanges as we may wish without the cumbersome handling of property.

"The banks have taught us to use checks instead of the actual money, and it is true that they cash these, but, as we observed before, we can not draw checks until we have arranged

with our banker, and in order to make that arrangement, unless we have the real money, we must pay him interest at a rate that makes the greatest number of men poor and a few enormously rich. The fact that the bankers can make exchanges that represent hundreds of billions of dollars annually, when, as a matter of fact, there never was at any one time as much as \$1,700,000,000 in all of the banks combined, and of the money they do actually hold, which is approximately \$1,500,000,000, two-thirds or more is lying dead in their vaults as reserves and is never used.

"We are under obligations to the banks for teaching us this economy in the use of money and credit. But, after all, as we observed before, the credit is supported and maintained by the resources of the people and the daily application of their energy. The banks have simply filled the office of making it current and merchantable. We do not owe that tribute to the bankers, and, thanking them for the good that they have done, but for which they have been overpaid, we are now prepared as a people in our national capacity to pass the necessary laws and to perform the governmental function laid down by the Constitution, 'To coin money and regulate the value thereof' (and 'of foreign coin' when used in our country) in behalf of all the people of these United States. We should profit by the example of the banks in copying somewhat after some parts of the system they have used for making exchanges, but as a Government we ought to furnish the advantage to all of the people on equality and with the least expense practicable. The Government can do what the banks are doing and save to the people as much as the banks make in excessive dividends, besides the still greater profits that are made on speculation on the side.

"The Government shall 'coin money and regulate the value thereof.' That is the constitutional provision. The great special interests have been sticklers for following the Constitution whenever it has blocked the way to the people's progress if that might in any way interfere with the practice of the interests, but whenever the special interests find it to their advantage to follow any practice profitable to them, the fact that such practice may be in contravention of the Constitution and the laws does not in the least embarrass or hinder them, as long as the people do not invoke the law. When the people do, every possible dilatory tactic is resorted to by the interests to delay compliance. The consequence has been that the Constitution has often been used as an instrument to prevent the people from enforcing their rights.

"'Sound money' will be the song that will be sung to you by every advocate of the special interests. I have shown, and they have already stated and proved, that what they have in the past called 'sound money' is not 'sound.' By doing that they aid me. By that admission they disclose the fact, and it is a fact, that they have defrauded all of the people by their so-called 'sound money.' Their kind of sound money has enabled them to become wealthy and independent, but it has prevented the people generally from doing what they have a right to do, and should have done, namely, retained the fruits of their own labor.

"The kind of exchange that we should use is the kind that anybody who has value to give can get without paying usury. That kind will be the sound money of the people—the honest money. Those who wish gold may have it—there will be nothing to prevent their buying it. We, the people, on their presenting it, will stamp its weight and fineness for anyone who will pay the cost of doing so. We will do that to insure to the people who wish the gold the amount the Government stamp certifies that there is in any given piece of metal. That is honest, and to do anything more is dishonest to the people, but the Government could not say that it was legal tender and thereby give it a special quality that it did not possess in itself. We can do the same with any commodity that it is practicable to use as a thing of exchange. The demand for commodities of all kinds will be in proportion to the service they may render to the people, and no one should complain when absolute justice is to be done. As a consequence the Government would create no more 'commodity' money either for itself or for the people, because it would not only be unjust to do so but unnecessary and ridiculous. When anyone wishes commodities let them buy them as such.

"Everybody knows that we must have money, and now the question arises as to what kind it shall be. 'Honest money,' of course, instead of what we have now and are told is 'sound money,' whereas in truth it is the opposite of 'honest money,' and should have been named accordingly. We want a kind of money the buying and selling properties of which remain respectively constant. In other words, we want a kind of money that will buy the exact equivalent of what it cost us to get it. We want the kind of money that serves the same office among

the people in their commercial and social relations with each other as the drafts and checks serve in the business transactions entered into by the bankers. We do not intend that the bankers shall have a better system for themselves than we have for ourselves. We expect to pay those whose duty it will be to help make the exchanges. The bankers will be able to give as effective and valuable service in this other up-to-date system as they have given us heretofore, but the past service has been altogether too expensive and therefore not sufficiently effective. We have no prejudice to vent upon the bankers. As the system stands they serve the people, generally, the best they can. There are always, of course, a few isolated exceptions. But the time for us to do for ourselves what the bankers are doing for themselves is here and now, and we should hasten to adopt a system of exchange under which it will cost the people no more to make their commercial exchanges between each other than it costs the banks to make exchanges between the bankers and their cash customers. It is just as simple for us as it is for them, and we have the indisputable right. We owe it to ourselves, to our children, and to all posterity to have an efficient, self-sustaining, and effective system.

"The people are the Government. Therefore the Government should, as the Constitution provides, regulate the value of money. There is no other real sovereign power, because all authority emanates from the people. Money is the means of exchange among all people. Its regulation is absolutely a governmental function, and the Government has no natural inherent power that enables it to impart to money any other property or quality than that of making it the agent of exchange.

"Congress is not justified in passing an act that does not do complete justice to all. Merely to improve a false old system, but still leave it in operation, to continually force a sacrifice of the people's very life energies, is criminal. The Glass bill is a living picture of the deplorable effects of the treasonable caucus system and the gag rules by means of which a few leaders control legislation. As a result the outrageous policy of extorting usury from the people to pay monopoly is to be continued. It is not conceivable that the Members of this House, if freed from the caucus gag, would stand for the Glass bill to continue a false system simply by providing 12 new houses for it to operate in. By the failure of Congress to enact a proper bill an overwhelming majority of the people will still be compelled to work too many hours per day, receive too small pay for what they do, and pay too much for what they buy, and therefore have but few of the advantages that the present-day civilization owes to them. And all this is done for the purpose of allowing those who control the material productions of the people, and the credit supported by the people, to charge them excessive interest, rents, and dividends, which when compounded by the usages of business, impoverish the people generally. Do the Members of this House expect that such a system can stand in the face of the growing intelligence of a nation of self-respecting people? The Members who have, by the caucus and the rules that gag, prevented the presentation to the House of a bill in every respect true to the people, on which a record vote of the Members unfettered would force adoption, will have to answer. The people will reply with the truth when they learn what Congress has done. This monetary legislation is a test to divide those who favor from those who do not favor measures suited for the general welfare, but unfortunately many a Member will be able to hide behind the curtain cast around him by the secrecy of the caucus.

"C. A. LINDBERGH.

"NOTE.—At the last meeting of the committee my objections as to the amount of reserves required were met by amendments. Therefore my objections as to the reserve requirements are removed.

"C. A. LINDBERGH."

Mr. STONE. Mr. Chairman, I yield 30 minutes to the gentleman from Indiana [Mr. ADAIR].

The CHAIRMAN. The gentleman from Indiana [Mr. ADAIR] is recognized for 30 minutes.

Mr. CLARK of Florida. Mr. Chairman, will the gentleman from Indiana yield to me before he proceeds?

Mr. ADAIR. Yes; I will yield to the gentleman from Florida.

Mr. CLARK of Florida. Mr. Chairman, on the 25th day of July, 1913, I introduced in this House a resolution known as House concurrent resolution No. 14. I desire at this time to briefly address the House on that resolution. Briefly stated, it is a resolution reaffirming what has commonly come to be known as the Monroe doctrine; and in considering present conditions it has occurred to me that the American Congress, and, indeed,

the American people at large, may well afford to spend a little time in reflection upon what we call the Monroe doctrine.

Mr. Chairman, in my humble judgment the greatest danger confronting the people of the United States to-day is their proneness to depart from the teachings of the "Fathers of the Republic." So long as we adhere to the teachings of those who planted the standard of human freedom in the Western Hemisphere so long are we safe, but the very moment we depart from our ancient moorings, that moment the ship of state is encompassed by dangers which threaten the very existence of liberty among men. We have weathered many storms since first we set sail upon the sea of nations, but, sir, it occurs to me that we are now facing the most crucial test of our national existence. An irreconcilable contest is brewing. Look at it as we may, try to deceive ourselves as we please, the conflict, the inevitable conflict between the races of the earth, is not far distant.

It has been the policy of the United States ever since the birth of the Republic not to interfere with the affairs of the nations beyond the seas. We have simply desired to be let alone, but have always insisted that European nations should not interfere in the affairs of any of the people on this Western Hemisphere. This position has been recognized and respected by the nations of the earth as fair and just until a recent date, when some of the peoples of the Orient, while not openly objecting thereto, have shown by their every act that they did not propose to be controlled by it in future. The time has come, in my humble judgment, when this great Republic should put the world on notice of just where we stand and what we propose to stand upon and contend for.

In order, Mr. Chairman, that we may know just where we are among the nations of the earth and for what we shall contend I have introduced the resolution under discussion, reaffirming the Monroe doctrine; and in order that we may fully understand what this action commits us to it is not out of place to analyze the Monroe doctrine in its every essential element.

I shall not at this time go into a minute investigation of the conditions surrounding us when President Monroe sent his famous message to Congress, in which was embodied what we know as the Monroe doctrine. The gist of this doctrine, or policy, was contained in the farewell address of George Washington, when he advised that we extend our commercial relations but enter into no political alliance with any European country.

On the 2d day of December, 1823, James Monroe, then President of the United States, sent his annual message to the Congress, and, among other things, said:

In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are, of necessity, more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective governments; and to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole Nation is devoted. We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States.

Mr. Chairman, this, in brief, is the Monroe doctrine, and when reduced to its last analysis it simply means that the United States of America, the great Republic of the Western Hemisphere, while not interfering in the slightest degree with the politics of the Old World, is irrevocably committed to certain policies, viz:

First. That the rights of European or other nations existing on December 2, 1823, shall be fully respected.

Second. That no European or other nation shall, subsequent to December 2, 1823, acquire territory in this Western Hemisphere.

Third. That no European or other nation shall extend its holdings in this Western Hemisphere subsequent to December 2, 1823.

Fourth. That no European or other nation shall, for the purpose of oppressing or directing the affairs of any American Government, interfere in its internal affairs.

Fifth. That no European or other nation shall colonize or in any manner extend its system of government in this Western Hemisphere.

Mr. Chairman, I am not of that class who affect to believe that the Monroe doctrine is an "obsolete shibboleth." I am not of that class who are constantly proclaiming their allegiance to the doctrine of the "universal brotherhood of man." God Almighty, for some reason of His own, has separated the races of the earth by a deep and impassable gulf, and it does not lie within the power of a few misguided alleged humanitarians to bridge this gulf. Just so surely as I believe in the existence of God, just so surely do I believe that He has decreed that the Caucasian is the highest type of being in all the realm of creation. These United States have been established by the Caucasian race, and in the providence of God this is, and must forever remain, a white man's country.

But the conflict between the races is impending. Shall we supinely rest in our fancied security, or shall we, true to the traditions of the fathers, rise to the occasion, and by reaffirming the Monroe doctrine let the nations of the earth know just where we stand?

The Monroe doctrine is the American doctrine—it is the foundation stone of real republican government; it is the answer which freedom makes to tyranny; it is the protest of a free people to monarchy; and it is the solemn declaration that the white race shall control this Western Hemisphere.

I take it, sir, that no man will at this day question the fact that what we know as the Monroe doctrine is embedded in our institutions as a settled policy of the Republic. Indeed, by its long and uninterrupted application in our intercourse with foreign nations, it has in fact become a fixed principle in international law. But there is some difference of opinion even among our own people as to its full meaning.

If any European nation should undertake by force of arms to take possession of any territory of this hemisphere and establish a government there, I think there is no man who would not consider this act in contravention of the Monroe doctrine, and therefore an act of unfriendliness toward the United States.

If any European or other government should by any means acquire territory in this hemisphere, or should extend by any means its holdings, or interfere in the affairs of any American Government with the intent of oppressing or directing the affairs of such Government, I think none will be found who will not agree that any such acts contravene the doctrine laid down by President Monroe. I have no doubt, Mr. Chairman, that all well-informed persons will agree that the Monroe doctrine covers all of these acts which I have mentioned. We now come to the point about which there does exist some diversity of opinion. I refer to the question of colonization. In order that we may make no mistake I desire to quote the exact words used by President Monroe in his famous message to Congress wherein was enunciated the policy now known as the Monroe doctrine. On the subject of colonization Mr. Monroe used this language:

With the existing colonies or dependencies of any European power we have not interfered and shall not interfere; but with the Governments who have declared their independence and maintained it, and whose independence we have on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States.

Ninety years ago this language was uttered by James Monroe, then President of the United States, in his annual message to Congress. While the Congress has never by formal action or legislative enactment declared the policy proclaimed by President Monroe as the law of the land, yet its repeated indorsement by succeeding Presidents, the acquiescence therein by practically every succeeding Congress, and its general acceptance by the people of this Republic, as well as its universal acknowledgment by the nations of the earth, have served to give to it the force and effect of law.

Some contend, Mr. Chairman, that although the Monroe doctrine is in full force and effect, it does not extend to and prohibit the colonization of American territory, provided such colonization is with the consent of the American State which it is proposed to colonize. I deny this claim. In my humble judgment the Monroe doctrine goes to the extent of the colonization of any portion of this hemisphere by a people with whom the Caucasian can not and will not assimilate, either with or without the consent of the controlling or ruling power in the territory which it is proposed to colonize. I am convinced that a fair interpretation of the Monroe doctrine will support, and abundantly support, this contention. Listen to the words of President Monroe:

We could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States.

I am not one of those who believe that the United States should play the part of policeman for the Western Hemisphere,

nor am I one of those who believe that this great Republic should resolve itself into an agency to collect bad debts for European sovereignties. But I do believe that the safety, yea, even the life, of the Republic itself depends upon our strict adherence to the Monroe doctrine, strictly and literally construed.

I do not believe that the Monroe doctrine means that the United States must stand idly by and witness wholesale arson and murder in a sister republic until she shall be called on by the existing government, whether de jure or de facto, to intervene and restore order. God Almighty has planted us in this Western Hemisphere; He has blessed us far beyond the average of peoples who inhabit the earth; He has permitted us to plant in this generous soil the seed of human liberty; He has nurtured the young plant until it has become a mighty tree in the forest of human government. I believe that the God of nations expects these United States to preserve order, maintain peace, and protect liberty in this western land. The Monroe doctrine not only inveighs against any European nation interposing in the affairs of any American government for the purpose of oppressing such government, but it strongly declares against any European government "controlling in any other manner" the "destiny" of such American government.

The Monroe doctrine was declared and for 90 years has been maintained primarily in the interest of the United States, and secondly in the interest of every government on this hemisphere. I think no one will controvert this proposition. Now, Mr. Chairman, if we concede this to be true and we further concede that the interposition of any European government in the affairs of any American government "for the purpose of oppressing or otherwise controlling the destiny of such American government," then it is immaterial whether European colonization of any portion of the domain of any American nation is had with or without the consent of the government "controlling" such American territory. Friendly or hostile colonization by a European people on these shores will be practically the same so far as the United States are concerned. Friendly or hostile colonization by any European power will be "the manifestation of an unfriendly disposition toward the United States," and we had just as well face that proposition now as to postpone the settlement of the issue to a later day. Our Government has never receded one iota from the position taken by President Monroe in 1823, but, on the contrary, has on every appropriate occasion reaffirmed and emphasized it as the settled policy of this Republic. In the Venezuelan boundary dispute between Great Britain and Venezuela, when Great Britain refused to arbitrate, that great Democratic President, Grover Cleveland, in strong and vigorous language in his message to the Congress of date December 17, 1895, reasserted without qualification and in unmistakable English the Monroe doctrine in its every essential.

Mr. Chairman, so firmly has this policy been embedded in our governmental structure that it has become a strictly American doctrine, always adhered to and always upheld, no matter what political party may have been in power. It is not a party policy; it is not the property of any political organization; it is not an issue in American party politics. It is an American principle, asserted and to be maintained by every patriotic American citizen, regardless of his party association and regardless of the section from which he may hail. No matter how widely we may differ respecting our internal economic affairs, when it comes to defending the flag, proud emblem of our glorious institutions, we are all patriots, solemnly pledged to the preservation of freedom in this western land and the maintenance of the integrity of our civilization and the perpetuity of the purity of our race.

President Grant, in his message to the Congress under date of May 28, 1870, relating to San Domingo, said:

The doctrine promulgated by President Monroe has been adhered to by all political parties, and I now deem it proper to assert the equally important principle that hereafter no territory on this continent shall be regarded as subject of transfer to a European power.

And this brings me, Mr. Chairman, to the conditions to-day confronting this Republic, and which, for its proper solution will require our wisest statesmanship and most conservative diplomacy. The student of world politics who does not realize the impending and irrepressible conflict between the races of the earth has expended his brain force to little purpose. I am not an alarmist. I am not a jingo. I favor peace among the nations of the earth. But, Mr. Chairman, we are confronted at this stage of our existence as a Nation by a stern and unchangeable condition, and we are not engaged in analyzing a theory. We have builded upon this continent the most powerful Republic that ever existed among men; we have successfully demonstrated to all the world that the white man was entirely capable of self-government; we have builded a constitutional governmental structure as a model for all peoples of all races and all

times. This Government, constructed by the fathers, has withstood the storms of 137 years on the sea of national life, and has survived four years of the fiercest fratricidal strife which ever marred the history of any human government since the dawn of creation. She stands to-day in all her vigor, strength, and beauty, as the proud mistress of the western world. But, sir, this Government is confronted to-day by the most dangerous enemy that has ever arisen in her pathway. The hideous shadow of race antagonism has fallen across the roadway which we, as a Nation, must travel, and try as we may, we can not avoid the issue which this condition presents. We must meet and solve it, and the earlier the better for us. That a superior and an inferior race can not live together on terms of equality under the same government is admitted by every intelligent human being, and therefore it is perfectly apparent that the white man and the negro can never inhabit these United States upon any level approaching equality, either social or political. There can be no question about this, and in this day of broader knowledge of the subject the disfranchisement of the negro in the Southern States is acquiesced in by our northern brethren, if, indeed, it does not meet with their entire approval.

But, can this system endure? Is this a solution of the negro problem? Must they remain with us always, and, if so, must we always meet the issue in this way? I hope not. I sincerely trust we may find some solution of the negro problem which will be just to us and humane toward them. As I see the question to-day there are four solutions of the negro problem in the United States:

- First. Segregation on the soil of the United States.
- Second. Gradual deportation to Africa or some other country which may be secured for them.
- Third. Amalgamation with our people.
- Fourth. Extermination of all the negroes or persons with negro blood in their veins.

I do not believe, Mr. Chairman, that the first of these solutions, namely, segregation on United States soil, would materially lessen our troubles. In my humble judgment the only real, practical, humane solution of this vexatious problem is the gradual deportation of the negro from these shores. I am fully aware of the fact that it will require many years and cost many millions of dollars, but the number among us will be steadily diminishing, and therefore the danger will be greatly lessened as the years come and go. In addition to annually lessening the danger of a race conflict we will by this method be able to give the negro his opportunity to work out his own salvation and thus demonstrate to the world his capability for self-government.

The third solution, Mr. Chairman, is absolutely unthinkable to a real white man—one who has red corpuscles in his veins. The white man who for one moment would allow himself to consider this as a solution of the negro problem in the United States is a degenerate who has fallen far below the mental and social standard of the vilest cannibalistic specimen of the African fresh from the jungle.

The fourth solution is that of exterminating every creature of African descent found on the soil of the United States. Of course, no one desires to be driven to this extremity, and in this day of advanced civilization no one will seriously advocate such a policy. But, as brutal and bloodcurdling as this may seem, we will come to just that unless the statesmanship of this age will guide us along one or the other of the more humane and just methods which I have suggested. The truth is, Mr. Chairman, that deportation is really the only sane, safe, and humane solution of the great problem which confronts us, and which in the providence of God we must determine. I realize that it is a Herculean task, and that to carry it into successful accomplishment will require years of time and millions of money, but it can and should be done. It should be done in the interest both of the white and the colored races. It is best for the white man because it preserves the integrity of his race and permits the existence of a government under which all men in deed and in truth are free and equal. It is best for the colored man because it gives him a fair and an equal opportunity with all the peoples of the earth to work out his own destiny in his own way under a government guaranteeing him an even chance with his fellows. The idea that the negro will ever in these United States stand upon either a political or social level with the white man is an iridescent dream which can never be realized until God Almighty shall have materially changed the whole plan of creation. It will never be.

Segregation will not solve the problem, because that means an existence under the same government; and the world has never seen, nor in my judgment will it ever witness, an inferior and a superior race living in peace beneath the same flag on terms of political or social equality. It is repugnant to the eternal decree of the Creator himself, and can not be. Amalgamation,

which means the absorption of the proud Caucasian peoples of this continent and the substitution thereof of a race of mongrels, surely can find no advocates in the ranks of the dominant element of this Republic.

Extermination of the inferior race can never be considered by a civilized people, and therefore this solution must be eliminated. Then there remains only one remedy—that of deportation. The United States should arrange for a portion of Africa or some other suitable territory upon which to colonize the American negroes, and arrange to deport so many each year until such time as all will have been deported. It is true it will require many, very many years in which to carry this plan into complete execution, but you must remember that each year the number of them among us would be diminished and the dangers of racial troubles would be correspondingly lessened. It is true that this plan will cost the United States millions of money, but not nearly so much as it will eventually cost us to keep them among us, not to take into account the millions of lives which will be sacrificed through riots and other disturbances resultant from our futile attempt to place the negro upon a pedestal which God Almighty never intended him to occupy.

I am well aware of the fact that there are those, and they are mostly from my own section of the country, who, whenever the deportation of the negro is mentioned, almost go into hysterics, loudly proclaiming that the South could not survive without the labor of the negro, even going to the extent of claiming that the white man can not labor in the hot southern sun. There never was a greater mistake. White men do perform manual labor under the burning rays of the southern sun, and they can and do accomplish just as much as a negro laborer does.

Why, Mr. Chairman, I have plowed cotton and corn beneath the burning rays of a southern summer sun and have seen many other white men and boys do the same, and it is the veriest rot to claim that a white man can not perform manual labor in the South during the summer. More than that, Mr. Chairman, the latter-day southern negro has become, under the baleful influence of his "freedom," so unreliable and shiftless that the southern farmer no longer can depend upon him when he really needs him. In fact, we of the South are to-day absolutely without farm labor so far as the negro is concerned. The southern farmer is in a deplorable condition when it comes to farm labor, because the negro will not work, and self-respecting white laborers will not go South where their positions as common laborers will put them on a level with the negro. Can you blame them? Mr. Chairman, the negro population of the Southern States has hung like a black cloud over that fair section of our common country for a century. When they were slaves their masters could compel them to work, but now that they are "free" and in a land where one day's work will keep them for a week it is utterly impossible to get more than one day's work within a week out of them. This condition can not always last. There must be a remedy somewhere, and the remedy which I have suggested is that of deportation; and this is not original with me, but it strikes me as being the only feasible and sensible plan. I shall not discuss at this time the situation in Mexico, the unhappy Republic to the south of us. I am willing to trust the great Democratic President in the White House to properly adjust conditions in a manner quite agreeable to all parties at interest, to the honor of the United States, and with due regard to the integrity of the "Monroe doctrine." But, Mr. Chairman, looking far beyond present conditions, I desire to invite the attention of the Congress and the country to an impending conflict, the issue of which will change the map of the world. I refer to the conflict between the white and colored races, which sooner or later will come and which will shake the very foundations of our latter-day civilization.

The conflict is irrepressible; it is inevitable; it must come. Are we ready for this stupendous clash? I am quite sure that we are not. Shall we supinely rest upon our oars, hugging to our breasts the delectable delusion that no nation can afford to attack us? Shall we, relying upon the professed desire of the great nations of the earth for continued peace, continue the policy of reducing our military and naval establishments to the minimum? We can not afford this. With all our seacoast, with our great frontage on both the Atlantic and the Pacific Oceans, together with our broad expanse on the Gulf of Mexico, we must have a Navy second to none in all the world. We want peace—we must have peace—and the only way in which we can prevent war is to be always in condition to command peace. I do not mean that we are to play the part of policeman for all the governments on this hemisphere, but I do mean that we are to be in such condition at all times as to our naval establishment that all the world will take notice and act in accordance therewith.

I am fully aware of the fact, Mr. Chairman, that at the time of its promulgation the Monroe doctrine had special reference

to European nations, but I apprehend that no gentleman at this day and under existing conditions would limit its operation to the governments of Europe. In 1823 no American statesman could possibly have conceived that we would ever be confronted with the oriental problems which to-day menace our security. That Japan is now contemplating the colonization of a large portion of the Republic of Mexico must be perfectly patent to every observant citizen of this country; that Japan has at least one student at the State university of every State in the Union is an undeniable fact; that Japan must have more territory for her millions of surplus population is an indisputable fact; and that Japan's policy is one of conquest is beyond the pale of controversy. When all these facts are considered in connection with the further fact that the pride of the Japanese Nation has been sorely wounded by our refusal to permit Japanese to become citizens of this country upon terms of equality, both political and social, with us, it needs not the eye of a prophet to foresee the impending conflict between the subjects of the Mikado and the people of these United States.

Mr. Chairman, the safety of this Republic demands that no people with whom we can not affiliate and assimilate be allowed a foothold upon these shores. The existence of human liberty in this hemisphere depends upon white supremacy. The Caucasian can no more assimilate with the Japanese and the Chinese than he can assimilate with the Negro. To assimilate with either is simply unthinkable to a self-respecting member of the white race.

Mr. Chairman, this contemplated colonization of a portion of Mexico by Japan is the first step toward the inevitable conflict. Shall we permit it? As for myself, I say no—a thousand times no. If the conflict must come, let it come now. Let us tell Japan in language which can not be misunderstood that she shall not own one foot of soil in this territory; that this is a white man's country, and that "by the eternal," with the help of God and the Army and Navy of the United States, it always will so remain.

Mr. ADAIR. Mr. Chairman, I shall ask the indulgence of the House while I discuss as briefly as possible the necessity for monetary legislation and the wisdom of the provisions of the bill now under consideration. I am not a member of the Banking and Currency Committee, neither do I claim to be an authority on the subject of finance, but as I have had some practical experience in banking I believe I have considerable knowledge upon this question. While my business has been that of banking, I am not here as the representative of the banking interests of the country, but as the representative of 250,000 of us progressive, intelligent, and patriotic people as can be found anywhere on earth. I am representing a large agricultural and manufacturing district, where the success of the banks depends entirely on the success of the farmer and the manufacturer. Any legislation, therefore, that would prove hurtful to their interests or the business interests of the country in general would also be disastrous to those engaged in the banking business. Situated as I have been, I am schooled in honest banking, and know practically nothing about the corrupt methods employed by the frenzied financiers who operate in Wall Street. I am opposed to special privilege in every form; and while I remain a Member of this House I shall have no patience with or lend support to any bill designed or intended to give to the banks, either national, State, or private, any special privileges that will benefit them at the expense of the people.

Mr. CALLAWAY. Will the gentleman yield?

Mr. ADAIR. I must decline to yield, as I have only 29 minutes, and I can not say all that I desire to say in that time.

Mr. CALLAWAY. I want to ask the gentleman if these reserve banks are not exempt from taxation—municipal, county, State, and national?

Mr. ADAIR. Mr. Chairman, I shall not go into that. If I were to yield to the gentleman from Texas, I should feel compelled to yield to other gentlemen, and as I had only 30 minutes at the beginning, I prefer not having my remarks interrupted.

Mr. Chairman, the necessity for currency legislation is denied by no one. For many years the people have been demanding relief, but the party in power failed, neglected, and refused to legislate for the general welfare. The present inadequate system has been permitted to stand, and as a result the Wall Street interests have not only controlled interest rates, but largely fixed the price of all products of the farm and factory. In return for this power and privilege the Wall Street interests contributed large sums of money to the campaign fund of the party then in control, but finally the people were awakened and drove from power the party of special privilege and placed the affairs of the Government in the hands of the party of Jefferson. Now, in fulfillment of our platform pledge we are going to give to the people a system of currency that will meet

the country's fluctuating volume of business, prevent the cornering of the people's money by a combination of Wall Street gamblers, guard the solvency of the banks, supply money sufficient to meet the actual needs of commerce, and protect the people from the vicious methods heretofore employed by those who enjoyed special privileges under existing law. [Applause.]

Mr. Chairman, our present banking system has been in existence with but little change since 1863. That it is inadequate to meet the demands of the country has been proven on more occasions than one. Great and powerful interests have been able to control the money market, fix the rate of interest, lower the price of farm and factory products, and bring on a panic whenever they desired to do so. This was forcibly demonstrated in 1907, when the Roosevelt panic came on us without a moment's warning—at a time of unprecedented prosperity, when the farms had brought forth bumper crops and products of all kinds were bringing high prices; at a time when our manufacturing establishments were running day and night with orders six months in advance; banks all over the country were bursting with deposits; labor everywhere was employed at moderate wages; our splendid railroads were unable to move the freight offered for transportation; in fact, we were in the midst of the most universal prosperity the country had ever known. There was not a cloud in the sky to throw a shadow over our magnificent prospects and the blessings of nature were smiling upon us as never before. Yet in the midst of all this we were hurled into a financial panic the most unfortunate and the most disastrous our Nation has ever known. No money could be had to carry on the business of the country, the wheels of industry were stopped, thousands of laboring men were thrown out of employment, our agriculturists lost millions of dollars through decreased prices of farm products, business generally was suspended, and want, starvation, and misery prevailed in many sections of the country, and this, too, in a land of plenty.

Mr. Chairman, such a condition could not have been brought about had it not been for the existence of our present financial system. The panic of 1907 was simply a money panic brought on by the Wall Street gamblers and speculators for the express purpose of enriching themselves at the expense of the people. Many times during the past 50 years have these powerful interests extorted from the American people millions of dollars through a manipulation of the money market. Under the present banking law, which has been in existence for half a century, the control of the interest rate on money is largely in the hands of the New York bankers and money lenders. Not only do they fix the interest rate, but they also control the price level, including the stock market, and this has had much to do with the high cost of living. While supply and demand, the tariff, trusts, and combinations have had something to do with the high cost of living, it should also be remembered that the fixing of the price level by the money lenders through interest rates is an important factor. That there is a relation between the volume of money and the price level no one will deny. It is simply a law of quantities. In the sale of goods or merchandise of any kind or of services on one side there is payment of money or its equivalent, or a promise to pay money, and consequently each increase in the volume of money eventually results in a proportionate rise in the level of prices. This was clearly shown in 1896. When the per capita of circulation was \$21.50, the price of all products were extremely low, but just as soon as the circulation medium was increased to \$34.50 per capita the price of all products of the farm and factory, as well as the wages paid to labor, rapidly increased. Therefore in the interest of fairness to both producer and consumer the Government should largely control both the interest rate and the level of prices. This has been done in Germany and England for many years. In Germany the control of the price level is directly in the Government, through the chancellor of the Empire, who operates it by dictating the interest rate at which money shall be loaned. In England it is controlled in a different way, but the result is practically the same. Under our present system the President of the United States has to some extent the arbitrary power to lower or raise the price level by putting money into circulation through the United States Treasury or withdrawing money from the banks and locking it up in the Treasury. No matter which course he pursues he is generally criticized. To use the language of ex-Secretary Lyman J. Gage, "he is damned if he does and damned if he doesn't." This is another evil of our inelastic system that should be and will be corrected.

Mr. Chairman, having pointed out many evils of the present currency law, I shall now devote the balance of my time to a discussion of the remedy proposed in the pending bill. Before taking up a discussion of the provisions of this Democratic

bill I desire to congratulate the President of the United States, the members of the Cabinet, and especially the chairman of the Banking and Currency Committee of the House, Mr. GLASS, and each member of his committee on their splendid work in the preparation of this bill. I regard it as one of the greatest achievements in the legislative history of our country, and proves beyond the shadow of a doubt that our party is capable of constructive legislation. [Applause on the Democratic side.] The bill before us is a complete redemption of our platform pledge made at Baltimore, Md., in 1912, and is also in line with the resolutions adopted by the National Grange, the National Farmers' Union, and the American Federation of Labor in the same year.

The Democratic platform of 1912:

We oppose the so-called Aldrich bill, or the establishment of a central bank, and we believe the people of the country will be largely free from panics and consequent unemployment and business depressions by such a systematic revision of our banking laws as will render temporary relief in localities where such a relief is needed, with protection from control or domination by what is known as the Money Trust.

Banks exist for the accommodation of the public and not for control of business. All legislation on banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public and of complete protection from the misuse of the power which wealth gives to those who possess it.

We condemn the present methods of depositing Government funds in a few favorite banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities, and subject to call by the Government.

Platform of the National Grange, 1912:

Whereas the National Grange recognizes the necessity for the revision of our banking system along more equitable and scientific lines: Therefore

Resolved, That we are unalterably opposed to the so-called Aldrich scheme for centralizing banking, which is in the interest of bankers and opposed to the interests of the people.

Resolved, That the issue of currency is fundamentally a Government function which should be exercised in the interest of all the people and not be surrendered as a special privilege to any set of individuals.

Resolved, That in any revision that may be made of our banking system and laws regulating the same, such revision shall be made in the interest of the people and not the money lenders. (Journal of Proceedings, 46th ann. sess., 1912, pp. 22-23.)

The nineteenth plank of the platform of the American Federation of Labor, an organization with 2,000,000 dues-paying members, is as follows:

We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

Mr. Chairman, it will be observed that in our platform adopted at Baltimore we declared in favor of a law requiring national banks to pay interest on Government deposits. In this connection I desire to state that six years ago, in the Sixtieth Congress, I introduced a bill requiring national banks to pay 2 per cent interest on Government funds and made a vigorous effort to have it enacted into law, but the House was controlled by the Republicans at that time and the committee to which my bill was referred refused to report it. I took the position that interest was being paid on township, county, and State funds throughout the United States, and there was no reason why the Government should give away to the banks in the large cities over \$1,000,000 each year that rightfully belonged to the people. I found upon investigation at the Treasury Department that 2 per cent on Government funds deposited with national banks during the past 25 years would have amounted to the enormous sum of \$36,000,000. While I was unable to get exact figures for the years preceding 1886, it is fair to presume that since the organization of national banks in 1863, 2 per cent interest on Government deposits in national banks, compounded annually at 2 per cent, would have amounted to over \$100,000,000, and this vast sum of money has been absolutely given away. Is it any wonder the people turned against the party responsible for this exchange of their money for campaign contributions? I fully intended when this Democratic administration came into power to reintroduce my bill, but was informed by the Treasury Department that the Secretary had the right to charge interest on Government deposits in national banks and that legislation to that end was unnecessary. The Secretary of the Treasury is now collecting 2 per cent interest on all deposits of Government funds in national banks, and I am informed it is netting the Government over \$1,000,000 per year. The bill under consideration does not provide for 2 per cent interest on Government funds deposited with Federal reserve banks, but it does provide that 60 per cent of the net earnings of such banks, after the payment of 5 per cent dividends to the stockholders, shall go to the Government, and this, in my judgment, will more than equal 2 per cent on Government deposits.

Mr. Chairman, this Government has never possessed a first-class banking and currency system, but I believe when the pending bill is enacted into law it will produce stability in the price level, will forever bring to an end the cornering of money by the great banks of our large cities, will furnish the currency with which to carry on our stupendous industrial enterprises, and protect the people against the extortions of the beneficiaries of our present system. Business men entering into contracts for the future performance of obligations will know that the average of prices for commodities will remain practically the same year after year, that there will be no money panics with resulting losses, and that there will be no forced sale of their business because of inability to get bank credit, provided they are entitled to it. Under such conditions we have the assurance of restored competition and great business activity throughout the entire country.

Mr. Chairman, the leading features of the pending bill may be summed up as follows: Sections 1 to 6, inclusive, have to do with the organization and putting into operation the proposed new system. The provisions contained in the sections referred to are so wise, just, and reasonable that they require or need no discussion. Section 7 has to do with the division of earnings of the regional reserve banks and provides that after the payment of a 5 per cent dividend on the paid-in capital, one-half of the net earnings shall be paid into a surplus fund until such fund shall amount to 20 per cent of the paid-in capital, and of the remaining one-half 60 per cent shall go to the United States and 40 per cent to the member banks. It further provides that after the surplus fund has reached the sum of 20 per cent of the paid-in capital, and the shareholders have received the 5 per cent dividend provided for, 60 per cent of all excess earnings shall go to the Government and 40 per cent to the member banks. In my judgment, this will be a fair and equitable distribution of the earnings. It surely can not be charged that the Government is not getting the long end of the string. The banks are putting up all the money in the way of capital stock, and the Government is to get 60 per cent of the profits after a 5 per cent dividend is paid to the stockholders. Some have objected to this provision on the theory that the Government is going into the banking business. I do not share that view. The Government is not going into the banking business in the sense of competing with local banks throughout the country. It is only making it possible for competing banks to carry on the business of banking and enabling them to meet the demand for money with which to conduct the legitimate business in their respective communities.

Sections 8, 9, and 10 merely designate the banks that may become members of Federal reserve banks and needs no discussion.

Sections 11 and 12 provide for the creation of a Federal reserve board consisting of seven members, including the Secretary of the Treasury, Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President of the United States, and prescribe their duties. Under the provision of section 12 the Federal reserve board is given large powers which, in my judgment, is right and proper.

Section 13 provides for the creation of a Federal advisory council consisting of as many members as there are Federal reserve districts. This board shall have power to meet and confer directly with the Federal reserve board on general business conditions; to call for information and to make recommendations in regard to discount rates, rediscount business, note issue, reserve conditions in various districts, and the general affairs of the reserve banking system. This I regard as a wise provision and will materially aid the Federal reserve board in the discharge of its duties.

Section 14 provides that Federal reserve banks are authorized and directed to supply an elastic volume of paper currency by rediscounting notes and bills of exchange arising out of commercial transactions. The section referred to reads as follows:

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used or may be used for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount within the meaning of this act, but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products or other goods, wares, or merchandise from being eligible for such discount. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount the paper of the classes hereinbefore described having a maturity of more than 60 and not more than 120 days when its

own cash reserve exceeds 33 1/3 per cent of its total outstanding demand liabilities exclusive of its outstanding Federal reserve notes by an amount to be fixed by the Federal reserve board, but not more than 50 per cent of the total paper so discounted for any member bank shall have a maturity of more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount acceptances of such banks which are based on the exportation or importation of goods and which mature in not more than six months and bear the signature of at least one member bank in addition to that of the acceptor. The amount so discounted shall at no time exceed one-half the capital of the bank for which the rediscounts are made.

The aggregate of such notes and bills bearing the signature or indorsement of any one person, company, firm, or corporation rediscounted for any one bank shall at no time exceed 10 per cent of the unimpaired capital and surplus of said bank, but this restriction shall not apply to the discount of bills of exchange drawn in good faith against actually existing values.

Any national bank may, at its discretion, accept drafts or bills of exchange drawn upon it having not more than six months sight to run and growing out of transactions involving the importation or exportation of goods, but no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half the face value of its paid-up and unimpaired capital.

In the language of one who has given this subject a great deal of study this section would work admirably, for as the crops should ripen and the time should come to move them the needed promissory notes and bills of exchange would be brought into being automatically, and part of them would be presented at the Government reserve banks for paper currency to be taken and used as bank reserves—the basis of bank credits. Later, when the time should arrive for paying to the Government the money called for by the notes and bills, the money paid in would be kept out of circulation if there should be enough in use without it. Thus the needed retirement would be brought about almost automatically and the Government would not enter the banking business at all. The taking of risks from the loaning of money and bank credits would be by the banks, the private institutions, at the same time the power of the existing Banking and Money Trust to control the money market would be terminated and the solvency of the banks would be protected.

Mr. Chairman, the proposed functions of the Federal reserve banks toward the public are to not only supply an elastic currency and to adjust its volume with a view to accommodating the commerce of the country, but also to promote a stable price level—a stable purchasing power for money. This will be done through the adjustment of the interest rate, as is provided in section 15, and reads as follows:

Every Federal reserve bank shall have power to establish each week, or as often as required, subject to review and determination of the Federal reserve board, a rate of discount to be charged by such bank for each class of paper, which shall be fixed with a view of accommodating the commerce of the country.

It will therefore be observed that the Federal reserve banks, acting with a veto power in the Federal reserve board, will control the interest rate at which business paper is to be rediscounted over its counter, and the interest rate of the whole number of Federal reserve banks will determine whether or not gold shall be shipped from abroad. By raising the rate of interest gold will come in from other countries and by lowering the rate of interest its importation will cease. By this method and through the issuance of paper currency the business interests of the country will be furnished with a sufficient volume of money to meet any increase in business that may arise. For each thousand dollars that member banks secure and place in their reserves, they can safely increase bank credits five times that amount, and this increase in the volume of bank credit will draw interest for the banks, while the interest from the paper currency will go to the Federal Government. Through this method banks will be able to make large loans, and the Government will control the interest rate, and by so doing control the importation of gold from abroad and also supply a paper currency, which will be loaned to the banks at the prevailing rate, and with such a system in use it will be impossible for the Money Trust to corner the money market. Persons engaged in legitimate business will at all times be able to borrow money—provided, of course, they can furnish the required security. While it will be possible for those who need more money in their business to get it, yet there will be no danger of over-issuance of paper currency, due to the fact that each Federal reserve bank will have an adjustable interest rate at which it will rediscount business paper, and this rate will be kept at a point where just enough money and bank credit will be in use to produce a stable price level. If the price level for commodities rises, the interest rate will be raised a little; if the tendency of the price level should be downward, then the interest rate will be lowered. When the interest rate is raised, borrowers—to some extent, at least—will take up their loans and the demand for money will be lessened, and these conditions will lessen the volume of money and bank credits in use, and result in a lower

price level for commodities. In the meantime the volume of paper currency will be elastic in volume and gold can be had at any time through the adjustment of our interest rate; therefore, the people will always be able to secure funds to carry on legitimate business—provided, of course, they have bankable paper for rediscount.

Section 16 provides that after one year from the passage of this act all Government funds shall be deposited in Federal reserve banks—the Government to distribute them equitably between different sections. The ultimate withdrawal of these funds from the national banks in the large cities has much to do with the opposition a few of the big bankers are putting up against this bill. The deposit of Government money in national banks located in New York, Chicago, and St. Louis has been the source of large profits to these banks, and, as a matter of course, they dislike very much to surrender this advantage.

Section 19 provides for the refunding of 2 per cent Government bonds in the following language:

That upon application the Secretary of the Treasury shall exchange the 2 per cent bonds of the United States bearing the circulation privilege deposited by any national banking association with the Treasurer of the United States as security for circulating notes for 3 per cent bonds of the United States without the circulation privilege, payable after 20 years from date of issue, and exempt from Federal, State, and municipal taxation both as to income and principal. No national bank shall, in any one year, present 2 per cent bonds for exchange in the manner hereinbefore provided to an amount exceeding 5 per cent of the total amount of bonds on deposit with the Treasurer by said bank for circulation purposes. Should any national bank fail in any one year to so exchange its full quota of 2 per cent bonds under the terms of this act, the Secretary of the Treasury may permit any other national bank or banks to exchange bonds in excess of the 5 per cent aforesaid in any amount equal to the deficiency caused by the failure of any one or more banks to make exchange in any one year, allotment to be made to applying banks in proportion to their holdings of bonds. At the expiration of 20 years from the passage of this act every holder of United States 2 per cent bonds then outstanding shall receive payment at par and accrued interest.

Mr. Chairman, there has been some criticism of this section, but in my opinion it is very unjust. The 2 per cent bonds referred to were bought by the banks in good faith for the purpose of securing circulation. Every dollar's worth of them sold at a premium because of their circulation privilege. Under our present system the Government required national banks to buy these bonds and take out circulation, and now if the Government, by law, takes away from these bonds the circulating privilege, which would unquestionably result in a loss of millions of dollars to the banks holding these bonds, it is only fair and just that the Government should protect the banks against such loss. Therefore the provision for refunding the 2 per cent bonds is wise, just, and proper. To do less would be to confiscate the property of the national banks. Another very wise provision is found in section 20, which reduces the reserve country banks are required to maintain from 15 to 12 per cent. This provision will release a large sum of money now held in reserve and transfer it to the channels of trade. In my opinion a 12 per cent reserve under the proposed law is much safer than a 15 per cent reserve under existing law.

Mr. Chairman, during the past eight years I have tried to secure legislation permitting national banks to make a limited amount of loans on real estate, but such legislation has been impossible on account of the attitude of the Senate. That real estate is the best security in the world no one will deny, and there never has been a just reason why national banks should not have been allowed to make real-estate loans equal at least to 50 per cent of their capital stock.

Section 26 of the pending bill permits national banks to make real-estate loans in a sum equal to 25 per cent of their capital and surplus or 50 per cent of their time deposits, and in my humble opinion is a very wise provision.

Mr. Chairman, it has been stated upon this floor and frequently stated in the press that the banks of the country are opposed to this bill. I deny the accuracy of this statement. I do not believe that 5 per cent of the 27,000 bankers scattered throughout the States are opposed to this legislation. I am aware of the fact that a few of our big bankers doing business in the large reserve cities are opposing the bill, and I can readily understand their motives in doing so. For many years under our present system they have held on deposit the reserves of thousands of country banks and also a very large per cent of Government funds, which deposits have been the source of great income to these banks; and, as a matter of course, their selfishness impels them to oppose any legislation that would deprive them of this special privilege. But so far as the great army of country bankers are concerned, they are not opposed to this bill. There are about 100 banks in the district I represent, and I do not know of a single one opposing this legislation. Neither do I know of a single bank in the State of Indiana in sympathy with those who are fighting the bill. A large major-

ity of our bankers depend entirely upon the success of the farmers, manufacturers, and business men in their respective communities, and they believe this bill will be conducive of better business conditions generally throughout the entire country, and that better business conditions means better business for them. In other words, the country bankers look at this bill from the standpoint of the general good, while the big bankers in the large cities view it from the standpoint of their own selfish interests.

Mr. Chairman, as the time allotted to me has expired, I want to say, in conclusion, that in my opinion this bill will bring great and permanent good to the country, will make money panics an impossibility, and protect the people against the vicious methods heretofore employed by those who operate on Wall Street. Believing this, I shall give the bill my hearty and enthusiastic support. [Applause.]

Mr. FALCONER. Mr. Chairman, I ask unanimous consent to insert in the Record an editorial from one of the local papers of to-day.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the Record by inserting an editorial from one of the evening papers. Is there objection?

Mr. FOSTER. What is it about?

Mr. FALCONER. I will say that it has to do with the result of the election in Maine.

Mr. HELVERING. I had a notion to ask the same thing.

Mr. MURDOCK. The gentleman has in mind the wrong editorial.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. FRENCH. I ask unanimous consent to insert in the Record an address by my colleague from Idaho [Mr. SMITH] delivered at Fairview, Ohio, a large part of which discusses the suffrage question.

The CHAIRMAN. The gentleman from Idaho asks unanimous consent to extend his remarks in the Record as indicated. Is there objection?

Mr. FOSTER. Of course this will go in the back part of the Record?

Mr. FRENCH. Certainly.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HAYES. I yield 20 minutes to the gentleman from Minnesota [Mr. ANDERSON].

Mr. ANDERSON. Mr. Chairman, I send to the Clerk's desk a communication which I have to-day mailed to the Speaker, and I ask that it be read for the information of the committee.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

WASHINGTON, D. C., September 10, 1913.

To the Speaker and the House of Representatives:

I hereby resign as a member of the Committee on Ways and Means of the House of Representatives, my resignation to take effect immediately.

Very respectfully,

SYDNEY ANDERSON.

Mr. ANDERSON. Mr. Chairman, I have asked the indulgence of the House because due appreciation of established usages, a proper regard for the opinions of my colleagues on the floor, and a suitable respect for the rights of the people who sent me here and are entitled to know my motives as their public servant seem to require that I state, and perhaps amplify, the causes which induce me to take this somewhat radical and unprecedented step.

I can state those reasons in a sentence.

I am induced to resign my membership on the Committee on Ways and Means because the rules of this House and the system of legislation which is in vogue here deprive me of my opportunity for service to the country upon that committee, and because my continuance as a member of the committee must be construed into an acquiescence in a fraud upon those who have a right to believe and do believe that I have had or shall have some part in framing the legislation reported by that committee. I tell you, sir, that no man is worthy to represent the least of the people upon this floor who can justify his presence here upon a less ground than the hope that he may be of service to his countrymen and that by industry and the studious application of whatever ability he may possess he may make his service here of value. Yet, under the system of legislation which has been established here, he can indulge no reasonable hope of living up to the standard of service which he may properly set for himself.

The rules of the House, written and unwritten, deprive me of my opportunity for service, and the system of legislation, visible and invisible, which pertains here strips me of my preroga-

tives as a representative of the people. I should be unworthy of the great and intelligent constituency which sent me here if I did not resent it, if I did not protest against it. Nor is the situation in which I find myself unique. I know there are many men in the House who find their inability to make their industry and ability effective in legislation irksome and disheartening. If the present system continues, the inevitable result must be that men of industry and ability will no longer seek membership in the House.

The Ways and Means Committee is recognized as the great committee of the House. I accepted a place upon it in the hope that I might, by diligent study and industrious application, make my membership in the committee serviceable and of value to those who desire to see a genuine and scientific revision of the tariff. I have studied diligently and worked industriously, but I am forced to the conclusion, by the irresistible logic of events, that no amount of study or application on my part can avail under the system of legislation which has been here established to reduce the burdens or increase the benefits which might flow from such a revision.

I have had no part in making the tariff bill which passed the House and is now pending in the Senate. I shall have none. I am overwhelmed, discouraged, disheartened by the uselessness and the terrible fruitlessness of it all.

It is true that I am still permitted to cast my vote, but I do so with the foreknowledge that it will not count. The votes are counted and the returns made up before my vote is cast.

It is true that I may still offer an amendment, but though that amendment was suggested by the Apostle Paul it could not be adopted.

It is true I may still lift my voice in argument, but though my logic were as irresistible as the tide of human progress itself, and though I spoke with the voice of the Angel Gabriel, I could not change a line or sentence of the language of the bill.

My feeling with reference to the matter may be best understood by having recourse to the history of the tariff bill.

I have said that the Ways and Means Committee is the big committee of the House. For many years it has been composed of 21 members, as it is at present. Of this membership 14 are Democrats, 6 Republicans, and 1 Progressive. Seven of the Democrats come from States included in the 14 Southern States, to which I shall subsequently have reference. The Ways and Means Committee of the last Congress, of which I was not a member, held open hearings from January 6 to February 1, preparatory to constructing the pending bill. In my opinion these hearings were useless, so far as accurate information on cost of production or conditions of competition, either here or abroad, are concerned. Immediately following the close of these hearings the Democratic members of the committee held daily and secret meetings, during which the details of the bill were determined. What influences prevailed in determining these details, no one, except the majority members of the committee, knows. They have not taken the minority into their confidence any more than they have the public. These secret meetings continued until April 8, when the bill was reported, not to the House, but to a caucus composed of the Democratic Members. It was debated in this unofficial body until April 10, which was Saturday, and on the following Monday introduced by Mr. UNDERWOOD and referred to the Committee on Ways and Means. It contained 14 schedules, with upward of 4,000 items, affecting every considerable industry of the United States, and included, in addition to radical changes in the administrative provisions, a new section providing for a graduated income tax. On Monday morning, April 21, the whole committee was called together for the first time to consider the tariff bill. There was no discussion, no consideration, no opportunity for amendment or to vote on separate paragraphs or items. Some one moved to report the bill; the ayes and nays were demanded, and, upon the roll call, the bill was ordered reported. The whole proceeding occupied less than 30 minutes, and this was the extent of my participation in the framing of the tariff bill. It would be humorous if it were not so tragic.

Every day I receive letters, briefs, and petitions from people who labor under the peculiar delusion that as a member of the committee I may in some way help them; that I have had or may have some influence, some voice, in determining the rates or the language of the bill. I write them that it is not so; that I have had no part in constructing the bill, and will have none. My membership is at once a farce and a fraud.

Debate in the House began on April 23 and continued for 12 hours a day until May 8. Not a single amendment or suggestion offered by any one of the hundred and forty-odd members of the minority in 156 hours of debate was adopted. It follows as a necessary conclusion that the sum total of human wisdom had been expended upon the bill when it left the Demo-

cratic caucus, or that members of the caucus were bound by its rules, written or unwritten, to vote against any amendments offered by the minority, no matter how meritorious. The first proposition is absurd; but if it were not, its falsity is demonstrated by the fact that suggestions and amendments of the minority were adopted and written into the bill by the Finance Committee of the Senate. The undisputed fact is that the whole bill, in form and substance, was determined by the caucus beyond the possibility of change before it came into the House at all.

Under these circumstances it is proper to consider the caucus as an institution, its organization and its relation to legislation.

The caucus system is new only in form. In effect it has been in use for many years. The questions which it presents are not political. I disclaim any partisan purpose in discussing them at this time.

These questions reach the very foundation of representative government, for the effect of the caucus is to deprive the minority wholly of participation in the actual making of legislation. Under this system 141 congressional districts are wholly unrepresented. Nine States—Idaho, Nevada, North Dakota, Oregon, South Dakota, Utah, Vermont, Washington, and Wyoming—are totally deprived of any participation in the making of legislation vitally affecting their interests, for these States send no Democrats to the House and consequently are not represented in the legislative annex where legislation is really made. Eighteen other States are partially unrepresented. Eight out of 11 districts in California, Iowa, and Wisconsin, 9 out of 10 in Minnesota, 10 out of 12 in Michigan, and 25 out of 36 in Pennsylvania are wholly without representation. It requires no argument to demonstrate the iniquity of this situation. Its sectional and discriminative results are apparent in legislation.

The right of the people to representation in making the laws by which they shall be governed necessarily carries with it the proposition that their Representatives, when elected, shall have opportunity to participate in the actual making of legislation and that the prerogatives and powers essential to this participation will be preserved.

These essentials are not numerous. They may be summed up in the right of debate, to offer amendments, and to vote as one's judgment dictates, without coercion or restriction.

The caucus preserves the shadow but destroys the substance of these rights.

A Member may debate, offer amendments, and vote, but the verdict has already been rendered by a packed jury.

No one would claim that a man's right to a trial by jury was preserved if the jury impaneled were already bound to return a verdict against him. Yet this is the exact situation in the House.

The caucus not only destroys the representation of the minority but of a minority of the majority, for it binds the votes of both majority and minority of the caucus as a unit in the House against all suggestion, amendment, and debate.

It may be claimed that no action of a caucus can bind the vote of a Member on the floor of the House. Doubtless this is theoretically true, but every man who has felt the sting of the party lash and the prick of the organization spur knows that actually it is not true. It is not true.

There is yet another essential to good legislation. It is that the acts of Representatives should be always open to the scrutiny of the public. The Constitution recognizes this, for it provides:

Each House shall keep a Journal of its proceedings and from time to time publish the same * * * and the yeas and nays of the Members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal.

The caucus destroys the force of this provision. The caucus is the real legislative body and its proceedings are essentially secret. The yeas and nays and the proceedings of the House are valuable records to the public only when they record the real transactions of the House and the real attitude of its membership. The real attitude of the majority party, which under the caucus system is in complete control of legislation, is disclosed only in the caucus, and hence the record provided by the Constitution is a false or at least inaccurate and useless one.

Again, the use of the caucus system may be justified by some on the ground of its good purpose and of its occasional good results. I will not deny that some good things have been done even under the caucus system. The bills passed by that unofficial body have contained things for which I would be glad to vote. Yet the same reasoning which now attempts to justify a caucus would justify a despotism. I can not believe in a despotism because I know that despots have done some good in the world. Nor does the right of representation seem less

precious because it is denied by this benevolent beast, the caucus.

The caucus holds the same place in legislation that the holding company does in finance.

The holding company enables a few men to control the policy of great corporations by the investment of a small amount of capital.

The caucus enables a few men to control the policy of legislation by the exercise of a limited amount of power.

A financier who wishes to control a great corporation organizes a second corporation or holding company to hold the controlling interest in the stock of the first. He then controls a majority of the stock in the holding company. Thus he reduces the amount of capital necessary to control the policy of the corporation from one-half of the aggregate capital of the corporation to one-fourth—or less if the stock is widely distributed. Under this benevolent scheme the minority stockholder has no real voice in determining the policy of the corporation. The real control is not vested in a majority of the capital of the corporation, but in a minority owned by those who control a majority of the stock of the holding company.

It is all very simple and very effective.

The few men who desire to control the policy of legislation in the House organize the members of the majority party into a holding company—the caucus. Under a rule, written or unwritten, a majority vote of the holding company, the caucus, binds the whole membership of the caucus to vote as a unit in the House. Thus a minority of the membership of the House controls the legislative policy of the whole House in the actual making of legislation and renders ineffective the service, industry, and ability of the minority.

It is all very simple and very effective.

I quote from Thompson on Corporations:

New Jersey and perhaps a few other States now permit the organization of corporations known as "holding corporations." The design of such corporations in the light of their history is evident, and from this it is apparent that their real purpose is to form and foster monopolies and combinations. It is surprising at least that any legislature in recent years as against present antitrust and antimonopoly sentiments, should authorize the formation and existence of corporations for such purposes, and to make it easily within their power to practically neutralize and nullify all antitrust laws. Such institutions are only fathered by States that have gone "corporation mad." A holding corporation, as the name indicates, is one organized for the purpose of owning and holding the stock of other corporations. Such a corporation may acquire a part or all of the capital stock of any other corporation, either manufacturing or quasi public; and it is managed by a board of directors and, as the owner of a majority of the stock of any other corporation, the board of directors of the latter becomes the mere instrument or pliant tool for carrying out the designs of the holding corporation; and where any one holding corporation owns all or a majority of the stock of several corporations organized for similar purposes it can manage, control, and manipulate these as its designing directors may desire.

How illuminating this statement is when its terms are applied to the caucus system.

But the control of the legislative policy of the House is much more centralized than would appear from this simple statement. It would be obviously impossible for a few men to control legislation for long or upon many and varied subjects if the membership of the House were free to vote as the facts developed and their own judgment of those facts dictated. The interests of the country, taken as a whole, are too diversified to permit of the permanent organization of a majority of the whole House upon a variety of subjects of legislation. In other words, the control of a few can only be perpetuated by the establishment of a scheme which permits the few to outvote the many.

I am told that only very infrequently the total number of votes cast for or against a proposition in the caucus exceeds 100. It is not so difficult to find 100 men whose sectional interests are sufficiently identical to permit of practical organization and control by a few men.

The judicious distribution of patronage and the subtle but tyrannical power of the administration will accomplish much in this direction. I do not say that Members consciously permit themselves to be used by the few. I merely assert that community and identity of interests, such as is possible on sectional grounds, are strong factors in maintaining organization.

The concert of old Members, who, by long familiarity and usage, know the rules and are familiar with the methods by which bills may be sidetracked or gently strangled to death in the dark, so as never to reach consideration in the House, and who know how to oppose bills while exhibiting zeal the other way, and the rule of seniority in the appointment of committees, all conduce to perpetuate the rule of the few.

Fourteen Southern States—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and

Virginia—alone send 129 Democrats to the House, enough to control the legislative policy of the caucus, and hence of the House.

The Members from these 14 Southern States hold 38 out of a total of 58 chairmanships of committees in the House. They hold every important chairmanship save one.

Twelve Northern States—Indiana, Illinois, New Jersey, New York, Ohio, Pennsylvania, Massachusetts, Connecticut, Colorado, California, Montana, and New Hampshire—send 130 Democrats to the House. These 130 Democrats from 12 Northern States hold 14 chairmanships, all of which are unimportant save one, the Committee on Appropriations, held by the gentleman from New York [Mr. FITZGERALD].

The State of Georgia, represented by 12 Democrats, has the chairmanships of the Committee on Interstate and Foreign Commerce; Coinage, Weights, and Measures; and Education; while Indiana, with 13 Democrats, gets Expenditures in the War Department, and Printing. Alabama sends 9 Democrats and gets Ways and Means, Judiciary, Immigration and Naturalization, and Pensions, while New Jersey sends 11 Democrats and gets Elections No. 2, which is not a legislative committee at all. Missouri, with 14 Democrats, gets Expenditures in the State Department; Merchant Marine and Fisheries; Election of the President, Vice President, and so forth; Accounts; and Roads; while Ohio, with 19 Democrats, gets Elections No. 1, Invalid Pensions, and Enrolled Bills. Two of these committees do not have legislation referred to them. Virginia, North Carolina, and South Carolina send 26 Democrats, who hold 8 chairmanships—Banking and Currency, Foreign Affairs, Military Affairs, Claims, Reform in the Civil Service, Expenses in the Department of Agriculture, Agriculture, and Insular Affairs. Five of these committees are of the first class. Massachusetts, Connecticut, Colorado, California, Montana, and New Hampshire send 25 Democrats and get no chairmanships at all. The State of Texas sends 18 Democrats and gets 6 chairmanships, 2 of the first class, while the State of Illinois sends 20 and gets 3 chairmanships of committees, 2 of which never meet and the other of which is relatively unimportant. Tennessee, Kentucky, Louisiana, and Mississippi contribute 33 Democrats to the control of the caucus and are rewarded with 7 chairmanships, including Post Office and Post Roads, Naval Affairs, Territories, and the District of Columbia, while New York contributes 31 and gets 3 chairmanships, 1 of which, the Committee on Appropriations, is of the first class.

If these facts and figures merely demonstrated that discrimination had been practiced in favor of the South in the distribution of political plums, I should not complain. That is not my affair. But it requires only a little knowledge of the power wielded by the chairman of a committee in his committee room and on the floor of the House under the rules to see in these facts and figures a real significance.

Of course the chairman of a committee can not report a bill without the consent of a majority of the committee, but under the unwritten, and, I believe, the unbroken, rule no majority has ever reported a bill without the consent of the chairman. On the floor the bill is absolutely in his hands.

It is obvious that the power to say that legislation shall not be considered is the power to legislate. It is this negative power which lends real significance to these chairmanships. This negative or obstructive power rests in the hands of a few men and may be exerted at any of the various stages of the bill's progress toward final passage. It is greatly enhanced by the restrictive character of the rules and the inefficiency of the legislative system in general.

One's first impressions of the legislative machinery is of its tremendous inertia—the difficulty of setting the wheels in motion. This inertia constitutes the first line of defense of the obstructionist and reactionary. But once public sentiment has set the wheels in motion, the negative or obstructive power to which I have referred may be used to wholly prevent or nullify results.

Up to the close of the second session of the Sixty-second Congress 25,453 bills had been introduced. Of this number practically 22,000 were of a private character. Of the remaining 3,500 about 700 were reported.

Of this 700 bills, 196 became laws during the session referred to. Out of the total bills passed by the House at this session 120 were passed by unanimous consent; in other words, were bills of such private and local character that no single objection to their passage was made in the House. Of the remainder, 17 were appropriation bills, 6 were tariff bills, and the remainder public bills of more or less importance. An examination of the Record shows that practically no legislation which was not privileged under the rules or made privileged by special rules was passed except on Calendar Wednesday. The passing of the

parcel-post legislation, of the anti-injunction bill, of the good-roads legislation was made possible only by the passage of special rules. The whole situation may be summed up in the statement that, as a general proposition, substantive legislation is possible only by the suspension of the ordinary restrictive rules of the House and the passage of the bill under a special order. These special orders are always restrictive of the right of debate and amendments, and their passage can be justified only on the ground of necessity. This necessity should disappear under such reform of the rules as would permit of consideration of bills in the ordinary course of legislation.

The inefficiency of the system is startling both as relates to substantive legislation and the raising and expenditure of the public funds. For 10 or 12 days we spend 12 hours a day in the consideration of a tariff bill and then adjourn 3 days at a time for 2 months. We spend money on big things with a lavish and unconcerned prodigality. We are stingy in small things to a point of parsimoniousness. The system is extravagant and wasteful of both time and money.

I do not make a charge of inefficiency without evidence. For I made a somewhat careful examination of its results. The first regular session of the Sixty-second Congress convened on the 4th day of December, 1911, and adjourned on the 26th day of August, 1912. Sessions were held on 210 days, and on 19 of these days the House adjourned without doing any business; so that there were actually 191 days for the transaction of business. Eighty-three of these 191 days, or 43 per cent, were consumed in the initial consideration in the House of appropriation bills.

The appropriation bills, of course, must be passed every year. In the main they contain routine appropriations solely. The time consumed in their consideration prevents consideration of substantive legislation, and the method of their consideration conduces to tremendous waste of the people's money.

In this same session there were 139 roll calls and 44 calls of the House. Figuring an average of 40 minutes for a call and a legislative day of 5 hours, something more than 24 days, or 12 per cent of the time of the House, was used in calling the roll. Certainly it will not be claimed by me that the roll calls were too numerous, but I believe that the time consumed by roll calls is by far too great. With the increased membership in the House there is increased necessity for the adoption of a new method of calling the roll which will reduce the actual time consumed.

The present legislative machinery is the development of nearly 130 years. While great commercial concerns of the country are stretching every energy toward greater efficiency in the methods of conducting their business, we are content with an inefficient and absolutely wasteful system because that system has been handed down to us by our forefathers. If a business concern exhibited the same reluctance to establish new and modern methods in the conduct of its business as the House of Representatives does it would soon be left behind in the march of progress, outstripped in the race of competition. This is exactly what has happened in the House. We have simply failed to revise our methods and to keep the machinery of legislation abreast of the march of civilization.

Do the people of the country wonder why the great economic problems involved in the adjustment of the relations between labor and capital, production and consumption, the enlargement of the scope of our institutions remain unsolved and the demand of the people for popular government remains ungranted? There never has been a time in the history of the Republic when so many minds, so much genius in the people as a whole, was being expended in the attempt to solve these problems as now. Yet this great force finds no outlet for its expression in the adequate and necessary forms of law, because the machinery by which it must necessarily be expressed is inadequate for that purpose. So these problems, the demands for reform, pile higher and higher year by year.

Some day the people will come to understand that the methods of legislation must themselves be reformed before they can yield reform.

I do not contend that we should ignore the wisdom and experience of 130 years. I do contend that we should have the courage to tear down the crazy patchwork we have erected and by reconstruction make it efficient and responsive to popular demand.

If those who believe in progressive, scientific government should fail in their attempt to work out the economic reforms which they believe essential to the continued happiness and prosperity of the people, it will be because they have not recognized the importance of the machinery and its control in securing these reforms. As long as men opposed to reform are in control of the machinery by which reform must be effected there will be no reform.

I wish to make a fight for reform of our legislative machinery. In making it I want to be free from any obligation or sense of obligation to any man or set of men, unhampered by any sense of loyalty to a committee which unwritten rules may prescribe.

I am deeply sensible of the honor and prestige which membership on the Ways and Means Committee conveys to the public mind. The honor is an empty honor and the prestige fruitless under a scheme of legislation which deprives one of the opportunity for service which his membership should give. Indeed, these very facts—the presumed honor and prestige—make of such membership a fraud and deception.

I am fully persuaded that no substantive legislation which shall really respond to the demands of the people for reforms is possible of enactment under the existing system of legislation. Because I so believe, because that system is ineffective, because it disfranchises great sections of the country, and because it renders service and ability ineffective I am convinced that reform in rules, methods, and practices is to-day our greatest political necessity.

I frankly hope that the action which I have taken will emphasize the situation which exists in the House and that it will arouse the country to a real sense of the iniquity, injustice, and inefficiency of the system.

I frankly hope that what I have said will arouse the whole people to protest, to a determination to assert their right to effective representation. I believe they can be relied upon to act intelligently when they are well informed, and I shall have mistaken their temper if they do not, in the near future, demand the reconstruction of the system which deprives them of the vital right of a free government. [Applause.]

Mr. STONE. I yield 15 minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman and gentlemen of the committee, I want to say to the gentleman from Minnesota [Mr. ANDERSON], who just preceded me on this floor, that he need not be perturbed over the Democratic caucus. He need not be worried over the fact that a few chairmanships have gone to the solid South. I want to say to him that the Democracy of the South are not in politics for pie. The people of the South believe in Democracy. They believe and know that it is the party that will relieve the people of this country from the oppression of special privilege, greed, and graft. I want to say to him that this caucus of which he speaks has brought out the best tariff bill that this country has ever known. It has brought out a currency bill that is going to put the stock gamblers of Wall Street out of commission. It has brought out these measures for the people, and at the regular session in December we will bring out an antitrust bill and enact it into law that will relieve the people of this country from the great oppressors of humanity. [Applause.]

In my judgment this is a great piece of constructive legislation, and under the genius of this Government is the most appropriate legislation that could be made touching the currency system.

There is not an intelligent, thinking man within the broad domain of this great Republic who does not know that some reform is needed in our banking laws. The Republican Party endeavored to fasten the Aldrich bill upon the people of this country.

The wicked Money Trust and all of its allies wanted the Aldrich bill to become the law of this land, because the powerful banks that belong to that system and all of its allied industries would still be able to control the money of the United States through the central bank as proposed in that scheme.

The American people and all independent enterprises would have continued to remain helpless in the time of financial stress and storm if that measure had been enacted into law.

The people of this country looking for relief have turned their faces to an independent and honest Democracy. Will they get that which they seek?

The Glass bill is not perfect, but, gentlemen, it is sufficient to give great relief, and absolutely sufficient to prevent a money or bank panic in the United States. It is the best bill that could consistently be put into operation now.

I am for the bill and want to see it enacted into law at the earliest possible moment.

This measure is for the benefit of all the people and all legitimate banking and other enterprises.

Who is it that finds fault with this currency bill, which proposes to have the money of this Government deposited, drawing interest, in 12 regional banks in this country under the control of the Government, and all currency issued to be guaranteed by the Government itself?

When you come to the last analysis, it is that crowd of bankers in New York that have such close relations with the stock

exchanges, and have for all of these years been keeping the reserves of the other banks of this country to promote stock gambling instead of fostering legitimate business.

Some of these potential influences induce legitimate country bankers to believe that this bill will be detrimental to the banking business.

Why is it that the American Bankers' Association at its meeting in the city of New Orleans unanimously indorsed the Aldrich bill when many bankers present and voting had never read the bill, much less spent any time studying it and applying its provisions to practical banking?

Who can explain why many of these same bankers condemn this bill, which insures a square deal to all portions of the United States and every branch of legitimate industry?

After the faultfinders discovered that they could not change the Glass bill in the House they moved the seat of their operations over to the Senate.

The President of the United States is behind this bill, and everyone knows that he is patriotic in his endeavors to secure the best currency law possible for all the country. [Applause.]

He has no favorites and is always ready to do battle against the Money Trust and all forms of special privilege. [Applause.] The gentleman from Kansas [Mr. MURDOCK] waxed eloquent, forsooth, because the Democratic caucus did not prohibit the interlocking of directors in this bill. He ought to know that the Democracy in that same caucus passed a resolution instructing the Judiciary Committee to bring out a bill early in the next session of Congress that will cut this cancer from the body of commerce in the United States. [Applause.]

The Democracy is going to pass then an antitrust law that will have iron teeth in it.

At an early date the gentleman from Kansas and his crowd will have an opportunity to help decapitate every commercial vampire in the United States.

There is no man in Congress who is more anxious than I to break up the trusts in this country, but we can not do everything in a day.

We can not prevent the interlocking of directors in this banking bill, but it will be done later.

Many of us thought it ought to go into this law as a part of it, but wiser and more experienced heads in our camp said not.

Everybody knows that the interlocking of directors in the big banks, industrial, quasi public, and public-service corporations is one of the worst evils known to modern business in this country.

This iniquitous feature of the greed, avarice, selfishness, and corruption in the abuse of corporate power is the daddy of trusts, unlawful combines, and monopolies.

The sworn evidence before the Pujo committee makes it plain that the Money Trust does exist in reality, and that all of the trusts of this Republic are directly connected, interlocked, and allied with this powerful vampire.

So long as the present money and banking system continues, the money power will be able at will to grip its avaricious hands upon the American people.

The disclosures before that committee made it known to all men that the money power is connected with the Wall Street gamblers in stocks and bonds, cotton, and other agricultural products.

The same evidence shows that the panic in the fall of 1907 was brought on by the gamblers in New York City when the big banks let them have virtually all of the reserves of the banks of the United States. Gentlemen, all of that element of citizenry has engendered an especial hostility toward this bill. The law which the Democracy is giving this country prevents and prohibits a single dollar of the currency issued under the provisions of this measure from being used by the speculators and gamblers on the stock exchanges.

This is a wise provision and ought to be the law always. The Glass bill is for the producers in this country, all legitimate commercial and agricultural business. Speculators never produce anything; they simply work schemes to acquire the wealth that working people produce by their effort and labor. Of course none of this currency should be allowed to go into any such channels.

GOVERNMENT CONTROL.

The gentleman from California [Mr. HAYES] and the gentleman from Wyoming [Mr. MONDELL] seem to be very much exercised over the fact that the President appoints the board that is to be the real head of the reserve association. They fear grave danger of political and partisan rule. How can some of these faultfinders reconcile their speeches now with their votes on a prior occasion when they voted for the Vreeland-Aldrich measure, which gave one single appointee of a President of this Republic the power to issue \$500,000,000 of currency without consulting anybody?

I want to say to you, gentlemen, that the people want the Government to control the banks under this bill, but the special-privilege crowd are all exceedingly anxious that the banking fraternity should control the board. I stand for the rights of the people of this country, and I am voting for them to control through the President and the Senate, for the people in the final analysis are financially responsible for every dollar of this currency. There never was a gold dollar in the world any stronger than the currency that will be issued under the provisions of this bill, and every banker who has studied this measure knows this is true.

The Wall Street crowd realizes that this piece of legislation is taking away from them the power to control the money and to a large extent the agricultural products of this country; that is the chief reason why this opposition appears to regional reserve banks and Government control.

All of that crowd is very anxious for a central bank. What the people want and need is decentralization. They want this money scattered out over the whole country so all legitimate enterprises everywhere can have a chance at this money to carry on business without bowing down before the golden calf in the temple of the money power, and paying exorbitant rates of interest, and in panicky times being informed that they can not get any money at all.

My friends, do you know that the greed and selfishness that operate in the hearts of some men who have money to lend actually makes them want money to be scarce and hard to get so that the interest rate will remain high? If you do not know this go out and talk with some honest money lenders who will tell you the truth.

We are all human; and bankers are actuated by the incentive to make profits, and it is natural for them to obtain as high a rate of interest as they can get. Most people do this when they loan money.

It is the duty of Congress to allow them reasonable profits, and it is the further duty of Congress to do all in its power to make conditions such that the borrowers of money for legitimate enterprises can get money at reasonable rates.

AGRICULTURAL FEATURES.

This measure permits the farmer to have a show to get money to carry on his business as well as any other enterprise.

He has the right to hold his crop to get a fair profit for his labor.

Under our present system the cotton farmer is forced to sell his cotton in the fall because the banks can not let him nor his merchant have the money to hold the cotton for several months in order that he might get the proper price for his cotton.

The same thing is true of other agricultural products. Under this bill the local bank can let the farmer have money for six months on his cotton stored in a warehouse; and after the local bank has carried the loan for three months that bank can rediscount the note at the reserve association bank for the remaining three months, and when that time expires he can renew the paper for six months more under the same plan.

The farmer is not any speculator, but is a wealth producer and is entitled to share in the benefits of this measure. The intimation that he is a speculator when he holds his crop for an honest price is tantamount to an insult to the honest, hard-working farmer. [Applause.]

The stock and cotton exchanges have been gambling in his product all of these years, and instead of his labor being valued by him himself it has been valued by the gamblers in his products.

The merchant knows what he is going to charge for his goods in order to make a profit, and he fixes the price and holds his goods on the shelf unless he gets the price at which he has marked them.

The farmer takes his cotton to town and asks the merchant what he will give him for his cotton.

His merchant tells him he has just received a "wire," and the figures in that message is the market price.

It may be much below the cost of production, but the farmer has to accept it because he owes the merchant, and neither he nor his merchant can get banks to carry loans for any great length of time. The cotton gamblers fixed that price, and the poor farmer is helpless. The Glass bill will not let any of this money go to these cotton gamblers, but it will permit the merchant and the farmer to borrow this money, so that the product of the farm can be marketed in a gradual and opportune way in order that the real law of supply and demand will govern the price of farm products. This ought to be the rule of all human labor. If the farmer did not owe anybody, he could hold his crop; but necessity forces him to sell all of his crop in the fall of the year. He certainly needs the help of this currency bill.

RURAL CREDITS.

The agricultural classes have always been compelled to pay a high rate of interest. In my district the farmers never could borrow more than 40 per cent of values, and the rate was from 8 per cent up—mostly up. [Laughter.] The poorer the man the higher the rate of interest that is charged. In other words, if he is poor, he is going to be kept poor under the system that is now in vogue. Our banks always desire to loan their money to the very best advantage to the bank, and this is good, sound policy, and it is one reason why the small farm borrower is compelled to pay a high rate of interest. I am in favor of this Government establishing a rural credit system similar to the system now in force in some of the foreign countries. The farmers of the United States are the backbone of the country; they are the real wealth producers, and should have every opportunity to develop the agricultural business and live in ease and comfort.

Our caucus passed a resolution directing the Committee on Banking and Currency to bring out a rural credit bill at the next session of Congress.

It is time that Democracy is getting busy to show the people that legislation will be enacted for the whole people, instead of special favors for the privileged classes.

Farm lands constitute the best security in the world and certainly should be entitled to low rates of interest, for the profits of the farm are generally small.

The rural credit system will enable the farmers of this country to borrow money at less than 5 per cent, which will inspire them to heroic efforts in the race of life.

Some people call this populist, but I am for it, because I know it is thoroughly practicable and will not only be of untold benefit to the farming class but will develop the greatest business that the world has ever known.

When the farmers are prosperous the bankers, merchants, laboring men and professional men, and transportation companies prosper in proportion.

You stop the farmers in the United States for 24 months and the wheels of commerce would stand still and famine would be in the land.

Gentlemen, you had just as well get ready to pass the bill establishing a rural-credit system in this Republic, because it is coming, and coming in a hurry, too.

If we do not give the American people this great constructive legislation after we pass this currency bill the people will put men in Congress who will come to the front with such a law.

The honest citizenship of this country means to keep Representatives in Congress who will constantly wage war against special privileges and do courageous service for the rights of men. [Applause.]

Mr. HAYES. Mr. Chairman, I now yield 20 minutes to the gentleman from Massachusetts [Mr. ROGERS].

Mr. ROGERS. Mr. Chairman, you will perhaps recall that a few days ago, when the Caminetti case was under discussion, and when the distinguished chairman of the Committee on the Judiciary was engaged in his eloquent but vain attempt to defend the Attorney General, a new Member on this side of the aisle had the effrontery to ask him a rather embarrassing question. The gentleman from Alabama most courteously and convincingly answered him somewhat in this wise: "You new, fresh Member, I do not know you or where you come from."

I am aware that as a result of a few observations which I desire to make—and which ought to be embarrassing to the Democratic Party, whether or not they will be so in fact—I am laying myself open to a similar retort courteous. There is so much that is wholly admirable in the Federal reserve act to reform our banking and currency system that I do not intend, at all events until later in the debate on the bill, to criticize the relatively few provisions thereof which seem to me fraught with danger to sound banking methods. I desire at this time to consider an aspect of legislation which has been forced upon the attention of us all by the star-chamber methods which have attended the framing of this bill.

As a newcomer here I have for the past five or six months been studying the modus operandi of legislation in this House. But, alas, I can not understand. If the fault is mine, I want to be enlightened. I came to Washington with certain preconceived ideas. I came with the idea that all Representatives in Congress, like all men, were born free and equal, and as such had equal rights, duties, and privileges in shaping legislation. But my observation has already shown me that in the Sixty-third Congress those rights, duties, and privileges belong only to the Democratic majority members.

It is true that a member of the minority may, at the whim of the majority, express his views; but even so, he is forced to the realization that he but wastes his time and his breath,

for the edict has gone forth that no minority ideas or suggestions, however meritorious, shall be adopted in matters of real moment.

Mr. Chairman, does not such a condition contravene the spirit of the Constitution of the United States? And does it not impair the usefulness of the House to reject the counsel of a considerable portion of its membership? I believe in parties, and I freely admit the responsibility of the party in power in shaping legislation; but no party has a monopoly of wisdom. An individual may, if he will, refuse the advice and guidance of others, for he only is the loser; but the party in power, the steward and the servant of the whole people, can not honorably pursue any such course. There is an esprit de corps, a pride of association, that in political contests often bind men together. But I had believed in my innocence that when men took office they would and should subordinate party obligations to the general welfare, and that it was both unpatriotic and dishonorable for a man—no matter at whose behest—to vote contrary to his convictions. And so it has been with feelings of regret and disappointment that I have seen that in this House the chief consideration of the majority—indeed, the only apparent consideration—has been given to party prestige. The Democratic Party has shown all too clearly its apprehension that that prestige might be impaired if tendered and often sorely needed aid were accepted from the minority.

Take the case of the tariff bill. Parties differ in policies and principles, and it was but proper that the Democratic Party should, in the first instance, attempt to draft a bill which should accord with the policies and principles of that party. But there were in the bill so drafted many, many things which were not only indefensible in themselves, but which were diametrically opposed to the Democratic platform and to the prelection promises and pledges of the leaders of the party. And they are in that bill to-day. Whether because of pride of opinion, of caucus obligation, or of Executive pressure, the attempt of the minority to save the majority from error and the country from dire disaster was spurned. This same tendency to regard all the patriotism and all the common sense and all the wisdom as exclusively possessed by the majority was but too manifest in the treatment of the Caminetti case, of the deficiency bill, and for a time—though happily not for long—of the Mexican situation. And in the second great measure to be considered at this special session the Democratic Party appears to be riding to the same kind of a fall.

The so-called currency bill, said to be the child of the brain of some principal whose name and even whose identity are still undisclosed, has been pored over for some weeks or even months by the Democratic members, or by some of the Democratic members, of the Banking and Currency Committee. It is no discourtesy to them to say that they are amateurs in the great problem which has taxed some of the greatest experts and thinkers of the world. Only 5 of the 14, I believe, were even members of that committee six months ago, and but one was a member of it prior to the last Congress; indeed, but two of them were in Congress at all. It is, perhaps, not too much to say that if any one of us were stockholders of but one national bank he would not trust its destinies to the good offices of these amiable amateurs. And yet they are to tear up by the roots the entire banking system of the United States, the country whose industries are the most colossal and manifold and whose financial system is the most complex of any Nation on the globe. These gentlemen are not to be blamed for their inexperience, for this shortcoming is inevitable in a committee of this House dealing with a subject at once so intricate and so little understood. There is no disposition, either, to doubt that they have done the very best that they, unaided, could do. But the country has a right to blame them most bitterly for having declined assistance, from whatever source derived; for having refused to throw open the doors of their committee room—as did even the Democratic Committee on Ways and Means—to anyone who might attempt to give aid; for having brought to the framing of this bill the methods of the recluse and the hermit.

Mr. SMITH of Minnesota. Will the gentleman yield?

Mr. ROGERS. Yes.

Mr. SMITH of Minnesota. Does the gentleman mean to say that the whole Committee on Banking and Currency has not considered this bill?

Mr. ROGERS. I mean to say that the minority Members have had no participation whatever in framing this measure.

Within but a few days, for example, the majority Members have refused to give ear to men already in Washington, already in conference with a committee of the Senate—men of ideas, ability, and experience, whether or not their views were in all respects worthy to be followed. The minority members of the

Banking and Currency Committee have until a few days ago been kept from the committee room, have been as ignorant of the progress of events as if they were afflicted with a contagious disease. Of what use is a minority Member on the floor of the House or in committee if participation is denied him and if all legislation of importance is practically completed before it even sees the light of day in full committee or in this Chamber? Is legislation by caucus to be substituted for legislation by the great House of Representatives? For a season, perhaps, but I am bold to think not for long.

Mr. TREADWAY. Will the gentleman yield?

Mr. ROGERS. Yes.

Mr. TREADWAY. I would like to ask my colleague if the same statement he has made about banking and currency applies to the Committee on Foreign Affairs, of which he is an honored member?

Mr. ROGERS. In answer to that, I may say that although there was at one time an apparent disposition on the part of the majority Members to keep in exclusive control the problems before it, yet later, as a result of the urgent representations of the minority leader, that situation has been somewhat remedied, and the minority Members lately have been received freely and cordially in the conclaves of that committee. [Applause on the Republican side.]

Mr. TREADWAY. May I ask one other question? I am very glad to hear that there is at least one committee where minority Members are being fairly treated, and I infer, perhaps rightly, that the Member from Massachusetts would not therefore consider it necessary to resign from that committee, as has another Member within a short time from the Committee on Ways and Means.

Mr. ROGERS. My resignation has not yet been prepared.

Mr. Chairman, if men older and wiser than I are to be believed, not in the palmist days of Czar Reed and of Speaker Cannon was the monarchy a tithe as absolute as now. Never did the lash of the presidential and caucus whip cut so deep as to-day. It is not strange that one Democratic Member of this Congress revolted. The only wonder and pity is there were not many more. The Democratic Senator from Nebraska [Mr. HITCHCOCK] said in the course of debate on August 29 last, after the debate on the tariff bill had been in progress in the Senate six or seven weeks:

Mr. HITCHCOCK. Mr. President, this is the first amendment to the tariff bill which has been proposed from the Democratic side.

To my mind it was, to say the least, a mistake to endeavor in a Democratic caucus to bind the individual to the details, for instance, of the pending section providing an income tax. It seems to me that the individual Democrat, like the individual Republican, ought to be permitted by his party to stand here and vote for his convictions.

After all, Senators here were elected to the Senate not to a caucus, and it is in the interest of the public welfare that great questions of this sort be debated in public and decided in public, particularly when we are engaged in formative, fundamental legislation of this sort.

So, Mr. President, it seemed to me a mistake when my party undertook to decide the details of the income-tax bill in the caucus. Still, I did not leave the caucus on that account. I left the caucus when I asked the privilege of being permitted in the open Senate to introduce a legitimate amendment for the taxation of trusts, and that privilege was denied me. I asked it not only for myself but I asked it for other Democrats on this side of the Chamber who believe in the principle and want to see it engrafted upon the pending bill. Those men, if compelled to vote against my amendment, which I am here to-day to urge, will have difficulty in explaining to their constituents why they have done so. It is not right for the party to put them in that position when no great party issue is involved.

It has been an unpleasant sight to me, as it has been to many Democrats during the last few days in this Chamber, when Senators on the Republican side of the Chamber have proposed amendments to the income-tax provision that appeal to the sense of justice and appeal to the judgment of Senators on this side, but who, because of caucus rule, were compelled to vote against such amendments. I do not think that is a worthy sight in the Senate of the United States. I do not believe it is right to bind individual Senators and compel them to vote against their conscience and their judgment upon such amendments when no party policy is involved.

Mr. President, in order to justify myself for the position I am taking, I shall go a little further, and perhaps verge upon the improper in reference to the Democratic caucus of which I was a part. Like all caucuses, I believe the fact to be that our Democratic caucus degenerated into a political machine.

The votes have been published, so I am revealing none of the secrets of that caucus when I say that 18 Members of the Senate voted for my amendment and 23 appeared to vote against it. I say "appeared" because it is a fact, which I shall take the liberty of stating, that the nine Democratic members of the Committee on Finance voted as a unit, regardless of their convictions. So we have a wheel within a wheel, a machine within a machine. The inner machine controlled the caucus. The vote cast was not the correct expression even of the caucus.

That same day, as it happened, appeared an editorial in the Washington Times, a portion of which appears apposite in this connection:

The trouble is that under the rigorous system that came in with Democratic control the caucus is used to enforce organization policies to the last detail. In effect, it is the instrument by which a garrote is fastened on the throat of all individuality and independence.

From this status to that of an arrogant bossism and a contemptible servility the step is shorter than perhaps leaders of the now dominant party realize. The men who, holding the reins of power, drive hard and

fast, generally feel pretty confident that their destination is a good one. But they fall too easily into ways of tyranny and arrogance. No better method of legislation has yet been devised than that of open and frank discussion, free and untrammelled voting, and honest determination of the majority's wish.

Small wonder that there is growing revolt in both Houses against the extremes of caucus rule. Caucus rule, through which a few bosses imposed their will on the party and through it on the country, was the real thing that wrecked Republicanism. It will wreck Democracy, too, in time, and in a good deal shorter time than it required in the other case, for the country understands better now and is less willing to be patient with such methods.

It is a good time for leaders to have a care and avoid becoming drivers. Drivers are not much in political vogue nowadays.

If, as the proverb says, there is wisdom in the multitude of counselors, the legislative efficiency of all the Members of the House should be greater than that of any fraction thereof. Why not, then, give the country the benefit of the greater efficiency instead of intrusting its interests exclusively to a membership majority, especially when that majority is fortuitous and does not represent in its sentiments a majority of the people of the United States? And why not make it a virtue—which it is—and not a disgrace—which it is not—for a Member who may approve of a bill as a whole, but who at the same time objects to certain details, to voice that objection, not in a caucus, secret and without legal standing, but in the Halls of Congress where alone, under the sanctity of the Constitution, legislation can be enacted. It is only in this way, Mr. Chairman, that the National Legislature can cease to be but an adjunct to the Executive and again achieve its proud and constitutional position as a coordinate branch of the Government of the United States. [Applause.]

Mr. STONE. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to; accordingly, the committee determined to rise, and the Speaker having resumed the chair, Mr. SHACKLEFORD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837, the currency bill, and had come to no resolution thereon.

RECESS.

Mr. STONE. Mr. Speaker, I ask unanimous consent that the House take a recess until 8 o'clock.

The SPEAKER. The gentleman from Illinois asks unanimous consent that the House take a recess until 8 o'clock. Is there objection?

There was no objection.

Accordingly (at 6 o'clock and 14 minutes p. m.) the House was in recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House was called to order by the Speaker.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill, with Mr. GARNER in the chair.

Mr. GLASS. Mr. Chairman, I yield 45 minutes to my colleague of the committee, Mr. SELDOMRIDGE. [Applause.]

Mr. SELDOMRIDGE. Mr. Chairman, the responsibility for legislation in our country always rests with the party in power. The Democratic Party could not if it would evade this obligation, and its right to receive the continued confidence and support of the people depends in large measure upon its ability to direct and control the great executive and legislative forces of the Government. Performance must now give place to profession and legislative act must square with platform declaration.

For the majority to share this responsibility of administration with the minority would be to confess its incapacity for government and its inability to legislate on matters affecting the general welfare of the country.

A political party, like an individual, can not remain stationary; it must develop or deteriorate. The person whose mind lies dormant and inactive soon finds himself outstripped in the race of life, and the party which does not rise to conditions of growth and enlargement of service will ultimately be discredited and relieved of power.

The Democratic Party to-day is better qualified to perform a great constructive service to the country than any other political organization. Through the past 17 years of defeat it has been encouraged and stimulated by the fact that it stood for certain great principles of government that ultimately would bring victory to its banners. Those who were lured by

the prize of office and the benefits of privileged legislation forsook its ranks and left the party purified, strong, and aggressive to carry out the policies to which it had been committed.

The President, mindful of the great responsibility resting upon him as the leader of his party, has not left the country in doubt as to the constructive policies which it should advocate. Recognizing the overwhelming majority cast against the Republican organization, not only as a protest against its subservience to great privileged interests but also as a demand for remedial legislation, he did not hesitate to convene the Sixty-third Congress in extraordinary session to consider two great legislative measures of constructive character.

The Underwood tariff bill will soon be enacted into law. It is an evidence of Democratic fidelity; it measures foursquare with Democratic declarations on the tariff; it strikes true to every note of Democratic policy. We can go to the country on this measure with clean hands and a clear purpose. We have kept the faith, and we will receive the reward which is assured to those who are true to principle and profession. The country will not reject the Democratic Party because its record on tariff legislation is indefinite and open to misconception. The law is clear and explicit, and we challenge our opponents to meet us on the issues raised through its operation and enforcement.

We are now asked to consider a second great constructive piece of legislation in the proposed banking and currency law which has been reported to the House and which bears the imprint of party approval. No one questions the need for currency legislation at the earliest possible date. Even before the unforeseen panic of 1907 the press and forum resounded with appeals to Congress for relief along this line. The Republican Party recognized the force of these appeals when it established the National Monetary Commission and sent it abroad to gather material for congressional action. Had that party remained in power there is no doubt that it would have been committed to the policy outlined by this commission and would have given over the great banking agencies of the country to private control and operation. The Democratic Party has no apology to make for discarding the law proposed by the Monetary Commission, as it is definitely committed to a policy of Government control as against private control.

Our present banking and currency system is largely the outgrowth of necessity. It was established during a period of great financial stress which was produced by the Civil War. It was not the result of profound study and investigation, but was the product of imperative conditions. The demand for revision of our currency laws largely arises out of our marvelous national development, and also the obligation to lay strong and secure foundations for the needs of the future. We must establish workable monetary machinery which shall adjust itself to the ebb and flow of the tides of domestic and foreign commerce. We do not condemn the great financial leaders of the past for the present inadequate nature of our currency laws. They faced great national emergencies, and we recognize the fact that the measures which they proposed met the needs of their day and brought the ship of state safely across tempestuous seas to a safe and secure harbor.

The greenback and national-bank note have performed a useful but costly service in our financial system, but no thoughtful student of finance contends that they should have a permanent place in our currency supply. The marvelous development of our natural resources, the widening of our export trade, the increased production of gold, and above all, the confidence of our people in the integrity and permanency of our Government, have been the causes which have spared our financial system from collapse and failure to meet its requirements.

There are always those who assert that the old way is better than the new; that the machinery of to-day will surely do the work of to-morrow; that we should be content with present appliances and not concern ourselves with those that may be needed for the greater tasks of the future. This doctrine is absolutely abhorrent to progressive spirit; if accepted and followed it would check national growth, stifle enterprise, and dull the ardor of individual ambition.

Our financial legislation for the past 50 years has been of the patchwork variety. We have tried in many ways to repair a defect in one particular, only to learn in a few years that more serious defects existed. We have finally arrived at the point where there is general agreement that we must abandon our present system and adopt one which is more responsive to modern conditions and which promises security and adaptation to future growth.

In discussing the bill before us one is strongly tempted to indulge in a recital of the banking and currency history of our country, but such reference would be of little benefit in the consideration of this measure, which deals with present condi-

tions which are the outgrowth of our marvelous national expansion. The experiences of the past should teach us the path of safety and prudence in matters of this nature and point the way to successful and proper legislation.

In order that we may understand some of the benefits that are expected to follow from the passage of this bill, let us briefly consider some of the defects of our present system and the means proposed to overcome them. Prof. Laughlin, who holds the chair of political economy in the Chicago University, has clearly stated some of these defects to be, first, inelasticity; second, the ineffective use of our gold supply; third, dissolving tendency of our bank reserves in time of panic; and, fourth, the lack of coordination of operation by the banking institutions of the country.

The Banking and Currency Committee during the months of January and February of this year conducted a series of exhaustive hearings regarding this proposed legislation. Statements were made before the committee by men who are recognized as authorities in the domains of finance and commerce regarding the defects of our banking system and the proper means to remedy them. There was general agreement that our present system is inelastic; that it is not related in any way to the demands of trade or exchange. Our gold and silver certificates, Treasury notes, and national-bank notes are all fixed in volume, and the quantity in circulation may be out of all proportion to the actual needs of the people. Under our present system the circulation expands when interest rates are low and prosperity prevails. There is no power of contraction, and when panic symptoms appear there is an abnormal demand for currency, which, owing to the rigidity of volume, can not be supplied. This results in a contraction of loans and withholding of credit, which causes loss and embarrassment in all lines of trade and industry. This abnormal demand for currency always produces an increase of interest rates, which falls most heavily upon the producer and consumer.

In 1912 the total bank deposits of the country amounted to \$17,024,067,606, and the amount of money in the United States at the close of the fiscal year, June 30, 1912, exclusive of national-bank circulation, was approximately \$3,648,800,000. Of this amount, according to the report of the Comptroller of the Currency, \$364,300,000, or 9.98 per cent, was in the Treasury as assets; \$1,563,800,000, or 42.86 per cent, was in reporting banks, excluding those of the island possessions; and \$1,720,700,000, or 47.16 per cent, was in circulation among the people. The per capita circulation in 1912 was \$34.34, an increase in 10 years of \$5.91.

In 1909 for every dollar of bank capital in existence there was \$5.30 of deposits. In 1912 for every dollar there was \$5.63 of deposits. Against every dollar of capital in 1909 there was loaned out \$5.43, and in 1912, \$5.77. For every dollar of capital, an individual deposit of \$2.87, and in 1912 there was \$2.96. In surplus, and other profits of national banks in 1909 there was 1909 the ratio of specie and legal-tender money to individual deposits was \$1 of specie to \$5.87 of deposits, and in 1912 it was \$1 to \$6.58. These figures are taken from the comptroller's report of 1912 and are based upon the reports of national banks only.

I present herewith a table of all reporting banks—national, State, trust companies, savings, and private—for the years 1909 and 1912, which fully demonstrates the growing function which credit performs in our business transactions and how necessary it is that this function should be recognized and promoted in legislation of banking character:

	1909	1912
Showing ratio of capital to—		
Individual deposits.....	\$1.00-\$7.80	\$1.00-\$8.51
Loans.....	1.00-6.32	1.00-6.98
Aggregate resources.....	1.00-11.72	1.00-12.49
Showing ratio of capital and surplus to—		
Individual deposits.....	1.00-3.86	1.00-4.03
Showing ratio of specie and legal tenders to—		
Individual deposits.....	1.00-9.87	1.00-10.33

I have presented the above figures to demonstrate the fact that we are constantly expanding the loaning power of our banks. The danger of this expansion does not lie in the fact that it is founded on too small a reserve of lawful money, but in the fact that there is no regular method of expansion and contraction. What we are striving to do in this bill is to create such an operation of loaning functions as will produce currency when needed and cause it to be withdrawn when the necessity for its use has disappeared.

It may be claimed that these figures demonstrate the effectiveness of the present law, but we have no assurance that the

conditions which obtained in 1907 may not be repeated with even greater disastrous consequences. The bill under consideration provides for elasticity of the currency through the following procedure, which can best be demonstrated by the use of an illustration:

Jones is a merchant who desires to borrow \$1,000 from his bank in order to purchase goods for his fall trade. Under the operation of this bill he would take his note to his banker and request the loan of \$1,000 for 60 days. The banker accepts his note and the transaction as far as Jones is concerned is closed until the note matures. Other merchants find themselves in need of funds and they, too, discount their paper with the banker. Later on the banker finds himself unable to meet the demand made upon him for loans, and in order to meet these demands, which are legitimate and for commercial purposes, he takes the notes made by Jones and other merchants to the Federal reserve bank of his district and offers them for rediscount. The Federal reserve bank finding that the paper presented comes within the provisions of the law accepts it for rediscount, taking the bank's indorsement as security. If the Federal reserve bank finds itself unable to issue currency for the paper without encroaching upon the reserve requirement of this bill it will take the paper presented for rediscount to the Federal reserve board at Washington and request the issuance of Treasury notes to the amount of paper presented. The Federal board will grant the request if it is satisfied the security is sufficient, and will issue the Treasury notes upon the indorsement of the Federal reserve bank. The transaction is a simple one and the borrowers have received the accommodation desired, which has enabled them to purchase the goods for their customers and helped the producer to that extent.

Let us take another illustration: It is harvest time in the West; farmers are bringing their wheat to the market and are anxious to secure currency with which to pay their debts which have accumulated during the winter and spring months. The resources of the banks have been taxed to the utmost and many bankers find themselves at the limit of their loaning power. Under the present law there is no place to which they can go for relief except to the large central reserve banks. It is possible that they may be able to find funds with which to supply their customers, but these are often procured at an additional interest cost; or it may be that they will find the funds in the city absolutely unavailable, and then the cry goes up for help from the Treasury Department. But what will happen in this crop emergency under the present bill? The agricultural bank will find ample facilities for the rediscount of its agricultural paper and the stress upon our banking institutions at times of crop movement will be largely relieved. It is a strange paradox that a wealthy nation like ours should find itself annually in a condition of financial inability to meet the needs of our agricultural sections. We claim for this bill that these needs are fully supplied, and if it accomplishes no other purpose than this, it should be entitled to general support.

The currency which will be issued against the paper described in the bill will have back of it several guarantors: First, it has the liability of the original maker; second, it has the indorsement of the local bank, which carries with it not only all of its assets, but also the double liability of its stockholders; third, it has the indorsement of the Federal reserve bank, which carries with it the assets of all the member banks, together with the double liability of their stockholders and also the assets of the Federal reserve bank, including a gold reserve of 33½ per cent; and fourth, it has the guaranty of the General Government.

This, it seems to me, illustrates the method of expanding the currency under the law proposed. In 60 days the merchant has sold his goods and is ready to pay off his note. The bank then withdraws the collateral from the Federal reserve bank, which then proceeds to cancel the amount of Treasury notes issued against it, and the transaction is closed, the currency being contracted to that amount.

It seems to me that the machinery thus provided in the bill for meeting the defect of inelasticity is ample and satisfactory. We believe it will do much to stimulate commerce in all parts of the country, prevent harmful and unreasonable contraction of loans, and give to every legitimate commercial enterprise an opportunity for development.

In my judgment, it also provides for the most effective use of our present gold supply and protects it from being depleted from foreign sources. The currency system of the United States to-day is thoroughly established on the gold standard. We must see to it that every dollar of currency that circulates among our people is backed up and supported by a reserve of gold. In none of its provisions does this bill disregard this fundamental necessity, and no charge can be made that the leg-

islation we here propose in any way influences or disturbs our monetary stability. The world's production of gold increased from 6,320,000 ounces in 1891, with a value of \$130,650,000, to 22,327,000 ounces in 1911, with a value of \$461,542,000—a period of 20 years. There is every reason to expect that the production of gold will continue to increase instead of diminish. The methods of extraction treatment are constantly being improved, and it is now possible to obtain large margins of profit from ore of low-grade value which in former years was allowed to remain as waste. It is possible, therefore, in view of the increasing production of gold and its availability as basic money, to build up our currency system along the lines proposed in this bill. Not only will it be possible for us to maintain our supply of gold, but the bill will enable the Government to be relieved of the strain imposed of maintaining a gold reserve to meet the banking needs of the country.

The bill provides that whenever Treasury notes issued in accordance therewith are presented to the United States Treasury for redemption that they shall be paid for in gold, but the Treasury shall immediately send these notes to the bank issuing them for redemption. The obligation will, therefore, rest upon the bank, as is provided in the bill, to maintain a reserve for the redemption of its notes at all times, and the Government will not be obliged to assume the burden of carrying them. The only gold that will be required to be kept in the vaults of the Treasury for redemption purposes will be that which is now required by law. The power which is given by this bill to the boards of directors of the Federal reserve banks to purchase foreign bills of exchange and fix discount rates will enable them to maintain a sufficient supply of gold in this country to meet all possible demands.

I need not point out the advantages to be secured by the bill in the segregation of bank reserves from the large money centers and their mobilization in the Federal reserve banks. We know the danger which has followed the operation of the present law and which has produced the necessity for this legislation. The fact that bank reserves were suddenly placed beyond the reach of their owners aroused the country to the importance of national action to protect these reserves and make them available in time of stringency and panic. Those who attack the reserve provisions of this bill are largely interested in keeping the reserves where they are placed by the present law. They have been a source of great profit to those who have used them in stock speculation, and they could well afford to pay the owners a small amount of interest in order to secure their support for a continuance of the present system.

We should prevent in every way the use of reserve money for any purpose except that for which it is created, namely, to protect and guard the deposits of the people. It is therefore highly important, in my opinion, that these reserves should be under the direct control and supervision of the General Government. There will be a degree of confidence among our people in the stability of our banking institutions which has not heretofore prevailed. The Democratic Party will not hesitate to join issue with those who attack this measure along the line of governmental control of reserves. We know it is fundamental to the value and strength of our currency system.

Another defect which has been referred to in connection with our present system is the lack of coordination of the banking institutions of our country. This bill provides for the bringing together in one systematic plan not only the national banks of the country, but all State banks and trust companies which may desire to identify themselves with this system. We believe that much is to be gained by this plan of definite coordination. It will not only create a feeling of confidence in the strength of our financial institutions, but it will also enable our banks to enlarge their operations and contribute in a more helpful way to the growth and development of the country. Under the present law each bank operates within its own sphere; it is obliged to fight its own battles; it must develop its own connections for times of emergency, which are in many instances uncertain and unavailable.

This bill links the banks into one great harmonious scheme of federation. There will be 12 reservoirs of strength and support. Every member bank will find at its command sources of strength in times of stress and a port of safety in every financial storm. The business world will realize that no check can be put on legitimate business enterprise and development, and those who are now timid and fearful concerning what may possibly occur as the result of financial agitation will find that the law which we now propose will provide ample means for security and confidence. We affirm without fear of contradiction that panics such as that of 1907, which came in a year of great material prosperity, can not recur under the operation of this law. A means will be at hand for rapidly dispelling the danger of

such panics, and business operations can proceed regularly without fear of interruption.

Objection is made to the provision of this bill which require the national banks to take stock in the regional banks on penalty of forfeiture of charter. In my opinion, if this provision were made optional, it would render this legislation entirely inoperative and ineffective. The establishment of an additional Government banking system apart from the national banking system is impracticable and would be fraught with great danger to our commercial interests.

We have dealt most generously with the national banks in the provisions of this bill. They are admitted to the Federal system without additional capital or expense; they are assured a fair dividend on the amount of their investment, and they will participate in the earnings of the bank to a reasonable extent; they will enjoy as shareholders in the regional banks the profits which will follow the deposit of Government funds. By reduction of reserve requirements they are permitted to expand their loaning power. If country banks, they may find a market for their funds in short-time loans on farm lands, and all national banks may conduct savings departments under proper and safe regulations. In addition to all of these advantages, this bill will give to all member banks a ready means for the rediscounting of liquid paper, thereby enabling them to enjoy a source of profit which is largely denied by the provisions and operations of the present law.

We believe that this bill will do much to widen commerce, strengthen business, aid the farmer, and develop new avenues of industry. If our hopes are realized, the banker more than any other person will reap the greatest benefit. I can not believe that the banks of the country that are being conducted along legitimate and proper lines will refuse to give this law their cordial and hearty support.

We cheerfully acknowledge the debt which the Nation owes to its long line of patriotic financiers, but we must censure those who desire to usurp the functions and prerogatives of the Government in order to accomplish selfish rewards and purposes. We are learning more and more that the powers of the General Government must be exercised to protect the individual citizen in the full enjoyment of his rights and privileges. We are endeavoring to break the power of special privilege wherever it is being exercised through governmental protection. The time has come when this privilege must be eliminated from the sphere of banking and allow financial institutions to operate in a way to promote the public welfare and not as the agents of monopoly and privilege. I believe that we are striking at one of the great citadels of trust control in this bill. We can not estimate the power that must reside in the control of credit expansion and contraction in this country. The testimony before the Pujo committee justifies the belief that the money which belongs to the people has oftentimes been used for their undoing. The large interests through their control of banking institutions have been enabled to check industrial and transportation development, and to that extent have retarded the growth and prosperity of the country. We believe that the distribution of banking facilities to all sections of the country, giving equal facility to every section, will do much to promote natural development, and that business conditions everywhere will soon reflect a spirit of confidence in the wisdom and justice of this legislation.

There are many other benefits conferred upon the people in the bill before us. I can only mention a few of them. The placing of Government funds in the Federal reserve banks will make the large Treasury balances always available for use in regular business transactions. The people will receive revenue from the interest paid on Government funds and the regional banks will be able to extend accommodation to member banks through the means provided from this source. I am in hearty accord with the provision which has for its object the withdrawal of the national-bank circulation and the refunding of 2 per cent bonds securing it. We can not estimate the burden which this circulation has imposed upon the American people. A currency which is founded upon bond-secured notes is not in harmony with the needs of our country. The people have paid an enormous tax in the way of interest for the circulating privilege given to the banks. The additional interest charge growing out of the substitution of 3 per cent for 2 per cent bonds is one which will be lightly distributed throughout the country, and bears no relation whatever to the charge which has been imposed upon the people by the use of the unexpanding and noncontracting national-bank circulation.

The establishment of American banks in foreign countries, in my opinion, will do much to aid our foreign commerce and cause an ever-widening market for our manufacturers and producers.

There are other provisions of the bill which are equally meritorious and worthy of support. We do not advocate the

passage of this measure alone for its adaptability to present conditions and its usefulness to avert evils which have heretofore existed and which may recur under the present system, but we believe that it is founded upon sound principles of operation that will meet the needs of the country for many years to come.

One is almost staggered at the tremendous growth of our Nation along all lines. Our population increased in the decade from 1900 to 1910 from 75,000,000 to 92,000,000, an increase of over 1,500,000 per year. Our present population must be over 96,000,000, and has almost doubled in 33 years. During the year 1912 over 838,000 immigrants passed through our gates to find employment and enjoy the benefits of our free Government. The value of farm property increased from \$20,400,000,000 in 1900 to \$40,991,000,000 in 1910. The building operations in our principal cities during the year of 1912 were estimated at \$683,500,000.

In 1900 our railway mileage amounted to 198,964 miles, and in 1911 to 254,732 miles. In 1900 there were 1,454,838 railway cars in service, and in 1911 there were 2,359,335 cars. In 1900 the total mileage of freight-revenue trains was 492,543,526 miles, and in 1911 it was 626,496,025 miles. Our railway capital in 1900 amounted to \$11,491,000,000, and in 1911 to \$19,208,000,000. The amount of freight traffic in 1911 was \$1,718,000,000. Our imports in 1900 were \$349,941,184, and in 1912 they were \$1,653,264,934. Our exports in 1900 amounted to \$1,394,483,082, and in 1912 to \$2,204,322,409. The wealth of the United States in 1900 was \$88,517,306,775, and in 1904 it was \$107,104,211,917.

In the face of these stupendous figures who will contend that the financial system of our country should be administered through private agencies? Who desires to surrender the power and opportunity to control the great flow of currency throughout the length and breadth of this country to great private and special interests? Who dares to advocate that the Government should not exercise a controlling and beneficial influence in regulating the volume and distribution of our currency? The great outstanding merit of this bill is that it places this great power absolutely in the hands of the people. Any party which should attempt to exercise this power to the detriment of the public welfare would soon find itself distrusted and defeated. It would take years of effort and profession to regain public confidence should it abuse this power.

We have reached the parting of the ways in this legislation. We must either give the power to regulate our financial system to private and special interests or else we must confine it exclusively to governmental supervision and discretion. The Democratic Party will never permit this great function to be exercised through other than governmental agencies. On this declaration it stands fearless and unafraid.

While this measure comes before the House with party approval, I share the hope that it may find willing supporters among those who differ from us on other matters of public policy. There is an appeal in this bill for the support of all citizens, irrespective of party, who desire to see our banking and currency system reformed and built up along progressive lines. The Democratic Party seeks to win no other measure of popular support than that which will come to it by reason of the fact that it is the dominant party in the country to-day and as such is responsible for legislative performance. No better evidence could be given to the country of the wisdom and value of this legislation than to have it receive the support and adherence of those of opposite political faith. We welcome every evidence that the old days of political rancor and bitterness are passing away. There is much in our life as citizens to bring us into close fellowship with each other, although we may differ on several political lines. I sincerely hope that this bill will not only go before the country with the approval of the Democratic Party and its administration, but that it also may receive the cordial support and approval of the members of the other political organizations represented in this body. [Loud applause.]

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. BARTLETT having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment bills of the following titles:

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement.

H. R. 7595. An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors.

CURRENCY.

The committee resumed its session.

Mr. STONE. Mr. Chairman, I yield 15 minutes to the gentleman from Indiana [Mr. Moss].

Mr. MOSS of Indiana. Mr. Chairman and gentlemen of the committee, in connection with the pending measure, the currency bill, I desire to discuss briefly the subject of rural credits. It is not necessary to remind gentlemen holding seats in this honorable body that there is a great campaign of education going on in the United States regarding the question of rural credits, and this movement occurs not because the farmers of the United States are seeking special privilege, but because in the end better farming means better living.

I am aware that the pending measure is not offered as a measure to meet the peculiar requirements of rural credits and that later the committee will report a bill framed to promote these purposes. This division of the subject, so as to place agriculture on a parity with commerce and manufacturing in matters of financial legislation, is proof that our campaign of education is making wonderful progress. The decision of the honorable committee to deal with agricultural credit separate and apart from the general subject of banking is a recognition by a most eminent authority that rural credit differs essentially from commercial credit and that the same organization can not serve both interests with equal fidelity.

I regret that it did not fall to the English-speaking race to perfect rural credit by practical legislation, but it is more a reflection on our progressive tendencies that we have refused to see the improvement which the system has worked in every country where it has been adopted. Beginning in Germany in 1849 amid poverty and agricultural stagnation, the system has spread over the Continent of Europe and is now being studied in every agricultural region in the world. We can not stop its progress if we would. The human race desires to improve its conditions and is ready to honor the master mind in any field of human endeavor. The principles of the Raiffeisen system have now been adopted by practically every country except those colonized by England, and our racial pride must give way to the spirit of improvement. We can no longer permit a stupid worship of commerce and manufacturing to blind our eyes to the progress which continental Europe is making with agriculture organized along lines permitting it to compete successfully with other industries. We can no longer sustain a system of legislation which fosters the growth of cities and their industries while the rural community and industries languish.

The Sixty-second Congress took official notice of the public interest in this important subject and authorized President Wilson to commission a body of men to visit European countries and make a study of this question. I esteem it a high honor to be one of the men whom the President charged with this responsibility. The official report is now in preparation, and in due course will be submitted for your consideration. In my present remarks I am speaking on my responsibility as a Member of this House and am not in any manner forecasting or attempting to forecast any conclusions which may be reached by the United States Commission on Rural Credits. I am convinced that it will not be a simple task to frame practical legislation to meet the requirements of our rural population. Those who believe that we can go to Europe and bring any system here and write it in its entirety upon the statute book are doomed to meet disappointment. The American people are a national people, and when we organize a system of farm credits it will be an American system and not a European system. [Applause.]

More than that, in Europe the question of rural credits has been merged with social reform, so that it is a difficult task to select the purely financial features and separate them from the social-reform elements. In some countries these theories are so blended that I doubt whether the advocates themselves know if they are financiers or social reformers.

We have here a different constituency than they have in European countries. It ought to be the purpose of the American people, regardless of political affiliations, as I believe it will be, to study and work out the solution of this question now and prevent the later necessity of having to deal with the problem of social reform. I hope the time will never come that any student can come to America, go on the farm, and see the same conditions of injustice which have been laid upon the European farmer.

The farmers of the Nation are not asking to be given the use of public moneys at special rates of interest. I deny that the Government has any moral right to advance public money to finance the industrial operations of any class of its citizens. If such a law were enacted in the favor of farmers, then citizens

engaged in other occupations would have a right to ask similar favors; and in the end we would have the Government performing many of the functions which pertain solely to the life of a private citizen.

But while the farmers are not asking for any special privilege, and do not expect the Government of the United States to put public funds at their disposal, yet they are asking that the laws of this country shall be so framed that they can organize and use their collective credit where they wish to use it, and be thus enabled to obtain money on as good terms as can an organized community where such a community is borrowing money.

I come from one of the great agricultural States of the Union, the State of Indiana. As a State, we have made large use of our collective credit to develop and improve our communities. We have improved our roads and drained our marshes with money secured by the sale of bonds which are being repaid by the earning capacity of our people. No laws on our statute books are justly more popular or have more largely aided in the development of our resources. There are but two States in the Union which have improved a larger percentage of their roads than Indiana, and hundreds of dismal swamps have been converted into the best farming lands in the world. We may therefore safely attribute the advanced position of our State as being in a large measure due to the advantages of cheap credit; but while the advantage of collective credit has been extended by law to citizens in their organized capacity, it has been denied to the citizen in his individual capacity. The result has been that while our communities and our cities have made large growth and splendid improvement, the individual farmer has failed to keep pace with the progress of the times. Does any sane person refuse to believe that cheap credit would have gone as far to improve the situation of the individual as it has done for the community?

To-day the citizens of my State are borrowing not thousands but millions of dollars, to be placed on public improvements at 4½ per cent interest. So the farmers are asking that they shall have the same opportunity as the community, that they may join and borrow money in their own private interest as cheaply as we are now borrowing it for public purposes.

I concede that the farmers are getting credit indirectly. In Canada a royal commission is making investigation of this subject, and finds that the farmers are obtaining three times as much credit from the implement manufacturers as from the banks.

Farmers know that this indirect credit is costing them a high rate of interest, that they are paying more under this method than if they were securing credit direct. It robs them of the independence which the farmers of this country have a right to enjoy. In seeking to change these conditions, farmers are not asking for special rights as a class but for their just rights as citizens. They are willing to pay what money is worth in the markets of the world, but they do not wish to be driven to the pawnbrokers for credit; and, please God, that is a condition which is going to be broken up. [Applause.]

It must be recognized that the wealth which is created by agriculture is just as important to the bankers, the manufacturers, the merchants, and our citizens generally as it is to the farmers who produce it. We are beginning to realize that the things which grow out of the soil—the food, the clothing, and shelter for all our people—are capable of indefinite reproduction; and therefore it is the Nation's fault if any of her citizens—to-day or at any time in the future—are doomed to go hungry, ill clad, or poorly housed. If it can be proven that a rational system of farm credits will increase agricultural production and multiply the food supply of our Nation, then it must be conceded that this legislation is not in the interest of any class or section, but appeals to that national feeling of patriotism which overrides all classes and sections in the highest interest of our common brotherhood.

It will generally be admitted by those who have given this subject close attention that Germany has the most perfect system of rural credits among modern nations. In his splendid report to the British Government on this subject, Mr. Cahill says:

In no modern country does organized effort for safeguarding and promoting the economic interests of agriculture appear to have been more persistent and so successful as in Germany, more especially in the direction of providing the farmer with facilities for obtaining credit, for acquiring the instruments of production, and for disposing of his produce on the most favorable terms.

I fully indorse this opinion.

In soil and climate Germany is not as highly favored as is the United States. Land has been divided and subdivided until now, in many instances, it is held in tracts which are incredibly small, as measured by our standard. Isolated tracts which are but 12 to 15 feet in width are held in separate ownership.

The average size of farms for the German Empire is about 20 acres. This minute subdivision has precluded the use of labor-saving machinery or the most economical performance of farm labor on these small farms. On the other hand, the large estates are burdened with rent to the noble landlord, who must live in idle luxury as befits his fortunate caste in life. Thirty years ago the average yields in Germany were about the same as the yields in the United States, but to-day their yields are perhaps double those of ours. In 20 years their yield of wheat has increased 66½ per cent, while ours has increased but 8½ per cent. If the comparison be extended to include rye, oats, barley, and potatoes, which are staple crops common to both countries, the result will be equally favorable to that nation. With an area not as extensive as Texas—in fact, smaller than Texas would be if we were to form a new State the size of Alabama from its territory—and with one-fourth of that area in forests, Germany grows 95 per cent of the food for 68,000,000 people. Their boast is that they will soon be exporting food; our peril is that we may be forced to import food.

I shall not rest the case on a comparison of our agriculture with that of a foreign country; let us analyze that industry in our own country. Since the days of Abraham every agricultural nation has reckoned her national wealth by a census of her cattle. This great industry is naturally divided into beef and dairy interests. The net profits are perhaps nearly equal in either branch of the industry. Dairy farming calls for more labor and constant attention, while the beef industry requires the greater store of capital. The dairy cow yields her produce in a cash form twice every day, while the beef steer is a constant drain on the owner's capital from birth until the day of sale. Thus, dairy farming requires the least static capital of any branch of farming, while beef production requires the greatest. During the past 10 years our population increased 21 per cent and the number of dairy cattle increased almost exactly 21 per cent. Here we have an instance where American agriculture has kept pace with the growth of population.

The same result is true of poultry farming, which is a branch of farming requiring but little stored-up capital. The cash turnover in these lines is for very short periods, and so the American hen and the American cow has kept steady pace in the manufacture of food products with the demand of a rapidly growing population. The results are quite different in the beef industry. Despite high tariff charges we are importing beef to feed our people. The statement is made on high authority that recently 900,000 pounds of beef was received in Washington from Argentina in one day. There has been steadily rising prices for beef cattle for a period of 10 years, while there has been a steadily declining supply. At the present time there is no more profitable branch of farming than the growing of beef cattle; it is a very pleasant occupation; in either direction, under prevailing conditions, beef growing will compare most favorably with dairy farming; yet the one branch—that requiring but little credit—is growing in sympathy with legitimate demand, while the other—the one requiring large volumes of stored capital—is steadily declining, and we are forced to go thousands of miles to import meat to feed our people. I will not pursue this branch of the subject further. The nation which has the most highly developed system of farm credits is making the most rapid advances in agriculture among all the nations of the world, while in our country only those branches of farming which can give the farmer a constant cash turnover are expanding in proportion to meet a rapidly growing demand. The conclusion is self-evident, we must give our farmers the advantage of cheap and readily available farm credits. For 50 years we have been depending on a high tariff to stimulate agriculture; during this period we have charged farmers a high interest rate, and to-day we are face to face with a deficiency in our domestic food supply. Let us give our farmers the necessary tools of trade—credit without usury—and American industry and intelligence will soon make us the foremost agricultural nation of the world. Every branch of our farming will keep pace with dairy farming, and thus through all the years to come our farms will feed and clothe under American standards of living our great and growing population.

Agricultural credit naturally divides itself into two classes—short-time, or personal credit, and land mortgage, or long-time credit. Both classes are required in order to meet the credit necessities of farmers; but long-time credit is of the greatest value to the Nation. This kind of credit has been first developed in other countries, and will doubtless precede personal credit in this country.

The two classes of credit, however, are separate and distinct from a banker's standpoint. We are now considering a measure which deals principally with personal credit. For this reason

alone I have confined my discussion at this time to personal credits, and will ask the House for permission at some future time to submit my views on land-mortgage banks or long-time agricultural credit. Personal credit as used to promote productive agricultural operations differs essentially from commercial credit and of necessity requires a different organization in order to be administered efficiently. A banker recently gave the press a definition of a commercial bank. He said:

The real business of a bank is to gather together the current deposits of the people and amass them into a body of liquid capital that can be loaned out to people engaged in a commercial business. They should be loaned on short-time paper, three or four months' notes preferably, that represent the great tide of commercial transactions of the people.

This system of banking adapts itself perfectly to the necessities of the merchant and the manufacturer, but can not serve the needs of the farmer. The merchant can restock his shelves several times a year and the manufacturer can increase at will the capacity of his shops. The manufacturer's total output is a question of operating his shops 8, 16, or 24 hours per day. In comparison, the farmer's harvest period is fixed by nature and can not be hastened. With grains, fruits, swine, and sheep it is a question of months, while with important classes of live stock—for instance, cattle and horses—the period lengthens into years. Thus while the merchant may use his capital but 60 days until it is released by a turnover, the minimum period with the farmer is six months, and this period may be extended to two or three years. Therefore the period of discount must be longer in agricultural credit than it is in commercial credit. This is conceded by bankers, but it is insisted that a solvent loan can be renewed. If the period of time were the only distinction between rural and commercial credit, the renewal privilege would partly solve this question.

In the pending bill we have fixed the period of rediscount at 90 days, which is an admission that agricultural loans should be renewed under this provision. Other vital distinctions between agricultural and commercial credit are the character of the security and the purpose for which the loan is granted. A commercial banker loans money only on property values which can be realized upon under the terms of the law. A solvent loan to him is one which is legally good or which can be collected by execution. He looks to stored-up capital as a basis of credit and hence is not primarily interested in the purpose to which the money is to be put. The two classes of people whose interests are safeguarded by the commercial banker are the depositors and the stockholders of his bank. The borrowers as a class do not receive any consideration. The bank cashier literally applies that passage of scripture which says that to them who bath shall be given. In contradistinction to this kind of banking, agricultural credit is based upon the Divine promise of a seed time and a harvest. It undertakes to promote agricultural operations by financing them and waiting until the maturity of the crop for repayment of the loan. The loaning of money on cotton stored in a warehouse or on wheat in an elevator is not agricultural credit. Agriculture gives way to commerce at the maturity of the crop. Storing crops for a better price may be good speculation or good commercial enterprise, but it is not any part of productive agriculture. The total gross value of one year's products of American farms is computed to be more than \$9,000,000,000, estimated at farm values. If we will include farm equipment, feed, and growing of live stock, which farmers are compelled to own in order to carry on their operations, we may form an accurate estimate of the huge financial operations of the American farmers. They need vast stores of capital during the crop year to carry on these operations under the most favorable conditions.

The prudent commercial banker at once says that farm crops depend on the elements; that these elements are beyond man's control and therefore it is hazardous to advance funds on growing crops as security. This is true if the bank does business with each farmer as an individual. No man can determine in advance that his harvest will be a good one; but all human experience proves that general results in agriculture are dependable.

We thus reach the old question of individual or collective bargaining. In the labor world it has been found that the only way to protect the interest of the laboring man is by a system of collective bargaining; so it is with the farmer. The probability of one farmer failing to grow good crops has caused every farmer to pay a high rate of interest and has compelled those who were not endowed with valuable property to resort to the chattel mortgage shark for credit. In a letter recently written on this subject from a Northwestern State it was said that their bank rate is 9 per cent and their chattel-mortgage rate is 12 per cent.

Under these conditions it is impossible for agriculture to become a prosperous business, except to the loan agent and his principal.

It has been said that all really great discoveries are very simple. So it proved with this problem of crop failure, which for centuries has barred farmers from being numbered among the business men of the world. The secret is that while some men engaged in farming will fail every season the great majority of farmers will succeed. Therefore, if farmers place their combined risks on their combined resources, the security is the best in the world. This principle is the basis of all successful insurance. In fact, rural credit banks are modern industrial insurance societies. Out of 100 men engaged in any line of labor it is certain that sickness, death, or other misfortune will reduce their total earning capacity perhaps 3 per cent. This reduction would mean serious loss to the creditors of the three men whose earnings were thus dissipated, but the society as a whole will have a guaranteed earning capacity of 97 per cent, and if their resources are pooled in such an instance the society have only to keep their liabilities 3 per cent below the maximum in order to be wholly solvent. A large loss may fall upon one farmer or indeed, upon a community in a season, but in the end, unless agriculture itself is successful, unless the divine promise of seedtime and harvest be realized, society itself must perish: You can not maintain organized states of society unless agriculture is successful.

As the business of farming calls for large amounts of capital to be engaged for comparatively long periods of time on absolutely safe security, we have all the elements to secure money in the markets of the world on the lowest possible terms. This is not a hypothetical presentation of this question. This result has been achieved in every country where banking has been organized along these lines. I will give specific instances.

In the country of lower Austria, at the moment of our visit, the Government rate of discount was fixed at 6 per cent and the rate on commercial bills was $7\frac{1}{2}$ to $7\frac{3}{4}$ per cent. The Austrian Imperial Government has recently issued bonds bearing $6\frac{1}{2}$ per cent. These high rates of interest were due to the political conditions growing out of the Balkan War. The banks at Vienna were paying 5 per cent on deposits; yet we visited a typical farmers' bank which was loaning money to its members at $4\frac{1}{2}$ per cent and was able to accept all applications from its membership for loans which had a proper relation to their business as farmers. This bank was one of an association of 450 similar organizations which were loaning money to their members at the same rate. These funds were deposited in these rural banks at a lower rate of interest in preference to the large city banks at a higher rate of interest. It is a most significant fact that, despite the pressure for money which was general in Austria, 420 of these associated banks out of a total membership of 450 had a surplus of deposits. Neither war scares nor rumors of commercial crises have any effect to reduce the volume of these deposits because of a sense of absolute security which is the basis of this banking system.

Mr. MADDEN. Will the gentleman yield?

Mr. MOSS of Indiana. With pleasure.

Mr. MADDEN. How do the farmers mobilize their resources in order to get the collective credit to which the gentleman has referred?

Mr. MOSS of Indiana. I shall be glad to answer that question, but I can not do so fully in my limited time. The farmers' banks accept deposits from everybody, but make loans only to their members. The farmer is connected first with his union bank. These union banks themselves are associated together in one central bank. These 450 associations were associated under the general condition that the individual farmer must deposit his surplus money in his bank. The union bank deposits all of its surplus capital over the amount needed to carry on the work of its members in the central bank. This central bank thus really controls and mobilizes all of the resources of the federation, having a membership of 450 banks.

In Germany there are 17,000 of these associations that are connected together under the Prussian State Central Bank. This one organization controls all the financial resources of 17,000 banks, having a membership of more than 4,000,000, or 1 person in every 13 in the German Empire.

I may also say that while the turnover of the rural banks in Germany amounts to more than \$1,000,000,000 in a year, 92 per cent of all the capital loaned is made up of deposits in the member banks.

Mr. J. H. McGraffin, an American citizen, who is manager of the commercial agency of R. G. Dun & Co. in Vienna, gave our commission a signed statement that their company did not have any record of a single failure among the Raiffeisen banks, and

that the system was founded on such a strong, conservative basis that failure was practically impossible. The bank we visited was located in a country village, and the occasion of our visit was made a general holiday. We were escorted to the bank by a great procession of citizens. There could be no mistaking the general feeling of pride and respect which these people had for the "people's bank" as the agent of their success and prosperity in business.

Quite as striking examples can be given from our experience in Germany. I am not speaking of what I was told; I am relating what I saw and know to be true. I visited a rural bank located in the village of Ritzan, Germany. This village is located about 25 miles from Leipzig, one of the great manufacturing centers of Germany, and $4\frac{1}{2}$ miles from a railway. I spent 10 days in this village with a German-American who spoke both languages fluently. I had thus exceptional advantages to come into actual contact with the operations of this bank. The association was loaning money to its members at $4\frac{1}{2}$ per cent. At that time the Imperial or Government rate of discount was 6 per cent, and Mr. Paul Ladenburg, a banker in Mannheim, stated that the prevailing bank rate on commercial loans was 7 per cent in that city. Dr. A. Schleisinger, vice United States consul at Munich, gave 7 per cent as being the current rate in that city on commercial paper secured by collateral. The bank at Ritzan was federated with a central bank located at Halle, and was only one of a large system of federated associations. In addition to its banking operations—accepting deposits and discounting notes—the association purchased at cash, wholesale prices, coal, feed, and fertilizer needed by its membership. By this cooperative organization the members secured credit and staple farm supplies at lowest rates.

I have selected these as typical examples of rural banking in the best farming sections of Europe. These banks accepted deposits from everybody and loaned only to their membership. Such was the confidence of the general public that the loans were largely made from their deposits. In Italy, Hungary, and Ireland totally different conditions exist, and accordingly we found a different banking rate. In these countries the population was so poor that in country districts a sufficiently large volume of deposits could not be secured. The people were more borrowers than lenders of money. It is difficult for an American to comprehend the depths of poverty to which whole agricultural communities have been forced through the adverse conditions of the past. With absolutely no banking connections or commercial credit and with but little property qualifications among their members these banking associations were formed upon the earning power of labor applied to the soil. I visited one bank in Italy which was loaning to its members at 5 per cent, which was the Government rate of discount. The commercial rate in Rome was $5\frac{1}{2}$ per cent for a period of three or four months and 6 per cent for a six-month period. Our commission visited the village of Vigo Novo in the Province of Venice, where Vollenburg, in 1883, organized the second rural bank in Italy. This pioneer bank was loaning money to its members at 6 per cent. Throughout Italy the peasant farmers were securing credit as cheaply as were the merchants of the large Italian cities. In Hungary the rate charged by the rural banks was about 1 per cent higher than the Government discount rate. In Ireland the rate was generally $6\frac{1}{2}$ per cent, which was said to be a great reduction from that prevailing before the introduction of the rural banks.

The general constitution of rural banks must conform to the means of securing funds. In Germany these banks are savings and loan associations; 92 per cent of their loans are made from deposits. The members form a simple partnership, each assuming an unlimited liability for the debts of the bank. This is the oldest and simplest form of rural banking. France has the newest system and is more complex. The farmers of France would not assume the unlimited liability which was imposed by the German banks; local conditions were such that deposits could not be secured in liberal volume. Therefore, they had to organize banks in connection with the Government and looking toward the Government for temporary aid and assistance. I shall accept these two systems as being the general types of European banks, though it is true that in Italy and in Hungary the German type has been modified to meet their national conditions. In Germany, rural banks are entirely separate from the commercial banks and receive State aid in varying degree. The local banks are attached to central banks which are specially organized for this purpose. These central banks control all surplus deposits of each local bank and in turn supply any deficiency of capital needed by any local bank connected with it. This mutual organization and centralization is further perfected by the organization of the Prussian State Central

Bank which is endowed with State capital and to which are joined all the central banks. This German system of affiliated central banks gives the management large powers and secures a high degree of liquidity of resources. The individual member deposits his money with his union bank. The union bank hands over to the central bank with which it is affiliated all capital flowing into its treasury from members and nonmembers except that required to carry on its own cooperative enterprises. The central bank in turn deposits its surplus with the State central bank. The State central bank thus controls all the business of the affiliated societies and is their agent with the outside money market.

In case the societies as a whole require more capital than their combined resources will provide, this State central bank negotiates the loan either in the open market or secures it from the imperial bank of issue by rediscounting the securities in the possession of the federated societies. This bank in this way regulates the interest rate which the local associations charge their members, because the bank will have no dealings with any union bank which does not scrupulously regard all the regulations governing the conduct of the associated business. Each member can secure an open account with his union bank, the union bank can secure an open account with its central bank, and each central bank can secure an open account with the State central bank. There is one member of these affiliated societies in Germany for every 13 inhabitants. This arrangement in effect merges the resources in business of this vast number of industrial citizens—computed to be 4,800,000 people—in the hands of one financial institution. This centralization is too extreme to accord with the spirit of our institutions, and I do not believe that it will meet with the approval of American judgment. The concentration is more extreme than it appears from the mere statement, because the character of business includes more than the loaning of money. It has large influence over the purchase of supplies, and to a lesser extent influences the selling of the products of their labor.

The rural credit of our Nation should not be concentrated in one institution; even though that institution were under State supervision and were to receive in part State aid. The average American farmer will not accept the principle of unlimited liability, which is mutual indorsement of financial obligations. As has been indicated, this system as developed in Germany is not strictly a financial system, but is one of social reform as well. Its aims are wider than any American system will comprehend, at least for many decades, and it is to be hoped wider than will ever be necessary in our country. It is our duty to avoid the evils which reduced the agricultural classes in Europe to the necessities of radical social reforms. We fortunately have a much more intimate connection between the farming classes and the banking interests than existed in Europe at the organization of the German system, and therefore I do not believe that in many sections of the United States any separate system of rural banks will attract deposits in sufficient volume to finance adequately the needs of their sections. These and many other reasons lead me to question whether any necessity exists for the organization of special central banks and thus bring the new system into sharp competition at all points with our existing banking system, which, with admitted faults, has done much to develop agriculture throughout the United States.

An American system of rural credits will call for a new banking organization as the primary unit. This is necessary because it has been proven to be impossible under the present banking system to assemble the farmers' business or to concentrate it sufficiently for city banks to secure it. In Europe farmers live in villages, while with us they live on individual farms. In this respect the European banker has an advantage over the American banker, but their experience has been that this business had to be organized by farmers living among farmers. It could not be developed by the city banker. A recent inquiry was held in Canada by a royal commission on agricultural credits, in which it was developed that their farmers secured three times the volume of credit from the implement dealers that they did from the banks. The banks are satisfied with this state of affairs because they loan more money to the manufacturers and less to the farmers, but the farmers are not satisfied. They know that credit costs them more secured in this indirect manner and robs them of a desirable independence, but it is to be noted that the organization of this form of credit is done by people in close touch with the farmers—not by those remote from their daily life. Too many students overlook the fact that farmers are now compelled to secure a vast volume of credit in this indirect way under our present system in the United States, and those who overlook this most important fact are among the first to oppose the idea of an organization, in close touch with farmers, to control this volume of credit business at wholesale rates.

A secondary reason in favor of a separate primary organization is that the administration of this credit business must be simple in order to reduce the cost. It is nearly impossible for an American to form an accurate picture of the simplicity of European rural banks, which is a very essential element in making possible the very low cost of their administration. This is one of the foundation stones, and unless we can introduce this simplicity it will be impossible to sell credit under our system at the low cost which is possible under their organization. It is impossible to disassociate completely rural credits and social reforms. Good farming is not a simple act. It is a very complex organization, and so any great movement having for its avowed purpose the improvement of agriculture must at the same time regard the improvement of society.

Thus there is attending the management of a rural credit society an opportunity for the exercise of altruism in varying degrees. I am aware that it is strongly denied that altruistic motives can be admitted in the management of financial affairs. That contention is true only so far as it means that funds of the rural bank can not be loaned on inadequate security or that a member can be given something for nothing. It is not true that the more competent members of a society or community can not give their talents and services at a very nominal rate of compensation and do this in order to develop the best interests of the society. This spirit gave birth to rural credits and has sustained the system in every stage of its growth. If it be asserted that such a motive can not be developed in our country in the free air which surrounds American farms, then it had as well be admitted that the hope of the system is an iridescent dream. I do not accept this conclusion. Therefore I believe that a primary unit must be organized separate and apart from our highly organized commercial banks, but that it is not only possible but highly desirable that this new unit shall be connected with existing banks and not projected against them. These new rural banks can be either cooperative or joint stock in type. It has been assumed in some newspaper discussion that rural credits can not be successfully organized in this country without accepting both the theory and the method of European cooperation. I do not accept that conclusion. It is perhaps true that American farmers are self-seeking to a greater degree than they are cooperators in business, but it is also true that recent developments in European methods place much greater stress upon share capital than was done in the genesis of the movement. It was the fact that share capital could not be secured rather than the fact that such capital was not to be desired that molded the original organization. This fact only gives emphasis to the argument that nationality must be considered in the framing of any scheme of legislation. American farmers will do business on a larger scale than European farmers; they can subscribe share capital in greater amount than could European farmers, thus necessity and ability unite in deciding upon share capital as a proper basis for these primary units. What is to be most desired is to secure a practical method of organizing for financial purposes without including the whole scheme of European moral philosophy which surrounds this movement at this time in most of those countries. The problem is how we may avoid their problems of social reform which have become associated with their rural organization rather than to try to harmonize the temperament of American farmers with that of European farmers.

For these reasons, I predict that the share capital organization with limited responsibility will be preferred in America to the cooperative organization with heavy mutual liability. The membership will be select and limited in number. It is very evident that mutual acquaintance and mutual respect will be the basis of harmonious action. The liability attaching to share capital will be greater than in the ordinary corporation, while requirements as to reserves and other limitations will be greatly reduced. The rural American bank will become a small association of neighboring farmers whose principal joint function will be to pass upon the credit qualifications of their own number. They will be required to assume a greater liability than ordinary shareholders in order to secure an open account with some other financial institution, but this liability will be strictly defined and limited in amount. Their power to loan money will extend only to their own members. Thus their joint liability is in the end only a guarantee that their estimates of the resources of their own members are correct. The administration will be cheap because the organization is simple. The dividends which can be earned on the share capital will be limited to the level of the current rate on loans, so that the money invested in the bank will earn only as much as that which is actively at work in the hands of the borrowers.

Under precisely the same banking laws in Germany there are 55 failures of commercial banks to 1 among rural banks. It has been found that prohibition of large dividends and of

speculative loans have done more to insure safe banking than all the restrictions which the law can throw around a bank. For this reason, the partners in a rural bank should be placed under reasonable liability which will insure personal supervision by the partners of the operation of the bank and of the uses to which the capital of the bank is put by those who may borrow it, and, at the same time, be relieved of all complex processes in administration.

I am aware that our existing banks have not gained the entire confidence of the American people. There is a vast sum of money which is in hiding and which has never been deposited in any bank or financial institution. It is possible that a system of rural banks with its undoubted security will attract portions of this vast sum and place it at the disposal of industry. If so, it will be one more advantage which the system will give to American industry.

The French system of rural banks is a system which the farmers and legislators of the United States may study with profit, because that system had to meet many of the difficulties which confront us. The French Government is a Republic, and thus political conditions are more nearly analogous than in Germany. The Credit Foncier, the great land-mortgage bank of the French nation, had been given the exclusive privilege of attracting bank deposits by offering lottery prizes. This scheme is so attractive to the French people that this banking institution practically controls the savings of the nation. The rural banks could not, therefore, attract deposits in sufficient volume to finance the needs of their members. The French banks were largely associations of borrowers, and their members joined in order to secure loans. The rural banks were therefore compelled in large degree to apply to the Government bank of issue to secure a rediscount of the farmers' notes. It is my opinion that the system will have to be inaugurated in the United States in somewhat a similar way. If we do not revise our banking law whereby solvent notes of borrowers can be rediscounted by a Government bank, and thus place the national credit at the disposal of industry, I can conceive of no way in which a system of short-time personal credit can be organized except by the direct use of Government funds. Under French law farmers were not given the benefits of a bankruptcy law. Principally for this reason, the commercial banks would not enter into business relations with the farmers, and the private money lender was the only source of credit open to the rural population. The rate of interest in such cases was extortionate and extremely burdensome. The Bank of France had the power to rediscount commercial paper which bore three indorsements and having a maturity not exceeding 90 days. This had been interpreted to mean commercial paper, and under the law of France a farmer could not issue commercial paper because of being excluded from the operations of the bankruptcy law. Under these conditions agriculture declined until certain rural districts in France became practically depopulated. Then came the disaster to the grape, which produced internal disorder closely bordering on revolution. No nation in modern times has faced a more acute economic crisis. Germany had solved her rural problem and her agriculture was growing just as surely as that of France was declining. It required the best thought of the French nation 15 years to crystallize public opinion and secure the enactment of the first rural banking law as the only escape from their condition.

The system is distinctly national and was devised to meet the requirements of the French people. I called particular attention to this point. France had at that time the best land mortgage bank in the world; they were perfectly familiar with every system of agricultural credit then organized; yet it required years of study and effort to devise a national system which would rebuild French agriculture. There seems to be some authorities in our country who affect to believe that we can copy the German system or the French system on our statute books and the problem is settled. We must have a national system which is as truly American as the system of Germany or of France is national, and it calls for careful study and time for deliberation. No made-over system will suffice because our Nation is different from any other nation.

The Government is more closely connected with the administration of rural credit in France than is true in Germany. The Raiffeisen banks in Germany are fighting Government aid and control in every particular and desire to be entirely independent; but in France the cabinet ministers are the officers or administration. The Government supervises the banks closely and in many ways is intimately associated with their operations. The funds are secured mainly from the Bank of France through the power of rediscount, though the nation places large sums of money in these banks at nominal rates of interest for the first five years of a regional bank's exist-

ence. As the law requires three separate indorsements before the Bank of France can rediscount commercial paper, there had to be organized two separate systems of banks because the existing banks refused to negotiate farm paper. The first bank is a cooperative association of French farmers who assume a limited-individual liability for the debts of the banks. These cooperative associations were then organized into regional banks. The system was now complete because a chain had been constructed which would connect the farm with the Bank of France and give the farmer the advantages of national credit. An individual member of an association must present his promissory note to his association with one additional name for security. This additional name is to meet the requirement as to indorsement and is the first one of the three indorsements required by the Bank of France. The other two indorsements are given by the respective banks. Thus the cooperative association adds its indorsement and passes the paper to the regional bank; the regional bank in turn adds its indorsement and presents the note to the Bank of France for final rediscount by the issue of bank notes. In this way the farmer secures his credit from the nation.

It will be noted that this system conforms in a general way to the outline of the pending bill. The Secretary of Agriculture as a member of the Federal reserve board will have large powers in the administrative features. I regard this as an extremely important provision. There is not a system of agricultural personal credit in Europe which would be successful if the Government was not friendly to its administration.

One of the most effective schemes of cooperation in Europe is the assistance which the various Governments give to rural credit and the support which the farmers extend to the Government at the polls. It is useless to organize a system of people's banks and then turn over the control to a special interest which is opposed to the development and success of the system. Agriculture has never been fairly treated by commercial banks in any country in the world, and when we do organize rural credits in the United States, as by the help of God we are going to organize it, we ought to have enough sense to keep the control in the hands of high public officials who have a proper measure of responsibility to the whole people. It is worthy of note that since the organization of rural banks in France and their successful operation that commercial banks now eagerly compete for the very business which they affected to despise but a few years ago. The minister of agriculture stated that when a new regional bank is advertised to be organized his office is besieged by commercial banks to secure a connection with the new bank and thus share in the new business which the bank is sure to create. This conclusively proves that there is no difficulty in commercial banks accepting this business from the cooperative associations of farmers. There should exist no necessity to organize rural regional banks in a general banking system which depends on the power of rediscount to secure loanable funds. It will only be by the stupidity or selfishness of existing banks if they fail to meet this great movement kindly and assist in its organization and development. We can not hope for such a spirit of national patriotism from the Vanderlips and Forgans; but we may confidently count on the patriotic cooperation of the vast majority of our bankers who are not drunk with power.

The primary associations must be composed of farmers who bear a joint responsibility, because agricultural credit rests on the productive labor of farmers. This joint responsibility is but nominal so far as individual financial risk is concerned, because the security as a whole is abundant and safe. In this regard the risk is as prudent as that assumed by the members of mutual fire insurance companies, which are extensively organized in Indiana and other agricultural States of the Union. But this nominal joint responsibility is necessary in order to secure the proper restrictions which must be thrown around rural credit. It is well known that credit may be harmful as well as helpful. The very keystone to the system is that any man of good character and industrious habits may secure financial assistance, if needed, in order to produce a crop, and that this necessary credit shall be advanced to him at as low a rate as to any other citizen of the Republic. In order to meet these requirements there must be a committee to pass upon his application for credit. Every borrower has to meet that test now, except that at the bank counter it is a question of property qualification. The new system will substitute industry and honesty for property, and naturally these qualities must be passed upon by those who are personally acquainted with the applicant; but after this guaranty has been given there is no good reason why regularly chartered commercial banks shall not accept this business and, by indorsing this community paper, present it to the Government bank for rediscount. If the existing banks meet this new demand in this

spirit, then there will be no antagonism whatever between rural credits and commercial banking; but if they refuse to assist in the organization of this business farmers will have to organize central or regional banks, as they have done in France, and present their demands for credit directly to the Government bank of rediscount.

This cooperative effort in no wise will stifle the individual initiative of the farmer. It would be amusing if it were not offensive to hear the argument that an organization for business purposes among farmers along lines of approved experience will destroy individual initiative. Since the earliest settlement of our country there have been exchanges and cooperation among farmers who are neighbors. Swapping help at thrashing is a simple method of cooperation. Cooperative creameries, elevators, fruit exchanges, and mutual insurance societies are a further development of cooperation in mutual business interests. The rural delivery of mails and the parcel-post exchange is an extension of the same idea. In fact, incorporated towns and chartered cities are but huge cooperative business enterprises among the citizens of a thickly settled community, and the chief advantages in the way of schools, churches, lecture courses, and other places of entertainment and education which the city possesses over the country is the aggregate wealth and power which cooperation gives the community over the individual. In every line of human endeavor organization wins over disconcerted action; and so manifest are the advantages of organization in business that the whole power of our Federal Government can not restrain the activity of our trusts, which is but another name for organization applied to money. This development will require time and education as well as favorable legislation. Unquestionably, one of the great problems of the future before American lawmakers is to frame our laws so as to permit organization and cooperation to grow up among our industrial classes without meeting the inhibition of our antitrust laws. The immediate future will witness a great development of cooperation among the agricultural classes. This is true because agricultural operations can not be carried on with due regard to economy without cooperation.

In the pioneer stage when land was practically without value and taxes were light American farming did not require business methods and business organization. We have passed that stage and the farmer of the future will encounter competition on every hand from organized industry, and his only salvation lies in the economies which are possible through organization and combination, not in any spirit of hostility to society, but in the larger and nobler sense of service to the Nation which his industry must feed and clothe.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SAMUEL W. SMITH. I hope the gentleman may be given two or three minutes more to finish his statement.

Mr. STONE. I yield to the gentleman five minutes more.

Mr. MOSS of Indiana. Mr. Chairman, in conclusion I desire to congratulate the committee specially on some of the features of the pending bill. There are two features of vital importance to agricultural credit, and I believe that all candid students, Republicans and Democrats alike, will admit that they mark a great advance over present conditions. An important question in any system is that of administration. There is not a rural credit system in Europe which will stand 10 years if the administration were unfriendly. The placing of the Secretary of Agriculture on the reserve board is a great assurance that the new system will be administered in a friendly spirit to our farmers. [Applause.] Whatever changes Congress may order in the bill I hope that the Secretary of Agriculture will remain a member of the reserve board.

Second, that agricultural paper is made prime and admitted to be rediscounted, so that if the individual farmer can not obtain credit on fair terms from existing sources he can, by organization, carry his paper to the regional bank and secure credit directly from the Nation. I do not believe that a system of agricultural credit can be made a success in this country unless you give by law the power to rediscount farmers' notes. The one conviction which my study of rural credits has firmly fixed in my mind is that only the power of rediscount by order of the Government, and at a rate fixed by it, will protect farmers from usurious rates in those undeveloped communities where capital has not been accumulated. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAYES. Mr. Chairman, I yield 20 minutes to the gentleman from Pennsylvania [Mr. HULINGS].

Mr. HULINGS. Mr. Chairman, it is with great embarrassment that I undertake to discuss a subject so intricate and of such vital importance as the bill now before the House.

I have read volumes upon the subject and articles and arguments without number, only to find the utmost confusion upon

the most elementary principles involved in this subject. The bankers disagree; the financiers differ; the monetary scientists, who hold themselves a notch above the bankers, take utterly variant grounds. Yet we, the representatives of 100,000,000 people, in the enactment of a law involving colossal results to them, are obliged to vote almost blindly, with scant time for investigation and without opportunity of amendment.

Except for the frame of mind that makes them Democrats, I could almost envy my Democratic colleagues who serenely take orders from a caucus that never took the trouble to investigate for itself, but simply registered the dictum of the master mind in the White House. [Applause.]

Never since Jackson's day has a more determined, aggressive, astute, and accomplished politician resided in that historic mansion. [Applause on the Democratic side.]

Never has a more subservient Congress sat in the Capitol.

Composed of warring elements, Tammany and anti-Tammany, free-traders and protectionists, we have seen you swallowing all protests and raising your voices in unanimous support of a free-trade tariff. [Laughter.]

What other President ever accomplished anything like this?

It is true that Mr. Wilson has announced that "the people need no guardian," but his acts show that he is clearly of opinion that the Democrats in Congress need a guardian [applause on the Republican side], and he proposes to discharge that duty, though I fear he will have an unruly lot of wards on his hands before they come to years of discretion or he is much older.

There is no man on this floor who entertains a higher respect for the President of the United States than I do, nor for what I conceive to be the purity of purpose of Woodrow Wilson.

His warfare upon the "boss system" in New Jersey and his progressive administration as governor of that State were sufficient warrant for me to announce during my campaign that I should support every progressive measure of his without respect to its party label, and without surrendering my right of private judgment I propose to keep my word.

Aside from the matters of detail with which the bill now before us abounds the fundamental questions are:

First. Does the system proposed provide for elasticity in the currency?

Second. Does the system proposed provide for an adequate supply of gold, upon which the system is based?

Third, and uppermost of all. Where will the control of commercial credits finally lodge if this bill is enacted—in the Government or in the banks?

As to the first, without entering into any academic discussion as to what is "money," whether "money" must of itself have intrinsic value, or whether "money" may consist of anything adopted by the "flat" of a government endowed with the power to tax all property in support of its fiat, we need not inquire.

But whatever is adopted as "money," whether coined gold or stamped paper, it is apparent that the increase in the volume of money raises the average level of prices of all other commodities. In other words, the purchasing power of the money unit is increased or decreased as its volume increases or decreases, and without any doubt the great increase in the circulating medium in this country since 1900 is in part the cause of the rise in prices of all other commodities.

In order, therefore, that any assumed standard of value shall be a stable standard there must be a constant equilibration between the volume of money and credits and the average "price level" of other commodities. The price level must be steady, else your standard of value changes.

The German Government controls the "price level" by controlling the rate of interest. The volume of business there is controlled by unlimited bank credits and issues of paper money under certain limitations based on commercial paper.

The English Government have a wholly different system. In England the volume of paper money is not changed. Since 1844 there has been no increase of paper money, and elasticity is secured through the Bank of England, not a governmental but a private organization, which is managed not by bankers, but by a board of directors who are usually merchants, bankers being ineligible as members.

Elasticity there is secured by fluctuations in bank credits, which are made to correspond by raising or lowering the interest rates with the average "price level" and the volume of business.

The proposed bill embraces both these systems in part and will be an improvement upon each of them, although, in my opinion, the power to conform the "price level" to the volume of currency and credits by raising or lowering the rate of interest should be vested in the Federal reserve board rather than in the reserve banks, for inasmuch as the Government prac-

tically guarantees the redemption of all paper in gold the Federal board should be vested with the power to change the interest rate, since that power is substantially the only means of arresting the outflow of gold or to attract it to this country.

The second question is, Is there adequate provision for the supply of gold?

No country in the world holds enough gold to redeem its paper money. What gives the paper issues of the Government value is, in the last analysis, not that it has gold enough to redeem any quantity of its paper that it may be called on at any time to redeem, but that it can procure the gold by the exercise of its taxing power.

Governed by this consideration, the United States Government, having the power of unlimited taxation of all the property of its 100,000,000 of the wealthiest and most industrious and efficient people in the world, her power to keep her agreements and her disposition to keep them is not equaled elsewhere in the world; and whether we fix 33½ per cent or 50 per cent as a gold reserve is, in my opinion, a matter of detail of no great importance.

This brings us to the third question: Where will the money control lodge?

The great bankers who, it is alleged in the report of the Pujo committee, at present are in control or have the power to control the credit system of the country, of course wish to preserve for themselves that power of control, and they urge with great and, apparently, ingenious pertinacity that the bankers should control the constituent banks, the Federal reserve banks, and, as well, the Federal reserve board.

In the greatest financial institution of the age, the Bank of England, no banker is allowed on its board.

The chancellor of Germany controls the German Imperial Bank's interest rates. So in these great institutions bankers are rigidly excluded from the controlling power, and I think it a mistake that there should be any banker allowed on the reserve board or that any advisory council of bankers should have been provided for.

Mr. Chairman, under our present system we have seen that a few of the big institutions of the great cities by collaborating—I will not say conspiring—have controlled, in large degree, the credit system of the country; and that they have it in their power to hurt the country with financial panic, to its great loss and their profit and advantage, and to bring the Government itself to its knees, as they did in Cleveland's day and in 1907.

Yet there remained a great number of smaller banks, country banks, that were independent and competing.

But I wish to point out the danger that when all the banks become members of the 12 Federal reserve banks that it will be much easier to effect the cooperation of all the banks upon concerted policies of control than it is under the present system. There is no doubt in my mind that these confederated banks will have enormous power not only as controllers of the credit system, but as political agencies. And for this reason, if I shall be given the opportunity, I shall at the proper time move to amend by striking out the advisory council of bankers and bank membership on the Federal reserve board.

Mr. Chairman, I beg also to offer some observations concerning farm loans, provided for in section 23.

This provision, I think, can do no harm, but it must be evident that it can do little, if any, good, for the reason that no banker will lend on 12 months' time when he can lend on 3 or 4 months' time. Another reason is that 12 months' time does not accommodate the real needs of the average farmer.

But primarily the objection is that the farmer is not equipped to compete in the money markets with the short-time borrower. The farmer can not afford to pay the rates of the commercial bank handling business for borrowers who get quick returns from their enterprises. The merchant turns his goods in three or four months' time and can afford to pay a higher interest than the farmer whose returns come but once a year.

For this reason every civilized Government except our own has been developing for many years a system of farm credits, making it possible for farmers to secure loans at low rates of interest, which has proved of great advantage to the general welfare. These systems have been adopted by these Governments not because they had any particular love for farmers, but because their statesmen perceived that all national prosperity depended upon a prosperous land-tilling class.

Instead, therefore, of the provision in the bill that will inevitably fail to be of substantial benefit to the farming class or of any real advantage to the public, I believe there can be inserted here a provision that will not in any wise conflict with other provisions of the bill, but will afford a substantial and practical benefit to the farming classes; and at the proper time I shall ask so to amend the bill.

Mr. Chairman, this measure falls far short of what it ought to be. Its failure is largely due to the fact that it has been devised as a partisan measure.

It is not such a bill as the fair product of a free Congress of the thought and judgment of this House would have made it. But it is introduced as a party measure. It is perfectly well understood that under the party lash it will be whipped through and that no amendment will be permitted.

I listened with profound admiration to the remarkable speech yesterday delivered by the gifted gentleman from Kansas [Mr. MURDOCK]. With every word of it I thoroughly agree. This bill is not what it ought to be.

I have studiously read the report of the committee, and especially the learned and illuminating minority report of the gentleman from Minnesota [Mr. LINDBERGH].

These two gentlemen have gone to the marrow of the question. They have exposed the weakness of the bill. It palliates but does not cure the evils of the Money Trust.

This is a banker's bill, and yet the Government, though it guarantees all issues and is at all the expense, may be humiliated by the refusal of the banks to adopt the scheme. In my district there are 45 banks, State and national. In response to inquiries from them I have had numerous replies, and not one of them is heartily in favor of the bill.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HULINGS. I would like to have five minutes more.

Mr. HAYES. I yield five minutes more to the gentleman.

Mr. HULINGS. Mr. Chairman, the objections to the bill have been clearly pointed out by the gentleman from Kansas and the gentleman from Minnesota. The gentleman from Minnesota [Mr. LINDBERGH] suggests a bill which I regard as one of the most important contributions to the literature of finance ever written. It is a document challenging the serious thought of the country. It would revolutionize the financial policies of the world. The country is not yet ready for such a bill, and the bill is not under discussion here.

The only bill upon which we are permitted to vote is the bill proposed by the committee, and as to that bill I believe, with the gentleman from Kansas [Mr. MURDOCK], that it is a "step in the right direction"; a timid and halting step it may be, yet, considering the whole matter, an improvement upon our present system.

So with much misgivings and with the hope that it may be a longer step than I see it, with the hope that the President, who so urgently commands its passage, may see more clearly than I, and without any hope whatever that the present Congress will present a better measure, I shall vote for the bill. [Applause.]

I yield back the balance of my time.

The CHAIRMAN. It goes back automatically.

Mr. GLASS. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, and had come to no resolution thereon.

ENROLLED BILL SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title, when the Speaker signed the same:

H. R. 3406. An act to authorize the construction of a bridge across the Sabine River at Orange, Tex.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following bill:

H. R. 3406. An act to authorize the construction of a bridge across the Sabine River at Orange, Tex.

DEATH OF REPRESENTATIVE WILDER.

Mr. TREADWAY. Mr. Speaker, it becomes my sad duty to announce to the House of Representatives the death of Hon. WILLIAM H. WILDER, late a Representative from the third district of Massachusetts.

I will not take the time now, but I will at some future time ask the House to set apart a day in order that proper tribute may be paid to his memory.

Mr. Speaker, I offer the following resolutions.

The SPEAKER. The Clerk will report the resolutions.

The Clerk read as follows:

House resolution 250.

Resolved, That the House has heard with profound sorrow of the death of Hon. WILLIAM H. WILDER, a Representative from the State of Massachusetts.

Resolved, That a committee of 20 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expense in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The resolution was agreed to; and the Speaker appointed as the committee on the part of the House Mr. PETERS, Mr. CURLEY, Mr. MURRAY of Massachusetts, Mr. MITCHELL, Mr. PHELAN, Mr. THACHER, Mr. GILMORE, Mr. DIETRICH, Mr. ADAMSON, Mr. WATKINS, Mr. OLDFIELD, Mr. GILLET, Mr. GREENE of Massachusetts, Mr. ROBERTS of Massachusetts, Mr. GARDNER, Mr. TREADWAY, Mr. WINSLOW, Mr. ROGERS, Mr. HINDS, and Mr. SLEMP.

ADJOURNMENT.

Mr. TREADWAY. Mr. Speaker, I offer the following further resolution.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect the House do now adjourn.

The resolution was agreed to; accordingly (at 9 o'clock and 27 minutes p. m.) the House, under the order heretofore agreed to, adjourned until Friday, September 12, 1913, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, copies of reports, with illustrations, from a special board of engineer officers on a survey of the Beaufort (N. C.) to Key West (Fla.) section of the proposed continuous inland waterway from Boston, Mass., to the Rio Grande (H. Doc. No. 229); to the Committee on Rivers and Harbors and ordered to be printed with illustrations.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of the channel of Illinois River at Meredosia, Ill. (H. Doc. No. 230); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

3. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on examination and survey of Southeast River, Md. (H. Doc. No. 231); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

4. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report of preliminary examination and survey of Milford Harbor, Conn. (H. Doc. No. 232); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

5. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on survey of the across-Florida section of the proposed continuous inland waterway from Boston, Mass., to the Rio Grande (H. Doc. No. 233); to the Committee on Rivers and Harbors and ordered to be printed with illustrations.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 2758) granting a pension to James G. Kuhnert; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 2768) granting a pension to Aaron W. Dixon; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII,

Mr. CLARK of Missouri (by request) introduced a bill (H. R. 8079) to establish a drainage and levee fund and to provide for the protection, drainage, and reclamation of the overflowed and swamp lands in the United States, in promotion of the general welfare, in prevention of the dissemination of malaria

and other diseases among the several States, and to promote interstate commerce by navigation, which was referred to the Committee on Rivers and Harbors.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BYRNS of Tennessee: A bill (H. R. 8070) granting a pension to Henry S. Robert; to the Committee on Pensions.

By Mr. FOSTER: A bill (H. R. 8071) granting a pension to Eugene Cunningham; to the Committee on Pensions.

Also, a bill (H. R. 8072) granting an increase of pension to Thomas W. Dare; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8073) granting an increase of pension to Elisha Sprouse; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8074) granting an increase of pension to Isaac F. Morrison; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8075) granting an increase of pension to Edward H. Bennett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8076) granting an increase of pension to Adolph C. Radtke; to the Committee on Invalid Pensions.

By Mr. PETERS: A bill (H. R. 8077) for the relief of Alexander Gilmore; to the Committee on Claims.

By Mr. WILLIS: A bill (H. R. 8078) granting an increase of pension to Samuel Garver; to the Committee on Invalid Pensions.

By Mr. FRENCH: A bill (H. R. 8080) granting an increase of pension to La Fayette Platt; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. DYER: Papers to accompany bill (H. R. 7635) granting a pension to Edward Dodsworth; to the Committee on Invalid Pensions.

Also, petition of the National Civil Service Reform League, New York, protesting against exempting the income-tax collection force from the provisions of the civil-service law for a period of two years; to the Committee on Ways and Means.

By Mr. STEENERSON: Petition of C. R. Andrews & Co., Ada, Minn., favoring a reduction of the tariff on raw and refined sugars; to the Committee on Ways and Means.

By Mr. STEPHENS of California: Petition of the Santa Monica Bay Chamber of Commerce, Ocean Park, Cal., and the San Mateo County Development Association, favoring the passage of legislation making an appropriation for increasing the Navy by four battleships and necessary auxiliary boats; to the Committee on Naval Affairs.

Also, petition of the Santa Monica Bay Chamber of Commerce, Ocean Park, Cal., and the San Mateo County Development Association, favoring the passage of legislation for the formation of a naval reserve; to the Committee on Naval Affairs.

HOUSE OF REPRESENTATIVES.

FRIDAY, September 12, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, O God our heavenly Father, for all the noble and godlike qualities of mind and soul with which Thou has endowed us; especially do we thank Thee for the inborn hope of the immortality of the soul, strengthened by the lives of great men who have lived and wrought and passed on, leaving behind them thoughts and deeds which live after them. He that believeth on Me, said the Son of God, shall never die. "For we know that if our earthly house of this tabernacle were dissolved we have a building of God, an house not made with hands, eternal in the heavens. Now He that hath wrought us for the selfsame thing is God, who also hath given unto us the earnest of the Spirit." Death has once more entered our ranks and taken away one of its Members. Grant that he may still live in the contributions to his fellow men and in the personality of a genial life and noble character. Comfort his colleagues and friends, especially his stricken family. Help them to look forward through the rainbow of tears to the great beyond for consolation and help, and Thine shall be the praise through Him who said I am the resurrection and the life. Amen.

The Journal of the proceedings of yesterday was read and approved.

RESIGNATION FROM COMMITTEE.

The SPEAKER laid before the House the following letter:

WASHINGTON, D. C., September 10, 1913.

To the Speaker and the House of Representatives:

I hereby resign as a member of the Committee on Ways and Means of the House of Representatives, my resignation to take effect immediately.

Very respectfully,

SYDNEY ANDERSON.

The SPEAKER. Without objection, the resignation will be accepted.

There was no objection.

ENROLLED BILL SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title, when the Speaker signed the same:

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1890, governing the immediate transportation of dutiable merchandise without appraisement.

BIDS FOR BATTLESHIP MACHINERY.

Mr. CULLOP. Mr. Speaker, I ask unanimous consent to extend remarks in the RECORD by inserting a news item in the Washington Times of yesterday concerning the bid for machinery on a certain battleship in the New York Navy Yard.

The SPEAKER. The gentleman from Indiana asks unanimous consent to extend his remarks by inserting an extract from a newspaper on a bid for machinery on a battleship in the New York Navy Yard. Is there objection?

There was no objection.

IMMIGRATION.

Mr. RAKER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon immigration.

The SPEAKER. The gentleman from California asks unanimous consent to extend remarks in the RECORD on immigration. Is there objection?

There was no objection.

THE CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837—the currency bill.

The motion was agreed to; accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. GARNER in the chair.

Mr. GLASS. Mr. Chairman, I yield one hour to my colleague on the committee [Mr. BULKLEY].

Mr. BULKLEY. Mr. Chairman, our banking and currency system, or rather lack of system, has resulted in greater and more frequent panics than has any other system in the world, and for years it has been recognized that our periodical financial troubles can be mitigated, if not eliminated, by appropriate changes in our banking and currency laws. There has developed some agreement among experts concerning some of the causes which underlie our troubles, but our experts and legislators have never come so near to an agreement on a practical remedy as we find ourselves to-day. It has been generally agreed that the country needs a mobilization of reserves, a more elastic currency, the development of a discount market for commercial paper, and a greater measure of governmental control of banking. These are the great needs, and necessarily any measure aiming to accomplish these great reforms becomes involved in almost countless puzzling ramifications, more or less directly connected with the main purposes. The Banking and Currency Committee now submits a bill which it believes will accomplish all of these great objects as well as other desirable reforms of minor importance, with a minimum of disturbance and inconvenience to business. Considering the complexity of the subject and the number of questions involved it could hardly be expected that all concerned in the preparation of such a measure should be in complete accord as to what that measure should contain. Nor could a measure be generally agreed upon which would meet in every detail the unqualified approval of any one man. Nevertheless, a substantial agreement has been reached, and this bill comes before the House heartily supported by almost every member of the Banking and Currency Committee, and by almost every member of the Democratic caucus.

It is not assumed that the pending bill will reform everything which might be reformed, and because of the very immensity of the field it has been the purpose of the committee to confine the present measure to a reform of our currency and commercial banking.

Our national banks are commercial banks. That is to say, they are banks whose transactions are concerned with the production and distribution of agricultural and industrial products. They are to be distinguished from savings and investment institutions, for their deposits are mostly the balances which merchants, manufacturers, and farmers find it convenient to keep for the ordinary everyday transaction of business, and their loans are generally made to meet the ordinary business necessities of these classes. The business man deposits his funds in the bank for safe-keeping and for the convenience of being able to pay his debts by check against the bank. The bank, having an accumulation of such funds, finds it possible to make loans to its customers, which means that funds not required for active use by their owners are placed at the disposal of those who can make use of them in business. It frequently happens that borrowers require not money, but merely the right to draw checks upon the bank. Such borrowers give their notes, and in exchange therefor take a deposit credit with the bank. Our credit structure is so developed that the greater part of our bank deposits is created by loans from the banks rather than by the deposit of money in the banks. When checks drawn against a bank are deposited by some other person in the same bank only a bookkeeping entry is necessary to complete the transaction, and no money passes; if the checks are deposited in other banks they are likely to be offset by the deposit of checks drawn against other banks, and again only bookkeeping entries take place and no money passes. Some specie is certain to be drawn out of a bank from day to day, but it is largely offset by the deposit of specie. And so experience shows that a bank may do a large business with a comparatively small amount of money on hand.

Yet it is always necessary that the bank should have a certain amount of money on hand, because of its duty to supply it on demand to its depositors. The amount of reserve money which it is desirable for a bank to keep on hand may vary from time to time and from place to place, and in most foreign countries the amount to be held available is left entirely to the judgment and discretion of the banker. But in this country, because of the great number of banks, and because under our free banking system banks may be established by persons without banking experience, it has been deemed desirable to fix by law certain minimum reserve requirements. These requirements differ according to the location of the bank.

Our law provides that upon application of three-fourths of the national banks situated in any city having more than 200,000 inhabitants the Comptroller of the Currency may designate such city as a central reserve city. And similarly, upon application of three-fourths of the national banks situated therein, any city having a population of at least 25,000 inhabitants may be designated as a reserve city. New York, Chicago, and St. Louis are now the only central reserve cities, and there are 47 reserve cities. All banks not situated in reserve or central reserve cities are known as country banks.

The amount of reserves required by law to be held by country national banks is 15 per cent of the aggregate amount of their deposits, and by national banks situated in reserve and central reserve cities 25 per cent of their aggregate deposits. Gold, silver, gold certificates, silver certificates, United States notes, Treasury notes, and clearing-house certificates evidencing the deposit of gold may be counted by national banks as legal reserves.

Country banks are required to keep money in one or more of these forms in their own vaults to the extent of two-fifths of the 15 per cent reserve required of them, and the balance of their legal reserve may be in the form of a credit balance with one or more national banks situated in reserve or central reserve cities. Reserve city banks must keep money in some of these forms to the extent of one-half of their required legal reserves, the rest of which may consist of credit balances with banks situated in central reserve cities. The central reserve city banks must keep all of their required reserves in cash in their own vaults. It is obvious that the loaning power of national banks is limited by the amount of their reserves. In other words, when the amount of legal reserve is about as low as the law allows, a bank can not extend new credit accommodations until it shall have replenished its reserve.

Under our present law banks in all sections of the country have developed the custom of keeping balances for reserve and exchange purposes in the central reserve cities, and especially in New York. Banks qualifying as reserve agents have encouraged the building up of these balances by the payment of interest thereon, the interest paid being usually at the rate of 2 per cent. Ordinarily a uniform rate is paid on these bank balances in season and out of season, regardless of how much the use of the money may be worth at any particular time to

the reserve agent. Then, in order to make a profit on the transaction, the reserve agents have been obliged to keep the money actively employed one way or another. This necessity of finding some employment for funds, coupled with an effort so to invest them as to keep them available at call, has resulted in the overdevelopment of the call-loan market in New York, a market whose principal business is that of carrying speculative transactions, largely on the New York Stock Exchange.

And so we find much of the reserve money of the country invested in call loans on stock-exchange collateral, on the theory that such loans are absolutely liquid. No doubt this is true of a single loan of this character, because by its terms it is payable on call and is secured by collateral for which there is a ready market. But once a sufficient number of these loans is called at the same time, a situation develops in which the loans are not liquid at all because the very calling of a large number of these loans knocks the bottom out of the stock market and spoils the sale of all the collateral. Experience has repeatedly proved this to be the case.

Let us keep clearly in mind the distinction between a fixed investment and a commercial or liquid asset. Corporate stocks and bonds, lands, and buildings are fixed investments. However valuable they may be, their conversion into cash depends upon finding some one who believes that under all the circumstances it will be profitable for him to buy them as an investment. Growing crops, goods in process of manufacture or in transit, and mercantile stocks are commercial or liquid assets, generally speaking; certainly they are liquid to the extent that they are products on some stage of the way toward consumption. The sale of such products does not depend upon finding a willing investor and does not have to be forced, but comes about naturally in response to the ordinary demand arising from the necessities of mankind. Such assets constantly liquidate themselves, because, of necessity, they must be paid for when consumed.

If we allow national banks to count as part of their required legal reserve credit balances with other banks, be they the reserve agents now provided by law or the Federal reserve banks proposed by this bill, we must take care that the banks charged with the care of such balances shall keep them always available and ready to meet the necessities of the banks depositing them. Reserve money so far as it is invested must be invested in bills of short maturity based on liquid assets.

It happens that at the seasons when our great agricultural crops are harvested and moved there is need for a larger amount of currency in circulation than is required at other seasons. This is only another way of saying that at those seasons the amount of transactions evidenced by the payment of cash or currency is larger in proportion to the credit transactions than it is at other times. It is easy to see that when large amounts of cash are drawn out of the banks to pay farm hands and for other purposes, the amount of reserve money held by the banks is reduced, and hence their loaning power is impaired, and this is the explanation of the annual autumn money stringency.

The banks can to some extent protect themselves against paying out their reserve money by the issue of national-bank notes, but inasmuch as these notes are based on the fixed amount of United States bonds bearing the circulation privilege, and the profitableness of their issue depends to some extent upon their being kept constantly in circulation without reference to the country's demand for currency, it is apparent that there can be no elasticity in the amount of such notes. In other words, the amount of our currency does not rise and fall in response to the need for it. It is most desirable that the amount of our currency should be made more elastic, because the seasonal demand for currency is a perfectly normal and natural thing, and, as has been said, results only from the fact that at certain seasons it is necessary to do a relatively large proportion of the country's business with currency. There is no sound reason why we should allow this to cause a credit stringency by drawing reserve money out of the banks.

It is proposed in the pending bill to relieve this situation by the issue of Government notes. These notes will be issued through the several regional reserve banks which the bill proposes to establish, each bank being required when it takes out the notes to pledge as security commercial paper to the amount of the face value of the notes and to establish in lawful money a fund to redeem the notes in the amount of one-third of the face value of the notes.

Whatever Treasury notes go out into circulation must be immediately redeemable in lawful money on demand, and we should never allow such notes to go out into circulation without ample provision for their being so redeemed. The security behind our currency must be such that it can be readily liquidated without forcing sales and without depending upon the willing-

ness of investors to buy. In other words, the security behind our currency must be liquid assets, not fixed investments.

The proposed note issue will rest on a basis of commercial paper which is itself flexible, the amount of it rising and falling with the active needs of the country. The plan proposed, however, is dependent upon the existence of regional reserve banks, such as this bill proposes to establish, possessing adequate amounts of lawful money to insure the redemption of the notes issued; and the possession of this lawful money by these banks is dependent upon the mobilization or concentration of national-bank reserves.

So it appears that the establishment of regional reserve banks and the proposed system of rediscounting is a most efficient means of insuring the proper investment of the reserve money of the country, which is the very active lifeblood of our commerce, in the safest and most liquid assets, namely, the agricultural, industrial, and commercial paper, which, as we have already seen, is constantly clearing itself. The establishment of the regional reserve banks and the rediscount system thus accomplishes at once the three vital reforms needed in our banking and currency system. It provides for mobilization of reserves that they may be available to be used where most needed; it provides the basis for a truly elastic currency to meet our seasonal demand without undue strain upon our credit system; and it affords a discount market for our agricultural, industrial, and commercial paper, drawing our reserve funds out of their present use for speculative purposes in the great centers and providing for their employment in the development of business throughout the country.

Mr. TRIBBLE. Mr. Chairman, I would like to ask the gentleman a question.

Mr. BULKLEY. I will yield to the gentleman.

Mr. TRIBBLE. As to the amount to be paid by the borrowing banks, does the gentleman think that that amount ought to be fixed by this bill?

Mr. BULKLEY. I think that should be within the discretion of the Federal reserve board, as is provided in the bill.

The whole structure depends upon the proper disposition of reserves. If reserves are really mobilized, the amount required to be carried as reserve by the individual bank may safely be reduced, as each member bank will have facilities for converting its good paper into ready cash, and by this reduction in the reserve requirements of the individual banks additional credits will become available for the legitimate development of business through the enlarged loaning power of the banks. If the reserves are really mobilized, the Federal reserve banks will be a power to stop panics, they will have the basis for an elastic currency and the funds to support a broad market for agricultural, industrial, and commercial paper. But all depends on really mobilizing the reserves. It will not do to evade the question, as was done by the Aldrich plan, which provided that banks might have the privilege of depositing their reserves in a central reservoir without interest, while they were still permitted to deposit them with reserve agents who would pay interest. It will not do to meet the question half way, as the Chicago bankers' conference now asks us to meet it, by permitting the reserves to be carried one-third in vault, one-third with regional reserve banks, and one-third with reserve agents. As the chairman of our committee has said, we must cut the cancer out, we must not permit balances with other banks to be counted as reserve, because experience has shown that they are not reserves when reserve is most needed.

I have referred to the meeting of representatives of State bankers' associations and clearing-house associations called together by the currency commission of the American Bankers' Association for a conference at Chicago on August 22 and 23. This conference unanimously adopted resolutions proposing certain changes in this bill and appointed a committee to come to Washington and lay their proposals before Congress. The members of this committee appeared last week before the Senate Committee on Banking and Currency. Mr. George M. Reynolds, president of the Continental & Commercial National Bank, of Chicago, was one of the representatives of that conference and was delegated by his colleagues to speak on the subject of bank reserves. I call him to witness to show whether or not it is desirable that reserves should be taken away from the central reserve cities and sent back home. I quote from page 225 of the hearings:

Senator NELSON. Now, let us go back to the practical ideas. Is it not a fact that when money is plentiful in the interior of the country the country banks and the banks in the reserve cities send the money to New York, to the banks in New York, for the sake of getting their 2 per cent interest on the deposits? The banks in New York, at that season of the year, in order to utilize that money and make that interest, instead of investing it in what I call commercial loans or commercial strictly they invest it in call loans on stock collateral on the stock exchange, in those gambling contracts; and there is where the

money comes from to do that. And then, in the fall of the year when there is a demand for the money in order to move crops and so on, their money is tied up in those stock collaterals.

Now, would it not be safer to keep that money at home instead of getting that 2 per cent interest on it—would it not be better for the whole country?

Mr. REYNOLDS. I do not think, Senator, there is any question about that at all. That does not, however, change the force of my statement to the effect that it would reduce the income of the banks from their present status of a little over \$10,000,000 a year, which must be borne at some place by somebody else. Now, if you want to ask whether, as a principle of economy, it would be better to take \$10,000,000 and spread it in higher interest rates which the people would have to pay, that is another proposition.

Senator NELSON. Well, would it not be better, so far as the question of safety is concerned?

Mr. REYNOLDS. I do not think there is any question about that. Now, let me in the same connection make a statement as to how I regard this thing of the investment in the so-called stock exchange loans. If that money would be kept at home, Senator, and be invested by the local bankers in such loans as they can get over their counter, the liquidity of the assets of banks to that extent would be reduced, because I think you will agree that if the farmers of the country borrow this money and are called upon to pay it back before their crops have matured or before their live stock has been fattened for the market, it could only be done at a sacrifice.

In passing, let me comment on the suggestion Mr. Reynolds makes that our bill will take \$10,000,000 a year income from the country banks, which they will pass along to the borrower. Of course, we do not forget that the borrowing public pays that ten million a year now, for certainly the reserve city banks do not pay it for the mere pleasure of carrying country balances unless they make a profit on it. Mr. Reynolds is right, however, in saying that the country banker will not lose any of the money he now makes, but will pass the charge along to the borrower. It will not, however, be passed to the borrower in the shape of higher rates for loans, as Mr. Reynolds implies; it will be justly and equitably charged to the borrower, because by the facilities afforded by this bill borrowers from the country banks will get more than \$10,000,000 worth of additional accommodation, and will be glad to pay for it.

Mr. Reynolds suggests some doubt about the liquidity of agricultural paper, and no doubt he is right in saying that there is a season in the year when it is not absolutely liquid. That happens, however, to be the summer season, when demand for credit and currency is at its lowest. Let us answer that industrial and commercial paper will mature rapidly enough during those seasons to meet all demands. Let us further answer that while the farmer might be embarrassed to be called upon to pay all his debts out of season, the New York Stock Exchange borrower would be embarrassed to pay all his debts at any season, and Mr. Reynolds says so himself on page 226 of the hearings:

The man who borrows money on stock-exchange collaterals in New York and who wants to realize on them quickly must depend upon the ability of the borrower to re-borrow that money immediately elsewhere or upon the sale of same. Now, if the condition is so bad that the banks in New York City are unable to extend the accommodation, the result is that there is a very violent break in the values of securities, and we are in the midst of a panic. Now, that is what actually happened in the panic of 1907, and the illustration you have made is literally true, and that is the reason that in all the discussions I have had on the subject of currency legislation I have insisted that the security for bank notes should be in a character of paper which naturally liquidates itself and thereby forces to that extent notes which are issued against it.

After proposing the plan recommended by the Chicago conference providing that reserves should be carried one-third in vault, one-third in regional reserve banks, and one-third with reserve agents, Mr. Reynolds submitted figures to show how the plan would work, and then summed up his theory about the matter as follows:

My theory and the theory of the people who made this recommendation was that while we might agree with you in principle that the pyramiding of reserves was not a proper banking principle, still we have a condition and not a theory, and our theory in asking for this change is that we may be given more time to comply with the change which is being provided for in this bill as it now stands.

What is the significance of these statements? The president of the bank which carries more country accounts than any other bank, the man selected by the Chicago bankers' conference to present their case for a modification of this section, has frankly and manfully admitted that we are right in principle. As against this principle he suggests a theory that the banks can not conveniently make these adjustments in the course of three years after the organization of the proposed banks, or perhaps four years from now. Yet hitherto no expert has ventured to say that a longer time is necessary for these readjustments, and I submit that it does not do full justice to the bankers of this country to say that they can not prepare for this change in such a length of time.

How will this reserve section operate practically? So much depends upon this section that it is important to examine carefully whether it could be worked out without disturbing busi-

ness. I have prepared tables to show in a general way what the ultimate result of this section will be after the final readjustment shall have been made. Accurate predictions are, in the nature of the case, impossible, since no one can know how many banks will have come into the proposed system at any given time. Some assumption must be made before we can begin to figure; yet no assumption will prove literally true. The most convenient assumption, which is at the same time about as likely as any other, is that all national banks and no State banks will enter the system. It is, of course, fair to presume that some national banks will go out and some State banks will come in; but these might offset each other, and, in any event, we must be frank to say that we do not expect a large proportion of the State banks to enter until after the success of the plan shall have been fully demonstrated. The figures, then, are made on the assumption I have stated.

Tables showing transfers of funds necessitated by provisions of House bill 7837.

Of the two tables I have prepared one illustrates the amount of money which would be drawn from the reserve and central reserve banks and placed in the Federal reserve banks if all the banks should deposit with the Federal reserve bank the least possible amount—that is to say, the minimum they are required by law to deposit. The other table shows what the situation would be provided all of the banks deposited with the Federal reserve bank the largest amount they would be allowed to count as reserves in the Federal reserve bank. The truth is the situation would be somewhere between the two, because it is likely the banks would not restrict deposits to the least minimum nor would they keep quite as much of their reserves with these banks as they might under the law.

You will remember that the bill proposes that the reserve of country banks shall be cut from 15 per cent to 12 per cent of aggregate deposits, and that of this five-twelfths must be kept in their own vaults and five-twelfths ultimately after the three-year period of readjustment must be kept on deposit in the Federal reserve banks. That, therefore, leaves a leeway of 2 per cent, which they may keep in the reserve banks or in their own vaults, at their option. Reserve city and central reserve city banks are required to keep a reserve of 18 per cent, and of this 18 per cent one-half must be kept in their own vaults and 5 per cent must be kept with the reserve banks, and there is a leeway of 4 per cent, which they may deposit or keep in vault. The first table shows you how this bill would work, assuming the banks deposit the minimum amount which they are required to deposit. This statement is based on the comptroller's statement of the condition of the national banks on June 4 last.

Mr. MANN. These tables are duplicates, are they not?

Mr. BULKLEY. They are duplicates in form, but not in figures. These figures in the first table represent what would happen if the banks carried with the regional reserve banks the minimum amount they are obliged to carry, and these figures in the second table represent what would happen if they carried the maximum amount they might count as reserve.

The country banks on June 4 had net deposits subject to reserve requirements of \$3,610,000,000. Five per cent is the minimum reserve member banks are required to carry with the regional reserve banks. It amounts to \$180,000,000. The capital of country banks is \$610,000,000, of which they would be required to make 20 per cent subscriptions to the stock of Federal reserve banks, of which they would have to pay one-half. I therefore add the payment of \$61,000,000. United States deposits would be withdrawn from the individual banks and deposited in the regional reserve banks. Therefore the country banks would have to make a payment of the total amount of Government deposits which they now have. We add these,

then, to the other payments they would have to make and find that they would have to pay over \$263,000,000 to the reserve banks. Country banks are now required to carry 6 per cent reserve against deposits in their own vaults. The new law would permit them to carry as much as 7 per cent in their own vaults and count it as reserve. I have, therefore, added 1 per cent and assumed that they withdrew this from their reserve agents and put it in their own vaults as reserve. This \$36,000,000 is 1 per cent of their deposits subject to reserve requirements, and that is added to the amount they would have to pay to the Federal reserve banks, and makes a total withdrawal from reserve agents of \$300,000,000. The present balances of all of the country banks with reserve agents amount to \$496,000,000, and this shows they could make all of the payments required by this bill by drawing against their reserve agents and still allow more than one-third of their total balances to remain on deposit with their agents. A statement I have received from the Comptroller's Office shows the balances carried by country banks with reserve agents to be about two-fifths in the central reserve banks, in Chicago, St. Louis, and New York, and about three-fifths in the reserve banks in the other 47 reserve cities. This shows that about \$120,000,000 would be withdrawn by the country banks from central reserve cities and \$180,000,000 from reserve cities.

Take the situation with the reserve banks. Their deposits on June 4 were \$1,945,000,000, and if \$180,000,000 were withdrawn by country banks that would leave so much less subject to reserve requirements, and therefore they would have only \$1,765,000,000 deposits, of which they would be required to deposit 5 per cent with the reserve banks, or \$88,000,000; \$264,000,000 represents their capital, of which they would have to pay in 10 per cent as capital stock subscription. They would also have to give up their Government deposits, amounting to \$22,000,000. Now, the country banks have withdrawn from the Federal banks, as we see over here by this table, \$180,000,000. That must be added here, making a total of \$317,000,000 which the reserve city banks would have to pay over to the Federal reserve banks. Their present cash holdings are \$242,000,000. If they have deposited 5 per cent of their aggregate deposits in the Federal reserve banks, they would, under the provisions of this bill, have to keep 13 per cent in their own vaults, making a total of the 18 per cent required. Now, that 13 per cent cash reserve would be \$229,000,000, releasing \$12,000,000 of money which they now hold in their own vaults. Their present balances with central reserve banks in New York, Chicago, and St. Louis are \$205,000,000. In order to make this table conservative I have estimated that these banks, in spite of the fact they are not allowed to count that money as reserve, would still desire to keep about one-fourth of their present balances with these central reserve banks for purposes of exchange or business reasons. That is the estimate that has been made to me by bankers of the amount which at least temporarily the reserve city banks would want to keep as balances with the central reserve banks. This releases from the balances with central reserve banks, which they would be free to draw down, \$198,000,000. The next figures show how payments would be made to the Federal reserve banks. They have a total of \$317,000,000 which must be paid. I have shown how they would be able to pay \$12,000,000 in cash and \$198,000,000 by draft on their central reserve agents, and the rest of the amount necessary to be paid would have to be paid by rediscounts with reserve banks. I therefore estimate that the reserve city banks would have to rediscount with the Federal reserve banks to the amount of about \$105,000,000.

The central reserve banks have net deposits of a billion and a half. From that we must deduct these withdrawals. We have seen over here the country banks would withdraw \$120,000,000 from the central reserve cities and the reserve city banks would withdraw \$198,000,000 from the central reserve cities. We therefore have a total withdrawal on the part of correspondent banks of \$318,000,000, leaving \$1,249,000,000 net deposits subject to reserve requirements. Against this they deposit 5 per cent with Federal reserve banks, \$62,000,000; the Government deposits amount to \$5,000,000; 10 per cent on capital stock amounts to \$18,000,000, making a total of \$85,000,000 which they would have to pay to the Federal reserve banks for their own account. The payments which the reserve banks would require them to make is \$198,000,000; and the country banks would draw against them for \$120,000,000, making \$404,000,000 in the aggregate they would have to pay over to the Federal reserve banks. The present cash holdings are \$405,000,000 and the amount of the reserve required under the new bill if they deposited 5 per cent with the Federal reserve banks would be 13 per cent, which they would have to carry in their own vaults, say \$162,000,000. That releases \$243,000,000 of

cash. They could therefore pay to the Federal reserve banks \$243,000,000 in cash, and they would have to rediscount to the extent of \$161,000,000, making a total payment which they would have to make of \$404,000,000.

The next table is a recapitulation, showing what the situation would be after these changes have been accomplished. This first reserve is the payments that they would all make. The country banks would pay \$61,000,000 of capital, the reserve city banks, \$26,000,000, and the central reserve city banks, \$18,000,000, a total of \$105,000,000 capital. They would have to put up the reserves shown in the next column, and they would have to give up United States deposits as shown in the third column, making a total of \$676,000,000, which they would have to pay in as shown here.

I have estimated here that the country banks, so far from paying out any cash, would actually draw cash away and put it into their vaults, and therefore this \$36,000,000 is a red-ink figure, showing a minus quantity. They would draw on their reserve banks \$180,000,000, and on their central reserve agents \$120,000,000. The total of these two figures, minus the cash withdrawal would be the amount that they are required to pay.

Similarly, the reserve banks would put up in cash \$12,000,000, would rediscount \$105,000,000, and would draw on the central reserve agents \$198,000,000. The central reserve banks would put up in cash \$243,000,000, and would rediscount to the extent of \$161,000,000.

The next table is a combined statement of all the Federal reserve banks, after all of these changes take place. Assume that \$140,000,000 of Government deposits were withdrawn from the United States Treasury and put into the banks, this being approximately the amount that is carried in the Treasury from day to day, and would, under the new plan, be deposited in the regional reserve banks. It would give the combined Federal reserve banks total assets in cash of \$359,000,000 and loans of \$266,000,000. The capital would be \$105,000,000, and the deposits \$521,000,000.

As you will see, that shows a very large cash reserve against deposits, permitting not only all of the present loans now existing in the country to stand exactly as they are, but also allowing of a very large expansion of credit, because the reserve required of these Federal reserve banks is only 33½ per cent of their deposits.

Mr. HAYES. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from California?

Mr. BULKLEY. Yes.

Mr. HAYES. After these banks have made these payments, is it not true that all the payments made to the Federal reserve bank, except \$105,000,000 that they pay for capital subscriptions, would be counted as reserve, and therefore would be a basis for credit?

Mr. BULKLEY. It all depends on whether or not they are in cash. These tables show they would not all be made in cash and would be made to a certain extent in rediscounts.

Mr. HAYES. No. After the credits have been given to the various reserve banks, would not all the money, except the capital stock of the reserve banks that is paid to the Federal reserve bank, really be counted as reserves in the several member banks, and therefore could be used as a basis of credit just the same as though it were in their own vaults?

Mr. BULKLEY. No. The deposits are liabilities, it should be remembered. The reserves are an asset. You must look on the other side of the ledger. They would have only \$359,000,000 of cash.

Mr. HAYES. I speak not of reserve banks, but of the individual banks scattered all over the country.

Mr. BULKLEY. Oh, I misunderstood the gentleman, then. The gentleman's statement is correct. This \$521,000,000 is reserve, from the point of view of the constituent banks.

Mr. HAYES. That is true.

Mr. BULKLEY. Certainly; that is very true.

Mr. LINDBERGH. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BULKLEY. Certainly.

Mr. LINDBERGH. The figures the gentleman has shown here are the averages of all the banks. Has the gentleman made any estimate of how many banks there are whose cash holdings are small—that is, just barely along the average—and what proportion of them have large reserves and what proportion of them have small reserves, and how they would be affected in readjusting one another?

Mr. BULKLEY. I think this will answer the gentleman's question. This is an aggregate of all the banks. As the gen-

tleman suggests, it does not take into consideration the situation as to each individual bank. There may be and probably are a good many individual banks that will have to make some readjustment in order to comply with the terms of this bill.

The answer to that is that they have three years in which to do it, and it will be three years from the establishment of the regional reserve banks and probably about four years from now. The committee is confident that the individual banks will be able to readjust themselves so as to conform to the law.

Mr. LINDBERGH. You spoke about rediscounts. At what point in the organization of these Federal banks will the member banks be able to rediscount? Will they not have to pay in their subscriptions of stocks and their deposits, to be carried in the reserve banks before they can rediscount?

Mr. BULKLEY. The whole thing would be practically simultaneous. They could draw a check against a reserve agent one day and before the check is there for collection they might have a rediscount with the regional reserve bank.

Mr. HAYES. One more question. Would it not be true, under the bill as drawn, that the 5 per cent that is paid into the reserve banks could be deducted from the reserve requirements, as immediately on payment the legal requirements are reduced from 25 per cent to 20 per cent in the central or reserve cities?

Mr. BULKLEY. Absolutely.

Mr. HAYES. So that there would really be no contraction at all.

Mr. BULKLEY. On the contrary, there would be a possibility of expansion, as this table shows.

This table assumes that not a single loan is called. It assumes that all loans now existing are allowed to stand, and so, providing for all existing loans, it still shows this possibility of expansion. The reserve required on the part of the regional reserve bank is only one-third of that \$521,000,000, or about \$170,000,000. They would have \$359,000,000 cash, or more than twice the reserve required by law; and this table is on the assumption that the member banks deposit the least amount that they are required to deposit.

Mr. HARDWICK. I would like to ask the gentleman one question. I want to know if it is the gentleman's contention that under this bill we will be enabled to maintain the present volume of credits and extend them?

Mr. BULKLEY. Yes; absolutely.

Mr. HARDWICK. That is the purpose of the bill, is it? That is one of the chief purposes?

Mr. BULKLEY. That is one of the purposes; yes.

Mr. SMITH of Minnesota. The central reserve banks have to redeposit \$162,000,000, according to your table, to make this payment to the Federal reserve banks. They have to rediscount \$162,000,000, or thereabouts.

Mr. BULKLEY. Yes; about that.

Mr. SMITH of Minnesota. Have you made any computation as to just when the central reserve banks will be able to pay off that \$162,000,000 that they rediscount, or is it a sort of an endless chain whereby they will have to keep redepositing continuously?

Mr. BULKLEY. I think they may have to carry this for some time. I would not be able to say exactly how rapidly these banks will be able to readjust their circumstances; but certainly they are enormously in debt now because of deposits which have been made with them by country and outside banks, and in the course of time they will have to liquidate that debt. This table only shows that there will be no embarrassment about their liquidating it. How long it will take to work it off I could not say.

Mr. MADDEN. Did I understand the gentleman to say that there would be rediscounts amounting to about \$300,000,000 altogether?

Mr. BULKLEY. The rediscounts will be about \$266,000,000.

Mr. MADDEN. In order to make the payments required with the central reserve bank?

Mr. BULKLEY. With the regional reserve banks.

Mr. MADDEN. With the different banks that are to go into it?

Mr. BULKLEY. Yes; that is correct.

Mr. MADDEN. That means that they do not have any money with which to make the payment, does it not?

Mr. BULKLEY. It means that they are about that much short of having enough.

Mr. MADDEN. That if the cash was required to organize the Federal reserve banks they could be organized under this system.

Mr. BULKLEY. Yes; that is true.

Mr. MADDEN. When you rediscount the \$266,000,000 in order to make payments for which you have no money, will

not this rediscounted paper have to be renewed at the end of the term for which it is rediscounted?

Mr. BULKLEY. To the extent that it can not be paid, which would be a large extent, I think.

Mr. MADDEN. And at the end of the next period of maturity it would have to be rediscounted again, would it not?

Mr. BULKLEY. Yes; which is only another way of saying that the regional reserve banks will do business and will continue to do business.

Mr. MADDEN. Except that you could not organize this system under the plan laid down and make the payments unless you created an endless chain by which to create credit.

Mr. BULKLEY. You may call it an endless chain if you will. You can not keep up the present system without the central reserve banks being vastly indebted to the outside banks.

Mr. HAYES. Will the gentleman yield?

Mr. BULKLEY. I will.

Mr. HAYES. I want to ask if it is not true that the gentleman's statement contemplates the full payment, and if it is not true that a part is to be paid first and then time for the balance?

Mr. BULKLEY. Yes; they have over three years to work it out.

Mr. HAYES. So the difficulties that my friend from Illinois [Mr. MADDEN] suggests may not arise at all?

Mr. BULKLEY. They may not. It is difficult to say to what extent the central reserve banks will desire to keep on rediscounting.

Mr. MADDEN. If they keep it in the Federal reserve bank, would it not be an expansion of the currency?

Mr. BULKLEY. It has nothing to do with the currency.

Mr. MADDEN. It is a credit.

Mr. BULKLEY. Yes.

Mr. MADDEN. That is the same thing.

Mr. KENT. If the gentleman will allow me, the reserve city banks can not pay off their bank depositors any more than any other kind of depositors, and this seems to be working toward sound finance down the line. I think the question of the gentleman from Illinois would lead to the assumption that it was unsound finance instead of a cleaning up.

Mr. BULKLEY. That is the situation.

Mr. HARDY. If the gentleman will allow me, this system allows the central reserve banks to shift the indebtedness from where it is now in the country banks over to the regional reserve banks?

Mr. BULKLEY. Yes. Now, Mr. Chairman, the other series of tables that I have prepared is in identical form with the first series except that it assumes that the banks depositing with the regional reserve banks will deposit the largest amount they are permitted to count as reserve. For example, the bill requires that the country banks shall keep 5 per cent of their deposits in cash in their own vaults and a total reserve of 12 per cent. That will leave 7 per cent that they could keep as a deposit in the Federal reserve bank. So this series of tables assumes that they deposit it, and that makes a larger deposit than was assumed in the first tables, and so on all the way through. The reserve city bank is permitted to count as reserve a balance with the regional reserve bank equal to 9 per cent of its own deposits. The same applies to the central reserve city banks—they might so count 9 per cent. I think there is nothing more in those tables that needs to be explained, as it is substantially the same thing over again which I have explained as to the first tables, except on a different assumption. I will leave the tables here and hope that they will be looked over from time to time.

Mr. CALLAWAY. Will the tables be printed in the Record?

Mr. BULKLEY. They will. As I say, one is on an assumption that the banks deposit as little as they have to, and the other is on the assumption that they deposit as much as they may count as reserve, and, as I have said, the actual truth will come somewhere between the two.

Mr. MANN. In the end, is it not inevitable that the full amount will be deposited in the Federal reserve bank?

Mr. BULKLEY. Yes; the amount shown in these first tables.

Mr. MANN. I am not talking about what the law requires, but the logic of it. If they keep a part of their reserves in cash over what they are required to, they get no profit, but if they deposit in the Federal reserve bank they have a hope of a share of the profits?

Mr. BULKLEY. Yes; that is true. I think the gentleman is correct in assuming that, and therefore this second chart or set of figures will be nearer the truth than the other.

Considerable publicity has been given to a statement by Mr. James B. Forgan to the effect that the enactment of this bill would cause a contraction of credits in the country to the amount of \$1,800,000,000. As Mr. Forgan is one of the leading

bankers of the United States, the president of the First National Bank of Chicago, and was designated by the recent Chicago bankers' conference as chairman of the committee appointed by that conference to place its views before Congress, his statement is worthy of careful attention. It is worthy of attention, however, solely because of Mr. Forgan's prominence, and not because of any logic or merit in the statement itself. Let us analyze his own explanation of it made last Friday before the Senate Committee on Banking and Currency. Referring to the figures given in the report of the Comptroller of the Currency on the condition of national banks on June 4, Mr. Forgan said:

The aggregate net deposits of the national banks on which their legal reserve is figured amount to \$7,124,000,000. * * * The established relation between the amount of actual money held by the banks and the fabric of credit existing between the banks and the public is therefore in the ratio of \$917,000,000 to \$7,336,000,000, or 12½ per cent of money to the amount of credits.

The amount, \$7,336,000,000, referred to loans and bond investment of the national banks, which, as Mr. Forgan was just explaining, are approximately equal to the aggregate net deposits of the national banks subject to reserve requirements. When he says that the actual lawful money held by the banks was 12½ per cent of their aggregate deposits he, of course, did not mean that the banks' legal reserves had fallen as low as 12½ per cent, but owing to the counting of balances with reserve agents, which the present law permits to be counted as part of the legal reserve of the banks, it is always true that the amount of lawful money which the banks hold in the aggregate is considerably less than the legal reserve requirement. Mr. Forgan, therefore, is quite right in saying that the established relation between money and credits is about 1 to 8. He goes on to say:

If from the amount of money on hand, \$917,000,000, the national banks are required to make the following payments to the Federal reserve banks, viz, 10 per cent of their aggregate capital, \$105,000,000, and 3 per cent of their net deposits, \$213,000,000, they would have to turn over more than one-third of their entire holdings, or \$318,000,000, and would have left money on hand amounting to \$599,000,000.

* * * You have the same fabric of credit in the banks left when you have \$600,000,000 of cash that you had before, when you had \$900,000,000; so that the basis of the fabric of credit existing between the bank and the public has been changed from 12½ per cent, as I have shown, which is \$8 of credit for \$1 of money. It has been increased to whatever that proportion is. It would be something like \$12 of credit to \$1 of money, and in that way the banks will be very much more expanded.

On the established basis of 12½ per cent of money to existing credits, which seems little enough, this would provide for credits between the banks and the public aggregating \$4,792,000,000, calling for a compulsory contraction in such credits of \$2,544,000,000 from the present amount of \$7,336,000,000. The Federal reserve banks, with a capital paid in of \$105,000,000 and reserve deposits similarly paid in of \$213,000,000, would have in money to start with \$318,000,000 which on the basis of 33⅓ per cent cash reserve they are required to carry against their total demand liabilities would enable them to expand until they had assumed total liabilities of \$954,000,000, * * * of which they would have already assumed liability for the reserve deposits, \$213,000,000. Their net expansion capacity would therefore be \$741,000,000, and this would be the limit of their ability to rediscount for their member banks, whose compulsory contraction of credits, as shown above, if they are to be kept in their present basis, would be \$2,544,000,000, showing that their ability to rediscount would fall short of the contraction of credits in their member banks by \$1,803,000,000. After 14 months, when the minimum reserve deposits required are to be raised from 3 to 5 per cent, the contraction would be proportionately greater.

The fallacy of Mr. Forgan's calculation lies in this: He counts money turned over to the regional reserve banks as if it were no longer reserve money. He says if we have 12 per cent of lawful money against all deposits and turn one-third of it over to the Federal reserve banks, that leaves us only 8 per cent of lawful money against deposits. It seems hardly necessary to do more than state this proposition in order to show the absurdity of it. The \$900,000,000 in question is just as much a part of the country's reserves when one-third of it is held by the new regional reserve banks as when all of it is held by the national banks, and we must not forget that nearly \$150,000,000 will actually be added by the provisions of this bill when the lawful money now held in the United States Treasury shall be deposited with the Federal reserve banks. So the proportion of lawful money held in reserve against deposits will be increased, rather than diminished. If Mr. Forgan wishes to argue that the creation of these deposit accounts with the Federal reserve banks will increase the total of deposit liabilities, and thus decrease the proportion of reserves held against them, I will answer that as bank deposits with the Federal reserve banks are increased deposits with reserve agents will be diminished, and that the one will practically offset the other.

Mr. Forgan admits that under his theory the capacity of the Federal reserve banks for expanding loans would be \$741,000,000, and he makes a deduction of \$741,000,000 from what he says would be the gross contraction of credit, but if the Federal reserve banks really used this expansion it could only

be by way of credits granted or cash turned back to the constituent member banks, and when so placed at the disposal of the member banks it would be a foundation for credit of several times that amount.

I have not had time to quote the whole of what Mr. Forgan said on the subject of contraction, but have endeavored to give the substance of it with entire fairness. I shall, however, print with my remarks a few pages from the hearings in order to present in full what Mr. Forgan had to say on this subject, as I am confident that anyone who will study his full explanation will not be alarmed by his predictions. Mr. Forgan's conclusions in this respect are indeed completely shattered by the careful and accurate analysis of the situation presented to the Senate committee by Mr. Reynolds, another member of the committee delegated by that conference to present to Congress the "unanimous" views of those who participated in the conference. I shall print also with my remarks the statement prepared by Mr. Reynolds, which is a substantial verification of my own analysis of the situation.

Mr. Forgan explained why the Chicago conference recommended a change in the bill to provide that the Federal reserve banks should be in number not more than 5, instead of not less than 12 as provided in the bill. His testimony, however, shows no reason at all for fixing five as a proper number, and indeed he frankly says that what he would recommend is a single central bank, or, if that be not possible, then as few regional banks as Congress may be willing to consent to.

He states that 12 is too large a number, because it might not be possible to start as many as 12 regional banks in view of the requirement that such banks must have a minimum capital of \$5,000,000 each. In other words, he fears that the total subscriptions to all the banks will amount to not much more than \$60,000,000. To support this contention, he will have to assume that not a single State bank will enter the system, and that less than 60 per cent of the national banks will subscribe. Conceding that the amount of subscription which may be made is entirely a matter of conjecture, nevertheless, in view of the advantages of membership in the proposed system, and of the losses which national banks owning 2 per cent bonds would probably have to suffer by leaving the system, it is hardly reasonable to assume that so few banks will subscribe for stock.

Mr. Forgan's real argument against 12 regional banks could logically be made with equal force against 5 such banks. His real contention is that there should be but one. In his testimony he quotes at length from the address delivered at the Chicago conference by Mr. A. Barton Hepburn, of New York, who said:

Will there not naturally and inevitably be competition between the regional reserve banks, competition between the 12 sections of the country, and will we not in the end have competition for cash holdings between individual banks, added to the competition of section against section, reserve bank against reserve bank? The framers of the measure evidently recognize that danger and seek to palliate it by giving the Federal reserve board authority to force one reserve bank to loan to another. Under the conditions that would exist would not the exercise of that authority fail to accomplish the just distribution of funds? Is there not strong probability that in exercising that authority factors would be created that would endanger the smooth workings and permanency of the whole plan?

Of course, it is one of the fundamental necessary principles of banking reform, recognized in the Glass bill as well as in the Aldrich plan, that reserves must be so disposed that they can be used where needed. The power of the Federal reserve board in time of emergency to compel rediscounts between regional reserve banks is a necessary part of a plan which establishes 12 reserve banks; it would be no less necessary if there were but 5 reserve banks. Mr. Forgan and Mr. Hepburn therefore sacrifice logic to expediency when they recommend five regional banks, but are entirely logical and consistent when they contend that there should be but one.

What is the objection to compulsory rediscounting? Mr. Forgan states it on page 38 of the Senate committee hearings, as follows:

Senator NELSON. Then would not this difficulty arise: Suppose that a reserve bank at Minneapolis should be well supplied with funds, and suppose the reserve bank at New Orleans lacked funds, and suppose the board should order a transfer of funds, directly or indirectly, from Minneapolis to New Orleans, would not it lead to some friction?

Mr. FORGAN. It would lead to a great deal of friction. Senator NELSON. Would not the Minneapolis reserve bank feel they were discriminated against and that it was not fair to transfer their funds to New Orleans?

Mr. FORGAN. Yes, sir. And, to follow that idea up, the Minneapolis banks might at that time be compelling their customers to dispose of their wheat in order to turn it into money for local necessities, while down in New Orleans they might be holding their cotton and borrowing the money for that purpose, and they would be enabled to carry their cotton, while Minneapolis would have to sacrifice their wheat.

In order to make his objection to compulsory rediscount appear as plausible as possible, Mr. Forgan does not hesitate to indulge the rather violent presumption that a disinterested Fed-

eral reserve board would be willing to sacrifice Minneapolis wheat in order to support New Orleans cotton. But, strange to say, Mr. Forgan did not intend any reflection on the disinterestedness of the Federal reserve board in such a transaction. This becomes clear when we understand that it is not the shifting of these funds from one section to another which he regards as objectionable; he objects only to the publicity that would attend our method of doing it. This is shown by the following extract from Mr. Hepburn's address, which was quoted by Mr. Forgan with unqualified approval:

With such a single central bank the controlling board might place its reserves in the section of the country where most needed. This shifting of funds would be accomplished without ostentation and without notoriety, whereas if the Federal reserve board should require, as it might do under this proposed law, one Federal reserve bank to loan money to another Federal reserve bank, that could not be done without attracting the attention to the borrowing locality in a way that would operate to the prejudice of that locality. On the other hand, how simply and easily and naturally this apportionment of funds would be made to fit the requirements in different localities through one central bank with branches.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield at this point?

Mr. BULKLEY. I would rather not be interrupted just at this point.

These gentlemen contend, therefore, that when the Minneapolis banks are to be required to carry New Orleans cotton the shifting of funds should be made "simply, easily, naturally," "without ostentation and without notoriety," to the end that on the well-known principle of "What you don't know won't hurt you," the Minneapolis wheat men may not be damaged at all.

The Chicago conference unanimously condemned the requirement that banks entering the proposed system shall subscribe to the capital stock of the reserve banks an amount equal to 20 per cent of their own capital stock, half of such subscription to be paid and half subject to call. They suggest that the proposed requirement should be cut in half. It is perhaps a sufficient answer to this suggestion to recall that at the annual meeting of the American Bankers' Association at New Orleans in 1911 this identical requirement was unanimously approved as a part of the Aldrich plan. At New Orleans two years ago no voice was raised in protest against this provision, yet in Chicago last month there was none to defend it. Mr. Sol Wexler, who was designated by the Chicago bankers' conference to explain the views of that conference to the Senate Committee on Banking and Currency, failed to advance a single argument against this provision which he might not have advanced against the same provision in the Aldrich plan when the bankers' association met in his own city two years ago. He failed to explain the remarkable unanimity in the change of opinions; he failed to show any new circumstance which makes this provision, so desirable two years ago, impracticable now. It is inconceivable that every member of the bankers' association present at these two conferences could really have sincerely reversed his opinion on this provision as an independent proposition. And in truth there was no independence about it. At New Orleans Simon said, "Thumbs up," and all thumbs went up. At Chicago Simon said, "Thumbs down," and every thumb went down. It matters not whether Simon was Mr. Forgan or Mr. Hepburn or Mr. Wexler or Mr. Wade, or a composite of all of them. It is pretty clear that he decreed the reversal of position, not because of any change in the merits of this independent proposition, but because for some other reason he favored the Aldrich plan and disliked the Glass plan.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. GLASS. Mr. Chairman, I yield the gentleman 10 minutes more.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a simple question at this point?

Mr. BULKLEY. Yes.

Mr. MADDEN. I wanted to ask the gentleman whether the provision in the Aldrich bill was voluntary and not compulsory?

Mr. BULKLEY. That has nothing to do with the amount of subscription required. In the Aldrich bill stock subscription was not really voluntary, although it purported to be voluntary. There was just as much compulsion about it as to banks with 2 per cent bonds as there is in our bill.

Mr. MADDEN. Except that one requires it and the other does not. [Applause.]

Mr. BULKLEY. They both require it, but one says so and the other does not. [Applause on the Democratic side.]

Let us waive the inconsistency of the attitude assumed by these bankers and examine which of these views is more reasonable. The aggregate capital and surplus of all national banks in the United States is in the neighborhood of one-fifth

of the aggregate amount of their deposits, and, in addition, there exists a double liability on the part of the stockholders. Before the Senate committee the other day Mr. Wexler testified that in his judgment the capital and surplus of banks in the Southern States "is quite inadequate," although the comptroller's statement shows that the capital and surplus of this section aggregates somewhat more than one-fifth of the deposits. On the next page, however, Mr. Wexler testified:

Twenty per cent margin to the depositor—the ratio of capital and surplus to deposits—is, in my opinion, quite adequate.

So we find, both from the actual figures throughout the United States and from the opinion of Mr. Wexler, whom the Chicago bankers' conference selected as their special expert to present this phase of the question, that 1 to 5 is about the reasonable ratio which capital and surplus should bear to deposits. If, then, we should take one-fifth of the probable deposits of the regional reserve banks, we would find the amount of capital which ought to be required, bearing in mind that the reserve banks would have no surplus at the outset, but over a period of years would accumulate a surplus of 20 per cent of their capital. Assuming all national banks to be members of the proposed system, the amount of reserve money which would be held in the Federal reserve banks would be from three hundred and fifty to five hundred and seventy-five million dollars, the former being the minimum amount which they are required to carry as balance, the latter the maximum balance which they may count as reserves. To this should be added about two hundred millions of United States deposits, making total deposits of five hundred and fifty to seven hundred and seventy-five millions. This would seem to indicate that the aggregate capital and surplus of the proposed banks should be from one hundred and ten to one hundred and fifty-five millions. And this is just about what the bill provides. To be exact, it would require of these same banks a capital-stock subscription of two hundred and ten millions, but a payment of only one hundred and five millions. After the accumulation of a 20 per cent surplus the aggregate of capital and surplus would be just about one-fifth of the deposits, which accords with present banking practice as well as the best expert opinion which the American Bankers' Association is able to offer us. The additional one hundred and five millions required to be subscribed and subject to call corresponds to the double liability of stockholders in national banks.

Let me say a word about the contention that this bill imposes a hardship on the country banker. It is said that the new arrangement will cost him dearly because he is to be deprived of the interest which he now receives from the reserve city banks on his reserve balances. Let us figure that out. Against each \$100,000 of deposits the country banker is now required to carry a reserve of \$15,000. Of this, \$6,000 must be cash in his vault, drawing no interest. If he gets 2 per cent on the other \$9,000, it will amount to \$180 a year. Under the provisions of this bill this \$180 interest from the reserve city bank will be lost to the country banker; but inasmuch as he will in the future be obliged to carry but \$12,000 reserve instead of \$15,000 as in the past, there will be released from his required reserve \$3,000, and he will have this additional amount to lend. If he lends it all out in cash at 6 per cent, he will receive \$180 a year, or just enough to reimburse him for the loss of the interest which he has been getting from the reserve city bank; but if he uses the \$3,000 as reserve and makes loans by credit to deposit accounts, he will have an added loaning power of \$25,000, which at 6 per cent will bring him \$1,500 a year, or \$1,320 more than he is now getting from his reserve city agent. At the worst, then, he will be as well off as he is now and the chances are that he will in fact make a much better profit. In addition to the profits I have already shown he will share in the profits of the regional reserve bank in proportion to his balances with that institution.

It is uncertain how much this will bring, but, whatever it may be, it represents clear gain over and above present possibilities. If it be argued that the country banker's investment in the stock of the regional reserve bank will be unprofitable, we need only stop and figure exactly how unprofitable it will be. A bank with \$25,000 capital will pay in a subscription of \$2,500, on which it will get 5 per cent. If money is worth 6 per cent, the annual loss is 1 per cent of \$2,500, or \$25, an insignificant sum in proportion to the profits which I have just shown. Yet my illustration does not do full justice to the situation, because the \$25,000 bank will ordinarily have deposits considerably in excess of the \$100,000 which I have assumed in my calculation. But some one may say that the loss on the stock investment will be more than 1 per cent because money in some sections is worth 7 or 8 per cent. If that is so, we must go back and figure the profit on the release

of reserves on a 7 or 8 per cent basis, and we have a much stronger showing for the new system than I have made out.

There is in fact no burden placed on any national bank by this bill, and there is nothing in it that will afford a good reason for a bank to give up its national charter. On the other hand, banks which have been benefited for years by the prestige of the national charter will be loath to give that up now, and they will not fail to see that the business man will want to keep his money and secure his line of credit at a bank which is entitled to the rediscount facilities now to be afforded and which is scrutinized by a Federal examination more complete than has ever existed before. For these reasons any bank which leaves the national system will quickly be replaced by a new one coming in; and in this connection it must be remembered that new national banks can be organized in the future under less burdensome conditions than heretofore, since it is no longer required of them to make an investment in 2 per cent Government bonds, and they will be subject only to the less burdensome requirement of a smaller investment in 5 per cent Federal reserve bank stock, carrying with it facilities more valuable than those accompanying the Government bonds.

I have touched upon the general principles underlying the bill and endeavored to answer the principal objections which have been raised against it. I have not had time to discuss the details of the measure, nor have I even enumerated its minor good features, among which I might mention the authorization of bank acceptances, under restrictions carefully safeguarding the practice, the provision for export bills of exchange, and for the establishment of branches of American banks in foreign countries. These provisions will give us our fair share of financial control over our export trade, which is already large and now destined to become vastly greater under the operation of the new tariff bill, which will place us on a basis of competition in all the markets of the world. This bill also provides for the placing of Government funds where they will be a help to the business of the country and puts an end to that segregation in Treasury vaults which has so often proved a disturbing factor. Public confidence in our banks will be increased by the improvements here provided in bank examinations, as well as by the greater measure of Government control of the banking business.

Let us concede the strong possibility that certain faults may appear in this legislation after it has been put into operation; that is but natural in a measure establishing so great a reform as to which there are so many elements of uncertainty and conjecture. Let us enact this bill as representing the best we know how to do to-day and remember that Congress will always be here to correct such errors as may become apparent in the future. This legislation can not wait for unanimous agreement as to all details. It is the part of statesmanship to enact now this bill—the only comprehensive reform measure on this most important subject in 50 years. [Applause.]

APPENDIX A.

MR. FORGAN'S STATEMENT BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY ABOUT "CONTRACTION."

Senator SHAFROTH. Mr. Forgan, while you have the floor I would like for you to make an explanation as to your theory of this bill creating a contraction of the currency. I understand that your theory is that a contraction will follow if this bill is passed in its present form. Therefore I would like to have you explain to the committee your reason for believing that.

Mr. FORGAN. Not a contraction of the currency, but a contraction of credit in the banks.

Senator SHAFROTH. Well, a contraction of credit in the banks, then.

The CHAIRMAN. You said you had a table in respect to that?

Mr. FORGAN. Yes, sir.

The CHAIRMAN. Will you have the table submitted to the stenographer to put it in the record?

Mr. FORGAN. I will give it that way.

Senator SHAFROTH. You may give it any way you wish.

Mr. FORGAN. I would prefer to make the statement and to give it with qualifications.

Senator SHAFROTH. You may proceed in any way you see fit.

Mr. FORGAN. It will not take a minute.

The loans and bond investments of the national banks, exclusive of their Government bonds pledged as security for their note circulation, amount, in round figures, to \$7,336,000,000. The aggregate net deposits of the national banks on which their legal reserve is figured amount to \$7,124,000,000. (See comptroller's report of June 4, 1913.) Thus the aggregate loans, including bond investments, of the national banks are practically an offset against the amount of their aggregate net deposits. In other words, these two items represent the amount of credits exchanged between the banks and the public, the amount owed by the banks to the public being practically offset by the amount owed by the public to the banks. This exchange of credits is based on and supported by actual money in the banks. The established relation between the amount of actual money held by the banks and the fabric of credits existing between the banks and the public is therefore in the ratio of \$917,000,000 to \$7,336,000,000, or 12½ per cent of money to the amount of credits.

If from the amount of money on hand, \$917,000,000, the national banks are required to make the following payments to the Federal reserve banks, viz, 10 per cent of their aggregate capital, \$105,000,000, and 3 per cent of their net deposits, \$213,000,000, they would have to

turn over more than one-third of their entire holdings, or \$318,000,000, and would have left money on hand amounting to \$599,000,000.

I might explain that in a very ready way by taking three articles this way [indicating]. Suppose these three articles represent a total amount of money in all the national banks, figuring on the net deposits and not on the gross deposits. The difference between the figures I give you and Mr. Reynolds's figures is that he figures on the gross deposits and I figure on the net deposits.

Senator NELSON. What is the difference between gross and net?

Mr. FORGAN. My reason for figuring on the net is that when we are figuring the reserve deposits to be paid into the Federal reserve banks on the main reserves we will be allowed to figure, I presume, the same way as we are allowed to figure our legal reserves now. We are allowed to deduct from gross deposits balance due from banks against balances due to banks; the clearing-house checks are deducted; all national-bank notes on hand are deducted from the gross deposits to produce the net deposits. Therefore our deposits are very largely reduced on which we keep our reserves, and I figure, there being nothing in the national-bank law to prohibit that method of figuring reserves and that system having been adopted by the comptroller's department, the same practice will be continued in this case.

Now, if these three items represent \$900,000,000 and you take a third of that away we have two-thirds left. And you have the same liability as you had before. You have the same fabric of credit in the banks left when you have \$600,000,000 of cash that you had before when you had \$900,000,000; so that the basis of the fabric of credit existing between the bank and the public has been changed from 12½ per cent, as I have shown, which is \$8 of credit for \$1 of money. It has been increased to whatever that proportion is. It would be something like \$12 of credit to \$1 of money, and in that way the banks will be very much more expanded.

Senator NELSON. You mean inflated.

Mr. FORGAN. Yes; inflated. I would like to say right here, because it came up before: In our conference in Chicago there was a question raised by Mr. Dawes, ex-Comptroller of the Currency and now president of the Central Trust Co. there—

The CHAIRMAN. You are speaking of Charles G. Dawes?

Mr. FORGAN. Yes, sir; Charles G. Dawes; he made the statement that this would produce a great inflation, and I followed him by saying that it would cause contraction.

The CHAIRMAN. How much gross do you figure; \$1,800,000,000, according to your estimates?

Mr. FORGAN. Yes, sir; \$1,800,000,000. My idea—and I want this to be put clearly before you, and as I show, the contraction was to bring the present fabric of credit existing on the banks down to the present ratio of \$8 credit to \$1 of money and would require the calling of loans and the contraction of credits to the public to that extent. He figured that this contraction would not be enforced and therefore there would be a great expansion, and he came to me after he had taken my figures home and said:

"You and I are exactly on the same basis. You say that if the thing was put into effect—which could not be done—it would cause contraction. It would make contraction necessary, but the contraction would not take place. Therefore the banks would be placed in an expanded condition."

Therefore he and I were really on the same track.

As I was saying, taking that one-third of the money, or about one-third, would leave money on hand amounting to \$599,000,000 in the banks.

On the established basis of 12½ per cent of money to existing credits, which seems little enough, this would provide for credits between the banks and the public aggregating \$4,792,000,000 calling for a compulsory contraction in such credits of \$2,544,000,000 from their present amount of \$7,336,000,000. The Federal reserve banks, with a capital paid in of \$105,000,000, and reserve deposits similarly paid in of \$213,000,000, would have in money to start with, \$318,000,000, which, on the basis of the 33½ per cent cash reserve they are required to carry against their total demand liabilities would enable them to expend until they had assumed total liabilities of \$954,000,000.

Senator CRAWFORD. You can not extend credit to anyone except to the banks?

Mr. FORGAN. No, sir; as I was saying, that would be \$954,000,000, of which they would have already assumed liability for the reserve deposits, \$213,000,000. Their net expansion capacity would therefore be \$741,000,000, and this would be the limit of their ability to rediscount for their member banks, whose compulsory contraction of credits as shown above if they are to be kept in their present basis would be \$2,544,000,000, showing that their ability to rediscount would fall short of the contraction of credits in their member banks by \$1,803,000,000. After 14 months, when the minimum reserve deposits required are to be raised from 3 to 5 per cent, the contraction would be proportionately greater.

Senator HITCHCOCK. That would be without their issuing any notes. They could do that from the cash which they received from deposits?

Mr. FORGAN. It would make no difference what form the credit took; it would not make any difference whether it was deposit liabilities or note liabilities. They might be all notes or all deposits. There would not be a particle of difference, as they keep a reserve on both.

Senator HITCHCOCK. You figure, then, that there would actually be a contraction of \$100,000,000 of actual bank credits of the country?

Mr. FORGAN. I have not finished my argument, Senator. Right there, however, I want to impress upon your minds that I did not want to give these figures to scare anybody, because it does not mean the thing can not be worked out. It does not mean that at all. It means that this \$1,800,000,000 is the amount of contraction that would take place in order to continue the national banks on their present basis of \$8 of credit to \$1 of money, which I do not think necessary, but it produces a condition that has to be faced.

Now I will go on to explain. Such a contraction of the credits, if enforced, between the national banks and the public could not be accomplished without a cataclysm in business.

In order that these figures should not overstate the effect on the credits between the public and the national banks by such a diversion of money equal to one-third of all the money in the national banks, from these banks into the Federal reserve banks, the 3 per cent reserve deposit required on their "total demand liabilities" has been figured on their net and not on their gross deposits, under the assumption that the same offsets would be allowed them that are now allowed when figuring their legal reserve requirements.

These figures do not include the Government deposits which within 12 months are to be transferred to the Federal reserve banks. With the exception of the free money in the Treasury such deposits would be transferred from the national banks and would require them to part

with a further amount of money, equal to the amount of the Government deposits they hold, which would still further proportionately decrease their money reserve and increase the contraction of their loans necessary to maintain their present credit expansion basis. These transfers of Government deposits having to be made within 12 months, would have no effect on the above transactions, all of which must occur within 60 days.

Senator NELSON. Those Government deposits would be a checking account, would they not?

Mr. FORGAN. Yes. I do not wish to be misunderstood here, and I want you to understand my position. They say figures will not lie.

The CHAIRMAN. Figures lie and then they prove it, as they say.

Mr. FORGAN. If you rely on them you had better rely upon something that is fundamentally true. I do not wish it to be understood that these figures forecast precisely what would occur were the Federal reserve act passed and were the national banks to operate under it. I am well aware that no calculation can possibly be made to correctly forecast what would actually occur in such an event. I am satisfied, however, that the figures portray as accurately as possible the situation which would be confronted were the 12 Federal reserve banks organized and should the national banks undertake to operate under the new law and maintain their present credit-expansion basis of \$5 credit to \$1 money.

The discrepancy between the loaning capacity of the Federal reserve banks and the contraction of credits in the national banks shown in the figures may be further elucidated as follows: It is proposed to transfer bodily from the national banks practically one-third of the actual money now lodged in their vaults and place it in the vaults of the Federal reserve banks. As we have seen, the money in the vaults of the national banks forms the basis of a fabric of credits existing between them and the public in the ratio of 12½ per cent of actual money to the amount of such credits outstanding. This fabric of credits must be adjusted to the reduced holdings of actual money by the banks if the established ratio of 12½ per cent of money to total credits is to be maintained, otherwise to a proportionate extent there will be an over-expansion of credits in the banks. The credit expansion of the Federal reserve banks is fixed on the basis of 33½ per cent money reserve against their total liabilities. They are therefore restricted in their credit expansion to \$3 of credit against \$1 of money, while the national banks have been doing business on a 12½ per cent money basis, or \$8 of credit against \$1 of money. As a basis of credit, therefore, the one-third of the money now in the national banks when transferred to the Federal reserve banks would lose nearly two-thirds of its present expansive power.

Senator SHAFROTH. Mr. Forgan, would it not be true that that partnership relation, if it might be so termed, between the Government and the banks would produce a confidence in the public that would have a tendency to increase their deposits with the banks generally?

Mr. FORGAN. That is on the assumption that they have any more to deposit. I think they have deposited most of it now.

Senator SHAFROTH. Well, a part of the money is held in savings deposit vaults?

Mr. FORGAN. But I think it is comparatively a small part. Senator SHAFROTH. Is it not a fact also that many of the banks, especially country banks, keep a very large reserve that they would not have to keep if they were permitted to discount their paper at one of the banks, and would not they have a tendency to overcome some of these objections?

Mr. FORGAN. Yes, sir; I want that distinction understood. I do not consider the maintenance of the \$8 to \$1 basis necessary in the banks when they have these Federal reserve banks to go to to get rediscounts. I do not think it is necessary. I only put it before you as a condition produced by the operation of the plan which is proposed. I do not think there is any doubt about the condition, and it is for you to consider what the effect of it will be.

Senator CRAWFORD. Well, would it be safe banking to have \$12 credit against \$1 money?

Mr. FORGAN. Well, it would not, under the present circumstances, certainly, because it would affect our reserves.

Senator CRAWFORD. Well, under what circumstances would it be safe?

Mr. FORGAN. If we had a Federal reserve bank, established where we could always depend upon getting a satisfactory circulating medium to liquidate our deposits with when they were drawn upon, I think it would be safe at least to materially increase it.

It would not have to go to the full \$12 limit, because we would have some rediscounts; but even if they rediscounted to that extent, it would be an additional expansion of the credit on the part of the banks.

Senator CRAWFORD. Well, you would not want this Federal reserve bank to do a general business with the public, and do it on a basis of \$1 cash to \$8 credit?

Mr. FORGAN. No, sir; I would not; and that is one reason why, if it was a Federal reserve bank, and was running under competition with the banks and keeping a reserve of that kind, it could not do it.

APPENDIX B.

FIGURES SUBMITTED BY MR. REYNOLDS TO THE SENATE COMMITTEE ON BANKING AND CURRENCY.

Country banks.....	\$3,610,000,000
Reserve city banks.....	1,945,000,000
Central reserve city banks.....	1,569,000,000
Total.....	7,124,000,000
Reserves carried.....	1,455,700,000
Of which—	
Lawful money was.....	913,000,000
Amount due from banks.....	542,700,000
Total.....	1,455,700,000

Detailed statement.

Country banks, 15 per cent:	
Cash.....	\$266,000,000
Due from banks.....	310,000,000
	576,000,000

Reserve city banks, 25 per cent:	
Cash.....	242,000,000
Due from banks.....	232,700,000
	474,700,000

Total reserve, city banks, 25 per cent, cash..... 405,000,000

Cash in vault.	Due from banks.
\$266,000,000	\$310,000,000
242,000,000	232,700,000
405,000,000	542,700,000

913,000,000
542,700,000

1,455,700,000

This amount equals 20.95 per cent.

Actual lawful money reserve, 12½ per cent.

Assuming deposits with our present banks would continue the same as they now are and deducting amount to meet the changed conditions on account of change in reserve requirements when the plan would be fully operative, three years after the passage of the bill, deposits would be..... \$6,581,000,000

Divided as follows:

Country banks.....	3,610,000,000
Reserve city banks.....	1,935,000,000
Central reserve city banks.....	1,336,000,000

6,581,000,000

Now, I am taking present figures as to volume of business, with only such changes as the law would make, and I only offer them as my belief as to the condition that will exist at that time.

Reserve that would be required..... \$968,220,000

As follows:

Lawful money in vault.....	447,890,000
Credits with Federal reserve banks.....	520,330,000
Total.....	968,220,000

Detailed statement:

Country banks, 12 per cent—

Cash.....	180,500,000
Federal reserve banks.....	252,700,000
Total.....	433,200,000

Reserve city banks, 18 per cent—

Cash.....	147,150,000
Federal reserve banks.....	147,150,000
Total.....	294,300,000

Central reserve city banks, 18 per cent—

Cash.....	120,240,000
Federal reserve banks.....	120,240,000
Total.....	240,480,000

Totals.

Cash in vault.	Credit in Federal reserve banks.
\$180,500,000	\$252,700,000
147,150,000	147,150,000
120,240,000	120,480,000

Cash.....	447,890,000	520,330,000
Federal reserve banks.....	520,330,000	

Total..... 968,220,000

Reserve required in lawful money, 6.8 per cent.

Senator HITCHCOCK. That is a loss of \$650,000,000 in reserves?

Mr. REYNOLDS. It is not a loss of that much—\$465,000,000 actual money. I will come to that here. Counting reserve of 33½ per cent in lawful money, which Federal reserve banks would be obliged to carry, against the \$520,330,000 that banks would carry with them, the reserve in lawful money against deposits in both classes of banks would have to be \$621,300,000 or 8.7 per cent. As a minimum, it will be seen that the amount of lawful money banks would then have on hand would be \$447,900,000, as compared to \$913,000,000 under existing laws.

Senator HITCHCOCK. That is, the banks instead of turning over cash would turn over new paper?

Mr. REYNOLDS. Customers' notes to that extent.

Senator HITCHCOCK. Under their indorsement?

Mr. REYNOLDS. Yes, sir.

This would release \$465,000,000 in lawful money, which banks could use in depositing their reserves in Federal reserve banks. Assuming that all the national banks would go into the systems, they would be obliged to place with those banks the following amounts:

On account of subscriptions to capital in Federal reserve banks, \$105,000,000; reserves, \$520,330,000; total amount to be controlled, \$625,330,000.

Now, in addition to this amount, we will assume the Government would have on deposit with national banks an additional \$75,000,000, which they would no doubt have to give up, since it is estimated there would be \$200,000,000 of Government funds deposited in the Federal reserve banks. The total amount necessary for national banks to furnish by time plans would become fully operative would be \$700,330,000.

Just how such a vast sum could be paid into the Federal reserve bank and the effect it would have on business has been the cause of much speculation. It seems to me that the most natural as well as practical way would be as follows:

Inasmuch as under the new requirements for reserves that will have been made effective, the amount of lawful money now carried by banks in excess of amount that will then be required, or \$465,000,000, can

be turned over to the Federal reserve banks without inconvenience, and the balance of the amount necessary to furnish the \$700,330,000 required can be rediscounts of \$235,230,000. At that point the Federal reserve banks would have \$465,100,000 in lawful money against which they would have loaned to national banks \$235,230,000.

The Government in completing its deposit of \$200,000,000 will pay into the Federal reserve banks an additional \$125,000,000 in gold. That will make the holding of gold, or lawful money, by the Federal reserve banks \$590,100,000, and the combined statements of those banks would be about as follows:

Liabilities:	
Capital.....	\$105,000,000
Deposits—	
Banks.....	520,000,000
United States Government.....	200,000,000
	<hr/>
	\$825,330,000
Resources:	
Loans.....	235,230,000
Cash.....	590,100,000
	<hr/>
	\$825,330,000

This would give the Federal reserve banks a lawful money reserve of 81 per cent, and with a reserve requirement of 33½ per cent would give it an ability to extend credits to banks on rediscounts of \$810,000,000 in addition to the \$235,200,000 above referred to.

That is my deduction of the result as to how this bill would work out in actual practice.

Senator HITCHCOCK. That is, providing for the issue of no notes?

Mr. REYNOLDS. I do not care anything about the issuing of the notes; that has nothing to do with the statement. I give the figures I want to draw my facts against.

Senator HITCHCOCK. It would make a difference in reserves if you figure 80 per cent there.

Mr. REYNOLDS. For \$200,000,000 or \$300,000,000 it would be left with that percentage—81 per cent reserve over all liabilities to that point. If it issues \$300,000,000 of notes it would have less of reserves.

Mr. GLASS. Mr. Chairman, I yield 20 minutes to the gentleman from Kentucky [Mr. BARKLEY].

Mr. BARKLEY. Mr. Chairman, I do not intend to enter into a detailed discussion of the history of currency legislation in the United States. Such a discussion might be interesting from a historical standpoint, but in the limited time which I shall occupy in addressing the House I shall confine myself to a discussion of some of the more important provisions of the bill now under consideration.

I do not come before this body claiming that I am an expert upon the subject of banking and currency, for I am not. I am not a banker, nor the son of a banker, and have never had any experience in practical banking. But I have given some study to the question of the issue of currency in this and other countries, and there are certain fundamental doctrines with reference to the creation of banking institutions and the issue of currency which we are seeking in this legislation to recognize and to which I desire to call attention during the course of my remarks.

It is admitted by practically the unanimous voice of the people of this country that there is great and urgent need for immediate currency legislation in the United States. There is no great nation in the world which has such an unsatisfactory system of banking and currency as prevails in the United States, and it is the marvel of men who are informed that we have prospered so greatly in spite of the handicaps with which we have surrounded ourselves during the past 50 years.

The present system of banking and currency, so far as the Federal Government is concerned, was very largely inherited by us as the result of the Civil War. During that war, in 1863 and 1864, the Government found itself in great need of money, and in order to secure an easier market for Government bonds bearing a low interest rate it provided for a national-bank note currency. Under this system a national bank purchases United States Government bonds bearing 2 per cent interest, for which the bank pays par. It then deposits these bonds as security with the United States Treasury and receives from the Treasury national-bank notes, which it takes to its own community and loans to its customers, receiving such rates of interest as it may see fit or the demands for money will justify. There are at present something like \$750,000,000 of these national-bank notes in circulation, and the Government is paying annually more than \$14,000,000 interest on the bonds upon which this currency is predicated.

There are three other kinds of currency in circulation in the United States, to wit, gold certificates, silver certificates, and Treasury notes. The gold certificates are based upon gold in the Treasury for their redemption; the silver certificates are based upon silver in the Treasury for their redemption; and the Treasury notes are mere promises to pay upon the part of the United States Government.

There has been in this country for many years a cry for a more elastic currency, one which will readily respond to the changing needs of different communities and different seasons. There are seasons of the year, in the crop-moving periods, when

more currency is needed in order to meet the needs of commerce and trade than in other seasons of the year. Not only that, but in great periods of development in various and widely separated communities in this Nation there is a greater need for currency than in other periods of less development.

Under our present banking and currency system there can be practically no elasticity of the currency. It is inelastic, rigid, and inflexible, neither expanding nor contracting according to the demands of legitimate commerce. The reason for this condition is perfectly apparent. There is no way by which gold or silver may be legislated into existence. There is practically no way to legislate either of these metals into the Federal Treasury as a basis upon which to issue either gold or silver certificates. Therefore, the production of gold and silver being regulated by natural processes and conditions, it is impossible to increase the gold and silver circulation sufficiently to meet the needs of business. It is likewise impractical to attempt to increase the circulation of national-bank notes, and if it were practical it would not be desirable. The supply of 2 per cent Government bonds, upon which national-bank notes are based, being already exhausted, it is impossible to increase this character of currency without issuing more Government bonds and thus adding to the burdens of the people by increasing our Government debt and the annual charge for interest thereon.

These being the conditions under which we are laboring in this country to-day, it becomes necessary for Congress to devise a plan whereby a better system of currency may be adopted, insuring a reasonable and safe expansion when such expansion is necessary, and a normal and proper contraction when contraction is needed; and at the same time provide for the stability and safety of such currency and its acceptability among the people. No single incident in the history of our country so demonstrates the absolute necessity for a revision of our currency system as the panic of 1907, when men were unable to secure their own money, and the banks themselves were compelled to issue script, cashier's checks, and clearing-house certificates, which, fortunately, the people of the community accepted at par and passed as currency in order that the business of the country might not be prostrated.

So urgent and insistent has this demand been for currency reform in the last few years that every political party of any importance has proclaimed its desire and intention to enact such legislation if placed in power. Yet the Democratic Party is the only party which in 50 years has had the courage and intelligence to meet the issue face to face and seek to bring about such reforms in our banking and currency laws as would be in the interest of all the people. Whilst the Republican Party has been in power, with the exception of eight years, ever since the Civil War, and whilst it has repeatedly promised the people that it had the courage, and the intelligence, and constructive ability to enact remedial legislation, it has just as repeatedly broken its pledges in this respect as it has in many others; and when that party released its hold upon the Government on the 4th of last March, discredited and stricken asunder, we were no nearer the goal than we were before.

For many years past the Democratic Party has promised the people that if it were placed again in control of the Government it would, among other things, reform the tariff and reform the currency, and do both of them speedily. Believing that we would keep our promises as a party, and disgusted with the inability or unwillingness of the Republican Party to meet the situation squarely, the people at the last election placed the reins of this Government in the hands of Democrats with President Wilson as their leader, and though the new administration is scarcely more than six months old, his leadership has been abundantly justified, and all men who think and are sincere recognize him as a real leader whose heart is in tune with the yearnings of the American people, and whose hand is constantly upon the wheel, guiding the people's ship through the treacherous waters of doubt and uncertainty into the placid harbor of public confidence. [Applause on the Democratic side.]

In enacting legislation upon this abstruse and delicate subject it is necessary to keep in view the fact that such a currency as may be provided for by any law must be a stable currency. It must also be a safe and secure currency, and it must be a currency which will be universally accepted by those who have need of it. Does the bill under consideration provide such a currency? Let us examine the bill briefly and ascertain what its provisions are with reference to the issue of currency and the strengthening of the banking system generally throughout the country, so that the great powers delegated by the people may be used for their benefit and not to their damage.

In the first place, the bill provides for the organization of a Federal reserve board to be appointed by the President, which

shall have general supervision over the administration of the new law, over the issue of currency, and over the Federal reserve banks which are created by the law. Under the new law the United States will be divided into 12 Federal reserve districts, in each of which there shall be organized a Federal reserve bank, with a capital stock of not less than \$5,000,000. All national banks are required to subscribe to the stock of the Federal reserve bank an amount equal to 20 per cent of their own capital stock. Ten per cent of this is required to be paid in, and the other 10 per cent operates in the nature of a double liability similar to the double liability of individual stockholders in banks under the present law; but it is not anticipated that the latter 10 per cent will be called for, unless it became necessary by reason of the impairment of the capital stock of the Federal reserve bank by reason of losses, which will probably never happen.

The bill provides that State banks may also come into the system by subscribing to the capital of the Federal reserve bank the same amount required of national banks. These member banks will be required to keep a certain portion of their reserve funds in these Federal reserve banks, instead of reserve or central-reserve cities, as provided under the present law. Thus it can be seen that the reserves required by law to be kept by the banks will be mobilized in the district in which the bank is located, instead of being sent away to Chicago or New York, where it may be used for speculative purposes upon the stock exchange. One of the weakest features of the present system is that while all the banks are required to keep a reserve fund equal to 15 per cent of their deposits for times of emergency, yet when the emergency arrives and the money is needed it can not be obtained or used. Under the new system the reserve funds will be kept closer at home and will be more easily accessible in time of stress, and can be used to meet the needs of the legitimate and proper development of the community instead of being used in speculation on Wall Street, as may be and is done under the present system.

The new currency to be issued and circulated under the general supervision of the Federal reserve board is to be known as "Federal reserve notes," and they will purport on their face to be obligations of the United States. This currency will be issued to the Federal reserve banks and will be redeemable in gold or lawful money. This currency will be based upon a security of 33½ per cent of gold upon the par value of prime commercial paper indorsed by the bank, and in addition the issue of this currency shall constitute a lien upon all the assets of the bank to which it is issued. Thus it can be seen that the requirements of stability, safety, and acceptability are amply provided for in the security required. It is not expected that the Federal reserve banks will call for this currency except when they need more money with which to meet the demands of the business of their respective districts, and likewise, when the need for it has passed by, the currency thus placed into circulation will be withdrawn and canceled, thus producing an automatic elasticity of currency according to the needs of business. For instance, if any given Federal reserve bank had more calls for money from its member banks than it could supply and the demand was a legitimate one, it would apply to the Federal reserve board for an issue of currency, giving to the Government the security I have heretofore described for the use of this currency. The reserve bank would in turn lend this money to the local banks, accepting prime commercial paper indorsed by such local bank as security. The local bank would in turn lend this money to the people of the community in order to perform the legitimate functions of trade and commerce. In due course of time the borrower would pay the bank and cancel his note. The local bank would then use this money to repay the Federal reserve bank and would take down its security. The Federal reserve bank would then cancel this currency by redeeming it. It is not expected that the Federal reserve banks will call for the issue of this money so long as the volume of circulation is sufficient to meet the demands of business, because the law gives the Federal board the right to place a tax upon this currency, which must be paid by the banks to which it is issued. No bank would desire to take out circulation and pay the tax upon it unless it were needed to meet its demands. This will insure the prompt return and cancellation of these notes as soon as the demand for them has passed, and will thus prevent an inflation of the currency.

So, without going further into the details of the proposed system, it will insure a currency which will be elastic, safe, sound, stable, and acceptable. For, besides being guaranteed by the bank to which it will be issued, it will be redeemable by the Government of the United States, which has back of it the taxing power of a sovereign Nation.

Another reason why I support this bill, Mr. Chairman, is because it places the commercial paper of the farmer upon the same basis as that of the merchant and the manufacturer. This bill provides that a local bank may take its notes and bills of exchange arising out of commercial transactions to the Federal reserve bank and have them rediscounted and obtain the money upon them to meet its own necessities. The bill describes such commercial paper to include "notes or bills of exchange issued or drawn for commercial, agricultural, or industrial purposes, or the proceeds of which have been or may be used for such purposes." So that if a farmer makes his note and takes it to the bank to get money upon it, the bank will be more willing to let him have the money if it knows that it may take that same note to the Federal reserve bank, and by indorsing it obtain more money on it, to be used in the legitimate business of the community. This bill recognizes the farmer and the wage earner as important factors in the commercial transactions and the development of the country by placing their commercial paper upon an equal basis with all other people of the country. [Applause.] And let me say, Mr. Chairman, that I hope the time is not far distant when we may enact a general system of rural credits throughout the United States, which will make it easier for the farmer to borrow money at low rates of interest in order to aid him in building a home for himself and his family. [Applause.] It ought not to be true that the farmer of Europe can borrow money much cheaper than the American farmer can borrow it; yet it is true. And while the American farmer may not be in so great need of it as his foreign brother, yet we must recognize that the necessity for a real system of rural credits is growing, and we ought to have sufficient foresight to meet this problem as we are undertaking to meet the currency and the tariff and provide the remedy at once.

I support this measure, Mr. Chairman, because it permits the establishment of branch banks in foreign countries, thus aiding the American people in conducting foreign trade, expanding our already growing commerce, and capturing the trade markets of the world for American products.

I support it because it is intended to, and as I believe will, prevent the recurrence of artificial panics in the future by affording in times of financial trouble and stress a stable, safe, and acceptable currency. Under the operation of this bill the great reserve funds of the banks will be withdrawn in large measure from Wall Street, where it is used for stock gambling and other shady transactions that work injury to our country, and will be mobilized and segregated in 12 reserve districts, where they can be used for the benefit of the people who own this money. I have no criticism to make against New York or Wall Street merely because they are New York and Wall Street. But against many of their methods I do complain, and the people of this country have complained, and will continue to complain until the cause for the complaint is removed. And it is a fact known to everybody that the great financial institutions of New York have so manipulated the handling of and the control of money and credit in this country that the people who have needed money and credit in order to establish or maintain legitimate business have been unable to secure it. The law which sanctions such methods or permits them to continue is at fault, and it is this law which we are seeking to change by the enactment of the bill now under discussion.

I support this bill, Mr. Chairman, because it is intended to produce a welding together of a system now loose and disjointed, and to create a larger and easier market for the rediscounting of commercial paper. Each local bank will have an interest in the success of the Federal reserve bank, and each Federal reserve bank will stand ready at all times to come to the relief of the local bank when it needs money to supply its community. Those who criticize this proposed legislation claim to fear that it may not work successfully because it is an experiment. Yet they have offered nothing to take its place, and while admitting that conditions are bad and ought to be changed, no remedy is forthcoming from them to relieve the country of the patchwork and misfit system under which we suffer at the present time. If you who criticize this bill do not like its provisions, why do you not give us something better? [Applause on the Democratic side.]

We have waited for 50 years for your side of this House to offer something to take the place of the system which everybody admits is bad; but during all that time you have been playing miserable politics, and even now you offer nothing worthy to be dignified by the name of remedy. The only attempt you have made to change the system was a few years ago when you offered to the country the famous Aldrich scheme, which if enacted would have placed the control of all money and credit and the issue of currency, if not the very Government itself, in the hands of private interests and would have

placed the American people more completely under the domination of private greed and special privilege than is even true at present. [Applause on the Democratic side.] It may be that the bill now under consideration is not all that we might desire in the way of currency legislation. It may not be the bill that each one of us would write if we were commissioned to write a currency measure for the American people, as was suggested by the gentleman from Ohio [Mr. BULKLEY]; and while it may be in the nature of an experiment, so is everything that has to do with human effort and human progress. No man ever sought to expand his business or to enlarge his house or his capital or the facilities with which he operated who did not realize in advance that it was an experiment. No law has ever been enacted since the foundation of the Government that was not an experiment. Yea, the very foundation of the Government itself was an experiment, and there were many who doubted its permanency. No man has the gift of prophecy to enable him to look into the future and tell precisely how any given law may operate. Therefore we have tried to exercise that discretion and foresight with which God has blessed us in undertaking to frame a measure which, while radical in some of its provisions, yet is conservative and constructive, and which I hope will appeal not only to the people of the United States but to the bankers as well, whose sympathy and cooperation will add much to its success.

Mr. Chairman, we hear much criticism from the Republican side of this House and from some of the larger bankers of the country because it provides for a Federal reserve board, to be appointed by the President of the United States. Those who have criticized this provision of the bill upon this floor and elsewhere claim to fear that by reason of the fact that this board shall be appointed by the President it will therefore be a political board and may use its great powers for political purposes.

There is not a governmental function with which we have to do to-day that is not a political function. There is not an act of Congress, nor an order of the executive department, nor a decision of the courts, from the smallest to the highest, that is not a political function, for the real definition of "politics" itself is "the science of government," and the definition of the word "political" is simply "pertaining to or having to do with the science of government." It is therefore impossible for any function of the Government to be performed that is not a political function.

Mr. HAYES. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BARKLEY. Yes.

Mr. HAYES. I would like to ask the gentleman if he claims that all of the powers of the Government are exercised as a matter of partisan politics?

Mr. BARKLEY. No, sir; I do not. And that is where the gentleman fails to distinguish between the terms "political" and "partisan."

Mr. HAYES. I would like for the gentleman to distinguish between "partisan" and "political."

Mr. BARKLEY. I appreciate that difference. That is where the critics make their mistake. They take it for granted they are the same, which is largely true of the so-called Republican Party. But if the gentleman means to leave the impression that he does not know the difference between these two words and that they are interchangeable, I fear that no definition that I could give would enlighten the gentleman. But if what the gentleman means to intimate be true and the President's appointments should be "partisan," where else would you lodge the power of appointment of this board than in the hands of the President? Would you lodge it in the House of Representatives? If you did that it would not only be a political appointment but a very partisan appointment.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BARKLEY. I do.

Mr. SMITH of Minnesota. Do you make any distinction between the method of appointment and the appointment itself? Do you make any difference between the board itself and the way the board is constituted?

Mr. BARKLEY. Certainly. I make this difference: There is no board until the President appoints one, and the act of appointment and the manner of appointment are not similar nor coextensive with the acts of the board after they are appointed. The President does not control the action of the reserve board after they are appointed any more than he controls the action of the Interstate Commerce Commission after he appoints its members.

Mr. HAYES. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BARKLEY. I do.

Mr. HAYES. I would like to ask the gentleman if it does not make a vast difference whether the President appoints directly the board or whether some one whom he has appointed and who holds by pleasure of the President becomes, by virtue of that fact, an ex officio member of that board?

Mr. BARKLEY. I do not care whether you take the two members of the Cabinet and the Comptroller of the Currency off the board or not. I think they ought to be on this board, because of their close relations with the banking and currency system of the country, for these two officers are more than any other in the Government supposed to be at the head of our financial system, and they ought to be on this board, and the Secretary of Agriculture ought to be on it, because it gives representation to the great agricultural interests of the people. The fact that they are appointed by the President as Secretary of the Treasury, or of Agriculture, or as Comptroller of the Currency, and become by reason thereof members of the reserve board makes no difference. I say that the Federal reserve board, representing the people and standing between them and the banks themselves, ought to be appointed by the people's representative, who is the President of the United States.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield for one more question?

The CHAIRMAN. Does the gentleman yield?

Mr. BARKLEY. I do.

Mr. SMITH of Minnesota. Does the gentleman recognize the fact that the Secretary of Agriculture and the Secretary of the Treasury and the Comptroller of the Currency belong to the political party in power, and consequently in making those selections the President makes them with reference to his particular administration, and that such a board under such a system and constituted as this board would be constituted, as provided in the bill, is bound to be representative of party politics in its make-up?

Mr. BARKLEY. I recognize the fact that the Secretary of Agriculture, the Secretary of the Treasury, and the Comptroller of the Currency are all appointed by the President, and appointed from his own political party, as I believe they and all other officers under him ought to be appointed, and by reason of their positions, one as Secretary of Agriculture, and one as Secretary of the Treasury—the latter being at the head of the financial system of the country—and the Comptroller of the Currency being in close cooperation with the Secretary of the Treasury and having already large powers in regulating the banking and currency of the Nation, ought to be members of this board. The mere fact that these men may be of the same political party as the man in White House ought not to disqualify them, for under our system a man who has no political convictions amounts to very little and ought not to be given any responsible position in the Government. [Applause on the Democratic side.]

But if it be suggested that the members of this Federal reserve board ought to be appointed by the banks themselves, as some of them desire and as was insisted upon yesterday by the gentleman from Illinois [Mr. MADDEN], I desire to say that that appears to me to be the most preposterous proposal that I have heard upon this floor since I became a Member of this House. The thought of such a thing is abhorrent to all the traditions of the Democratic Party, and the consummation of such an idea would prove subversive of the liberties of the people.

The banks themselves are the creatures of the people, and in legislating upon the subject of banking and currency we can not afford to lose sight of the distinction between the banker as an individual and the bank as an institution. The banker goes into the banking business simply and purely to make money, but the bank as an institution is a creature of the Government for the convenience of the people as a sort of clearing house for the commercial transactions of the community. They who, therefore, discuss this proposed legislation or any other without drawing a clear distinction between the banker as an individual and the bank as a quasi-public institution will fail to touch the vital features of the question. If it be true that the bank is a creature of the Government, and therefore of the people, and that it is organized and permitted to exist governmentally not to enable somebody to make money—for that is not a governmental function—but in order that the institution itself may serve a public purpose, it must then follow that this institution which has been created and authorized by the people must be regulated by them. And if this be true of the bank as an institution is it not still more urgently desired that the issue of currency for all the people, which is backed by the Government and redeemable by it, should be regulated and controlled absolutely by the Govern-

ment? Let me ask those who pretend to believe that this Federal board, exercising control and having regulating powers over the new banking system and the new currency to be issued, ought to be appointed by the bankers, would you be willing that the railroads of the country should have the right to name the members of the Interstate Commerce Commission? What sort of railroad regulation would we have in this country if the railroads were given the power to appoint the members of the commission which regulates them? What sort of a Supreme Court would we have if the trusts were permitted to appoint the members of that court? And what sort of a Federal reserve board would we have if the big banks were permitted to name its members? It is our belief that already certain bankers in this country have had too much to do with regulating and controlling the financial system of the United States, and one of the strong features of the bill which we are now discussing is the fact that it takes this control away from them and places it in the hands of the people, where it ought to be. [Applause.]

Mr. BALTZ. If this bill is enacted into law, will it not give the Government control of the finances of this country?

Mr. BARKLEY. It will; and the Government ought to have the control.

Mr. BALTZ. Who is the Government?

Mr. BARKLEY. The Government is the people, and the people act through their authorized agents, the chief of whom is the President of the United States. [Applause on the Democratic side.]

Mr. CALLAWAY. Is it not a fact that after this law goes into effect and the President has the power to put it into working order, so far as the franchise is concerned, he is absolutely dependent upon the bankers of the country to furnish the capital; and if they see fit not to furnish the capital for these 12 reserve banks, he will be absolutely powerless to act?

Mr. BARKLEY. Of course, if the banks should all go out of business and no more banks were organized, the law would fail. But in that event we would need no banking law, for there would be no banks to regulate.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. GLASS. Mr. Chairman, I yield five more minutes to the gentleman from Kentucky.

Mr. CALLAWAY. Is it not a fact that you can take the six firms that the Money Trust committee found to control \$22,000,000,000 capital in this country, and if they, with their interlocking directorates, see fit to keep out of this organization, there will not be enough capital left which is free from their control to organize the 12 regional banks with the \$5,000,000 capital each?

Mr. BARKLEY. The gentleman is assuming an improbability.

Mr. CALLAWAY. Well, that is a possibility, you will admit.

Mr. BARKLEY. When you begin to survey the field of possibilities, you are groping into infinity. You might say that all things are possible. It is possible for the earth to dry up for lack of rain, but we hope it is not probable. But I know what is in the gentleman's mind, and I want to answer him. The gentleman's proposition is that if the banks refuse to go into the new system it will be a failure, and that we depend upon the banks to go into it. That is true in large measure. We expect the banks to go into it. In fact, they have to go into it within one year or lose their charters as national banks.

Mr. CALLAWAY. Here is the proposition: It is a possibility, and the big financiers never overlook a possibility to hold what they have or to increase their holdings.

Mr. BARKLEY. I say that there is not an intelligent or businesslike bank in the United States that will refuse to go into this system, because they can not afford to surrender their national charters and lose the prestige they thereby possess in the community by saying they can not exist and make money under the new system. You must not lose sight of the fact that the bank does not make money by loaning its own money. The bank makes money by loaning other people's money, which has been deposited with it by the people themselves.

Mr. CALLAWAY. But is it not a fact that—

Mr. BARKLEY. I can not yield further to the gentleman. I would be glad to answer his questions all day if I had the time. But I have been warned that my time is about to expire, and I must proceed. I do not entertain the fears of the gentleman from Texas, that the banks will not go into the system. I think they will all go into it, because they can not afford to stay out. There is no hardship placed upon the banks under this new law. They are required to pay into the organization of the Federal reserve bank of their respective districts an amount equal to 10 per cent of their capital. This is comparatively a small amount, taking all the banks as an average.

As I stated awhile ago, banks make a very small portion of their earnings from their own capital. They make their money by loaning the deposits that are placed with them by the people of the community. Let us take a bank that is capitalized at \$100,000. Suppose it has \$500,000 or \$1,000,000 in deposits, which it may loan to the people of its locality. This bank would be required to invest only \$10,000 in the capital of the Federal reserve bank, and upon that \$10,000 it is allowed under the new law to receive a net dividend of 5 per cent, and it may receive more if the reserve bank earns it.

Mr. TOWNSEND. That is no hardship.

Mr. BARKLEY. It does not operate as a hardship, but it will prove a benefit in the long run. There are many banks which loan more than \$10,000 every year at less than 5 per cent interest.

Mr. TOWNSEND. And their earnings may be more.

Mr. BARKLEY. Yes. After the banks receive this 5 per cent all over that is distributed as follows: One-half is required to be placed in a surplus fund until such fund amounts to 20 per cent of the paid-in stock. Of the remaining one-half, the Government of the United States receives 60 per cent and the member banks 40 per cent; and after the surplus fund amounts to 20 per cent of the capital all earnings in excess of the 5 per cent guaranteed to the banks are to be divided between the banks and the Government in the ratio of 40 and 60 per cent, respectively. The amount received by the Government from this source is to be placed in a sinking fund for the purpose of paying the outstanding bonded indebtedness of the United States.

There is another proposition to which I desire to refer. There has been some criticism leveled at this bill by its opponents because it is contended that the Government is going into the banking business. The Government has always been in the banking business, my friends. It is true that the Government has not heretofore received a portion of the earnings of any banking institution except indirectly; but the Government went into the banking business when it authorized the national banks to be created and authorized the Secretary of the Treasury to deposit Government funds in those banks and receive thereon interest at the rate of 2 per cent.

Mr. CALLAWAY. I want to know whether the Government went into the railroad business when it created the Interstate Commerce Commission?

Mr. BARKLEY. It went into the railroad-regulating business. And I will say that there were many people who objected to the creation of the Interstate Commerce Commission, and especially did the railroads object, because they claimed that the Government was interfering with private business and to that extent was "going into" such business. But no intelligent person would now advocate abolishing that commission, which has done such good service in protecting the people from the rapacity and greed of the railroads. It is for the same reason that to-day the big bankers object to the creation of the Federal reserve board, because they know this board will administer the law for the whole people and withdraw from the large financial institutions the power they now possess over the financial system of the United States. [Applause on the Democratic side.]

There has never been a State bank created except that the State went into the banking business to the extent that it authorized a set of individuals to conduct a business under a corporate name which they could not do as individuals; and when the United States Government deposits its money in a national bank and requires the bank to pay interest on it, that is going into the banking business to as great an extent as when it authorizes the creation of a Federal reserve bank and takes back as a part of its compensation for loaning its money to that reserve bank 60 per cent of the profits after 5 per cent has been guaranteed to the banks. And it seems to me that there is no force in the argument that this bill ought not to pass because somebody fears the Government is going into the banking business. If it is true, as it certainly is, that no bank can do business or exist except by the consent of the people, it is folly to argue to me that the Government ought not to exercise the strictest control over the bank that is thus created for the convenience of the public.

I support this measure because, in my judgment, it is not framed in the interest of a special class of our people, but in the interest of the whole people, in the interest of every man, from the lowest to the highest. It recognizes the laboring man, the farmer, the merchant, the manufacturer. It recognizes all avenues of legitimate trade and commerce and places our financial system upon a sound and secure basis and produces a uniformity and community of interest from the top to the bottom, and, reversely, from the bottom to the top. [Applause.]

I approve and support this measure, Mr. Chairman, because I believe the President of the United States and the Banking and Currency Committee of this House have worked with singleness of purpose in an effort to bring forth a great piece of constructive legislation, which all informed men admit is greatly needed to supplant the present antiquated system of banking, which has broken down in every period of financial stress which has afflicted the country. I have no patience with the criticism that has been hurled at the President because he has taken some part in the framing of this measure. On yesterday the gentleman from Pennsylvania [Mr. HULINGS] criticized the bill and the President, and all of us, because, he claimed, the President had dictated this measure to Congress; and stated that the Democratic Members of this House needed a guardian, and the President had set himself up as our guardian. I am thankful that the gentleman from Pennsylvania admitted that we have a good guardian and one who will make prompt settlement of his accounts as such when we arrive at our majority. [Laughter.] I should very much prefer to have a guardian in the White House who would carefully look after the interests of all the people rather than to have a man there who needed a guardian himself, as was true during the last Republican administration. [Laughter and applause.]

The President of the United States must approve this measure or disapprove it if it passes the House and the Senate. Would you have him sit idly by, close his eyes, and fold his hands on a corpulent abdomen, as President Taft did when the last tariff bill was in Congress, then sign it, whether he liked it or not, and be forced to go out and apologize for it? I honor the President of the United States for his earnestness in co-operating with Congress in order to bring about wise legislation for our country, and I recognize his leadership in striving to lead the country out of the wilderness, where it has been groping under recent Republican policies. I state here that he would be derelict to his own and the country's conception of his duty if he refused or declined to cooperate with both branches of Congress in framing legislation for the welfare of the people, and I feel quite sure that his methods in this respect will be approved by the American people, who see in the President a leader capable of leading and willing to lead. [Applause.]

Mr. Chairman, there are many other features of this bill which I should like to discuss, especially the provisions authorizing the creation of savings departments in national banks and authorizing national banks to loan upon improved farm lands and the provisions for a better system of bank inspection. But I have not the time. Permit me to say in conclusion that I believe that this bill will pass this House by a greater majority than has been given to any measure of similar importance in many years. And while it may be that in the future further changes may be needed, Congress will be here ready to amend or change it in all those particulars which experience may demonstrate as needful of amendment. No work of human hand or human brain can be perfect. We are constantly striving for better things in every human enterprise, and that should be our aim in legislation. I believe this measure will bring about better conditions in this country, and I give it my unqualified support. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 45 minutes to the gentleman from Maine [Mr. GUERNSEY].

Mr. GUERNSEY. Mr. Chairman, I realize that it may be difficult to hold the attention of Members after the storm of eloquence that has just fallen from the lips of my Democratic friend in his frantic efforts to defend the currency measure now under consideration.

Currency legislation is of such vast importance and so far-reaching in its results that I hesitate even to discuss it before the membership of this House, but as a minority member of the Banking and Currency Committee I do not feel like shirking the responsibility imposed upon me by my position.

Currency legislation and its results, when we stop to consider, overshadow in importance all matters before this Congress. Important as the tariff question is, it has its limitations; but general currency legislation if enacted into law at this time may continue unchanged for half a century or more. Nearly that time has elapsed since Congress enacted the present national banking law.

I am in favor of the general principles of the currency measure now under consideration. I believe in most of its fundamental principles. It contains many of the features for a national banking system such as was recommended by the National Monetary Commission.

The measure carries, however, some provisions that I can not support and others that are unnecessary to its general purposes, provisions that are not only unnecessary, but dangerous,

and which I trust the majority membership of this House will allow to be eliminated, as I and many others here desire to support currency legislation, but may not be able to vote for this legislation unless amendments are adopted which will eliminate some of the objectionable features. Let Congress in providing a currency system for the country keep straight along the highway of its original purposes to improve our banking system, to prevent panics and unnecessary periodical stringency in the currency. Let us keep off the crossroads of politics and privilege; let us keep straight on to the port to which we set sail.

For years there has been a well-founded belief that our currency system was not only inadequate for the business of the country, but at times dangerous. Its weakness was driven home to the minds of men during the currency panic of 1907, when solvent banks were forced to close their doors and sound commercial houses and mills were driven into bankruptcy, while men connected with them blew out their brains simply because we did not have a proper currency system, one that could supply currency to sound banks and through them to sound industries in such a crisis. Those financial institutions that the Secretary of the Treasury was able to reach and those that the clearing house cared for were saved; many that were not assisted were ruined.

Public opinion demands changes in the national monetary system; changes broad and sound that will create a system that will carry the business of the country and prevent the recurrence of panics like that of 1907. We need a more elastic currency, but at the same time it must be guarded against inflation.

It seems to be generally conceded that there must be some agency controlled or, at least, supervised by the Federal Government that can increase or decrease the outstanding volume of currency as conditions in the country actually require, and that the circulating medium so issued shall be secured by sound banking assets, such as gold and short-time commercial paper guaranteed by solvent banks, limited, of course, to such percentage of commercial paper as sound judgment will justify. In time of panic it is currency and credit that banks and, through them, business need, but which under our present system are often lacking. There should be some agency that can meet the requirements of business at such times. With such a system the chief reason for currency panics would disappear.

EVERY FEW YEARS.

Money stringency or panics seem to occur every few years in this country. At these times business depression exists for one cause or another. Credits are strained, people become frightened and call for their money at the banks, the bankers become frightened and refuse credit to solvent parties; every bank locks up and holds onto all the cash it can secure regardless of the needs of other banks, their own customers, or the country. Their very acts increase the state of public alarm, with the result that the business of the country becomes paralyzed, industries come to a standstill, manufacturing plants close their doors, business men suspend operations for lack of currency and credit of which they have been deprived, while railroads are forced into the hands of receivers and labor throughout the country is thrown out of employment. The loss and devastation that follows such breakdowns in our financial system are beyond calculation, and are felt for many years afterwards.

There seems to be no way under our present system that the banks on such occasions can protect and save from loss the communities which they serve. The local bank of a town or community may have in its vaults securities of the most unquestionable character, the best bonds of the country, even those of the municipality and the State in which the bank is located. It may even have in its vaults far more cash than the law requires that it shall keep as a reserve, yet in time of general stress exhaust it quickly in trying to avoid suspension of payments. Our banking system should be made sufficient to protect banks and communities from loss in any crisis by a reserve system that can supply currency, extend credit, and protect business until normal conditions are restored.

INVESTIGATIONS BY CONGRESS.

In 1908 Congress appointed a National Monetary Commission, composed of nine Members of the House and nine Members of the United States Senate, for the purpose of investigating the monetary system of our country and that of other nations of the world. For three and one-half years that commission made a most careful study of the subject matter of the investigation. They visited the great money centers of England and Europe and secured information at first hand as to the tried and proven currency methods of such countries. In their report, as well as in the vast amount of information that the commission collected

relative to the banking systems of the world, is to be found a great amount of useful knowledge to reflect upon in reconstructing our banking and currency system.

In the United States there are some 7,000 national banks, each having the right to issue or withdraw from circulation bank notes as they desire, dependent not on the requirements of the country but as to whether the banks can make money by purchasing Government bonds and issuing circulation against them. Will it pay, is the question.

Nearly three times as many State banking institutions possess no such rights as to the issue of currency, but are dependent for currency to quite an extent upon the will of the comparatively smaller number of national institutions. The system makes a false market for our Government bonds, causing them to sell at high prices on account of their circulating privileges rather than on the conditions of the country's credit.

BANK RESERVES.

There are more than \$17,000,000,000 deposited in the banks of the United States. To protect these deposits the national banks are required to keep as a reserve on hand lawful money in amount equal to at least from 15 to 25 per cent of their deposits and notes in circulation—15 per cent for the country banks and 25 per cent for the reserve cities (banks located in New York, Chicago, St. Louis, and other cities named in the national banking act)—and from 6 to 25 per cent must be actual cash in their vaults.

The State banking institutions are required to keep a somewhat less reserve than the national banks. The cash reserves in all of the banks are something less than a billion and a half (June 4, 1913, \$1,492,866,335.37) with which to meet the seventeen billions of deposits. These reserves being scattered and divided in small amounts among all the banks make it impossible for the various banks to render much assistance to one another in times of general stress. It is at such times that reserve banks such as are proposed in this legislation are needed, from which the banks of the country can draw. Our present banking system is weak in this respect. Each bank is compelled to look out for itself, and this very condition adds to its embarrassment and danger and contributes to the panic.

THE EUROPEAN SYSTEM CONSOLIDATES THE RESERVES.

The Monetary Commission, in the course of its investigations, found that in other great countries of the world, such as England, France, and Germany, the banks were not required by law to keep cash reserves in their vaults. All the cash that was not desired for current use was kept in great central banks, from which they drew to the extent required as demands were made upon them. The commission learned that as a result of this system these great reserve banks—being also banks of issue—were able at all times to extend credit to the banks and enable them to meet the demands of depositors and business in any crisis.

BANK OF ENGLAND.

In the panic of 1907 the banks of this country were obliged to import gold from England. At the time the importation from England commenced the Bank of England had in its vaults as the basis in part of its outstanding bank notes one hundred and sixty-five millions in gold, and although we drew millions of gold from the great English bank it did not imperil the money situation in England in the least. It produced no disturbance, apprehension, or fear in England; the people and the banks had full confidence in their monetary system. The Bank of England proceeded to maintain its supply of gold and meet our requirements by drawing gold from the Continent and elsewhere, and it did this by simply raising the bank rate to 4½ and 5½ per cent late in October; in November it raised it to 6 per cent, and a little later to 7 per cent.

In so doing it drew an ample supply of gold for the bank vaults from 24 countries of the world, including the British colonies. The Bank of England can always meet the demands of business in the British Isles, as it can issue its notes without limit, except that they shall be based on a certain amount of securities fixed by law, and gold coin, gold and silver bullion in its vaults, which can always be increased to any amount that is needed for bank-note bases through the raising of the bank rate. The English banking system consists not only of the Bank of England, but there are joint-stock banks, discount houses, merchant houses, and postal savings banks, all existing side by side and filling their respective places in the English financial world.

BANK OF FRANCE.

In Paris the commission visited great French banks, with deposits amounting to hundreds of millions of dollars, and learned that they carried practically no cash in their vaults except in amounts sufficient for daily use, but relied on the

Bank of France to supply any unusual demand upon them, as all that was necessary for them to do in case of unusual calls for currency was to take from their vaults commercial paper to any amount they possessed bearing solvent names and take it to the Bank of France and bring back bank notes of that great national institution—good as gold throughout the French nation—and immediately meet the demands of their depositors.

The Bank of France regulates the currency of the whole country, and any bank in need of additional cash may present for discount at the Bank of France bills and other commercial paper which it has in its vaults. The Bank of France can issue its bank notes against cash and statutory discounts or loans. Every note has its counterpart either in the metallic reserve or in discounts or loans. In the French banking system there are in addition to the Bank of France joint-stock banks, mortgage banks, cooperative, agricultural, and savings banks.

BANK OF GERMANY.

In Germany the commission learned that the great Bank of Germany by increasing its gold reserve, say, by a hundred millions as a basis of one-third and commercial paper indorsed by solvent banks for two-thirds could create three hundred millions in cash or credit for the relief of the country to sustain business in time of pressure. The bank is charged with the issue and regulation of the nation's money, the amount of its bank-note issue being limited to three times the amount of gold and gold bullion, silver, copper, and nickel and Government notes held by the bank; and, furthermore, all notes issued in excess of the gold coin and gold bullion, silver, copper, and nickel and Government notes must be covered by bills discounted. While there is no restriction as to the amount of silver, there is a limitation on its coinage. The bank acts not only as a bank for banks but for the commercial and industrial enterprises of the Empire.

Supplementing the great Bank of Germany and existing along with it in the German Empire as a part of their financial system we find there are joint-stock banks, credit societies, which resemble very much mutual savings banks, in that they are managed by citizens of the locality in which they exist, to serve without compensation, and which institutions receive small deposits and loan the societies' funds locally as far as possible. They also have land-mortgage banks.

The great central or reserve banks of Europe in the three countries that I have mentioned perform most important functions by handling and making available at all times the banking reserves of those countries, and while engaged in general banking they do not tend to drive out of business the numerous other banking institutions to which I have called attention as existing in England, France, and Germany in addition to the central banks, but exist in perfect harmony with the smaller institutions, protecting and sustaining them in times of need.

The measure now under consideration has been prepared by the majority membership of the House, aided by the exhaustive investigations of the National Monetary Commission, which laid before Congress the banking systems of Europe with their hundreds of years' experience. Those who wrote the pending measure have sought to secure the benefits which result from the great central banks of the Old World without creating a central bank in the United States.

I would call attention to the fact that, while adopting many principles of the tried and tested banking systems of Europe, there is incorporated in this measure a wide departure from the European systems. While competition is maintained between banks and all classes of banks over there, the principle of extermination does not exist. The adoption of this measure as it stands will carry with it the principles of extermination.

In providing for this country a new currency system, including a series of great reserve banks such as proposed in this measure and which are to be in turn controlled by one central board, we should exercise great care not to create a system which will prove to be destructive to existing banks. It is uncalled for and unnecessary.

MEASURE MAY FORCE MANY SMALL NATIONAL AND STATE SAVINGS BANKS OUT OF BUSINESS.

In two instances I believe the legislation under consideration, if enacted into law as it now stands, will prove destructive. It will tend to drive out of business many of the small country national banks and the mutual savings banks. The compulsory provisions of the measure as to subscription to capital stock in the Federal reserve banks, I believe, will prove most burdensome to the small banks of the country. It will compel them to set aside a considerable portion of their capital for stock investments in the Federal banks, and if they fail to do so they will be compelled to surrender their charters. In other words, the measure seeks to compel them to enter the system or go out of business.

We of the minority believe the provision is unconstitutional. This system should be made sufficiently attractive so that the banks will gradually and voluntarily come in and develop the national banking system of the country in the natural way. Otherwise we may enact legislation that will disorganize our banking system generally, and in so doing it would prove most disastrous to general business. Commercial banks and investment banks in Europe, as a rule, are separate—an important fact for us to consider.

MAY DRIVE SAVINGS BANKS OUT OF BUSINESS.

In the measure now before the House is a provision that may drive out of existence the investment banks of the United States, commonly known as mutual savings banks. This class of banks fills an important place in our national development. They are neighborhood institutions; they are located in the small places as well as the large. The near-by people place their money in them and the money is loaned out, as far as possible, to near-by farmers, village people, and local enterprises. The officers are local and serve, generally without compensation, as a matter of public duty, except the treasurer, who is given a salary.

For years I have served as a trustee and in later years as president of one of these institutions, and without compensation. I tendered my resignation to the latter position early in this year, but my associates did not accept it, and continued me as president for no other reason, I suppose, than that they considered it a public duty that I should continue to perform.

These savings institutions pay no dividends; all of their earnings go to the depositors. It would be most unwise to wipe out these institutions, and it is unnecessary in the reform of our national banking system. The bill before us when originally introduced contained no savings-bank provisions. I felt that the provision ought to have been opposed in the report of the minority, but other members of the minority favored this section of the bill, and consequently I was unable to have my objections included in the report. Undoubtedly the objections I raise are less serious in the Western and Southern States, where savings banks are few in number, compared with the 11 New England and Eastern States, which contain 609 out of a total of 630 of these banks in the country.

The provision in the measure now before us which I believe will endanger the mutual savings banks is the savings-department provision that this measure contains. This authorizes the Federal banks to establish savings departments and conduct a class of business that the legislatures of the several States have found it was necessary to throw around special safeguards and rules of caution. In this provision there are no such safeguards or rules of caution, although the section was incorporated in the bill by the Democratic secret caucus after weeks of consideration and discussion. Under this savings-department provision the directors of a bank which conducts such department might offer any rate of interest that was considered necessary to induce depositors to make investments in savings deposits in any class of securities that they might consider desirable. These investments are not required to be, under the terms of the bill, of uniform character throughout the United States, but may be such that the condition of business in the different sections of the country afford. Under this rule the deposits in these savings departments might be used to promote the mines of the West or the exploitation of water-covered lands of the South, or possibly in enterprises to extract gold from sea water in the East, subject, of course, to the supervision of the Federal reserve board; but with the vast duties imposed upon this board by this measure it would be impossible for it to give proper supervision to the investments by the savings department.

The ordinary experience of the average man is that it is impossible to protect savings of this class in this manner. Long experience has taught the lesson that the law which authorizes a bank to accept them must in itself specify in detail the class of investments that the bank may place its funds in. Such discretion should never be left to unpaid and otherwise engaged bank directors or to the long-distance advice of a Federal board in Washington.

A FORMER NATIONAL SAVINGS BANK ACT AND THE FLAG OF THE UNITED STATES.

In 1865 the Congress of the United States granted a charter to the Freedman's Savings & Trust Co., a bank with branches established throughout the southern portion of the country. The flag of the United States was raised over its office, and a soldier in the uniform of the United States Government stood at its doors. Thousands flocked to these branch banks and deposited their savings. Millions of dollars were collected by reason of the indorsement of the Government of the United States which this bank was supposed to have.

Through careless legislation by Congress relative to the investments that these banks might make, and through lack of proper supervision provided by the congressional act, the banks eventually closed their doors. The depositors lost the most of their money, and they and their heirs have been haunting the Halls of Congress to secure reimbursement for nearly 40 years.

THE FLAG MAY AGAIN BE RAISED.

Under the legislation before us, if it becomes law, national savings institutions will again raise over their offices the flag of the United States. They will let it be known that officials of the United States stand at their door in the uniform of members of the Federal reserve board. It may not be that the disaster which overtook the depositors in the Freedman's Savings & Trust Co. will overtake these depositors in the new Federal savings institutions, but does the Government of the United States again wish to give its indorsement to the establishment of institutions to receive the savings of the people under legislation that is absolutely lacking in proper restrictions and safeguards, institutions which will invite wide latitude as to investments of a high-rate-bearing class but not savings investments, institutions with all the prestige of the Federal Government behind them, which will enter the field of the mutual savings banks of the country, restricted by State legislation to investments of the highest grade, but bearing of necessity low rates of interest, with the result that competition with the new Federal institution would be impossible?

8,000,000 DEPOSITORS.

The mutual savings banks of the United States in 1912 carried more than three and one-half billions of dollars in deposits, and their individual depositors numbered nearly 8,000,000; the average account was \$459.62, while the deposits in the mutual and stock savings institutions of the United States for the same year amounted to nearly four and one-half billion dollars, and the depositors numbered more than 10,000,000 individuals.

NEW BANK TAX EXEMPT.

The new Federal institution will possess an additional advantage over these mutual savings institutions of tremendous importance. I refer to the tax-exemption privilege, exemption from all State taxes on deposits wherever they operate.

The savings deposits in mutual savings banks and stock companies of the New England States in 1912 were taxed and paid into the several State treasuries the sum of \$4,715,536.

In Maine it was \$589,987; New Hampshire, \$563,505; Vermont, \$572,668; Massachusetts, \$1,808,462; Rhode Island, \$520,720; Connecticut, \$660,194; while in the great State of New York institutions carrying this class of deposits are taxed, although upon a different basis than in the New England States, the sum of \$3,407,942, making a total in the above-mentioned States of \$8,123,478. I have not the data at hand as to the other States, but the aggregate must be many millions more.

New national institutions will enjoy absolute freedom from these millions of taxation. The tax-exemption privileges that the Federal institutions will enjoy afford a tremendous advantage over competing State banks. Under the privileges that this measure would carry the Federal savings institutions, with all the prestige of the United States Government behind them, with all the privileges of investment in high-rate securities, and, lastly and vastly more important, the privilege of millions upon millions of tax exemption in the States, no savings institution could compete or exist in any State, county, or community where national institutions with these privileges opened their doors. Congress should consider the interest of the depositors in these State institutions, as they contain the small savings of "the boy in blue, the girl in white, the woman in black, and the man and woman old and gray."

WILDCAT INVESTMENTS.

If this legislation is to be adopted, it should at least provide against wildcat investments for savings deposits, and thereby equalize to some extent conditions under which the Federal savings institutions shall enter into competition with the State institutions. It is entirely practicable and possible to provide here that the savings deposits in Federal institutions in the States where they engage in business shall be invested according to the laws of such State regulating investments of savings banks, and that in conducting a savings department a Federal bank shall segregate deposits and investments that they may be entirely separated from the commercial business of the bank, and held in the first instance for the benefit of the savings depositors in liquidation. The paragraph providing for savings departments should be stricken from the measure or these safeguards adopted.

FEDERAL RESERVE NOTES.

The measure contains ample provisions, I believe, for the security of the new currency to be issued; that being so it seems

unnecessary to issue such currency as obligations of the United States. If unnecessary, why encumber the credit of the Federal Government by the issue of money for the use of the banks and through them business? In time of war, for instance, a large outstanding volume of this currency as a Government obligation might not only bring about unnecessary depreciation of the currency but add to the strain on the credit of the Government.

FEDERAL RESERVE BOARD.

This legislation contains a further objectionable feature in the provision that will cause five out of the seven members of the Federal reserve board to be selected from and represent the political party in power. The Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency will be direct representatives of the administration in control of the Government. The Federal reserve board will be the most powerful board to which this Government has ever delegated authority. Its powers over our financial system will involve the prosperity and happiness of every citizen in the land. The Federal reserve board should be so constituted that its action at all times will be regarded nonpartisan. It should be above the suspicion of political control or action, and it will always be subject to such suspicion if three members are high officials and direct representatives of the administration in power.

Mr. GLASS. Mr. Chairman, I yield 20 minutes to my colleague [Mr. HELVERING].

Mr. HELVERING. Mr. Chairman, it seems incredible to think that a nation which prides itself upon its intelligence and progress, a nation peopled by the descendants of those who not merely proclaimed the inalienable right of man to be free but sealed the proclamation with their blood, and thereby built an institution which is the admiration of the world and an inspiration to the oppressed everywhere, should be content to passively submit for so many years to the enthrallment of a system which retarded growth, shackled progress, and put a premium upon financial distrust and resultant panic.

And this we have done merely because we have insidiously yielded to an atmosphere in which money has been elevated to a position superior to man. We have both loved and feared it—worshiped and hated. We have made obeisance to its possessor and when manifest evils have become oppressive we have been loth to act until those who profited by the evils should point out the road we ought to take.

Money—what is it? To quote J. Stuart Mill:

There can not be intrinsically a more insignificant thing in the economy of society than money. It is a machine for doing quickly and commodiously what would be done, though less quickly and commodiously, without it; and like other machines it only exerts a distinct and independent influence of its own when it gets out of order.

Mr. YOUNG of North Dakota. From whom is the gentleman quoting?

Mr. HELVERING. John Stuart Mill. That is a succinct and comprehensive definition, but for purposes of application to argument I prefer to think of money as a token used to facilitate the world's work. From the cradle to the grave we are engaged in barter and trade. We are all producers and we have to exchange our products in order to supply our needs. The needs of the man who has only his labor to sell must be kept within the bounds of a meager income; the needs of the man who has inherited property, or who has products for which the world pays a higher price, may be no greater but he has more of them supplied. In either case we have to have a yardstick to measure or a pair of scales to weigh the things bought and sold, and so, in order to facilitate exchange, the world has evolved money.

We are now, for the first time in many years, engaged in the discussion of a plan which will radically change the issue, control, and utility of our currency, and that brings in, necessarily, many coordinate branches. To my mind no Congress in the past half century has had before it a problem which contains so much of weal or woe for the American people. How shall we approach it? Is it to be as American citizens, sincerely interested in the well-being of all of our people, or is it to be as blind partisans, concerned only with the fortunes of the organization whose faith we preach?

In 1890 the Canadian Parliament had to deal with a problem akin to ours and under conditions not very different from those we are facing. Their banking system had fallen down, as ours has done; it had failed to meet the needs of the people, had fostered distrust, discouraged cooperation, and was in no sense calculated to inspire confidence, stimulate business, or give opportunity for the individual to attain his natural growth.

Partisan lines are closely drawn in Canada, but to the credit of its people be it said that partisanship was forced into the

background when this question had to be settled. Men were actuated more with a desire to serve all of the people than they were a particular political party, and, speaking of the occasion, R. M. Breckenridge says in his work on the Canadian Banking System:

A bill to which long study and the attention of the ablest experts in Canada had already been given was presented to a House comprising many of the first men in the country in law, commerce, and public life. Using all the resources of their rich experience and excellent theoretical equipment they took up the question without a trace of party feeling and earnestly, ably, thoughtfully worked to bring the bank act as near as might be to the perfection of a scientific ideal.

And that is the spirit in which, to my mind, we ought to approach this subject—considerate of the common good of all of the people of these United States rather than of a favored portion of them, or of the fortunes of any political organization.

Approaching this subject, and as a basis from which to reason, we should first determine what are the things most needed to insure a currency and banking system suited to our system of government and calculated to meet and overcome every difficulty, bearing in mind the weaknesses developed in the past and the things required to meet the conditions liable to arise in the future.

THE THINGS NEEDED.

Such a system, I believe, ought to insure—

Stability, so that the purchasing value of the dollar will be fixed as closely as we can, regardless of the amount of money in circulation.

Elasticity, so that circulation will expand and contract in keeping with the needs of the Nation.

Fluidity, to the end that money will automatically flow to the point needed when it is needed and without danger to the business of the country.

Mobility, so that we will have the power to mass our resources quickly and defend every point of attack at the time when defense, successfully made, will avert economic and industrial disturbance.

BRYAN ON STABLE CURRENCY.

In relation to stability of the currency, I quote the following from a speech of the Hon. W. J. Bryan, inserted in the CONGRESSIONAL RECORD of date June 5, 1894:

The great thing to be desired is a stable currency; that is, a dollar whose purchasing power remains the same throughout long periods of time. The nations of the world will rise up and call him blessed who can devise an honest dollar—a dollar unchangeable in its purchasing power. To secure the desired stability in the value of the monetary unit the volume of money must increase or decrease, and in the same proportion. Lavaleye says: "It is desirable that the value of money should remain as stable as possible, and this will be the case so long as its quantity increases in the same proportion as the number of exchanges for which cash is required."

EXPANSION AND CONTRACTION.

Many men have given thought to the solution of the problem of stability of the currency, but as yet we have not had any workable proposition.

To the operations of the law of supply and demand we can and must submit, and as a general proposition they bring compensations which tend to even matters up, but the operation of man-made laws has hampered us, and it should be our duty to improve on them when we can. Irving Fisher in his excellent work "The Purchasing Power of Money," says:

For a hundred years the world has been suffering from periodic changes in the level of prices, producing alternate crises and depression of trade. Only by knowledge, both of the principle and the facts involved, can such fluctuations in the future be prevented or mitigated, and only by such knowledge can the losses which they entail be avoided or reduced. It is not too much to say that the evils of a variable monetary standard are among the most serious economic evils with which civilization has to deal, and the practical problem of finding a solution of the difficulty is of international extent and importance.

It is too much to hope that we can prevent all such fluctuations, but we can mitigate them, and I believe that we will do so by making this bill into law. By linking together our various banking institutions, by giving to them the power to make better use of their assets, by adopting the provisions relative to bank acceptances and branch foreign banks, and thus providing for and encouraging trade expansion we provide a freer channel for the movement of money, and by thus keeping it in steady and healthy use we aid in eliminating the constant changes from "cheap money" to "dear money," and vice versa, and thus aid in securing a greater stability and a closer approach to price levels.

INDICTING THE PRESENT SYSTEM.

Tying up our circulation with our national debt is unquestionably an economic error. That is clearly demonstrated by Irving Fisher in but a few words, and I can not better follow this argument than by quoting him here. He says:

The next feature of our currency to be considered is the bank note. Although the national bank acts wiped out the old, ill-assorted State bank notes it tied the new notes up with the war debt, and they have so remained tied ever since, in spite of the fact that the advantages of

the connection have long been terminated and the disadvantages have grown acute. National bank notes can not legally be issued in excess of the Government debt, however urgent the need for them, nor can the Government pay its debt without thereby compelling national banks to cancel their notes.

One of the curious anomalies of the situation is that the prices of United States bonds are so high and, therefore, the rate of interest returned on these bonds so low that there is actually less inducement to issue bank notes in regions where the rates of interest are high, as in the West, than in regions where the rate is low, as in the East.

Thus, when you logically follow this statement to its legitimate conclusion, you are bound to be convinced that our present system has a tendency to retard circulation when most needed instead of stimulating it. It substitutes rigidity for elasticity, solidity for fluidity, and scatters our resources at a time when prudence and public service demands that they should be mobile.

It is to be hoped that in time we may be able to get away from this antiquated system and secure a circulation which will automatically expand with the growth of our Nation. Only by doing this can we keep the per capita circulation at anything like a level, and as long as we fail to do this we are bound to constantly appreciate the value of the dollar. It is well known that labor is about the last thing to get any advantage in the fluctuations of the purchasing price of the dollar, and as long as we aim to secure the greatest good for the greatest number we should have their interests at heart. I regret that in providing for the retirement of the national bank notes we did not at the same time provide for a certain and automatic increase in circulation to keep pace with increase in population, but as there are so many good features in this bill and so few to criticize we can look to the future to have this remedied.

SAUCE FOR DEBTOR SHOULD BE SAUCE FOR CREDITOR.

Any time that a demand is made for an increase in circulation we are met with the plea that it is unjust to the creditor. It is, in so far as increase in circulation decreases the purchasing power of the dollar. There is a palpable injustice if money is borrowed at a time when lack of money makes its purchasing power great and the debt is canceled at a time when an unusual increase of circulation very largely diminishes the purchasing power of the dollar.

But there is another side to that question. It was John Stuart Mill who said:

There is no way in which a general and permanent rise in prices can benefit anyone except at the expense of some one else.

And when the creditor class takes advantage of conditions to secure cheap money and loans it on the chance of getting it paid back in dear money it enters on a gambling operation which should not receive aid from the Government. If it takes a chance in securing its pay in dear money, then it has no right to grumble when the game goes against it and it is forced to accept cheap money.

Wileman, in his work on "Brazilian Exchange," says:

There is no logic in the pretension that attempts to bind the debtor but leaves the creditor free to take all and every advantage that the oscillations in the value of currency may confer. If a moral obligation exists on the part of the debtor to indemnify the creditor for any loss that the further depreciation of the currency may inflict, surely a similar obligation must exist on the part of the creditor when by an accidental improvement in its value, to which he has contributed little or nothing, a similar loss is inflicted on the debtor.

That is the law of common sense and common decency. If a "moral obligation" rests upon the debtor, then should "moral obligations" bind the creditor. Sauce for the debtor should be the sauce served to the creditor.

DEMAND FOR CURRENCY.

The demand for currency is a most important factor which must be taken into consideration if we are to have any scientific adjustment of the currency problem. Demand rests mainly upon—

Local normal demand, dependent upon the variation of population.

Local business demand, varying with the volume and needs of business.

International demand, which is determined by our trade balances.

Any scientific currency system must provide for the normal demand, or else increase in population means decrease in per capita circulation and appreciation in prices.

Must provide for local business demands, or else money will be scarce and inordinately high when most needed—which is usually the time when crops must be moved.

And it must make allowance for the variations in international demand, or else after a period of unusual buying and decreased selling from and to the dwellers in other countries we find ourselves with property in the form of goods bought, but with a diminution in cash to the amount sent abroad and a certain increase in the purchasing power of the amount remaining.

MUST MAINTAIN CONFIDENCE.

The fact that a panic is quite often the result of an unhealthy state of mind is too well understood to need elaboration. Panics are caused not so much from a lack of resources as from an inability to secure the money tokens which render these resources available as capital, and in turn these tokens fail us when most needed because seeds of suspicion sown begin to sprout and from a small beginning they expand and grow into mammoth proportions. At such a time our entire banking system is threatened by even one weak link, for with the failure of one bank to meet its legitimate obligations on demand comes a dread which leads all depositors to hasten their steps to even the strongest institutions in their eagerness to secure what is theirs.

The English author, W. W. Carlisle, in his work, *Monetary Economics*, furnishes to us the proof of the foregoing deductions. He says:

In New York in 1860 each bank on the approach of the crisis naturally thought first of strengthening its own resources and was inclined to let its neighbors take care of themselves. This, however, it was soon discovered, would necessarily mean disaster for all. Accordingly the organization of the clearing house was brought into play to meet the situation. The banks agreed that for the purpose of enabling them to expand their loans the specie held by them should be treated as a common fund and, if necessary, should be equalized among the banks by assessments laid upon the stronger for the benefit of the weaker, and that for the purpose of settling balances between the banks a committee should be appointed, with power to issue certificates of deposit to any bank placing with them adequate security in the shape of stocks, bonds, or bills receivable, and that these certificates should be received in payment by creditor banks. The effect of this arrangement was that any bank which experienced an unusual demand for specie would be supported by the whole of the common stocks, and that the debt to the others which it thus incurred could be met by a pledge of its securities.

Here is an object lesson of the need and of the utility of making capital—assets, if you will—fluid when the demand is pressing. Unity of action between the banks of one city prevented calamity to any, and probably to all. Hence the obvious need of securing this unity not locally, but nationally; and if it is to be utilized for the benefit of debtor as well as creditor, and utilized without discrimination as to individuals, sections, or communities, it is essential that the central control should rest in the Government, which is the guardian and administrator for all the people. The power for good can be with equal ease transformed into a power for evil, and if we are all to derive equal benefits and be saved from possible dangers it is necessary that in the hands of the Government and not in the hands of individuals should this tremendous power be lodged.

THE HOUSE OF CARDS.

Quite often in the past few weeks I have read and have heard reference made to the beauty of the English financial system, while the Bank of England is ever held up as the model for the world. This is not surprising, for not alone has the Bank of England been a tower of strength in time of financial storm, but every monometallist in the world has used it as an object lesson when expatiating on the merits of the gold standard. But is it that this bank is strong in reality or has it been favored by fortunate circumstances? Let us see.

Carlisle, an Englishman, an advocate of the gold standard and an advocate and admirer of the Bank of England, points out that this bank, by treating all obligations as payable in gold, has made it not only possible but almost certain that no holder of good banking security who applies for gold shall be turned away empty handed.

And this condition has been brought about because England, or rather London, has been seeking to be made the clearing house of the world, and millions in profits have been made out of the banking and commission business attracted there.

But the condition of safety is possible only so long as the demand for gold upon that bank is not abnormal. Granted the birth of conditions which would precipitate a demand upon the bank for an excessive supply of gold and the house of cards would totter. The percentage of gold, while large—I speak now of reserves—could not resist a prolonged attack.

Bagehot, than whom there is no better authority, expressed the belief that "it is not possible to assign a superior limit to the demands which by means of bankers' balances may be made upon the Bank of England," and he added that at the time when the French indemnity was being paid over the German Government "could have broken the Bank of England if it had liked."

Now, then, it is not beyond the realms of possibility to assume that the time may come when England will face war with a power of comparatively equal strength. The preliminary step of the enemy would be to bring financial distress to England, and this could best be done by drawing gold from its great bank. Such a step would lead the world to follow, and that bank could not possibly stand the strain. The house of

cards would topple and fall, for it was built to weather only fair winds and was not braced to withstand foul weather. And remember that these deductions are not mine, but can be found in the writings of men who favored the single gold standard and who believe that the Bank of England is the ark of the gold-standard covenant and the stanchest financial edifice ever constructed by man.

MONEY AND CREDIT.

Admitting, as a starting point, that money is valuable only as a token by which we can facilitate the exchange of products, we are confronted with the necessity of having that token as little susceptible to change as possible. The purchasing power of the dollar is bound to vary on different products, in compliance with the law of supply and demand, and therefore in judging of its stability we must make our comparisons of purchasing price by taking groups as the unit.

In order to further facilitate business and make easier the exchange of products we have evolved bank checks and a system of credit on which the bulk of the business of the country is now established.

At the very first whisper of the approach of a financial storm credit begins to fade out of sight; the holder of the check seeks at once to convert it into a more substantial token of value—the money which can be exchanged for property; the man who has money in the bank seeks to get it out, so that it can be cared for by himself personally rather than by an agent, and as that money has been disseminated in the channels of business and is represented in the bank vaults by other tokens of property—notes, bonds, and so forth—there is not sufficient money to pay to those who are actual depositors.

There you have the elements of a panic. Once a breath of suspicion is breathed against credit, confidence begins to waver. From a surmise, or a hint, suspicion is soon evolved. There is not less money than there was on the preceding day, or in the preceding year; property may have appreciated in value, rather than depreciated, but with the loss of confidence comes an insane desire to secure that which can not be had—money—which is but the token of exchange and represents only a fraction of the wealth of the world—the bank fails and with the snapping of the weakest link comes a train of evils almost unbelievable.

How then can there be a difference of opinion in regard to any proposition which we all admit will help to add strength in time of need and is not to be used except when confidence needs a tonic? We have a crazy-quilt system of currency legislation which operates to the end that money disappears when most needed and only comes out of its hiding place when the necessity is at an end. We have a system in which elasticity plays no part and we have so manipulated it that we have lodged in the hands of a small group of men the power to precipitate a panic and profit by it. We are here to legislate—not for a class, but for the mass—and if it is in our power to bring relief and provide insurance against foolish panics, by providing the machinery necessary to meet and overcome the difficulties which will come, if the history of the past is any index of the future, and if we now fail to make use of our opportunities then shall we be held accountable by the people for our neglect.

It is not in the power of Congress to create property, but it is in our power to create confidence. It is not my belief that the time will come in the course of ordinary conditions when this \$500,000,000, or any considerable part of it, will be needed in the channels of business. But the knowledge that it is available will provide the tonic needed to keep confidence healthy, and if any financial storms should beat around us the very fact that we have this circulation ready and are prepared to use it will render it unnecessary that we should use it at all, for when you are ready to admit that neither the amount of money nor of property is decreased during time of financial stress, it must be evident that any and every means which operate to strengthen confidence make for the stability of business and the happiness of the people.

THE HOUR AND THE MAN.

If proof were needed that the proposed emergency fund of \$500,000,000 would give the confidence needed in time of danger it can be found in the following financial letter, written to the Washington Star during the time of the recent flurry in Wall Street. No one will accuse the Star with being a champion of this administration, but we can give it credit for being fair in disseminating the news and in this case the facts would seem to bear out the contention made by me in the preceding statement:

NEW YORK, June 21, 1913.

Ten days' recovery from bottom prices ranged from 3 to 7 points, most of which was held. The improvement was extremely grateful, after a declining movement that had carried quotations down \$15 to \$55 a share, and rolled up a gross record paper loss of \$3,000,000,000 to \$4,000,000,000. There was enough actual loss in this shrinkage in

quotations to constitute a calamity, for the annihilation of a sum even in excess of a single billion dollars represents the cost of a mighty war between nations.

The record of the tape shows that at the extreme inside range thus far reached there was a loss of 55 points in Canadian Pacific, 25 in Union Pacific, 30 in New Haven, 27 in Lehigh Valley, 25 in the Cans (allowing for 24 per cent payment of accrued dividends on preferred), 18½ in Steel, 19 in Amalgamated Copper, 18 in Reading, 15 in Southern Pacific, 17 in Pennsylvania, 13 in New York Central, 15 in Baltimore & Ohio, 14 in Atchafalpa, and 12 in Erie.

The sacrifices among the standard and well-tried stocks were as serious, on the average, as among the rainbow and good-will promotions. In the class last described the shrinkage did not seem real. In many cases distribution of the shares of the new promotions had not succeeded, and the certificates were left on the hands of the promoters and underwriters. The loss in such cases was largely "paper," and consisted of fortunes not realized—the disappearance of something that never existed.

In more cases, however, real loss accompanied the slump in prices. It assumed the proportions of a disaster. The total ravage was probably as great as that in 1907, but the conduct of the massacre was more orderly. The death list was horrifyingly long, and the hospitals the country through are filled with a myriad of men financially mutilated.

The change in the tone of the market dates from the unexpected and placid announcement by Secretary of the Treasury McAdoo that he was custodian of a Treasury reserve fund of \$500,000,000, created for the salvation of the financial situation in case of panics or for protection against panics. He called attention to the fact that he had authority to issue the entire amount if the occasion should arise, or any part of it, borrowers being only required to put up good collateral and pay 7 per cent for the accommodation. The country at large and half the bankers had forgotten all about this Aldrich provision against financial convulsion.

The bankers were keeping quiet about this enormous salvation fund. They had plenty of money on hand, but were giving open and somber currency to dark talk about "tight money" and the need of excessive caution in making loans. Frightened borrowers were only too willing to pay liberal "commissions" for back-door accommodations, and for weeks there were fat pickings for a none too scrupulous corps of brokers of influence in Shylock manipulation. The practice had grown to the proportions of a greedy scandal and threatened the safety of the financial situation. The scare, which had been developing for weeks and going from bad to worse, to the expressed consternation of the leaders, was becoming genuinely very, very serious, and the Street looked in vain for succor in quarters where it should have been offered.

And then, lo! upon the stage sauntered the quiet and homely figure of Mr. McAdoo, Secretary of the Treasury. The great bankers and their allies had not given Mr. McAdoo a thought. Who was McAdoo, anyway, and what did he know about national finances? Least of all, what did he know about hidden and forgotten Treasury resources and the uses for which they were created? It developed, however, that in the construction of a \$75,000,000 tunnel under the Hudson River and sections of New Jersey and Manhattan he had acquired several of the rudiments of the art of subterranean financing. He had been obliged to pay dearly for his education, and the great truths he had absorbed were not forgotten. He did not have to dig far to uncover that \$500,000,000 and recall its existence and purpose to the recollection of the multitude.

The resurrection of that half-billion-dollar asset was as effective a piece of stage business as Wall Street had witnessed in years. The entire absence of fireworks blinded the audience for a time to the significance and importance of the play, but when the bankers began to squirm and scream about the blunders of the tunnel-digging financier, transplanted from the New Jersey swamps to the management of Uncle Sam's Treasury, the meaning and magnitude of the move struck in. Wall Street (the big bankers excepted) broke into a hoarse roar of amusement and satisfaction.

Interest rates have been sliding down steadily for fully a week. Money is being placed generously within easy reach of borrowers. They are told that the financial stringency has relaxed and that unlimited capital at 1½ to 2½ per cent could be had on call and 4 to 4½ per cent on time. It filled the bankers with rare joy (?) to feel that conditions had suddenly improved and that it was once more in their power to accommodate legitimate demands.

The panic mills ceased grinding, the tumult of approaching disaster changed to inspiring music, sunshine superseded darkness, market temperament was transformed from gloom to cheerfulness, and Wall Street once more smiled broadly. Prices boomed in every quarter, but nothing boomed in comparison with "McAdoo preferred."

Here was a case where Mr. McAdoo's announcement in no way altered or amended existing facts. His statement did not add one dollar to the wealth available for use by the Nation or by Wall Street, but the mere announcement that the fund was ready and would be let loose when wanted served to check declining values, lowered interest rates, and built up confidence.

How much greater, then, would be our insurance against money panic if we, by the passage of this legislation, serve notice on the people of the country that we have at all times a reservoir ready and the machinery installed and capable of turning the fluid currency into the channels of business at the time when most needed?

THREATS OF NATIONAL BANKS.

I have seen it frequently stated in the columns of the public press that if this measure becomes a law many of the national banks will give up their charters, preferring to operate under State laws.

I can not believe this to be a fact—can not believe that banks will forego the opportunity to avail themselves of the many excellent features of this law—the advantages of discounting and rediscounting, dealing in bank acceptances, and the manifest benefits arising from cooperation, with national protection and assistance. The bankers have admitted that this bill is

in many respects a vast improvement over the system which we seek to remedy. They have come to us with advice and with suggestions. Some of the latter we have accepted and some rejected, but we have at all times endeavored to act with the idea that we are here to safeguard the interests of all of the people—debtors as well as creditors; borrowers as well as lenders. We offer this measure in the belief that it deals fairly with all, and we have the right to demand fair play in return. The national bankers have secured far more through their connection with the Government than the Government or the people have secured from them. Bankers have been and are of the class favored, for as Murray Covington truly says:

The banking business, when limited in its own proper sphere and conducted with fair and reasonable, not brilliant, ability, is the most certain of all businesses to yield a profit; and, taken as a whole the country over, it involves the least risk and yields the greatest profit of all.

We propose to deal fairly with banks and bankers, for we realize that when working in harmony with the business interests of the sections they serve they are of great value. But we are not to be moved by threats.

If some of the national banks prefer to give up their charters and operate under a State charter, well and good. The States can be depended upon to deal with them, and practices illegal in any of the States will not be considered legal because they may be so in the State in which their charters were issued; that is, when their business at any time becomes interstate in character.

THE WEAKNESSES OF RESERVES UNDER PRESENT SYSTEM.

To quote J. Laurence Laughlin:

The fall of reserves is always a signal of danger under the present system. Indeed, when reserves fall to the legal limit we have no reserves in the proper sense of the term. The surplus reserve is the only one which can really be made use of. Consequently, our rigid legal percentage of reserves causes a sudden stoppage of loans and often failure and ruin to needy borrowers. Hence, at present all attention is centered on the quantity of a bank's cash reserves. If trouble threatens, each separate bank clutches at reserve money in selfish isolation. Herein is our great danger. At such a time the large banking institutions have exceptional power to aid or refuse help to smaller institutions. Under present conditions when small banks must go for assistance to the large banks we have a system of practical decentralization, based on special favors to desirable correspondents.

That is a strong indictment of the present system and a true one. In time of stress the life of a bank and the security of its depositors is not based on the strength of its assets, but upon the ability of the bank to secure favors from the larger institutions. Such a system is damnable, because the granting of favors means the seeking of favors in return in the future. What we want is a banking system in which the units are in reality independent, and we will have it when this bill becomes a law, because then the individual banks can demand from the Federal reserve association as a right that which they must now beg as a privilege.

FAILS US IN TIME OF NEED.

Too much stress can not be laid upon the fact that our present banking system fails us at the time when most needed. Between March 6, 1893, and October 3, 1893, the loans and discounts of the country banks fell from \$1,267,000,000 to \$970,000,000, and in the same time individual deposits fell from \$970,000,000 to \$764,000,000, while in the same period these banks increased their reserves to 30 per cent. In other words, at the time when the customers were in the greatest need of help the banks had to refuse it because they had to build up reserves so as to guard against disaster. If it was a period of prosperity they would not have hesitated to deplete these reserves for no danger would possibly result.

In the panic of 1907 the loans of country banks fell from \$2,272,000,000 in March, 1907, to \$2,198,000,000 on February 14, 1908. Deposits fell from \$2,502,000,000 to \$2,411,000,000, and the reserves were increased 2 per cent.

Is any greater proof needed of the lack of elasticity in the present system, which tends to take money out of circulation at the time when it is essential? If this bill did not do anything else other than provide a means by which the banks could protect themselves by making liquid their assets in time of financial danger, I would favor it, for I believe that in doing this it grants an inestimable boon to every honest banker and to every business man.

THEIR SELFISHNESS OUR CURSE.

An eminent authority on banking has well said:

The fact that there is no fixed relationship between the banks makes it possible for selfish institutions, so to speak, to help themselves to the country's stock of cash. They play the part of dogs in the manger, accumulating cash in their vaults often to guard against a fancied threat rather than any real harm. Although they are precisely the institutions which ought to be helpful and inclined to place their funds at the disposal of the community, those banks which are in most liquid condition are able to practice this kind of selfishness to the greater extent. Very often this process is carried to an extreme. During the

panic of 1907 there was a mad rush for actual money, and many local banks grasped all that they could get, piling the coin and currency in their vaults and advertising the fact to the public. In some cases this unnecessary reserve was raised as high as 50 or even 75 per cent of outstanding liabilities. The cash, if left in the hands of other banks, would have enabled many which got into difficulties to keep afloat and at the same time supply the needs of borrowers who are looking to them for aid.

If any great number of banks were to pursue the policy of increasing reserves, it is manifest that ruin would result. The comparison of actual money in circulation, with the amount of debts owed, convinces that ruin would follow in the wake of any general demand for liquidation, and the situation is all the more dangerous when banks attempt to build up reserves. The proposed law would make such a condition practically impossible, because it provides a reservoir from which we can draw in time of drought, and it provides also the one and only market to which we could go at all times with the assurance that we could secure cash for assets which now are useless to us in time of panic.

PALPABLE LOSS FROM LACK OF ELASTICITY.

If there is one thing in which the Canadian banking system is superior to our own, it is in the aid and protection given to all customers, even in the most remote sections. By a system of branch banks, cooperation, and the power to rediscount the Canadian system affords the means by which the customer of the bank in the small hamlet in the far Northwest can secure terms equally as good as those given to the prosperous merchant in Toronto or Montreal. The variation in interest rates rarely exceeds 2 per cent. This is vouched for by B. E. Walker, in his article on "Banking in Canada," published in the Journal of the Canadian Banking Association.

Compare that condition with our own, where the variation, even in normal times, runs, according to Prof. Laughlin:

New York, 2½ to 3 per cent.
Chicago, 3½ to 4 per cent.
Atlanta, 5 to 6 per cent.
Macon, 6 to 7 per cent.
Greensboro, 8 to 10 per cent.
Small towns, 12 to 15 per cent.
And—

Declares the same authority—

under a system by which mobilization of reserves was made possible, the rates to banks in the smaller towns, on the same basis of security, would be as low as to the large banks in New York or Chicago.

Certainly such a consummation is to be wished for, and it is largely provided for in the bill now under consideration. Cooperation is secured through the agency of the Government, and when banks everywhere are on the same footing and can secure equal rights and privileges from the Federal reserve banks, the interest rate the country over would automatically adjust itself, for extortion would be certain to invite keen competition and a resultant lowering of rates.

NO ELASTICITY UNDER PRESENT SYSTEM.

As A. D. Noyes clearly puts it in his History of the National Bank Currency:

The sum of the whole matter is that under the existing system of bank notes based upon Government bonds normal and authentic expansion and contraction of the currency in response to the needs of trade is flatly impossible. The currency supply may be greatly enlarged in the dull midsummer months and suddenly contracted when the active autumn season begins. It may increase rapidly at a time when trade reaction has reduced to a minimum the necessities for even the existing bank-note supply, and it may as rapidly be reduced when large harvests, full employment of labor, and active hand-to-hand use of currency most need a larger circulating medium. That there is no remedy for this abnormal situation except the substitution of some other system for that which prescribes the United States Government bond as a basis for bank-note issues every economist at all familiar with the question agrees.

In other words, the prop on which we must at times depend is certain to break when we most need it. While I regret to say that we have not reached the time when we can get away from the bond as the basis of circulation, we are nevertheless making a very important improvement over the old method. In place of a system which is pilloried and derided by even its beneficiaries we propose to substitute one which will be more responsive to the needs of the people and to which we can look for protection in time of danger. Granting all that the critics of the proposed measure claim—and much of this criticism is based either on selfishness or blind partisanship, the fact remains that the legislation now before us marks a progressive step toward currency reform and cures many defects. The people realize this, and they will have but scant patience with those who would delay the day of industrial and commercial freedom merely because every clause and every word is not in accord with the ideas of the critics.

BANK CONTROL OR GOVERNMENT CONTROL.

The Democratic Party has long held to the belief that the "issue of money is a function of government." With that as a basis to govern our conduct in legislation, there can be no room

for disagreement as to whether we shall have bank or Government control in charge of the machinery necessary to carry out the provisions of this bill.

We provide that the notes of the banks shall be gradually retired from circulation and their place filled by Government currency.

We further provide a fund of \$500,000,000 which can be drawn upon as the needs of the country demand.

All other provisions grow out of or are intimately related to these two.

The association which we propose to form is to be the custodian of all Government funds and is also empowered to safeguard the industrial and commercial interests of the Nation, knowing no north or south, east, or west, New York or Squash-town Center, but placing all upon an equality where they will be certain to obtain equal rights.

Consequently, while there are innumerable reasons why this trust should be administered by representatives of the people and for the people, not one can be advanced as to why it should be administered by the banks, with every prospect of it also being administered for the banks, with the interests of the whole people treated as being of secondary importance.

You might as well contend that the railroads should name the members of the Interstate Commerce Commission; that the trusts should name the members of a special court before which all trust cases must be tried; that tariff bills must be framed only by representatives of interests protected—and we have had some legislation along that line to our sorrow; that National and State bank examiners should be selected by the banks; and that the prisoners in our various penal institutions should have the right to select their own wardens.

I could continue this list indefinitely, but it is useless. Under this bill we grant to the banks many favors and we take away from them no right. In their legitimate sphere we give to them ample protection—they can receive deposits, loan and discount, and in doing so we provide the means to insure their safety when help is needed. But we do this to some extent with the money of all of the people, and it is absolutely necessary that representatives of all of the people should be on guard to conserve the trust.

I have no fears of a Government-appointed board ever showing sectional favor or partisan bias. Responsibility always tends to clarify judgment and makes men appreciate what they owe. That unfit men may at times find place upon these various boards is to be expected, but public opinion is to be relied upon to secure a speedy change, and no Federal reserve board could impose on any class or any section or show partisan bias or favor without arousing the people of this country to the extent that the board and the party responsible would quickly fall.

The responsibility owed and the knowledge that every act is scanned by the people of these United States must cause each President to be particularly careful as to the men he names to run the machinery which we provide in this bill, and I had far rather trust any President to do what is right, under such conditions, than I would any group of eminent bankers who measure men by dollars, success by affluence, and opportunity by percentage of interest.

COUNTRY BANKERS.

In this connection I want to state frankly that in my objection to bankers I have no intention to reflect upon the men who are engaged in the banking business in the rural sections. They serve a useful purpose; they are a part of us and "bred in the bone," as it were. To them success means that the community in which they operate must be successful, and with them we have a community of interest—we all must prosper or fail together.

To each of the bankers in my district I have sent a copy of this bill; from each I have asked for an expression of opinion, and have had but two who objected to the bill, and their objection was confined to governmental control.

Who are these country bankers? They are mainly men who have profited in farming or in the mercantile business. They realize the needs of both the farming and the mercantile interests, and as a general thing they are ready to sacrifice personal and immediate profit with a view to community and greater profit in the end.

How different, then, is their position from that of the speculative bankers of New York and Chicago. These men profit by ruin. The greater the demand for money to move crops in the rural sections brings with it a greater demand for money for speculative purposes, and it is not to be wondered at that this cripples production, for man is in the main selfish and he will take the greater profit offered by speculation when production has to be denied relief when speculation can secure it readily.

Give the country bankers a free hand; divorce them from Wall Street—and that is what this bill does—and there can be no question as to their readiness, eagerness, and ability to serve the agricultural districts, for we have had ample proof of this in the past.

BANK ACCEPTANCES.

Two features of the bill under discussion which will be of inestimable value to American commerce directly and to American prosperity indirectly must not be overlooked, and by these I refer to the provision authorizing the acceptance of time bills and the one which paves the way for the establishment of branch banks abroad.

Under the law now in existence national banks are not permitted to accept time bills, according to the decision of the courts. This has materially hampered us in our foreign trade and has built up European cities at our expense. Much could be said on this subject, both as to the losses resulting and the court decisions which have prevented our expansion; but in order to give impartial testimony as to the operation of the present method I will insert a very fair statement from the able work of Lawrence M. Jacobs on Bank Acceptances, which reads as follows:

The weakness of our banking system as compared with the systems of Europe may very certainly be attributed in part to the omission of the bank act to permit bank acceptances. It is a weakness, furthermore, which involves the country in serious economic loss. Without a national discount market the great majority of our merchants and manufacturers are compelled to confine their borrowings to American capital, either through the discounting of their paper with their local banks or through its sale to note brokers. All but the strongest and largest are practically excluded from the benefits of foreign competition for their paper. Aside from the great concerns with international ramifications, which are able to arrange their own credits abroad, our merchants and manufacturers are not benefited by low foreign discount rates, except in so far as note brokers, who make it a practice to borrow in Europe with commercial paper as collateral, are better able to finance their purchases. What is more, they receive relatively little advantage from an accumulation of funds in New York banks. Low call-loan rates have an indirect rather than a direct effect on the rate which the mercantile community has to pay for money. Low call rates, in other words, are an indication more especially of stagnation in the stock market than of a lack of demand for accommodation from merchants and manufacturers. Such rates do not act as a stimulus to trade in general any more than high call rates act as an immediate check to overexpansion.

It is not only in our domestic trade that the country suffers through the want of a discount market. Without bank acceptances we are at a distinct disadvantage in connection with our foreign trade. Our importers, unable to open credits with their banks, as is done abroad, are not in a position to finance their purchases upon as favorable a basis as the importers in other countries, as English cotton spinners, for example. The English spinner about to purchase cotton in America arranges for his bank to accept 60 or 90 days' sight bills drawn on it by the American shipper. The latter draws his bills on the English bank and attaches the documents covering the shipment, such as the bills of lading, insurance certificates, invoices, etc. He then sells them to a New York bank, thereby receiving immediate payment for his cotton. The New York bank forwards the bills to its London correspondent, which presents them for acceptance to the bank upon which they are drawn. Upon the acceptance of the bills the documents are delivered to the accepting bank, which then turns them over to the spinner upon whatever arrangement has previously been made. The accepted bills are discounted by the New York bank in London and the proceeds placed to its credit there. The New York bank can afford to pay a high rate for such bills, as they are drawn on prime bankers, rendering certain their ultimate payment. The purchase of the bills does not, moreover, necessitate any outlay of money, as against the credit to be received through the discount of the bills the New York bank can immediately sell its checks on London.

Without such banking facilities—that is, the ability to arrange with his bank to accept time bills drawn on it by a foreign shipper—the American importer is compelled to finance his purchases in either one of two ways. He may pay for the goods at once by remitting funds direct to the shipper. This, however, ordinarily necessitates the negotiation by the importer of a loan on his promissory note. If he is not in a position to secure such an advance, he must shift the burden of providing funds to finance the shipment from the time it is forwarded until it is to be paid for upon the foreign shipper, who is then in a position to exact terms more favorable to himself through an adjustment of prices. The practice in connection with this method of making payment for foreign purchases is for the shipper to draw his draft on the American importer and turn it over to his banker to forward for collection. Such drafts, drawn as they are on individual importers and not on banks whose standing is well known abroad, must be sent for collection, since there is no general market for them. Practically the only way in which a foreign shipper can realize immediately on bills of this character is to dispose of them to his own banker or get him to make an advance on them.

Either of these two methods of financing our imports is expensive, even when the time between the shipment and the receipt of the goods is short. When the time is much longer, as in the case of imports from South America and the Far East, the cost is almost prohibitive—that is, so great that we can not compete on an even basis with foreign buyers. In fact, we might be practically excluded from these markets if a makeshift were not possible. Our importer gets around our lack of banking facilities by having his bank arrange a credit with its London correspondent. He receives an undertaking, called a commercial letter of credit, giving the terms of the credit; that is, the name of the London bank upon which the bills are to be drawn, the amount which may be drawn, the character of the goods which are to be purchased, the tenor of the bills, and the documents which must accompany them. On the strength of such a letter of credit the shipper in South America, for example, is able to dispose of his bills on London and thus receive immediate payment for his goods. The local bank which buys the bills sends them with the documents to its London correspondent, which presents the bills to the bank on which they are

drawn; that is, the bank with which the credit was opened. Upon the acceptance of the bills the documents are delivered. They are then sent by the London accepting bank to the New York bank which opened the credit and the latter delivers them to the importer against his trust receipt. Twelve days prior to the maturity of the bills in London the New York bank presents a statement to the importer indicating the amount of pounds sterling which must be remitted to London to provide for their payment at maturity or rather a bill stated in dollars for the amount of pounds sterling drawn under the credit. In this purchase of exchange the importer makes payment for his goods. This method, while workable, is obviously cumbersome, yet it is practically the only one which the American importer can follow in connection with such imports. It is expensive for the importer, for not only must he pay his bank a commission for arranging the credit, but there is included in this commission a charge made by the London bank for its acceptance. Further than that, the importer must take a material risk in exchange. At the time a credit is opened the cost of remitting, say, £10,000, to take up the bills in London, might be only \$48,600, or at the rate of \$4.86, whereas by the time the bills actually mature exchange may have risen and cost him \$4.87, or \$48,700.

As a result of the inability of our banks to finance imports through the acceptance of time bills, American importers are then made dependent to a large extent upon London, and are required to pay London a considerable annual tribute in the way of acceptance commissions. This practice not only adds to the importance of London and militates against the development of New York as a financial center, but it at the same time works serious injury to our export trade. Since time bills can not be drawn on our banks from foreign points against shipments of goods to the United States, there are consequently in such foreign countries very few bills which can be purchased for remittance to the United States in payment for goods which have been bought here. In other words, under our present banking system our imports do not create a supply of exchange on New York, for example, which can be sold in foreign countries to those who have payments to make in New York. This means that our exporters are also, to their great disadvantage, made dependent upon London. It means that when they are shipping goods to South America and to the Orient they can not, when they are subject to competition, advantageously bill them in United States dollars. They naturally do not care to value their goods in local currency—that is, in the money of the country to which the goods are going—so their only alternative is to value them in francs or marks or sterling, preferably the latter, owing to the distribution and extent of British trade, creating throughout the world, as it does under the English banking system, a fairly constant supply of and demand for exchange on London. When we come to bill our goods in sterling, however, it is at once seen that our exporters are obliged to take a risk of exchange, which is a serious handicap when competing with British exporters. Our exporters, who are to receive payment for their goods in sterling, must previously decide on what rate of exchange will make the transaction profitable. If in an effort to safeguard themselves against a loss in exchange they calculate on too low a rate for the ultimate conversion of their sterling into dollars, their prices become unfavorable compared to those made by British exporters and they lose the business. If they do not calculate on a sufficiently low rate, they get the business, but lose money on the transaction through a loss in exchange.

The prohibition of bank acceptances not only acts as a hamper upon our domestic and foreign trade, but is detrimental to our banks as well. It is the small country bank which is chiefly affected. The business of the country bank, so far as the employment of its funds is concerned, may be divided into two classes—that which relates to advances to local customers and that connected with the investment of its surplus.

It is in respect to the latter that the matter of acceptances is important. Under the present limitations of the national-bank act there are three principal ways in which a country bank may render its surplus funds productive. It may deposit them with its reserve agent. This means a low interest return; too low, in fact, to permit of more than a relatively small amount being thus employed. It may invest in bonds. In this way an increased interest return can be secured, providing a wise selection of securities is made, but it partakes of the nature of speculation. The third way is to buy commercial paper. Such purchases give an ample interest return, and there is no savor of speculation. Even this method of employing a bank's funds, however, is far from satisfactory. It means the investment in a security for the strength of which the bank must depend on the word of note brokers, the rating of the mercantile agencies, or the opinion of some correspondent bank. It means, furthermore, the tying up of the bank's funds for a fixed period. If national banks were permitted to accept time bills, the country bank could then invest its funds in paper bearing the guaranty of some great bank with whose standing it is perfectly familiar. Risk such as now has to be taken would be eliminated. What is vital, however, is that with a national discount market an investment in a bank-accepted bill is one which could be realized upon immediately.

Since the reserves of interior banks are so largely concentrated with them and it is essential that they keep their assets in an especially liquid condition, the prohibition of bank acceptances works injury to the banks at the country's financial center, New York, in a different way. It deprives them of what London banks, for example, have—that is, a mass of the soundest securities against which to loan their money on call or in which they may invest their funds for very brief periods—bills of exchange, covering genuine commercial transactions, bearing the acceptance of prime bankers. Unquestionably such securities as a basis for loans are preferable to stocks and bonds, but without them New York banks must have recourse to day-to-day loans on the stock exchange. Moreover, when the demand for such loans is limited, New York banks are forced into the keenest kind of competition, a competition which, as has been pointed out, is not only of little benefit to trade, but which, through the lowering of the money rate, actually stimulates speculation. Furthermore, without a steady money rate such as exists in countries possessing discount markets, New York banks are left with no reasonable or satisfactory basis upon which to fix a rate of interest to pay for the deposits of country banks. In London interest on bank deposits is fixed at a certain percentage below the Bank of England discount rate—usually 1½ per cent—that is, a rate which fluctuates with the value of money and normally leaves a certain margin of profit to the London bank. The same practice is followed in all the great financial centers of Europe. With us, country banks receive a fixed rate of interest for their deposits—usually 2 per cent—the year around, regardless of fluctuations in the value of money. The unscientific nature of such a rate is obvious. When the call-loan rate is high, country banks do not receive interest in proportion to the value of their deposits. When it is low the New York banks pay more interest than the deposits are worth. In the latter instance the New

York bankers are forced into injurious competition with one another. They are in much the same position as competing railroads were earlier in our history, with results similarly baneful. With the railroads it was worth while to secure traffic even at a losing rate, as no matter what the return it helped, if only a little, toward meeting fixed charges. Oftentimes with the New York banks to-day any rate which they can secure for their money, whether losing or not, is acceptable as helping to meet this fixed interest charge on bank deposits. To pay 2 per cent for deposits and to keep a 25 per cent reserve a bank must loan its money at 23 per cent to come out even, taking into consideration the actual expense of making and recording the transaction. It is better to loan at 13 per cent, however, than to let the money lie idle. It is better to lose 1 per cent than to lose the entire 23 per cent, as would be done in case no loans at all were made, clerk hire being just as much a fixed charge as interest. With the amendment of the national-bank act to permit the acceptance of time bills, such ruinous competition would cease. The funds of the banks would come to be principally invested in trade paper, and stock-exchange loans would be relegated to a position of secondary importance, as in London and on the Continent. The field for the investment of their deposits would be greatly broadened, to the benefit both of the banks and trade in general.

To remedy this primary defect in our banking system; to trade along the lines which have proved so advantageous in other countries; to provide negotiable paper of a character suitable to the investment of foreign funds, paper which can not only be discounted but rediscounted; to give trade the advantage of bank surpluses accumulated both in the country at large and in New York; to lessen the evils of speculation; to afford a reasonable basis for the calculation of interest rates on bank deposits in central reserve cities; to bring New York into the circle of those financial centers between which funds move naturally as discount rates rise or decline; to secure the advantage of the competition of foreign capital for our trade paper—can be put in the way of accomplishment by the insertion of a paragraph or two in the national-bank act.

To permit bank acceptances would not require the revision of the entire bank act. To remove the barrier to scientific banking, as it is known abroad, no complicated piece of legislation would be necessary. Time only would be required for the development of a great national discount market.

The remedy was within our reach for many years, but the national-bank act was looked upon as a thing sacred—it was not to be altered or amended—and for that reason our banking business as well as our commercial interests and our export trade have all been hobbling along in shackles. It remained for this Congress to attempt to frame a workable and an intelligent system, and to the men responsible for the framing of the legislation now before us all credit is due.

Apply the arraignment made by Mr. Jacobs to existing conditions, then study the proposed measure and note the relief afforded. The one provision of this bill which authorizes bank acceptances is alone worth more in the way of material gain than we possibly could lose if all the forebodings of the critics of this measure were to come true.

BRANCH BANKS ABROAD.

And no less important, and intimately related to the preceding, is the message of cheer contained in the provision which gives to us the opportunity to secure a system of branch banks abroad.

There was a time when many of our people were content to look with equanimity to an America bounded by a Chinese wall, behind which we could monopolize our own trade and shut the world out. But sound political economy teaches that you can not shut out without penning in, and while this policy might operate to our advantage as long as all we had to sell was the product of farm or mine and the world had to buy from us or else starve or suffer industrial collapse, nevertheless such a restriction would be intolerable when the time came that the products of our toilers in factory and in shop were vastly in excess of the amount we could absorb behind our wall.

That time came, and we have broken down the wall in order to secure commercial freedom and a fair field on which American intelligence and skill can have the opportunity to compete with the world. During the fiscal year ended on June 30 last we exported manufactured articles, other than manufactured foodstuffs, to the amount of \$1,187,000,460. In 20 years our iron and steel manufacturers have increased their exports from \$30,106,482 to \$304,605,797 per year; cotton manufactures from \$11,809,355 to \$53,743,977; copper manufactures from \$4,525,573 to \$140,164,913. Despite the disadvantages of legislation calculated to dwarf, we have expanded and made breaches in the wall.

But now, with legislation in sight which will remove much of our handicap, there is every probability that our foreign exports will expand to an extent unprecedented and the plaint of coming industrial disaster will be changed to paeans of praise at the opportunity offered by the opening up of new markets which will absorb all that factory and farm can offer.

With no change in the existing law our trade will enter into this new field with hobbles on. We may progress, and probably will, but the lack of banking facilities will continue to operate against us and the foreigner, who is competing with us in the markets of the world, is not to be expected to show us

favor when he has his own kith and kin to protect against our competition.

With foreign branches of our banks we are placed on terms of equality with the nations of the world and that is all we ask. American industry, intelligence, and skill have demonstrated our capacity to hold our own and win out, even when crippled by adverse legislation. How much of hope is there, then, in sight when we are made industrially free? And who can justify his acts to himself or to his country who would vote against a recommendation which is so palpably fair and wise?

AGRICULTURAL CREDITS.

Objection has been made that in revising our currency system we have not made allowance for a system of agricultural credits.

I do not believe that such an objection is well founded. No one more firmly believes in the necessity of securing a lower interest rate for the men who till the soil than I do. I have seen the handicap under which they have labored, as compared with their European competitors. I have seen them made the prey of Shylocks and have seen where, after years of honest toil and struggling months and years, where their day's work was measured on no union scale but stretched from daylight to darkness, they have fallen under the weight of debt and after earning a period of rest they have found themselves penniless in their declining years.

All this have I witnessed and for that reason I am ready to work and vote for any measure which would bring to them relief. But this bill is not the place for such remedial legislation. You can not link short-time loans with long-time loans—fluid assets with rigid assets. In this bill we deal with banks and with the currency system, and before this Congress goes out of power I feel confident that we will have a system of agricultural credits, standing on its own merits and meeting every need of those who require, not charity but the opportunity to make better use of their property, increase the productivity of the land, and be placed on the same footing as their more fortunate neighbors, who, because they are in trade and have a stock of goods convertible into cash, can get financial aid denied to the men who own the assets on which the major portion of our wealth is founded.

THE BANKERS AND THIS BILL.

It is to be regretted that a certain element among the national bankers have taken a position antagonistic to this bill, not so much because they deny the necessity for reform as from the fact that they would have their own particular brand of reform or none at all.

With these worthy gentleman I have no quarrel. Human nature is so constituted that selfishness is a common vice, so common that in the opinion of many it is a negative rather than a positive one and should be classed as the "original sin," which is an unavoidable inheritance. But these gentlemen should realize that it is for the ninety and odd millions of people of the United States that Congress is acting. No one here has in mind the idea of imposing a hardship on a man merely because he is a banker, neither does the fact that he is a banker give to him the right to demand special favors. The issue and control of money is too intimately connected with the welfare of every inhabitant of the United States to leave it in private hands, and while the banker is a most important cog in the economic life of the Nation, yet his powers are so great and his opportunities for good or evil so many that it is absolutely necessary that he should be the servant of the Government in dealing with the people instead of a separate and independent entity.

While the bankers would have preferred the Aldrich bill to the measure which we now offer to them, nevertheless it does not follow that the Aldrich bill is better in any way—except to the bankers. The people of this country are not ready to submit to a slavery such as is contemplated by the Aldrich bill, and I hope they never will be. It is true that the Aldrich bill would give to us many improvements over the present system, but at the same time it would make for a centralization of control which would ultimately leave the people of this country completely at the mercy of a small group of individuals, just as it would tend more and more to draw money to a few financial centers and at the expense of the rural sections. We want the reforms which would result; but the price is prohibitive, and we are not yet ready to sell our birthright for a mess of pottage.

That the sentiment of the people of this country is in favor of this bill is clearly expressed in a letter written by Holland on August 24, and I know no man better fitted to analyze the financial situation in the country in general. Speaking of the

Chicago convention of bankers and the address of President Reynolds, Holland says:

Apparently President Reynolds has discovered some evidence that the bill now before Congress has been so written as to limit, if not completely destroy, the concentration of credit and resources at the large financial centers in such manner as to make them available for those who speculate or operate in the New York Stock Exchange.

If that be one purpose in this measure which actuated those who wrote the present bill, there is hardly any doubt that the majority of the people in the United States will give that purpose their cordial approval.

I do not doubt but that approval will be forthcoming and that it was the purpose of those who framed the bill to prevent concentration of the Nation's stock of money to be used for speculative purposes. The flow of cash to New York works all right in time of fair weather, but when the storms come it is the people in the rural sections and in the smaller cities who have to suffer. In times of fair weather the country banker can draw on New York, Chicago, or St. Louis for the amount which he has on deposit; but let the conditions prevailing in 1907 be repeated and he can not command that which is his own, and in turn is compelled to put the brakes on the depositor, as was done in 1907, when many a man with money in bank and needing it badly could draw but \$10 or \$25, as the case might be. The history of that period is fresh in the memories of the people, and it is no wonder that they approve a bill which will make the needs of the producers superior to the needs of the stock gamblers, who can make it profitable to the banker to loan them money at a time when it is denied to the industrial world.

While we admit that bankers—and I speak of the large bank interests, not the small banker who comes in contact with his customers—should have a thorough knowledge of their own business, and presume such to be the case, nevertheless it does not follow that we should look to them to write for us a currency measure. Their main interest is the interest of the creditor, while we have to consider both debtor and creditor. And there are times when we have doubts of the ability of bankers to write a bill which would be understood even by themselves, for while we are told that banking is a science, still we have evidence in plenty that some eminent bankers are not scientists. At the recent convention of bankers in Chicago ex-Comptroller of the Currency Charles G. Dawes, now president of the Central Trust Co. of Illinois, alarmed the bankers by stating that the measure we now have under consideration would result in such an expansion of credits that it would invite disaster. That is certainly important, if true, and deserving of serious consideration.

But, lo and behold, a few moments later James B. Forgan, president of the First National Bank of Chicago, came forward with the statement that the effect of this bill would be the "most damnable contraction of credit ever proposed in this country, such that it would be impossible for business to go on."

You can take the opinion of either or neither of these eminent authorities, for it is evident that you can not take both, and very many of us are inclined to choose neither.

THE DAWN OF ECONOMIC FREEDOM.

For years we have lived in the shadow of fear, knowing our own weakness, and yet not having the courage to break the shackles which prevented us from securing commercial, industrial, and economic freedom. Prosperity has been but a bubble which would shatter at the first breath of suspicion, and in the midst of plenty we have seen actual want. As we have been informed, it was the custom in China to strap and bind the feet of the female infant so as to retard growth of the pedal extremities, and as a natural consequence the Chinese woman goes through life halting, stumbling, and ever afraid of a fall. So have we bound the industries and the individuals in America in shackles of steel, which have permitted no expansion to meet the natural wants of the lusty infant, and we, too, have moved lame and halting and ever fearful of a danger known but not to be averted.

But, thank God, we see the dawn of freedom. With the breaking down of an archaic banking system will come greater opportunity for the individual, room for trade expansion abroad, and industrial growth at home. Prosperity will be built upon a foundation so stable that the pessimist, the panic breeder, and the speculator may fan the winds of distrust only to have them beat harmlessly against a Gibraltar of American honor and credit.

The new era will be one of freedom—industrial and commercial; it will be one of prosperity, for with the factors which make stability always present our advantages can not be weakened by speculation, and it will be one of opportunity, for each and every American citizen will have his chance to use his five or his seven talents so that they will produce and reproduce

instead of burying them in the sands through fear of loss from causes beyond control.

We can see the day longed for and hoped for by you and I and all of our countrymen, and as it is our privilege by aiding in the passage of this legislation to bring so much of good to America and to Americans, let us not divide as partisans, but unite for the general welfare, and acclaim with one voice, "Speed the coming of the day." [Loud applause.]

Mr. GLASS. Mr. Chairman, I yield 30 minutes to the gentleman from Georgia [Mr. HARDWICK].

Mr. HARDWICK. Mr. Chairman, the task that I have set for myself this afternoon is not an easy one. In the first place, let me say that it is my purpose to vote for this bill, not because I like it, not because it is my judgment that it ought to be enacted into law, but because I conceive it is my duty to do so because of the caucus action of my party on this bill; and I feel, on the other hand, if I should let this occasion pass without embalming in the permanent record of the country for the benefit of my constituents and of the people who are to come after us the objections I have to the bill I would be recreant in my duty to my constituents and to my conceptions of what is right. Of course, in this Chamber and elsewhere some gentlemen may take issue with me on the proposition that, feeling as I do about this bill, I ought to vote for it because of the caucus action. Let me say to these gentlemen that I have this view of that question: This Government is now and, in my judgment, always will be conducted through political parties. Whatever my objections to this bill may be, after all, when all is summed up, the Democratic Party gives me so many more things that I firmly believe in than any other party and accomplishes so much more that, according to my judgment, is right and for the best interest of the country than any other party can hope to accomplish that my duty lies with that party. Let me further say that I have this conception of party duty—supposing that my first premise is right and that this is a Government of political parties. The maintenance of party solidarity and discipline is essential, and party discipline can not be maintained unless on each question that is the subject matter of party action the majority of the party shall control its attitude. Otherwise, we would have chaos and anarchy. If every man sets up his own judgment and conscience as the supreme court that shall determine each question, no party can maintain an organization, and therefore I conceive it my duty when I go into a caucus to abide by the result of that caucus. Otherwise I ought not to participate; otherwise I ought not to have been there; and yet I am not complaining at the performance of this duty to-day, although I feel a still greater obligation resting upon me to voice some of the forebodings I feel about this particular legislation.

Besides that—although there are some in this Chamber who may not understand it and others who may not appreciate it—I want to say that down where I come from the love of the Democratic Party is almost a religion. Down there we do not all always agree with every proposition embraced in the national platform. Down there we do not all always agree with every policy that the majority may propose. Down there we do not all believe the Democratic Party is right on everything that comes up. But we have suffered so much for the Democratic Party and with it that we not only love it devotedly, but we are thoroughly devoted to its principles, because they represent our ideal of government, and we are prepared to make sacrifices for it because we love it, and to-day I want to assure the committee and the country that when I vote for this bill it will be a sacrifice that I shall make for the Democratic Party, because this bill, in many respects, violates my conceptions of the fundamental principles of Democracy on this great question and is dangerous to the country.

I have always thought that there was a vital and fundamental distinction, in the first place, between money and bank credits. I have always belonged to that school of political thought that believed that the Constitution of the United States meant what it said on the money question, and that the sole power to issue money—real money that should discharge private debts and public dues—rested solely with the Government of the United States. On the other hand, if there is to be provision made for a system of bank credits, a currency system, if you please, of bank checks or notes, then such checks or notes should not be either legal tender for the payment of public dues or private debts and ought not to have any of the functions of real money in any respect. In other words, I believe that all of the real money of the country ought to be issued by the Government, and it ought to be full legal tender for the payment of private debts and public dues, and that nothing else except this money issued by the Government ought to be

received by the Government for public dues or ought to be or indeed can be made legal tender for the payment of private debts, but unfortunately this bill violates that conception and violates it both ways.

The money or currency—I do not know which to call it—that it provides for is neither fish, fowl, nor good red herring. It partakes of both; it does not pay private debts, although it is accepted for public dues. It is neither bank currency nor full Government money, and I think any legislation that is well considered and is expected to endure must preserve this fundamental distinction. If we are to issue real money—and that is the sole as well as the exclusive function of the Government—then it should have the functions and attributes of real money and should be made legal tender for all debts, public and private, and should, in my judgment, be redeemable in gold. On the other hand, if we are to authorize mere bank notes, then neither the Government nor any of its citizens should be required to accept them in payment of debt. In this bill what have we done? We provide for notes to be issued directly by the Government, but exclusively to the banks, redeemable in "gold or lawful coin," and yet we do not give them the full strength that the power of the Government could bestow, in that we do not make them legal tender for the payment of private debts, though we do provide that the Government shall take them for all public dues. So that, it seems to me, we either have gone too far or have not gone far enough. If the currency we provide is real money, then it ought to have all the functions of real money; it should discharge private debts as well as public dues. It should have every ounce of the sovereign power behind it.

On the other hand, if the currency we provide is mere bank-credit currency, then it should have none of the functions of real money, and neither the citizen nor the Government should be forced to accept it.

Another objection I have to this bill, Mr. Chairman, is that it seems to me it is liable in the years to come to create serious trouble along another line. Why are we enacting this legislation? What is the real reason for it? It was clearly stated at an early stage of this discussion, in another body, by a distinguished gentleman who is not here this afternoon, to be this: The credit of the country has expanded so that the banks' reserves have sunk below 10 per cent. The credit of the country is topheavy. There is too little real money on which to base this vast volume of credit. The gentleman was right. The real purpose of this bill, as stated by the able gentleman from Ohio [Mr. BULKLEY] who spoke here this morning, is to expand credits. We all know it. It is to give expanding and increased credit to the great business interests of this country. It is to enlarge the credit of the country, and yet, Mr. Chairman and gentlemen, if this is the purpose of the bill, and it is, and it shall work successfully for a few years, then, if we are to have any stability and safety in the future, if we are to maintain the existing volume of credit or if we are to enlarge it, as the gentleman from Ohio insisted a few moments ago, we ought to have a more substantial foundation on which to rest this great credit system, and we ought to have more real, primary money, with all the sovereign attributes of money, as such a foundation for that credit system. And yet, unfortunately, there is not a dollar of the currency provided in this bill that has all the necessary functions of real money. There is not a dollar of it that any bank can pay to a creditor who demands real money. There is not a dollar of all this "money" that is to be issued without limit or without any other limit except the clear blue sky of the Almighty that any bank can force any creditor to take, except the Government.

So that it seems to me that we are in this position: We provide a splendid mechanism to enlarge and expand credits, to increase trade, to boom things, and, although the reason we are doing it is that the present basis on which the trade and credit of the country rest is insecure and insufficient, we do not increase the foundation on which credit must rest. There is no solidity here, no strength. Gentlemen, this is "progressing" entirely too rapidly and recklessly to suit me. I believe that a great deal of this high cost of living comes from the extravagance of the people. [Applause.] Not all. The tariff has done a great deal—do not cheer me too soon. Your trusts and combinations have done more. Not only that, but on top of that, adding to it, is the extravagance of our people everywhere, North, South, East, and West. People are mortgaging their farms and homes to buy automobiles. No statement of the case can be stronger than that. They are trading and overtrading. Credit has expanded, and expanded until it has reached the danger point and everyone says something must be done. Hence this legislation. Now, the gentleman

from Ohio [Mr. BULKLEY] contends, if I understood him correctly, that this bill is going to still further expand credits, still further increase all this overtrading, and he is right; it is bound to do it. It proposes 12 great central banks called regional reserve banks with ample facilities for rediscounting commercial paper with the unbounded resources of the Government behind them.

Credit is already cheap, far too cheap. And yet when the splendid facilities afforded by this bill for turning promissory notes and commercial paper into Government currency are fully utilized, what prophet among us can tell how cheap it will finally become, before the day of reckoning finally arrives. It may be pleasant enough and easy enough for a time, but what is the end to be?

The proposition that these gentlemen give us as a remedy reminds me and makes me think of the doctor's proposition, who treated a man who came to him with a case of acute indigestion. The doctor said to the man, "Just go out and eat all you want. Eat more, and more, and more, and if that does not kill you you will get well." [Laughter.] I am afraid that is what this bill proposes and invites, when you boil it down.

Now, I make this prediction about it, and I want my friend from Virginia [Mr. GLASS] to bear it in mind in the years that are to come. If this bill passes, as it doubtless will; if this bill becomes a law, as I believe it will, you will have prosperity, expansion, more loans, more credits, boom times—for a while. The goose will hang high and everything will be lovely—for a while. But I tell you, gentlemen, it is equally true in the case of a nation and of an individual, that pay day comes after a while. We will go on perhaps five years more getting our notes discounted and rediscounted, and double discounted, and triple discounted, flooding the country with too much credit and engaging in overtrading of all sorts, but after a while the day of reckoning will come.

John Law went from Scotland to France with a scheme just about as beautiful as this one, and for a while that wizard of finance was the most popular man who ever entered the French Kingdom. Kings and lords and peers and noble ladies did obeisance to him in order that they might share in the golden prosperity that he was heaping upon France. But after a while the bubble burst, pay day came, and John Law had to run for his life.

Mr. GLASS. Mr. Chairman, will the gentleman submit to an interruption?

The CHAIRMAN. Does the gentleman yield?

Mr. HARDWICK. With pleasure.

Mr. GLASS. I am ready to agree with the gentleman from Georgia that there will be expansion under this bill.

Mr. HARDWICK. Yes.

Mr. GLASS. I think it will be a wise expansion. But I would have the gentleman indicate his opinion of the view expressed by eminent bankers in this country, such as James B. Forgan, that there will be an enormous contraction under this bill. My friend will agree that both of these things can not occur at the same time.

Mr. HARDWICK. Yes; and against the opinion the gentleman has referred to, I will put the opinion expressed by Charles G. Dawes, formerly Comptroller of the Treasury, who says that there will be a great inflation. He says what I predict is liable to occur.

Mr. GLASS. I ask the gentleman to essay the difficult task of reconciling those two widely divergent opinions.

Mr. HARDWICK. I can not do it any more than the gentleman from Virginia can. Either one or the other of these gentlemen is wrong. Each man has got to judge for himself of this bill; but the fact that I am inclined to agree with the view expressed by Charles G. Dawes, rather than that expressed by Mr. Forgan, is one of the reasons why I have hesitated to support this bill.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HARDWICK. Yes.

Mr. CALLAWAY. Are not both of those things possibilities under this bill? If the bankers should refuse to come in and surrender their charters and retire the present bank-note circulation, contraction would occur, would it not?

Mr. HARDWICK. Yes.

Mr. GLASS. But I call the gentleman's attention to the fact that Mr. Reynolds did not predicate his statement on the question of the banks coming in.

Mr. CALLAWAY. I am not talking about what Mr. Reynolds said. On the other hand, if all the banks come in and take advantage of the opportunities presented under this bill, what Mr. Dawes says would come true, would it not?

Mr. HARDWICK. I would say to the gentleman that to the bank that will come in this bill offers so many advantages,

such as furnishing a ready and ample market for the rediscount of its commercial paper, that I am satisfied they will all come in. They may fuss around and pretend they will not come in and attempt to get something into the bill which they want and fix it more to suit themselves, but the gentleman from Virginia [Mr. GLASS] need not worry about that. They will come in. They will come in by swarms and by droves.

Mr. GLASS. Yes; I believe with the gentleman that they will come in.

Mr. HARDWICK. Yes; they will come in, and they will be obliged to do it. Take the little town where I live, a town of 3,000 people, down in Georgia. It is a right prosperous community and has several banks. If two or three of those banks went in and the others did not, those that went in would have a tremendous advantage over those that did not, because they can go out to the regional reserve bank, whether located at Atlanta or New Orleans or Birmingham, and turn their notes into crisp bank notes or currency, or whatever you call it—something that will circulate for a while, at least. Therefore, in my judgment, it is reasonably certain that they will all come into this system.

But, gentlemen, there is no limit on this thing now. The committee started with \$500,000,000. Then they put it at \$700,000,000, and finally they said, "These figures are too small for us to trifle with, and we will lift the limit and play it up to the clear blue sky." So we are going without any limit, and God knows when the time will come that too much of this stuff will be issued and somebody will come down on the Treasury and say, "You promised to redeem this stuff in gold or lawful money"—which is it?

Mr. BURKE of Pennsylvania. Gold or lawful money.

Mr. SIMS. That is the same thing.

Mr. HARDWICK. Gold or lawful money. They will come up and say, "I want gold." How are you going to get the gold? Under the present law we redeem the bank notes from the redemption fund, which the banks maintain. In order to maintain the parity of our silver money and other forms of our money with gold, to keep up the gold standard, we have a gold reserve. How have we been able to obtain the gold during all these years? Bad as your national-bank law was—and I am utterly opposed to it—it provided that these national-bank notes should not be received at the Treasury for customs dues, and in that way the Republican Party did keep an avenue open from which they could get \$300,000,000 a year in gold if they wanted it.

Now, although you render it necessary to have a still larger gold reserve if this bill goes through, because this Government assumes all this responsibility for this currency, you have absolutely destroyed the only way of getting gold except by issuing bonds in time of peace, and I do not think any of us want any more of that, by saying that these bank notes which you are going to issue shall be received generally for public debts, as the present bank notes are, but, unlike the bank notes, shall also pay customs dues. That is another practical reason why I think the bill is of doubtful wisdom, to say the least of it.

I have some other ideas about this sort of legislation, with which I will not trouble the committee too long. How much time have I occupied, Mr. Chairman?

The CHAIRMAN. The gentleman has occupied 20 minutes.

Mr. HARDWICK. I will not trouble the committee to outline at any great length many of the other reasons that make me doubt the wisdom of this bill. I have always had old-fashioned ideas. I reckon I will have to modify some of them, although I hate to do it. I have always had the old-fashioned idea that this Government ought not to engage in either the banking or money-lending business. If I wanted to make a speech against this bill that would be really vicious, that would make the hair of my friend from Virginia [Mr. GLASS] almost stand on end, I would read from this desk the speech that Thomas H. Benton, of Missouri, made in the Senate on February 2, 1831, on the United States Bank bill, instead of using my own language. I would read the remarkable arraignment that John C. Calhoun, of South Carolina, made of schemes of this sort at about that same time in the Senate of the United States. I have always believed that the United States Government should be in but one business on this earth, and that is the governing business.

Mr. GLASS. The gentleman knows that Mr. Calhoun changed his mind on that?

Mr. HARDWICK. Never.

Mr. GLASS. Oh, yes.

Mr. HARDWICK. Mr. Calhoun never in his life did that. The gentleman will have ample opportunity to present the evidence of it if he did; and I ask him to present it to this House if he can.

Mr. GLASS. Did not Mr. Calhoun advocate the establishment of the second United States Bank?

Mr. HARDWICK. Never, as I recall it.

Mr. GLASS. I distinctly recollect that he did.

Mr. HARDWICK. Either the gentleman is wrong or I am.

Mr. GLASS. That is true.

Mr. HARDWICK. According to my reading of the life and writings of Mr. Calhoun, he was never an advocate of a Government bank. I do not know but what at some time they may have got him into the fix like you have got me into, and made him vote wrong at some time, but he never did believe in it that I know of, and I do not think the gentleman from Virginia [Mr. GLASS] will find on refreshing his memory that such was the case. Mr. Calhoun was a hard-money man, a strict constructionist, and a consistent believer, as I recall his record, in the old Jeffersonian doctrine that "the least governed people is the best governed people."

Mr. HARDY. If the gentleman will pardon me, I think Mr. Webster quoted Calhoun's speech against him.

Mr. HARDWICK. He could probably have replied by quoting Webster the other way.

Mr. HARDY. I think he did.

Mr. BRUMBAUGH. I think I can set that matter right. On the first effort to recharter the United States Bank Mr. Clay and Mr. Calhoun both voted against rechartering. That was in 1810 or 1812.

Mr. HARDWICK. Yes.

Mr. BRUMBAUGH. The bill, however, passed both the House and the Senate, and then President Madison vetoed it. When the bank came up again to be rechartered the bill passed both the House and Senate, Mr. Calhoun at that time voting for it.

Mr. HARDWICK. I will not yield to the gentleman any further, because I think he has his history wrong. I believe the gentleman is mistaken in his statement as to Mr. Calhoun's position. Of course I may be in error, but I think that the records will show that whenever the issue of a Government bank was distinctly made Mr. Calhoun was always against the Government bank. Certainly that was his mature and final conclusion, made after careful reflection and when the Government bank was the great issue of the day.

Mr. MONDELL. Will the gentleman yield?

Mr. HARDWICK. If the gentleman will make it short.

Mr. MONDELL. Calhoun was finally coerced against his will and judgment, just as the gentleman from Georgia, I assume, is on this occasion.

Mr. HARDWICK. I frankly admitted that I was, so that the gentleman puts me in good company to-day.

Now, gentlemen, I do not believe, regardless of whether Calhoun believed it or not, that the Government of the United States should be in but one business on this earth, and that is the business of governing. I do not believe that it ought to be in the business of banking; I do not believe that it ought to be in the business of transportation; I do not believe that it ought to be in the dry-goods business; I do not believe that it ought to be in any other sort of business except giving the people of this country a square and honest Government. [Applause.]

I have some good Democratic authority on this question. Let me read the conclusion of an eloquent paragraph in the inaugural address of Thomas Jefferson, when he assumed the reins of government on March 4, 1801, in which he defined the character of the republican Government that we had established on this continent. Mr. Jefferson said:

Still one thing more, fellow citizens. A wise and frugal government which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and of improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicity.

That may be old-fashioned doctrine, but I believe it yet. Times may change, conditions may change, but great principles like this do not change. They are immortal. They may be forgotten or ignored at times, but however far we may wander from them, we always return. I have an abiding faith that we will finally do so, even on this currency question.

In every other branch of industry and effort the Democratic Party has contended, down with combinations, down with monopolies, down with trusts. We have said that about the Steel Trust, we have said it about the Standard Oil Trust, we have said it about every other trust on earth. And yet it seems likely in this bill—I fear it is true, but I hope it is not—that we have established a gigantic Money Trust, with all the banks of the country concentrated in 12 great central banks, with the Government forming the connecting link between them, and the Government in actual partnership with them, lending them money, issuing "money" to them, and taking 60 per cent of their profits. [Applause.]

That may be proper; it may be right. A majority of my brethren say so, and I am forced, under my conception of the doctrine of fair play and party loyalty, to submit, and I must follow them. I am going to do it without any more murmurs than are contained in this speech. I do not accept it willingly and I fought as hard as I could against accepting it. I did not do it because I thought I was wiser than they, but because I have been brought up in that school and I do not believe in all these new-fangled things. I am not going to follow them along such paths unless they tie me, and tie me pretty tight at that. [Laughter.]

Now, gentlemen, what position did we occupy in the recent campaign? We said, "We will strike down monopoly; we will give a chance for individual efforts; we will replace combinations with competition." That is what we said. My heart was glad because we were returning to the old doctrines of Jefferson and Jackson. And yet in this bill it seems to me that we have abandoned the position that was taken by the Democratic Party in the recent campaign, and we have gone over, boots and baggage, to the Roosevelt position. We are giving as a substitute for the alleged private monopoly of Wall Street a gigantic monopoly that binds together all the banks in the country, issues to them unlimited paper money from the Treasury at Washington on their assets, creates 12 great central banks, and puts a Government board in charge of the whole combination. In other words, fleeing from the evils of Wall Street and private monopoly, we rush headlong and pell-mell into the arms of a great public monopoly—a system that we create to-day, but may not be able to destroy to-morrow; that we control now, but that may control us before the end is reached.

I know that the people of this country desire to get rid of the undue influence of Wall Street and Wall Street bankers over our fiscal and financial affairs. So do I. I know that the majority of the people, at least in that section of the country where I live, are opposed to the present national banking system. So am I. But I have not in my heart been able to say that simply because we want to get rid of Wall Street influences and the national banking law we ought to enact this particular bill. I think there are safer and saner ways that will not lead to all of these dangers of expansion of Government banking, Government money lending, and of paternalism and socialism. For that reason, Mr. Chairman, my judgment has been and is very much against this bill. A man in the particular frame of mind that I am about this bill—

Mr. MANN. He is between the devil and the deep sea.

Mr. HARDWICK. That is right, and I am not very sure which side is the devil. [Laughter.]

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. HARDWICK. Mr. Chairman, may I ask the gentleman in charge of the time to yield me two more minutes?

Mr. GLASS. I yield the gentleman two minutes.

Mr. HARDWICK. As I said before, I have not taken back here anything that I have said in the Democratic caucus. I do not propose to do that. I do not propose to alter it; but I do say this, that while I sincerely entertain the sentiments that I have expressed to the committee this afternoon, I realize that the Democratic Party, in this House at least, is for this bill. I still very much fear that it is unwise and dangerous, and I have said a few of the things that I have said this afternoon in the hope that in another body there might be some amendments to it, in the hope that there may be some turning back toward correct and sound principles, and that something may be done to it to avert at least some of the dangers that threaten us from this bill. I hope my friends understand my position in this matter, because when I enter a Democratic caucus I always support the nominee, no matter how much I dislike him or how great a rascal I think he is. Square dealing requires that. [Laughter.]

Mr. GLASS. Will the gentleman not do this; will he not say that in the many weeks given to this bill he did not propose any great change in its fundamental effects?

Mr. HARDWICK. On the contrary, I did propose, in speech at least, what I considered a proper substitute for the bill. I submitted on the floor of the caucus that very contention. I think the Canadian banking system, which, of course, came from Scotland, could with very few changes very easily be adapted to American conditions.

Mr. GLASS. But the gentleman did not propose that.

Mr. HARDWICK. Oh, yes; I did.

Mr. GLASS. In the form of an amendment?

Mr. HARDWICK. Oh, no; I was not on the committee and did not have charge of the legislation.

Mr. GLASS. The gentleman offered an amendment?

Mr. HARDWICK. The gentleman knows as well as I do that it was virtually useless to propose anything in the form

of something that we could vote on. The gentleman knows that I have always contended that the Canadian banking plan was really the best thing we could adopt under the circumstances, but the duty of preparing the details was not upon my shoulders. My brethren in their superior wisdom saw fit not to accept the idea. They outvoted us, and here I am, as my friend from Illinois would say, "hog tied"; but for the sake of my future reputation and to make my present position plain I want to put myself on record here saying publicly that I am not responsible for this thing. While I vote for it as a matter of party loyalty and duty, I do not like and did not help to frame it. When trouble comes from this bill, if unfortunately it does come, as I fear it will, but as I sincerely hope it will not, I want to be in a position where I can say "Shake not your gory locks at me."

Mr. BURKE of Pennsylvania. Will the gentleman please repeat what he said in reference to offering an amendment?

Mr. HARDWICK. Oh, the gentleman ought not to get worried about the Democratic caucus. I said the condition of affairs was such in the caucus that it was practically useless to offer any other system as a substitute.

Mr. BURKE of Pennsylvania. What was the condition? [Laughter.]

Mr. HARDWICK. Oh, I do not mind telling my colleague. The caucus was pretty nearly solid for the bill. [Laughter.] At least, it was when all the precincts were heard from and the final returns were in.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

Mr. GLASS. It was about the same condition that prevailed in the Republican caucus when the gentleman participated in it five years ago, and they would not permit any amendment to the Vreeland bill.

Mr. MANN. Oh, they did; and we did not attempt to bind Members by the caucus at that time, when we brought in the Vreeland bill.

Mr. GLASS. That rule provided for four hours' debate and would not permit even a Republican Member to offer an amendment.

Mr. MANN. The chairman of the Committee on Banking and Currency and the ranking Republican member of the Committee on Banking and Currency were not bound by that caucus action. We never attempted to bind anybody—

Mr. GLASS. Your rule prohibited any amendment to the bill on the floor of the House even from that side of the House.

Mr. MANN. That rule was a motion to suspend the rules and adopt an order which was probably voted for by the gentleman from Virginia.

Mr. GLASS. No, it was not; it was voted against by the gentleman from Virginia, but was voted for by the gentleman from Pennsylvania [Mr. BURKE], who sought information a while ago.

Mr. MANN. It was not a partisan matter. We did not attempt to bind people by the caucus.

The CHAIRMAN. Whose time is this to be taken out of?

Mr. GLASS. Out of the time of the gentleman from Pennsylvania. Mr. Chairman, I yield 15 minutes to the gentleman from Mississippi [Mr. COLLIER].

Mr. COLLIER. Mr. Chairman, it is with some diffidence that I arise to discuss this question before the House. The many questions involved in this bill are complex and technical in their nature, and the stupendous task of undertaking in one bill to revolutionize the banking and currency system which has prevailed in this country for half a century reminds me that I must approach this subject with care, deliberation, and caution. In the limited time allotted me for discussion I feel that I can only touch briefly upon a few of the important provisions in this measure.

Those who support the present bill, and who for several days have listened to the dismal prophecies of financial ruin and commercial disaster which the opponents of this measure have assured us will swiftly follow the passage of this bill, are yet comforted by the reflection and consoled by the knowledge that it would be indeed difficult for the ingenuity of man to devise a more cumbersome, antiquated, and useless system of currency than the one now in operation throughout the United States—a currency system which in time of stress always failed to give relief, and under which we have frequently been threatened with financial disaster.

Our present system did not come down to us as the cool, calm, deliberate judgment of the American people through their accredited representatives. It is not a gradual evolution of currency legislation, but was born at a time when the American people were engaged in a death struggle with each other. In times of war, with debts piling mountain high, with expenses

constantly increasing, with the credit of the Nation becoming impaired, with the need of money becoming more acute day by day, the present financial system, the result of a war measure, sprang into existence. The creation of national banks was authorized, charters were granted to these organizations, the privilege of circulation was given to our greatly depreciated bonds, and millions of dollars of bank notes were issued by these banks, which did much at the time to relieve the situation.

I am not prepared to criticize the act of the United States in passing this war measure. The financial condition of the country was so desperate and the Government bonds had become so depreciated that the credit of the United States was becoming seriously impaired and something had to be done.

Government bonds were worth little as promises to pay, but with the privilege of circulation they at once began to advance. Especially was this true by reason of the attractive field of investment the purchase of these bonds offered to one who possessed gold. A dollar in gold was at one time worth over \$2 in greenbacks. These bonds could be purchased much below par in greenbacks. Therefore the fortunate ones, those who got in on the ground floor, put their gold in greenbacks, and then put their greenbacks into Government bonds, which were considerably below par. The banks would then take these bonds and, turning them over to the Government, issue notes upon them. For instance, if \$150,000 in gold could be exchanged for \$300,000 in greenbacks, and if our bonds were worth only 75 cents, then this \$300,000 in greenbacks could purchase \$400,000 in bonds. Upon the \$400,000 in bonds the Federal Government would permit a bank to issue 90 per cent in circulating bank notes, or \$360,000, all growing out of the original capital of \$150,000 in gold. This system for a time proved a rich harvest to those who possessed gold, and the demand for Government bonds, because of the circulating privilege, soon forced them above par.

So I repeat that I am not prepared to criticize the act of the Federal Government in adopting the currency war measure as an expedient to relieve a distressing situation.

One of the greatest troubles with our present system is the amount of money that is withdrawn from circulation and held in reserve, which reserve is not used in time of disaster. A reserve has a high-sounding phrase. The very name is synonymous with confidence, a bulwark of protection; it is the last resort. That is the commonly accepted meaning of the word "reserve"—something to fall back upon, to rely on when all else is wavering. That is its common-sense application. But this definition is unknown in our present currency system. Under the present system a reserve means so many forces withdrawn forever from the conflict. It means that when the tide of battle is raging at its highest, when help is needed or all will perish, instead of bringing up these reserves and adding new forces to the conflict, it means that of those still struggling as many as can be found are to be withdrawn from the struggle and added to a reserve which it is intended will never be called into action.

That is the practical operation of the bank reserves in the present currency system. These reserves are not used in times of stress, and the bankers during a panic are calling in all demand notes and adding these collections to the reserves and at the same time refusing to lend money on security, no matter how ample.

The panic of 1907 is a fair illustration of the utter uselessness of the present currency system. It shows that the reserves are not only helpless in times of financial disaster, but are in reality a source of weakness. It teaches in unmistakable terms that the inelasticity of our currency system is one of our greatest troubles. The present bill will correct that glaring evil and will give us an elastic currency which will be a tremendous source of strength at all times and, I believe, will prevent the recurrence of a panic.

The panic of 1907 was of more magnitude than is generally supposed. It was not felt so much in the South and West, because the crops of those sections began to move at that time, and prices for agricultural products were good. This panic was due to an overspeculation on the stock market. It was preceded by an era of financial prosperity and speculators in bonds and stocks became largely overstocked. When demand was made upon these borrowers, they did not have the money to deliver and had to turn loose their stock. There was a general dumping of these securities upon the market, and of course the market went down. Every dollar's worth of stock placed upon the market was like pouring oil on fire, and these borrowing speculators, seeing their holdings about to be swept away, became desperate in their demand for money and their eagerness to sell. Of course, this eagerness to dispose of these securities caused them to greatly depreciate and the bottom be-

gan to drop out. The bankers in New York were hard pressed by their customers and began to call in all the demand notes they had in circulation among the country banks. The country banks, in order to meet the demands of the New York bankers, began to call in their loans from their customers. Credit was refused, confidence was destroyed, and the panic was on. There were immense sums of money held in reserve by the different banks of the country at that time. According to the United States Statistical Abstract, in the central reserve cities in the national banks alone on the 22d day of March, 1907, there were \$638,000,000, which was increased by the banks in these reserve cities to \$676,000,000 on August 22. There was in reserve in national banks alone in States and Territories, exclusive of the reserve cities, in March, 1907, \$426,000,000, which was also increased by the latter part of August of that same year to \$443,000,000. Thus, we find that in the national banks alone there were in reserve in March, 1907, in the vaults of the banks, \$1,068,000,000, which reserve was increased by the latter part of August to \$1,119,000,000, an increase in the year of panic of over \$50,000,000.

If our currency laws had been elastic, less than 5 per cent of this reserve would have broken the backbone of that panic; but not one dollar of the lawful reserve was used.

Nor was this all. Confidence had been destroyed, the market was still falling, financial conditions were becoming more acute, the demand for money was increasing, but it was locked up in those reserves. So, instead of relieving the situation by using these reserves, the bankers, both State and National, called in all the demand loans that they could collect and added this money to the reserve. Every dollar that was called in and taken out of circulation aggravated the situation. The bankers, fearing a run on their respective banks by reason of a destroyed confidence, refused to make any loans, but continued to call in all their collections and made the situation more acute by retiring from circulation all the money they could lay their hands upon and adding it to their reserve. The bankers, fearing a run upon their respective banks, were practically forced to do this, because they owed a first duty to those who had intrusted their money to their keeping, and a run on a bank in times of panic is easily started.

Mr. Morgan, with less than \$30,000,000 of the Government's money, broke the backbone of that panic and restored confidence, yet less than 5 per cent of the money in reserve would have accomplished that purpose.

Therefore, Mr. Chairman, when they tell us that this system of currency as outlined in the present bill is inadequate, I tell them it can not prove to be as cumbersome and as utterly useless a system of currency as the one now prevailing in the United States.

This bill may be divided into three important divisions, as follows:

First. Governmental control of Federal reserve banks, which banks have the power to issue currency.

Second. Mobilization of reserves.

Third. An elastic currency expanding and contracting as the occasion may require.

I will first discuss the governmental control of the different regional or Federal reserve banks.

The bill provides for the districting of the United States into 12 regional or Federal reserve banks, each bank having a minimum capital of \$5,000,000. Every national bank in the United States must within one year after the passage of this bill become a member of the Federal reserve bank in the district in which it is located or else surrender its charter and wind up its business. In order to become a member or stockholder of this Federal reserve bank it will be necessary for each national bank to subscribe a sum equal to 20 per cent of its capital stock to the Federal reserve bank. One-fourth of this subscription shall be paid at once, one-fourth in 60 days, and the balance subject to demand. It is believed, however, that it will never be necessary to call in this balance. All of the stock subscribed by a national bank to a Federal reserve bank shall be exempt from Federal, State, and local taxation. It further provides that after the passage of this act any State savings bank and trust company may make application to the Federal reserve board and be admitted under such regulations as the Federal reserve board may adopt.

Each of these Federal reserve banks shall be managed by nine directors, and the 12 Federal reserve banks shall be under the control and management of a Federal reserve board composed of seven members. Four of these members shall be appointed by the President and confirmed by the Senate, the remaining three shall consist of the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency.

This Federal reserve board shall exercise a general supervision over the affairs of the Federal reserve banks. It shall have authority to examine whenever it sees fit all the accounts, books, and affairs of each Federal reserve bank, and shall publish once each week a statement in detail showing the condition of each of these 12 Federal reserve banks, and also a consolidated statement showing the condition of all of these banks.

This board has the power to permit and in time of emergency to require one Federal reserve bank to rediscount the discounted prime paper of another Federal reserve bank, but this compulsory exercise shall be subject to an interest charge to the accommodated bank of not less than 1 nor more than 3 per cent above the higher rates prevailing in the district immediately affected. It has the power to suspend for 30 days and can renew this suspension for 15 days any reserve requirement, and can also suspend the officers of the Federal reserve banks for cause; but these officials are entitled to be heard in their own defense. This Federal reserve board even has authority to remove these officials, but such removals are subject to the approval of the President of the United States.

It is the duty of this Federal reserve board to require the writing off of the worthless assets upon the books of these various Federal reserve banks and, if necessary, suspend the operation of the bank and appoint a receiver.

One of the most important powers vested in this Federal reserve board is the provision in this bill which gives this board power to supervise and regulate the retirement and issue of Federal reserve notes and to prescribe the form and tenor of such notes. If any Federal reserve bank is in need of currency to carry on its business, it is empowered to make application to the Federal reserve board, and upon presentation of rediscounted prime paper, together with a reserve of 33½ per cent lawful money, currency will be issued to this reserve bank.

Now, the affairs of these Federal reserve banks are managed by a board of nine directors. Six members of this board shall be elected by the stockholders, which are the member banks, and the remaining three shall be appointed by the Federal reserve board. Three of the six directors elected by the member banks shall be directors of some member bank and the other three directors shall be representatives of the general public interest and shall in no instance be officials of any bank or banking institution.

It has been contended that entirely too much power is vested in this Federal reserve board, and that this power used arbitrarily might endanger the free institutions of our Government. Much has been said about putting the banking business into politics—that by reason of this great power a President of the United States could perpetuate himself in office. It has been strongly urged against the enactment of this bill into law that it will put the Government in the banking business, and that the general tendency to centralization and power is hurtful and harmful.

It is true that this bill does, to a limited extent, put the Government in the banking business. It is true that great power is vested in this governmental board. It is true that this system of currency and banking has a tendency to centralization, and if the powers of this board were grossly abused much harm would result.

I am as much opposed to centralization of the banking business as any Member of this House, and I would not countenance any plan which had the merest suggestion of centralization, if the control of these plans were to be in private hands.

One of the most serious objections to the Aldrich plan of currency reform was that it contemplated placing this control in the hands of the bankers themselves. I would never agree to support such a proposition. I would never be willing to place this power, this control, in the hands of the bankers or the lawyers or the merchants or any other set of men. Human nature is too strong in the best of us to permit such power to be vested in private hands. This power should properly be placed under the control of the Government itself—under the control of a Government placed into power by the ballots of the American people and responsive to the will of that people.

Under such control every act of the Federal board is a matter of official record open to the scrutiny of the public. There will be, there can be, no star-chamber proceedings in a back room in Wall Street as are now practiced by those who control the finances of this country. The country will be kept informed as to what is going on in financial circles; the condition of these regional reserve banks must be published each week, and in the event of approaching disaster, of gross mismanagement, of criminal dereliction of duty, an alert, enlightened, and awakened press will spread the news broadcast, serving a two-fold purpose. First, the knowledge that publicity will be given to mis-

management and wrongdoing will make the officers more careful, and, second, this knowledge will notify the country in time to avert a financial disaster.

That the passage of this bill will put the banking business of the country into politics is, in my opinion, unfounded. Two members of this board are Cabinet officers, another member is the Comptroller of the Treasury. These men, under existing law, are already appointed by the President. Of the remaining members of the board, the four appointed by the President, not more than two shall belong to the same political party. They must be selected from the different geographical sections of the country. They shall certify under oath that they will not hold office or act as a director of any bank or banking institution. Every possible safeguard to prevent this board from getting into politics has been taken.

The power of this board is considerable; it can wield an immense influence. But I for one will never believe that the power of this board is greater than that of the American people. This board will be created by a statute, enacted into law by the representatives of the American people, and there is no danger that this child of the statute can become the master of its creator.

The office of President of the United States is the greatest political office in the world. Rare, indeed, will be the instance when the American people will elevate to that high office a man with so little character that he will attempt to corrupt this Federal reserve board for the use of his own selfish ambitions. Any man receiving the honor of being elected President of the United States has reached the summit of political fame. Any man receiving this token of confidence from 100,000,000 people has left but one ambition, and that is to conduct the affairs of his administration so that they will justify the confidence which has been reposed in him.

The President of the United States has too much at stake to blacken his record, sully his fame, degrade his character, and betray his people by prostituting his office in the appointment of unworthy members of this Federal board for the sole purpose of furthering his own selfish ambitions. If the honesty of the President of the United States would not prevent him from degrading the high office to which he had been elected, then ambition, one of the strongest emotions found in the human breast, ambition to leave behind him a respected name, free from odium, would stay his unholy hand, because swift upon his head would fall the sword of condemnation wielded by the indignant hands of a betrayed and outraged people.

The power of this Federal reserve board will not be greater in the control and management of financial affairs than is now exercised by a dozen Wall Street financiers and speculators, who now meet in secret and by their gambling contracts corner the money markets of the world.

As additional proof of this statement I ask permission to insert in my remarks an extract of the testimony of Mr. George M. Reynolds, of Chicago, before the Pujo investigating committee during the investigation of the Money Trust. Mr. Reynolds is president of the Continental & Commercial National Bank, with a capital of \$21,500,000 and \$9,000,000 surplus and profits, with average deposits of over \$180,000,000 per annum.

In answer to a question asked him by Mr. Untermeyer, the attorney for the committee, if he did not think that the present concentration of the control of money and credit was a menace to the country, Mr. Reynolds replied:

I am inclined to think that the concentration having gone to the extent it has does constitute a menace.

Mr. UNTERMEYER. I have before me a copy of an address delivered by you, or purporting to have been delivered by you, before the National Business Congress. In what year was that? Do you remember?

Mr. REYNOLDS. It was either in 1910 or 1911. I am not sure.

Mr. UNTERMEYER. It was in 1911, was it not?

Mr. REYNOLDS. I think it was.

Mr. UNTERMEYER. You are reported as having made this statement: "I believe the money power now lies in the hands of a dozen men, and I plead guilty to being one, in the last analysis, of those men." Was that statement made in connection with a discussion of the currency question?

Mr. REYNOLDS. Yes, sir. My purpose in making that statement, Mr. Untermeyer, was this: I talked extemporaneously and perhaps was not as explicit as I should have been in making my explanation. I have no desire to in any way disclaim responsibility for it, however, because I have reiterated it fifty times since.

Mr. UNTERMEYER. And you believed it?

Mr. REYNOLDS. And I believed it, and still believe it. What I was trying to say was that I did not believe that the bankers of the country generally were combined together and had secret meetings to control and influence this thing called money and credit. What I meant to say was that, under our national banking laws, requiring that the national banks in three central cities should carry a reserve of the national banks of the country, there was a natural concentration of the money power or the power to issue credit against reserve, which they would carry, in the hands of a few men. What I meant by saying that I was one of them was this: Our bank probably carries a larger percentage of accounts of outside banks than any other institution in America, both in number and volume. I meant to say that I was conscious of the responsibility that that thing placed upon me, and

was urging currency legislation which would correct any faults that existed.

Mr. UNTERMEYER. You also said in that connection: "I believe that two or three in New York, two or three in Chicago, and two or three in St. Louis could control the question of whether or not loans should be made to correspondents throughout the country."

Mr. REYNOLDS. If there was collusion, I do believe that; yes, sir; if there was collusion.

These speculators of New York, who have gathered up from the different sections of the country all the reserves and the money that they can lay their hands upon, are now wielding more control and influence than is contemplated by this Federal reserve board. They are exercising this control and exerting this influence in secret and often without authority of law. While, on the other hand, this Federal reserve board, restrained by the strong grasp of public opinion and sanctioned by law, will use its power and its control to mobilize these reserves, to equitably distribute the financial benefit throughout the different sections of the country for the use and benefit of the American people.

I will now briefly discuss the second and third important features of this bill, and, as they are so intimately connected with each other, I will discuss both features together. The second important feature in this bill is the mobilization of reserves, and the third feature is the provision for an elastic currency, expanding and contracting as the exigencies of the occasion may demand.

Under existing law the national banks are required to keep 15 per cent of their total demand liabilities in reserve for the benefit of their depositors. Of this 15 per cent, 6 per cent is required to be kept in the vaults of the banks. These banks could then send to the banks of the reserve and central reserve cities 9 per cent of these reserves and receive 2 per cent interest upon the amount so deposited in the reserve bank. In the proposed bill no interest will be paid upon the amount of the reserve kept by the member banks with the regional reserve bank, but, instead, the member banks are in a way a partner of the regional reserve bank. They receive 5 per cent dividend upon the amount of stock subscribed, which dividend shall be cumulative. And in addition thereto, after the 5 per cent dividend claim shall have been met, one-half of the net earnings of the Federal reserve bank shall be placed in a surplus fund until such fund shall amount to 20 per cent of the paid-in capital of such bank. Of the remaining one-half net earnings, 60 per cent shall go to the United States Government and 40 per cent to the member banks in proportion to the average of the balance they may carry with the Federal reserve bank.

Under the present system the greater part of the reserves of the different banks find their way to New York, as that is the financial center of the United States. The banks in New York have been using these reserves and paying the country banks 2 per cent interest upon them and then lending them back, in some instances, to the same banks for 4 or 5 per cent. These New York banks also lend this money to the speculators in New York. The greater part of these reserves are used in this way. These loans are based upon demand notes and are supposed to be especially liquid. But if any great amount of these loans are called in at once they are no longer liquid, and they at once begin to depreciate, as was the case in 1907. It was the over-lending of this money in this way to the Wall Street speculators that caused the panic of 1907.

This bill provides for the mobilization of these reserves in the 12 Federal reserve banks instead of having it all concentrated in New York. Then if a condition should arise like the panic of 1907, when money was scarce and good collateral was unable to secure loans, under the provisions of this bill the banks in need of money could take their commercial paper to the Federal reserve bank and have this paper rediscounted, and if more currency was needed the Federal reserve bank could take this rediscounted paper and with the consent of the Federal reserve board have notes issued upon such collateral. A money stringency seldom lasts over 60 days; at the end of that period, or as soon as conditions assumed the normal, these notes could be turned over and canceled, the security would be returned, and thus we have an illustration of an elastic currency expanding in time of need and automatically contracting when conditions were once again normal.

In the fall of the year, when the agricultural crops begin to move, a great deal of money is required. It costs millions of dollars to move the cotton crop and other agricultural crops. It is at this time that the banks in the central and reserve cities turn loose their money by the millions to the country banks, lending them, in some instances, their own money at 5 or 6 per cent. In the spring and summer little money is required; therefore this system of expanding our currency in the fall and winter and automatically through the cancellation of these notes contracting this currency in the spring and summer will prove

of inestimable benefit to those living in agricultural regions and will release them from the grasp of the Wall Street financiers, who are now lending the money of these country banks to the gamblers of Wall Street.

There are some who are opposed to these Federal reserve banks rediscounting paper which is based upon staple agricultural products. A fine distinction has been attempted to be drawn along this line. It has been contended that rediscounting such paper will tend to speculation and an inflation of the currency. The charges are manifestly unjust. Take, for instance, the staple agricultural product of the State I have the honor in part to represent—cotton. Cotton is our greatest product. It is nonperishable, except by fire. Cotton in a bonded warehouse properly insured is worth its equivalent in gold. It is one product the sale of which brings into the United States more gold than any other product.

Now it is contended that it is all right and proper for the reserve bank to rediscount a note signed by a farmer if the money is to be used for the making of that crop; but after the cotton has been ginned and baled and taken to a bonded warehouse, that then a note—using this cotton as a basis of security—is not subject to rediscount, because the farmer or owner of the cotton is holding it for a better price, and that is a species of speculation which should be discouraged. There never was an argument seriously advanced with less real merit. It would be an injustice to the great agricultural masses of the people. The farmers in my State have never asked for any advantage over their fellow man, they have never asked for any special privilege, but they do ask and they expect to get justice at the hands of this body. The farmer sells his cotton without being given the right to place his own price upon it, yet everything he buys for his home, his farm, and his family has a fixed, determined price and is charged up to him at that price if it is bought on credit. Now the price of cotton is fixed by others, and if the farmer finds that the price of cotton at the time he has ginned is not so high as he thinks it should be, if it is not enough to compensate him for his labor and his toil, why should he be forced to sell at once or else be branded as a speculator? The cotton crop moves in the fall. There is more cotton ginned and baled in September, October, November, and December than can be used by the world in 10 months. Then why should all this cotton be forced upon the market at once? The spinners can not use and do not want all this cotton at one time. If the farmer is forced to sell as soon as he makes his cotton it will not be to the mills, but to the speculators, for the mills can not use it all during that period, and the mills will not buy actual cotton to be delivered 6 or 8 or 10 months before it can be used, for the purchaser can not find use for all that cotton as fast as it is ginned. Then it will be the farmer who is forced to sell, and the speculator who buys the cotton will hold it and reap the reward of the higher price, if the price should rise, because the world can use only so much cotton each month. Permitting these notes, backed by cotton-warehouse certificates, to be rediscounted will not necessarily mean that the price of cotton will be raised to the consumer.

It will mean that when the rise in price does come, the farmer and not the speculator will get the benefit of this rise, and the consumer pays the same, whether he pays it to the farmer or to the speculator. But if it is contended that a note based on cotton receipts, properly stored in a bonded warehouse, fully insured, backed by the credit and first assets of the bank taking this note, and reinforced by two indorsements—if it is contended that that kind of paper is not subject to rediscount by the Federal reserve bank, it will mean that the farmer will have to sell his cotton as soon as it is ginned, because he owes his merchant for money and supplies advanced to make that crop. If the bankers can not use this kind of paper for rediscount purposes, then, of course, there will be no incentive to them to loan upon this kind of security, which is to-day the very best security in the United States, and the farmer will be forced to sell at once. But the majority in this House believe that this kind of paper is good paper, that it is safe paper, that it is the best kind of paper for rediscount purposes, because the cotton itself can be sent abroad and sold for gold. There will be no inflation of the currency, because as the cotton is sold the notes will be redeemed, and the currency, if any has been issued by the reserve bank upon such notes, will be canceled as fast as these notes are redeemed.

That the passage of this bill will cause an inflation of the currency seems to dwell in the minds of some. There is no reason why this apprehension should be entertained. This currency is backed by the prime commercial paper which has been rediscounted by the Federal reserve bank. This paper has behind it the original security which moved the member bank to accept

the paper and make the loan, and, in addition thereto, this paper is further backed by two indorsements and is secured by the first assets of the member bank. Nor is this paper which has been rediscounted by the Federal reserve bank the only security for these notes. Every dollar of currency issued by the Federal reserve bank must have, in addition to this paper, behind it 33½ cents in lawful money, held in reserve by the Federal reserve bank.

Such security is too liquid and valuable to remain long tied up and the value of the security is such that the danger of an inflation is remote.

Another feature of this bill which appeals to me is that provision which permits the Government to take some of the money now lying idle in the vaults of the Treasury and place it on deposit in the Federal reserve banks. This will put more money in circulation and give the Federal reserve bank ample capital along with the deposits from the member banks to operate on, and prevent any possible tendency toward a money stringency which might arise.

If I had the time I would like to dwell upon that feature of the bill which permits national banks to make loans upon farm lands. This should have been permitted long ago, and it is a step in the right direction. The provision in this bill limiting these loans to 9 and 12 months is not long enough, and I would like to see the time of such loans extended, but it is much better than the existing conditions. I hope that in due time there will be enacted a system of rural credits which will go thoroughly into this situation and remedy all defects which now exist in this bill along this line.

Mr. Chairman, I have touched briefly upon what I believe to be the important provisions of this bill. I do not contend that this bill is a perfect measure. I would like to see it amended in some of its details. I would like to see the exchange feature amended; I would like to see a longer extension on farm loans, and there are other provisions that I would like to see amended in some of their details.

I do not suppose that there ever was a bill as important as this which in all its details suited any one Member of this House. All legislation is a matter of compromise, and while there may be a provision here and there in this bill which is objectionable to some of us, yet there has been no real currency revision for over half a century. It would be unfair to expect that at one time we can bring in a bill which will cure all the financial ills the country has been suffering with for so many years.

This bill may not cure all our financial ills, but this plan of currency reform is infinitely superior to the antiquated system now in operation throughout the United States. It is a step in the right direction. If there are imperfections in this bill, as these imperfections develop succeeding Congresses, guided by the lamp of experience, can make the proper amendments. There have been numerous substitutes offered, but none of these substitutes have, in my opinion, nor, I believe, the opinion of a great majority of the Members on both sides of the Chamber, equaled in merit the bill before us to-day. I believe that when this bill is in operation that it will create confidence and will prevent panics and financial depressions, which in the past have paralyzed industry, destroyed commerce, and left ruin, failure, and disaster in their wake. [Applause.]

Mr. POWERS. Mr. Chairman, that there can be improvements made in the present banking and currency laws of this country there is no room for honest doubt. That the country has witnessed years and years of unequaled prosperity and unparalleled progress under the present banking and currency system no well-informed man will attempt to deny. No one expects perfection in man-made laws nor in the men that make them. Our banking and currency laws can be and ought to be improved, but there is a wide difference in improving a banking and currency system that has worked reasonably well and is the result of years of study and experience, and substituting therefor an entirely new system, doubtful in wisdom and untried in experience. But the Democratic majority here seems to feel that it has been divinely chosen by a minority of the electorate of this great country to make a noisy assault with an ostensible intent to change all things done by the Republicans, leaving them the while, however, in the main but little changed, but nevertheless proclaiming that little altered legislation as simon-pure Democracy and 24-karat fine Democratic legislation, free from the taint of Republicanism. Such is their tactics and such is their jobbery. But in the currency legislation they have swung further loose from the old system and are attempting to and will establish, in its political features at least, a new one therefor. How it will work the acid test of time alone can tell. Whether it will benefit and bless or wreck and ruin time and experience alone will reveal. The

changes wrought are so radical and far-reaching, the scope of legislation so extensive that it will be impossible for me to do anything like discuss the various provisions of the bill now under consideration. That being true I have decided to confine my remarks to but two or three of the 30 sections of the bill. Section 11 of the bill provides:

That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President of the United States, by and with the advice and consent of the Senate. In selecting the four appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of different geographical divisions of the country. The four members of the Federal reserve board chosen by the President and confirmed as aforesaid shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of \$10,000, together with an allowance for actual necessary traveling expenses, and the Comptroller of the Currency, as ex officio member of said Federal reserve board, shall, in addition to the salary now paid him as comptroller, receive the sum of \$5,000 annually for his services as a member of said board. Of the members thus appointed by the President not more than two shall be of the same political party, and at least one shall be a person experienced in banking. One shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years unless sooner removed for cause by the President. Of the four persons thus appointed, one shall be designated by the President as manager and one as vice manager of the Federal reserve board. The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board.

The Federal reserve board shall have power to levy semiannually upon the Federal reserve banks, in proportion to capital stock, an assessment sufficient to pay its estimated expenses for the half year succeeding the levying of such assessment, together with any deficit carried forward from the preceding half year, etc.

I will insert here as part of my remarks a little off-hand speech I made on the floor of this House the other day regarding the political complexion and power for harm of this proposed Federal reserve board. Upon that occasion I said:

Mr. Chairman, I have offered an amendment, which will be reported in due time, and if it should be enacted into law it would place the appointing of the entire seven members of this Federal reserve board in the hands of the President, and there would be no ex officio members of this board.

Not only that, but my amendment provides that not more than three members of this Federal reserve board shall be members of any one political party. In other words, it would give the Democrats three members, the Republicans three members, and the Progressive, or Bull Moose, Party one member of this board; that is, as long as the Bull Moose Party lives. [Laughter.] After it is dead, which will not be long hence, that one member could be transferred to the Prohibition Party or some other political organization. [Applause.]

The argument has been made on the floor of this House that there is no danger of this board becoming a political machine; that it will be appointed mostly—a part of it—by the President of this great country; that the limelight of publicity will be upon the actions of this Federal reserve board, and for that reason its members can not afford to let politics enter at all into the transactions or doings of this particular Federal reserve board.

Why, politics has entered into the transactions of every President who has been in the White House. There never has been one there yet that has not attempted to serve his party, and there never will be one that will not attempt to serve the political party that put him in power. There is no politics in the official duties rendered by the postmasters anywhere over this great country, and yet for years the incoming administrations have turned out of office all the postmasters all over the country differing from them politically and have put men in office of their own political persuasions.

It is true, of course, that a good deal of that pernicious habit has been remedied by the Civil Service Commission and the laws that govern it; but at every opportunity which President Taft and President Roosevelt had, they put into office postmasters of their own persuasion, and the present President exercises every opportunity that he has to put his friends in office as postmasters. There is no politics in the performance of duty by the postmasters in this country. Now, if politics enters into the appointing of postmasters all over this land, when postmasters have no political duties to perform, what do you suppose will enter into the appointment of this board and into the actions of this board—a board that has control of the national banks all over this great country? You say there will be no politics in it. You put up the plea that it is going to be nonpartisan and nonpolitical; and yet, making that plea, you put on this board the Secretary of Agriculture, in accord with the administration of course, the Comptroller of the Currency, in accord with the administration of course, and the Secretary of the Treasury, in accord with the administration of course, and it will be in accord with the administration if the Republicans come into power. Then you provide that the four remaining members to be appointed by the President shall not belong to the same political organization. What is the use of that? What is the use of having that provision in the law, after you provide that the three members shall virtually be of the same political party? What is the use of dividing the four remaining members? Of what service can they be? Will that render it nonpolitical? Why, gentlemen, these two members who are Republicans, or whoever they may be—of a different political persuasion from the other two—will have nothing more to do in shaping the action of this Federal reserve board than the Republican members on the tariff conference committee are now having to do with the shaping of that measure. [Applause.]

Section 1 provides that the continental United States shall be divided into at least 12 Federal reserve districts; that there shall be a Federal reserve bank; and that every national bank located within a given district shall be required by the Federal reserve board, appointed by the President, to subscribe to the capital stock of the Federal reserve bank in that district a sum

equal to 20 per cent of the capital stock of such national bank; that one-fourth of this subscription shall be paid in cash, another one-fourth in 60 days, and the other one-half shall be paid upon call; and if any national bank should fail to heed this gentle and persuasive "call," the Federal reserve board has the power to put it out of business as a national bank.

Section 1 provides in part that—

Every national bank located within a given district shall be required to subscribe to the capital stock of the Federal reserve bank of that district a sum equal to 20 per cent of the capital stock of such national bank fully paid in and unimpaired, one-fourth of such subscription to be paid in cash and one-fourth within 60 days after said subscription is made. The remainder of the subscription or any part thereof shall become a liability of the member bank, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank under such terms and in accordance with such regulations as the board of directors of said Federal reserve bank may prescribe.

While section 8 provides:

That any national banking association heretofore organized may upon application at any time within one year after the passage of this act, and with the approval of the Comptroller of the Currency, be granted, as herein provided, all the rights, and be subject to all the liabilities, of national banking associations organized subsequent to the passage of this act: *Provided*, That such application on the part of such associations shall be authorized by the consent in writing of stockholders owning not less than a majority of the capital stock of the association. Any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinbefore stated, or which shall fail to comply with any of the provisions of this act applicable thereto, shall be dissolved; but such dissolution shall not take away or impair any remedy against such corporation, its stockholders or officers, for any liability or penalty which shall have previously been incurred.

The fifth amendment to the Constitution of the United States provides in part that "no person shall be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation." The fourteenth amendment to the Constitution of the United States in part provides that "no State shall deprive any person of life, liberty, or property without due process of law." The fifth amendment is an inhibition upon the Federal Government; the fourteenth amendment an inhibition upon the States.

The one prohibits the Federal Government from depriving anyone of his property without due process of law and without just compensation; the other amendment prohibits the States, or any one of them, from doing a like act. The language in the fifth amendment is as broad, as absolute, and as inclusive as the language in the fourteenth amendment, and the Supreme Court of the United States so held in the case of *Twining v. New Jersey* (211 U. S., 101) and in other cases. The court in the above-cited case said:

If any different meaning of the same words as they are used in the fourteenth amendment (and the fifth amendment) can be conceived, none yet has appeared in judicial decisions.

So we start out with the proposition that the fifth amendment to the Constitution of the United States is as broad and as comprehensive as the fourteenth amendment.

CONSTITUTIONALITY OF CURRENCY BILL.

Now, the question is whether section 1 and section 8 of the currency bill, which I have quoted, are in violation of the fifth amendment of the Constitution of the United States, to which I have made reference.

I do not claim to be a constitutional lawyer—I have but a mere smattering knowledge of the provisions of that great instrument—nor am I appearing as a special pleader for the national banks. I do not own a dollar's worth of stock in any bank in the world, State or national. I do know, however, that if this bill became a law in its present form and if later it should be held unconstitutional by the Supreme Court of the United States, in that event harm and disaster in the form of a great financial disturbance will be inevitable, with a consequent injury to every constituent of every Member here. I know that in this day and age there are those who have but little respect for the Constitution of this great country; those who boldly assert that it has outgrown its usefulness, that it is antiquated, and so on and so forth; but that is not the judgment of the sober-minded, level-headed people of this country.

Is the bill before us constitutional? Is it lawful to force the national banks to subscribe 20 per cent of their capital stock and 5 per cent of their deposits to a fund to be used as the working capital of the reserve banks? Is this depriving the banks of their property without due process of law? Is it the taking of private property for public use without just compensation? Or did Congress, in passing the banking and currency act of 1864 and other banking and currency acts, reserve to itself the power to forfeit the charters of the national banks at its pleasure or to alter or amend them at its will?

CONGRESS CAN FORFEIT THE CHARTERS.

However unjust and unfair to the national banks it would be, I concede that Congress has the power, if it chose to exercise

it, to forfeit the charters of all the national banks in this country. I concede also that Congress has the power to alter and amend, within a just scope, the charters of the national banks of this country. But I deny that Congress has the power, under the guise of amendment, to take from the national banks their property or any of their substantial property rights. In the case of *Shields v. Ohio* (95 U. S., 324) the Supreme Court, speaking through Justice Strong, said:

The power of alteration and amendment is not without limit. The alteration must be reasonable. They must be made in good faith and be consistent with the object and scope of the act of incorporation. Sheer oppression and wrong can not be inflicted under the guise of amendment or alteration.

While it is in the power of Congress to forfeit the charters of the national banks, this Glass-Owen currency bill does not do that. It does not forfeit the charters of the national banks. It keeps them in existence. It only threatens to forfeit them in the event they do not come across with their money to help put the reserve banks on their feet. They are given one year to make up their minds about it, and if they do not put up the money within that time they "shall be dissolved" is the language of the bill. In other words they are commanded by this bill in the language of the highwayman, "Give up your money or die."

Congress has the power to forfeit the charters of the banks, but it has not got the power to keep them in existence and at the same time rob them of their rights under this charter. Justice Strong, in the case to which I have made reference, in Ninety-fifth United States Reports, says:

I agree, therefore, that the legislature reserved the power to repeal, alter, or amend the charter, but I deny that under this reserve power it was competent for the legislature to take away the right given to the company, while at the same time continuing the company in existence subject to all the duties imposed upon it.

This Glass-Owen currency bill has not taken away the charters of the national banks. It continues them in existence. It seeks to take away their rights under their charters, and if they fail to surrender those rights it threatens them with death by "dissolution." It says they shall die if they refuse to give up their money. I have heard of burglars and highwaymen calling upon their victims to surrender their purse or give up their life, but it remains for a Democratic administration to legalize, or at least try to legalize, such methods of highwaymanism, brigandage, pillage, and plunder. In this the Democratic administration will not succeed. Unless this bill is amended so as to relieve it of its plunder provisions, the Supreme Court of the United States will declare it unconstitutional. Private property can not be taken in this way. Private property can be taken by only three methods: First, by the exercise of the right of eminent domain; second, by the taxing power; third, by the police power. Private property can be condemned under certain conditions for the use of the public. Property can be taken for taxes. It can be taken in the shape of fines and forfeitures in enforcing the criminal and penal laws of the country. With these exceptions, no impious hands can legally be laid upon your property or mine. The Government of the United States, except in the cases to which I have referred, has no more power to take your property or mine than the humblest citizen in the land.

The Glass-Owen currency bill does not seek to take the property of the national banks in any one of these three ways.

The national banks in the United States have about \$1,000,000,000 of capital and \$8,000,000,000 of deposits. Twenty per cent of the capital, the amount they are required to subscribe by the Glass-Owen bill, would amount to \$100,000,000, while 5 per cent of the deposits would amount to \$400,000,000. In other words, the national banks are required to subscribe \$500,000,000 of the money which is to constitute the working capital of the reserve banks. The national banks are not allowed to draw any interest on this money. They can not draw on it; under no circumstances can they use it. All this this Democratic Congress proposes to do in the face of the fifth amendment, which says that no person shall be deprived of his property without due process of law, as well as in the face of the other equally binding declaration that private property shall not be taken for public use without just compensation. The proponents of this bill, of course, maintain that the banks are compensated; that they get due return for all the loss they will sustain; that they, along with the rest of the country generally, will be benefited. If that be true, the banks would gladly do the things required of them in this bill without putting them to death in the event they do not. Your actions belie your words, gentlemen, when you make such a statement.

POWERS OF FEDERAL RESERVE BOARD.

The next question to which I want to call your attention is the powers given the Federal reserve board by the bill. As

enumerated by an influential Member of this House the other day, they are as follows:

1. To readjust Federal reserve districts created by the reserve bank organization committee.
2. To create new and additional districts to those created by the reserve bank organization committee.
3. To prescribe regulations for establishing branch offices of Federal reserve banks.
4. To designate the three directors of the Federal reserve bank specified in this act as class C.
5. To remove any director of class B in any Federal reserve bank.
6. To designate the chairman of the board of directors of Federal reserve bank.
7. To prescribe regulations for maintenance of local office of Federal reserve board on premises of Federal reserve bank.
8. To designate the Federal reserve agent.
9. To require and receive reports of Federal reserve agents.
10. To fix compensation of Federal reserve agents.
11. To review proceedings of boards of directors of Federal reserve banks fixing compensation of themselves.
12. To remove chairman of board of directors of Federal reserve bank at pleasure and without notice.
13. To prescribe rules and regulations for permitting State banks and trust companies to become members of Federal reserve bank.
14. To pass upon applications of State banks and trust companies to become members of Federal reserve bank.
15. To establish by-laws governing applications of State banks for membership.
16. To require surrender of stock of State banking association or trust company upon receipt from Federal reserve bank of cash-paid subscription.
17. To require Federal reserve bank upon notice to suspend State banking association or trust company and make payment to suspended member for its stock.
18. To levy semiannual assessments on Federal reserve banks for expenses.
19. To examine accounts, books, and affairs of each Federal reserve bank.
20. To require such statements and reports of Federal reserve banks as it may deem necessary.
21. To permit rediscount by Federal reserve banks of paper of other Federal reserve banks.
22. To compel Federal reserve banks to rediscount paper of other Federal reserve banks.
23. To suspend reserve requirements for not more than 30 days.
24. To renew suspensions of reserve requirements for periods of not more than 15 days.
25. To establish a graduated tax upon the amounts by which reserve requirements of act may be permitted to fall below level provided for in act.
26. To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.
27. To add to number of cities classified as reserve and central reserve cities under existing law in which national banking associations are subject to the reserve requirements of this act.
28. To reclassify existing reserve and central reserve cities and to designate the banks therein as country banks at its discretion.
29. To suspend officials of Federal reserve banks.
30. To remove officials of Federal reserve banks for incompetency, fraud, or deceit.
31. To require writing off of doubtful or worthless assets upon the books and balance sheets of Federal reserve banks.
32. To suspend for cause relating to violation of any of the provisions of this act the operations of any Federal reserve bank.
33. To appoint a receiver for any Federal reserve bank for cause relating to violation of provisions of this act.
34. To determine or define the character of paper eligible for discount.
35. To fix the amount which cash reserve of Federal reserve bank must exceed outstanding demand liabilities to permit discount of paper for member banks.
36. To prescribe rules and regulations governing the purchase and sale in the open market by Federal reserve banks of bankers' bills and bills of exchange.
37. To review rates of discount fixed by Federal reserve banks.
38. To grant or refuse applications of Federal reserve banks to open and maintain banking accounts in foreign countries and establish agencies there for the purpose of purchasing, selling, and collecting foreign bills of exchange.
39. To approve apportionment made by Secretary of Treasury of Government funds deposited in Federal reserve banks.
40. To charge interest on Government deposits at joint discretion of Federal reserve board and Secretary of Treasury.
41. To issue Federal reserve notes.
42. To call upon Federal reserve banks at any time for additional security for Federal reserve notes issued to them.
43. To assign letter or serial number to Federal reserve bank for notes issued to it.
44. To require in its discretion Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of notes issued to them.
45. To grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes.
46. To establish rate of interest to be paid on Federal reserve notes.
47. To prescribe regulations governing substitution of collateral security for the protection of Federal reserve notes.
48. To make and promulgate from time to time regulations governing the transfer of funds at par among Federal reserve banks.
49. To exercise at its discretion the functions of a clearing house for Federal reserve banks.
50. To designate a Federal reserve bank to act as clearing house for Federal reserve banks.
51. To require each Federal reserve bank to exercise functions of clearing house for its shareholding banks.
52. To prescribe period within which and regulations under which national bank notes remaining outstanding after 20 years from the passage of this act may be recalled and redeemed by national banking associations.
53. To require Federal reserve banks to maintain lawful reserve.
54. To appoint receivers for Federal reserve banks failing to maintain lawful reserve.
55. To require examination of affairs of national banking associations as often as it deems necessary.
56. To determine salaries to be received by bank examiners.

57. To assess expenses of bank examinations upon associations examined.
58. To require examinations of national banking associations in reserve cities.
59. To require examinations of Federal reserve banks.
60. To add to the list of cities from time to time in which national banks shall not be permitted to make loans secured upon real estate.
61. To exempt savings departments of national banking associations from any and every restriction upon classes or kinds of business governing national banks.
62. To prescribe rules and regulations governing savings departments of national banks.
63. To make and publish lists of securities, paper, bonds, and other forms of investment which savings departments of national banks shall be authorized to buy, it not being necessary that said lists be uniform throughout the United States.
64. To prescribe conditions and circumstances under which national banking associations capitalized at a million dollars or more may establish branches in foreign countries.
65. To approve or reject applications of national banks to establish foreign branches.
66. To perform the duties, functions, or services specified or implied in this act.

These are the express powers. What the implied powers are Heaven alone knows. At no time in the history of this country has any such power ever been given over the national banks of the land. At no time in the history of the oldest national bank on American soil has there ever been such a bold and brazen attempt made to browbeat them by Federal enactment into becoming servient tools of a great political organization. "You scratch my back if you want me to scratch yours," says the Federal Government, spokesman for the Democratic Party, to the national banks of the country. It says much more than that. It says, "Do our bidding or die."

We hear much of Jeffersonian and Jacksonian Democracy. Often the teachings and preachings of these great men are rolled as sweet morsels on the tongue and under the tongue of the faithful—the latter-day saints of simon-pure Democracy. But in their banking and currency bill they are flying in the face of the teachings of Andrew Jackson.

When he was President he read a report to his Cabinet, in September, 1833, in which he said:

The bank is thus converted into a vast electioneering engine, which means to embroil the country in deadly feuds and, under cover of expenditures in themselves improper, extend its corruption through all the ramifications of society. It is the desire of the President that the control of the banks and the currency shall, as far as possible, be entirely separated from the political power of the country, as well as wrested from an institution which has already attempted to subject the Government to its will.

These are the words of Andrew Jackson. They were spoken with reference to the power given the national banks at that time; but this power, compared with the power that the Glass bill proposes to confer upon the Federal reserve board, amounts virtually to no power at all. And President Jackson, in his farewell address, speaking again with reference to the power of the national banks in his day, said:

In the hands of this formidable power thus perfectly organized was also placed unlimited dominion over the amount of the circulating medium, giving it the power to regulate the value of property and the fruits of labor in every quarter of the Union and to bestow prosperity or bring ruin upon any city or section of the country as might best comport with its own interest or policy.

And yet how weak, feeble, and puerile the power of the national banks at that time compared with the gigantic power of the Federal reserve board under the provisions of this bill.

The sponsors of this Glass-Owen bill contend that they are putting the banks under governmental control. But instead of placing the banks under governmental control they are putting them under political control. They are putting them under the control of a political board, at least five of whose seven members, in this instance, will be Democrats—Democrats, at least, distinguished for party service. Under their control will be put the 7,400 national and the 20,000 State banks and trust companies of this country.

These banks and trust companies have an aggregate deposit of \$18,000,000,000. The Federal reserve board will have the power to compel these banks, or the banks have the right to get power from the Federal reserve board, to issue and distribute an unlimited amount of paper money to such sections of this country as the Federal reserve board may see fit and to deprive such other sections of this country as they see fit of the privilege of getting and using such paper money.

This Federal reserve board, composed of seven members, five of whom are to be Democrats, will have it in their power to have issued and distributed to the Democratic sections of this Union an unlimited amount of paper money and to deny such right to the Republican sections of this great country.

I am opposed to this partisan, unjust, and unfair bill, and I shall vote against it from the beginning to the end of its unholy passage.

Mr. HAYES. Mr. Chairman, I now yield 45 minutes to the gentleman from New York [Mr. PLATT].

Mr. PLATT. Mr. Chairman, I hardly expected to come in so soon after the gentleman with whom I so violently agree and disagree, the gentleman from Georgia [Mr. HARDWICK], but I want to congratulate the gentleman on his loyalty to his party in spite of his opposition to the bill. I am afraid I shall have to disagree in part with some things that have been said by some of my colleagues on this side of the House in regard to the long-continued secret-caucus process to which this bill has been subjected. If I belonged to a party which included so many men who believe in fiat money, in coining cucumbers and corn tassels, in chasing bogie men, and in other forms of idiocy, I should be in favor of getting the bunch together in secret caucus and in administering chloroform and discipline, too. And, furthermore, in spite of the fact that I have been roasting here in Washington all summer waiting for an opportunity to do some work with the members of the Banking and Currency Committee, I feel like congratulating the gentleman from Virginia upon the success of the chloroform and discipline which he has administered.

On the 23d of June the President of the United States came into this House and delivered a message on the currency question, which, boiled down and stripped of its rhetorical setting, was, in substance, as follows:

This tariff bill, which you are about to pass in fulfillment of the pledges of the Democratic platform, is likely to cause trouble, and therefore it is necessary to pass as soon as possible a currency bill to relieve the situation.

In pursuance of the recommendations of that message we are now considering a currency bill.

Mr. Chairman, I congratulate the gentleman from Virginia [Mr. GLASS] and the Democratic majority in this House on having annexed so much of the Hon. Nelson W. Aldrich. This banking and currency bill before us is none other than the much-discussed "Aldrich plan" in disguise, so disguised as to make it seem to harmonize with the Democratic platform and with the financial ideas of the distinguished Secretary of State, who has won his present exalted position by being always wrong on all currency questions that have come before the people up to this time. The disguise is pretty thin in some places, a sort of X-ray disguise, so thin that you can see right through it to the motive back of it without spectacles. Thus what are really in effect bank notes "purport on their faces" to be greenbacks; that was the language of the bill as it was first introduced, but "purport on their faces" was a little too much of a joke and was stricken out. In its place we find the statement that "the said notes shall be the obligations of the United States"; yet they are in fact made the obligations of the Federal reserve banks, which are required to keep a reserve of 33½ per cent against them and to mortgage all their assets for their security. The explanation of this contradiction lies in the fact that the Democratic platform and Mr. Bryan have declared that "all money must be issued by the Government," and Mr. Bryan regards bank notes as money.

The Democratic platform and Mr. Bryan also declared in no uncertain tones against a central bank and against the Aldrich plan, yet this bill creates a central bank just the same. You can not see it easily—it is disguised so as to fool the good people who believe in Mr. Bryan and in the Democratic platform—but it is there just the same. The central reserve association of the Aldrich plan has been split up into not less than 12 regional or Federal reserve banks in order to get votes and to disguise the fact that their main features are borrowed from a wicked Republican measure; but, horrible as it may seem, the central bank peeps through the cracks, the spaces made by splitting up the central reserve bank into regional banks. It is a Government-controlled central bank, to be sure, and confined to the rediscounting of notes and the issue of paper currency, but no less a central bank—a bank within or behind a group of banks.

A careful comparison of this bill with the bill introduced by the National Monetary Commission—the Aldrich commission—will show that more than half of the former is taken from the latter. All the main outline ideas of the bill come from the Aldrich plan—the idea of organizing for the pooling of reserves, to be available for aiding individual banks through rediscounting their short-time commercial paper; the idea of obtaining capital for the banker's bank or banks by subscriptions from the national banks themselves; the 20 per cent subscription idea, with 10 per cent to be paid in and the other 10 per cent to be subject to call; the idea of having the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency serve as an organization committee and also serve on the board of control—all these and many minor ideas are borrowed from the Aldrich plan.

This bill obtains much of its strength and some of its weakness from the Aldrich plan. Some ideas that were good if applied to a single central reserve association are sources of

weakness as applied to a series of comparatively small Federal banks, with a capital no greater than \$5,000,000. Doubtless \$5,000,000 looks like a good deal to many of us. It did to me until I reflected that there are in every one of the large cities of the United States single buildings that are worth as much or more than that, and in some cities a great many such buildings. Now, a \$5,000,000 institution in a city which has a revenue from taxation of \$150,000,000 would not seem like a very large or a very imposing or even a very substantial institution. In such a city many business firms and corporations, and doubtless some banks, would have far larger capital than the minimum capital of the Federal reserve bank. I do not suppose there will be more than one Federal reserve bank in the city of New York and the surrounding metropolitan district, but under the terms of this bill there might be three or four of them there, as the capital of the national banks alone of the city of New York is about \$120,000,000. You would need to add only a few of the great State banks to bring it up to \$150,000,000. Even one Federal reserve bank with a capital of \$15,000,000 in New York City would be overtopped by five national banks of the great city, and a \$20,000,000 Federal reserve bank would be overtopped by three of them.

This points to one of the weaknesses of this adaptation of the Aldrich plan to the Democratic platform. It was all well and good to obtain capital for a central reserve association by subscription from member banks, with the provision that increases or decreases should be in proportion to increases or decreases of capitalization of member banks, but with the central reserve association split up into not less than 12 Federal reserve banks this plan of raising capital becomes a source of weakness.

The failure of a member bank decreases automatically the capital of the Federal reserve bank of the district and might impair its capital just when its assistance would be most needed. The National City and the Bank of Commerce of New York City alone will own \$5,000,000 of the capital in the New York City Federal reserve bank, or one-third of it, supposing that the Federal reserve bank will have \$15,000,000 of capital, or one-fourth if a \$20,000,000 capital. Now, what would happen to the Federal reserve bank of New York if those two national banks should fail? Perhaps you will say they can not fail. Well, then, they are safer banks to-day in which to keep country reserves than the New York Federal reserve bank will be. What would happen if one of them should fail? Would the Federal reserve bank be able to extend any help to the other banks of the city? It would not; and its inability to help would cause other failures and the suspension of specie payments in New York and probably all over the country. There are at least 10 other banks in New York whose failure would cause serious embarrassment to a local Federal reserve bank in that city.

Now, let us look at this weakness of the split-up Aldrich plan in another light. The New York City national banks combined have a capital of \$120,200,000 and the banks of New York State a capital of \$171,600,000. Add the capital of the New England banks, \$105,776,000, and you have \$277,376,000, or about one-fourth of the capitalization of the banks of the whole United States. Add the capitalization of the banks of Pennsylvania, \$118,034,000, and you have \$395,410,000, or considerably more than one-third of the capitalization of the whole United States. Your Federal reserve banks in New York, New England, and Pennsylvania then will have a capitalization of \$39,541,000, out of a total of about \$105,000,000, without counting any State bank or trust company capitalization. Call it \$40,000,000 for convenience of figuring, or \$45,000,000 with New Jersey, Delaware, Maryland, and the District of Columbia figured in. Now, you have only \$60,000,000 left for all the rest of the country. Suppose three Federal reserve banks to be organized for this territory and nine for the rest of the country. Those nine would have an average capital of less than \$7,000,000 each, and as the Chicago Federal reserve bank would certainly have a capital of \$15,000,000 all the others would be held down pretty close to the minimum; there would be scarcely \$6,000,000 left for each of them, and as St. Louis, a central reserve city, would probably have a bank of \$10,000,000, most of the rest would be \$5,000,000 banks and of no great strength.

In all probability neither the banks nor the people would have any great confidence in these numerous reserve banks—at least not until they had demonstrated their soundness and usefulness. If even a small number of the national banks in some of these districts should elect to take out State charters, and if none of the State banks should choose to come in, some of the districts could not organize Federal reserve banks at all.

All that were organized would be greatly overtopped by the Federal reserve bank in New York City; and in case of a seri-

ous financial disturbance we should probably have a recurrence of the breakdown of the check-collection machinery that we saw in 1907, for each individual Federal reserve bank would be under the same inducements to strengthen its own reserves at the expense of the Federal reserve banks of other districts, as the individual, national, and State banks have to-day in a crisis. In the end there might even be a resort to the great clearing-house associations for help, and clearing-house certificates might have to be issued despite the prohibition on page 36, line 7.

It will be noted that the bill provides that not less than 12 Federal reserve districts shall be created. There may be as many more as can obtain a capital of \$5,000,000, the apparent purpose being to create as many as possible of these Federal reserve banks and make them as small and as weak as possible. It has been stated that Mr. Bryan wanted to create as many as 50 of them and that a well-known Senator wanted one for every State.

The effort in this bill to compel national banks to contribute to the capital of the Federal reserve banks follows as a necessary corollary to the effort to organize as many as possible of the reserve banks. The Aldrich plan provided for voluntary subscriptions from the banks, as, obviously, sufficient capital could be obtained in that way to start a single strong central reserve association; but without compulsion certainly sufficient capital can not possibly be obtained for 12 or more Federal reserve banks. I believe this effort at compulsion is, nevertheless, one of the most inexcusable and most dangerous features of the bill. It may disrupt our national banking system and is, in my judgment, entirely unnecessary to the carrying out of the general scheme of the bill. Enough capital to organize two or three strong Federal reserve banks can undoubtedly be obtained without compulsion, and the system would develop naturally and gradually without the compulsory feature and without the provision for not less than 12.

The framers of the bill seem to think that if they take out the "not less than 12" provision the result will be a single central bank, because bankers generally favor that plan. I think they have not reckoned upon the force of local pride and enterprise. Certainly each of the present central reserve cities will want a Federal reserve bank. San Francisco and other large centers will not be far behind in their demands if they can raise the capital. Doubtless there is some politics in the plan of having not less than 12. It is expected to obtain votes and local favor, and the same force would operate to create more than one bank by voluntary subscriptions. It would furthermore be easy to insert a provision that there should be not less than 4.

I believe the single reserve association provided for in the Aldrich plan would be very much superior to the plan of this bill, but I should have no serious objection to a division of the country into five or six Federal reserve districts. In fact, the latter plan has some advantages, especially in facilitating the redemption or recall of Federal reserve notes or currency issued. I regard the provision on page 31 that no Federal reserve bank can pay out the Federal reserve notes of another Federal reserve bank as one of the most valuable features in the bill. It is, of course, borrowed from the Canadian banking system, and should work to produce real elasticity in the issues of Federal reserve notes, if such issues ever amount to anything. It would be difficult, if not impossible, to arrange such a system with a single central reserve association with branches, and the scheme of taxing the issues provided in the Aldrich plan, borrowed from the German Reichsbank, is distinctly inferior.

On the other hand, the central association with branches would provide for more nearly uniform interest rates throughout the country, even if the rediscount rate were not fixed by law at a uniform rate. The Democratic Party, by breaking down the old United States Bank, and by persistent opposition to a really national system of banking, has condemned the South and West to the payment of much higher rates of interest than they should be paying.

Mr. CALLAWAY. Will the gentleman yield for a question?

Mr. PLATT. Yes.

Mr. CALLAWAY. The gentleman spoke of the Democratic Party breaking down the national banks—

Mr. PLATT. The old United States Bank.

Mr. CALLAWAY. Did not the Southwest get along all right until the Republican Party passed this banking act? We never suffered from 1836 to 1860.

Mr. PLATT. The gentleman can answer that question as well as I can.

Mr. CALLAWAY. But have not I answered it better?

Mr. PLATT. That is for the gentleman to judge, or the House. I shall have a further answer later.

We have really no national banking system in this country. Our national banks are local institutions. Doubtless there are great advantages in our free banking plan, as it has been called, as there are also great disadvantages, particularly for rapidly developing sections like the West and South. We have no safe, easy means of loaning the money which accumulates in the reservoirs of capital in the East, where it is often most in demand in the West and South, as Canada has.

I was very much surprised to find that a small country bank in my district, a bank with only \$25,000 capital, located in a little village of about 2,000 people, was loaning a considerable part of its deposits to cotton planters in the South. This bank, like many other country banks in the long-settled portions of the country, has much larger deposits than it can possibly loan at home. It is making its loans to cotton planters, however, not directly, but through middlemen; that is, by purchasing guaranteed notes through note brokers and guaranty associations, who, of course, make a profit. The cotton planters pay 7 per cent or 8 per cent for their money, and the bank gets 6 per cent. Inasmuch as considerable of the money in my district is still loaned at 5 per cent, the transactions are profitable to the bank, but if we had some safe way of loaning directly in the West or South the borrowers would pay a lower rate through elimination of the middleman.

If you should go through North Dakota or Montana, you would find people paying 8 per cent on perfectly well secured notes, though right over the border in Canada people are borrowing at 6 and 7 per cent from the great Canadian banks.

The Bank of Montreal, the Dominion Bank, the Canadian Bank of Commerce, and other Canadian banks collect the money which accumulates in the East and loan it through their own branches where their greatest demand for it is in the West, and the differences in rate between Montreal and Manitoba or Saskatchewan are, I am told, seldom more than 1 per cent.

Mr. WINGO. Would it disturb my friend for me to ask him a question?

Mr. PLATT. Not at all.

Mr. WINGO. The gentleman mentioned a few moments ago that he was surprised to learn that a small bank in a small village in his State was loaning its deposits indirectly to the cotton planters of the South. Has the gentleman any data to show the size of the notes which this bank handles?

Mr. PLATT. No; I have not. That is something—

Mr. WINGO. They were to the large cotton planters, were they not?

Mr. PLATT. I suppose they were, because they came from guaranty associations that would not be likely to guarantee notes unless they were the notes of large planters.

Mr. WINGO. What per cent did they get?

Mr. PLATT. The bank got 6 per cent.

Mr. WINGO. Has the gentleman in his experience found any banks in New York State that loan to the small farmers of the South at 7 per cent?

Mr. PLATT. Directly?

Mr. WINGO. Directly or indirectly.

Mr. PLATT. Not excepting in that once instance, in which I understood the cotton planters paid 7 per cent. They may have paid more. I do not know exactly what the rate of interest was.

Mr. WINGO. That is the extent, is it, of the gentleman's information as to the rate of interest that the small farmers of the South pay?

Mr. PLATT. I think they were large farmers.

Mr. WINGO. They were land notes, were they not?

Mr. PLATT. They were loans that were made on the cotton crop. They purchased the notes in the early spring, and they were paid off in the fall, I think in November.

Mr. WINGO. The gentleman will recognize that there is quite a difference between the problem that confronts the small farmer who makes only 8 or 10 bales of cotton a year and the large plantation that produces 10,000 bales. The gentleman recognizes the difference that confronts them, does he not?

Mr. PLATT. Yes; and those conditions ought to be taken care of by local associations, something of the kind that was spoken of by the gentleman from Indiana [Mr. Moss] last night. There should be farm credit associations all over this country that would loan directly to the farmers and that would have control, so that they would know that they are loaning safely. There are something like 50 granges in my district, where the farmers are largely dairymen. They all know each other and they know what every man is worth, but for some reason or other they have not formed such a credit association yet. They are talking about it, but so far they have not got busy.

Our individual banking system, with its multitude of small local units, is better for the East, which gets a very low rate, but unfortunate for the West and South, where the rates are sometimes double those that prevail in New England and New York. The banks in most eastern cities, small and large, at times have deposits much larger than are needed at home, and this is particularly true of the country banks in neighborhoods that are attractive as places of residence, as in my district. Nearly all such eastern banks invest their funds largely in bonds, railroad bonds, municipal bonds, State bonds, and so forth. This they do partly to obtain liquid assets, to be considered a secondary reserve, and bankers in my district have told me that they consider it good banking to invest about one-third of their deposits in bonds; but as these bonds never yield more than 5 per cent, and often do not yield as much as 4 per cent, such investments would not be made if there were a steady demand for their funds on the security of good commercial paper at home. Of course they purchase such commercial paper as comes into the market from time to time through the note brokers, but here again the middle man intervenes and gets part of the profit.

In my own city, a city of about 30,000 inhabitants, the deposits in the banks—four national banks, a trust company, and a savings bank—amount to about \$25,000,000, the savings bank alone having on deposit about \$15,000,000. Naturally no such enormous sum can be profitably employed at home and the savings bank has made a great many of its loans in New York City on mortgages bearing as low as 4 per cent interest. Our national banks all have large investments in bonds.

I might say that their statements show that nearly all of them have their capital and surplus invested in bonds. The average bank of this kind, when it wants help, does not take commercial notes for rediscount, but the method is to take some bonds down to New York and get money on collateral in that way at a low rate of interest. The same thing is true of a great many other eastern communities, and the most notable example I know of is to be found within 75 miles of Washington, at the little city of Frederick, Md., a city of scarcely over 12,000 people. One of the four national banks in that city, a bank with a capital of \$100,000, has deposits amounting to \$3,300,000 and owns bonds to the amount of \$1,300,000.

Now, the point I am getting at is that if President Andrew Jackson and the Democrats of his day had been wise enough to know how to reform the old United States bank, instead of destroying it, even if they had not been willing to give it national competition by allowing the great eastern banks to establish branches in other States, much of this wealth that accumulates in eastern centers could easily and naturally be spread throughout the country, without the intervention of middlemen, at lower rates than those which have prevailed and are now prevailing throughout the West and South.

I think there are some valid objections to the provision in the Aldrich plan for uniform rediscount rates, regardless of local conditions, but they are objections which appeal more to the student of banking than to the people at large, and I should think the Democratic Party would have pretty hard work defending them among people who are paying from 8 to 10 per cent on good paper. Even without the legal provision that the rediscounting rates should be uniform, a single central reserve bank or association would undoubtedly automatically operate toward greater uniformity and toward lower rates for the West and South than can possibly be the case with the scheme provided in this bill of not less than 12 Federal reserve banks.

Mr. HARDY. Mr. Chairman, will the gentleman submit to one question?

The CHAIRMAN. Does the gentleman yield?

Mr. PLATT. Yes.

Mr. HARDY. If this central and branch bank system is so clearly the right thing, why in the world has not the Republican Party put that system into operation during the 60 years of its reign?

Mr. PLATT. I will say to the gentleman that the same prejudices that built up the opposition in the Democratic Party have prevailed to a certain extent in the Republican Party and have only recently been cleared away a little.

Mr. HARDY. The gentleman thinks his party is tarred with the same feather?

Mr. PLATT. I think if the people understood that you could go over to Canada and borrow money for 2 per cent less than it can be had on this side of the line they would know that there is something wrong about the present system. It is because now you can not spread the capital that accumulates in the East over the West safely.

Mr. HARDY. I understood the gentleman to criticize the Democratic Party for not providing a remedy for the conditions

he speaks of, and yet there has been a delay of 60 years under the Republican administration to bring about these reforms.

Mr. PLATT. Really the Republicans led to the views expressed in the bill that is before us.

NOTE ISSUES.

I have said that the currency provided for in this bill is really bank currency, though on its face it appears to be United States Government currency. I have also said that the Federal reserve board, which is to issue it through and to the banks, has been constituted practically a central bank of issue under Government control. You will notice on page 32, lines 7 to 10, that the Federal reserve board is given discretion with regard to the issues of Federal reserve notes to applying Federal reserve banks, and you will also notice on the same page that the Federal reserve board or the local Federal reserve agent is authorized to charge "such rate of interest on said amount as may be established by the Federal reserve board, which rate shall not be less than one-half of 1 per cent per annum."

This, of course, is said to be merely the equivalent of the present tax of one-half of 1 per cent upon bank notes, but it is not called a tax but a "rate of interest," and may be fixed at any point above one-half of 1 per cent which the board shall determine. The word "interest" is apparently used with malice prepense. In other words, the board is given full powers of a bank except the receiving of deposits. It issues notes on collateral security, practically rediscounting the once rediscounted notes of the Federal reserve banks applying to it.

Now, apart from the question of the advisability of issuing these notes as Government notes, and apart from the danger of allowing them to be redeemed in lawful money—greenbacks—it is certainly a clumsy means of getting notes into circulation in response to the demand, almost as clumsy in fact as that provided in the Vreeland-Aldrich emergency currency plan, and there is clearly the possibility that politics or favoritism to some particular locality for political effect may at some time become a factor.

It may be said also that if the Government, or a board appointed by the President, is going to be given full discretionary powers of note issue on collateral security, it should also be given the right to receive deposits. In other words, the Federal reserve board might as well become in every respect a central bank with full power as to be merely a bank of issue half concealed behind the reserve banks, over which it is already given so much control as to make them little more than branches.

I agree fully with what has been said by my colleague from California about the folly of issuing these notes as Government obligations. They should be bank notes, pure and simple, dependent wholly upon good banking and a sufficient reserve for their security.

It seems to be particularly difficult, as has already been said, to make many people understand that a bank note is not money any more than a certified check is money. A bank note, like a check, is merely a promise to pay on demand. To make it read on its face as the obligation of the United States, like a greenback or a Treasury note, is to be guilty of practicing a certain amount of deception, and may lead to defeating in time to come one of the chief purposes of this bill, the establishment of an elastic currency. Checks provide an elastic currency so far as they go. They are issued when wanted, and come back to the bank for cancellation naturally when they have fulfilled their mission of transferring credit from one person to another. Bank notes ought to come back in a similar fashion after fulfilling their mission in order to be elastic. Being issued for uniform small amounts, they naturally pass through more hands than a check drawn to pay only a particular account, but they are none the less instruments of credit and not money. Nor is there any considerable increase in profit to a bank from issuing notes which regularly come back to it, as in Canada through the clearing houses, than there is from giving credit on the books of the bank upon which to draw checks or drafts. The difference in profit is mostly caused by the greater bookkeeping involved in collecting the checks and transferring the credits on the books.

In other words, the much-discussed note-issue privilege is not a privilege, as banking goes to-day, of any great value to a bank. It does not give the bank the right or privilege of controlling the money of the country, nor does it give to private individuals the right of "coning paper," as it is said by so many cranks.

UNFAIR TO COUNTRY BANKS.

This bill though improved in its sections applying to reserves is still unfair, in my opinion, to the country banks, and in spite of some efforts to create a contrary impression it is the country banks which are the real objectors to the bill rather

than the big city banks. Every Member of this House whose constituency lies in a country-bank district knows this from the letters he has received. Scarcely a single country bank can be found that is in favor of the plan. Most of them resent particularly the effort to force them to subscribe to the capital of the Federal reserve banks on pain of forfeiture of their charters, and some have declared flatly that if this provision is retained they will give up their charters as national banks and reorganize as State banks. In my own city all but one of the four national banks were formerly State banks, organized before the national banking act passed, and they are still known by the same names they took as State banks. They would lose little or nothing in prestige by going out of the national system, and two of them would lose little through the sale of the bonds they hold to secure circulation.

Mr. MURDOCK. Will the gentleman yield?

Mr. PLATT. Yes.

Mr. MURDOCK. When those four banks reorganized as national banks, did they include in their names the word "national"?

Mr. PLATT. Yes; but here is a strange thing: You will find in nearly every old town a First National Bank, and that First National Bank is generally the bank that was organized last. The first national banking act, passed in 1863, did not allow the State banks to organize with their old names, and they would not come in. They did not want to give up their old names. They thought the new system was something of an experiment. Consequently in every town a group of men got together and organized the First National Bank, which, of course, was a younger organization than any of those already in existence. So the First National Bank in my town is the last bank that was organized in that town.

In 1865 the law was amended so that State banks could come in with their old names, and the Merchants' Bank reorganized as a national bank and was called the Merchants' National Bank, and the Farmers' Bank was reorganized as the Farmers' National Bank, but in popular language the word "National" is not used except with regard to the First National Bank.

Mr. MURDOCK. In ordinary banking circles what is the advantage that a national bank has over a State bank?

Mr. PLATT. I think to-day it is very little. Of course originally, when Government bonds bore 6 or 7 per cent interest, there was quite a profit in the note circulation, but to-day, with 2 per cent bonds, there is very little. One of our banks has 3 per cent bonds, and the cashier of that bank told me: "We can get out of this system and not lose a cent on our bonds." To-day there is practically no profit in circulation, except when the needs for currency are a great deal more than any ordinary demand.

Mr. YOUNG of North Dakota. I understand the gentleman to say that he believes that most of the country banks are opposed to this measure.

Mr. PLATT. That is true in my district, and so far as I have heard in many other districts.

Mr. YOUNG of North Dakota. Does not the gentleman think that it is confined very largely to banks where the demand for money is not as great as the deposits and other resources, to banks where the deposits are very large, and where the local demand for money is not sufficient to take up or utilize all their deposits?

Mr. PLATT. I hardly think so. Of course that is true of my district and of many of the country bankers with whom I have talked. I have talked with the country bankers in parts of Maryland, more or less, and I know they feel just as our bankers do at home. I should like to ask the gentleman whether his country bankers, in his district in North Dakota, are in favor of the bill or against it?

Mr. YOUNG of North Dakota. The majority of them are in favor of it, and that leads me to believe that where the demand for money is greater than the supply, where the deposits are not sufficient to take care of the needs of the locality, the banks are in favor of this Glass measure.

Mr. PLATT. In other words, some of them have an idea that this measure is going to draw money out of New York and deposit it where they can get at it, I suppose?

Mr. YOUNG of North Dakota. No.

Mr. PLATT. I am afraid they are going to be disappointed.

Mr. LINDBERGH. The gentleman said that formerly the banks made more money on their circulation than they now do. Is it not a fact that formerly they had to pay such a high premium on the bonds that they did not like to take out circulation?

Mr. PLATT. When they first went into it that was hardly true.

Mr. LINDBERGH. You mean formerly, under the State banking law.

Mr. PLATT. When the State banks were reorganized as national banks there was quite a profit. They bought bonds with greenbacks and got them below par, sometimes.

Mr. LINDBERGH. I did not understand that that was what the gentleman meant at first.

Mr. PLATT. Then there is a special injustice in requiring a 20 per cent subscription, of which 10 per cent is to be paid in, for a 5 per cent stock, from country banks as compared with city banks, because it represents from country banks generally a larger percentage of their actual working capital than from city banks. It should be remembered that surplus and undivided profits are a part of the working capital of all banks. Now, the 37 national banks of New York City have a surplus larger than their capital, and the same is true of the Philadelphia banks and of the banks of several eastern reserve cities, like Albany. In Boston the bank surplus is more than two-thirds of the capital, but outside of New England, New York, New Jersey, and Pennsylvania the surplus item in bank statements generally shows less than one-half the capital. In only two States, Pennsylvania and New Jersey, is surplus greater than capital. In 12 others, including the District of Columbia, it is more than one-half the capital. In Iowa, a typical agricultural State, the national-bank surplus is less than one-third of the capital, in Oklahoma it is only a little more than one-fourth, and in Florida and North Dakota just over one-third. Obviously the banks of Iowa, Oklahoma, Florida, and North Dakota must contribute a considerably greater proportion of their resources to the capital of the Federal reserve banks than the banks of Pennsylvania and New Jersey or New York City. The New York City, New Jersey, and Pennsylvania banks are called upon for a paid subscription of less than 5 per cent, while the Iowa, Oklahoma, Florida, and North Dakota banks must pay from 7 to 10 per cent of their working capital. Some of the big New York City banks have surplus funds much larger than their capital, and will subscribe considerably less than 5 per cent, one of them, the Hanover National, less than 2 per cent of its working capital. Country banks generally have smaller surplus funds than city banks, and this is particularly true of the West and South. The forced subscription of 20 per cent, with 10 per cent paid in, is particularly unjust to recently organized banks, which have had no opportunity to accumulate any surplus.

Mr. AUSTIN. Has the gentleman any figures with relation to Tennessee or the Southern States upon this point that he is just upon?

Mr. PLATT. The gentleman will find them in the report of the Banking and Currency Committee, on page 92, I think.

Mr. YOUNG of North Dakota. Will the gentleman yield?

Mr. PLATT. I will.

Mr. YOUNG of North Dakota. I would like to ask the gentleman whether any bankers from the large reserve centers have made any complaint along the lines he mentions respecting the basis upon which the banks come in; that is to say, the percentage of their capital which must be paid in toward the capital of the regional reserve banks?

Mr. PLATT. I think the complaint of the large city banks has been exaggerated. They do not like some sections of the bill, but I think the chief complaint is from the country banks. The New York City banks will not suffer as much as the country banks from the terms of the bill.

Mr. GLASS. Will my colleague yield?

Mr. PLATT. I will.

Mr. GLASS. Can the gentleman account for the fact that the American Banking Association, without a dissenting vote, swallowed whole, without a grimace, the Aldrich bill, which required precisely the same thing in the way of capitalization?

Mr. PLATT. I have said that this provision was copied from the Aldrich bill.

Mr. GLASS. Yes; but that does not explain why they were willing to go in under the provisions of the Aldrich bill and are not willing to go in under the same provision in this bill.

Mr. PLATT. I think the gentleman must admit that the Aldrich bill was voluntary.

Mr. GLASS. That does not explain why they were willing to come in under precisely the same conditions, indorsing that provision of the Aldrich bill and bitterly complaining against the same provision in this bill.

Mr. PLATT. You mean contending against having to pay 10 per cent?

Mr. GLASS. Yes.

Mr. PLATT. I can not reconcile those views. I do not think the present opposition of the big banks to that feature of the bill is of any great account.

Mr. YOUNG of North Dakota. Is it not a fact that the small country banks have not in the past or up to this time, to any extent, been represented in the American Banking Association?

Is it not a fact that the association is composed largely of men from the stronger banks, either from the great cities or the larger banks in the rural communities?

Mr. PLATT. I presume that is a fact.

Mr. GLASS. The smaller banks are largely represented in the association. I will agree that the larger banks speak for the smaller banks.

Mr. YOUNG of North Dakota. I do not think the country banks have been heard from, at least not officially before the committees. The large, powerful bankers have assumed to speak for them.

Mr. PLATT. If the gentleman has received as many letters as I have, he has heard from them.

Mr. YOUNG of North Dakota. Yes; I have heard from them, and most of them in my district are in favor of this bill. Some of them are opposed to the bill in toto, and some of them would like to see certain amendments made. They would like to have the Federal reserve board made nonpartisan, and they realize that they will be required to pay in more than their share of the capital of the regional reserve banks, because the percentage of 10 per cent is figured only on the capital. The item of surplus is not considered. In the country banks the surplus is usually much smaller in proportion to capital than the large city banks, as the gentleman from New York [Mr. PLATT] has already pointed out.

And if the courteous gentleman from New York will yield for a couple of minutes longer, I will say that I have also heard from a large number of my constituents, and almost all of them who have written to me are in favor of this bill; but many of them are much more interested in the establishment of a system of rural credits, and some of them have criticized the present leaders of Congress for delaying the consideration of the establishment of a system of rural credits or rural banks designed to lighten the burdensome rates of interest which the farmers now pay.

Mr. PLATT. Then the compulsory terms of this bill are unjust, because forcing country banks to give up relations with their city correspondents, which, generally speaking, have been profitable and pleasant. If your constituency is one in which there are only country banks, as is the case with mine, I will venture the assertion that you have rarely heard of any complaints on the part of those banks of their treatment at the hands of their correspondents in the reserve and central reserve cities. They have generally been very well treated. For my part I think it exceedingly unwise to attempt to break up these relations, and I should so amend the bill as to allow at least 2 per cent of the reserve of the country banks to be deposited with their present correspondents, or would cut down the reserve requirement of country banks to a flat 10 per cent, which is high enough for safety if the new Federal reserve system proves at all successful.

Now, the gentleman from Ohio [Mr. BULKLEY] showed that the central reserve city banks would have to rediscount in order to comply with the reserve requirements of this bill. The reserve city banks are accustomed to rediscount and the country banks are not. I talked with one banker in my district who said he had not rediscounted a note in 12 years and he did not intend to. He considered it a source of weakness. You have got to break up the whole trend of American banking customs to make this bill work. The city banks, through the clearing houses, are accustomed to rediscounts, and will fall into the thing easily, because they think they are likely to get some benefits from it.

Mr. Chairman, if it is the expectation of those who framed this bill that they are going to drain New York of money and so prevent loans upon stock-exchange collateral, I fear they are doomed to disappointment. You can not prevent capital from seeking the best and safest investments, wherever they offer themselves, any more than you can prevent water from flowing downhill. Stock-exchange loans are the safest and, generally speaking, the most liquid that can be made. The Canadian banks have something like \$150,000,000 on call in Wall Street for that very reason. Such loans, however, because they are the safest, are made at low rates, and if higher rates on equally safe collateral can be obtained in the West and South some of the funds now loaned in Wall Street will be drawn away. A central reserve bank would do this by providing greater facilities for loaning at points of greatest demand, but I am afraid the divided regional scheme of this bill will have just the opposite effect.

I have here an item from a New York newspaper which I cut out, showing the money conditions in New York yesterday. It is as follows:

Time money was inactive and steady. Rates were 4 to 4½ per cent for 60 days, 4½ to 4¾ per cent for 90 days, 5 to 5½ per cent for 4, 5, and 6 months.

That looks as though money was at a pretty low rate in New York. A central reserve bank, in my opinion, would tend to spread these low rates all over the country.

Mr. CONNOLLY of Iowa. In speaking of the safety of loans on stock-exchange collateral the gentleman mentions that that is the safest form and the most liquid. As a matter of fact, in time of great stress and financial flurry, does not the gentleman think that a bank, for instance, like a State savings bank in the Middle West would have a large portion of its money on land?

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. HAYES. Mr. Chairman, I yield 10 minutes more to the gentleman.

Mr. CONNOLLY of Iowa. As a large part of their money is invested in farm lands on the basis of 50 per cent of the actual value of the land, is not that a better form of security or just as good security as when stock fluctuates from 10 to 20 and 30 points a day?

Mr. PLATT. I should doubt that. That may be true of farm mortgages in Iowa, where lands are quickly salable; but, as a matter of fact, fluctuations on the stock exchange are not very large. They go up and down some, and in the case of panic they go up and down a good deal. I do not see any material difference between loaning money on divided property like stocks and bonds—which mean simply divided ownership—than on loaning money on whole property. Most of us can not go out and buy a bank or a factory or a railroad, and the best that we can do is to raise a little money and buy a part of one. We can go to the bank and borrow part of the money. I will say this, that as a basis for issuing notes commercial paper is better than bonds. Commercial notes are supposed to be based on actual goods on the way to market, goods which will pay the notes at maturity. As a matter of fact, they do not pay themselves off. They are frequently renewed. This idea of commercial paper is largely based on the old-fashioned idea that when people buy goods they give notes for the goods. That is not done to-day nearly as much as formerly. We pay nowadays by discounting our own notes and pay the bills in 10 days to obtain a reduction or discount. The notes so made are on their faces accommodation paper. Whether they are negotiable under this bill or not I can not say. It is doubtful. The use of that class of paper is increasing all of the time, and the old class of paper where people gave three months' notes to those from whom they bought goods is going out of use.

Mr. Chairman, I shall not touch upon the possible effect of the initial contraction and final expansion and inflation probable under this bill, as others will cover those points, but shall conclude my remarks by saying that if this bill could be amended to take out the compulsory feature and to make the note issues distinctly bank notes, I believe I should vote for it. Without those amendments I must vote against it, for I do not believe there is any reason for rushing through an imperfect bill of this kind at this time even though it does contain many good features. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 40 minutes to the gentleman from Illinois [Mr. HINEBAUGH].

Mr. HINEBAUGH. Mr. Chairman, strange as it may seem, the two classes of our citizens—the farmer and the laboring man, the food and wealth producers of the Nation—whose interests are most directly affected by this legislation, have had less to say about the terms and provisions of this bill than the banker and the politician. In my innocence and lack of wisdom of the devious and uncertain methods employed in effecting important legislation I sometimes wonder who it is that is being represented by the American Congress—the masses or the classes. The Democrats say they represent the masses in secret committee and in secret caucus. The Republicans confess and avoid the charge that for a generation they have represented the classes.

The Progressives aver that they will honestly endeavor to justly represent all our people and give to each an open, square, honest deal; and when intrusted with power I believe they will.

It is not my purpose to consume much time or to attempt a scientific discussion of the banking business. There are three reasons for that statement: In the first place, I could not get the time from those that control it in this House; in the second place, I have no scientific knowledge of the subject; and, in the third place, very few of us would understand it if I did.

My knowledge and experience in banking covers a period of about 20 years. I feel warranted in asserting that during that period I have had an intimate knowledge of banking from the standpoint of the man who pays the interest. I do not boast when I say that during that time I have contributed my full share toward the prosperity of the banks in my home town.

It is the man who pays the interest that makes the business profitable.

It is very possible that my particular kind of banking experience has influenced me somewhat in favor of honest methods and against interlocking directorates and dishonest manipulations of the people's money by the kings and queens of frenzied finance.

It may be that my knowledge of banking, acquired as it was, has created in me a desire to live to see the moisture soaked out of all stocks and bonds which do not honestly represent intrinsic value, dollar for dollar.

I hope the day is not far distant when it will be a crime to capitalize hot air and sell it to the people. A system of banking that makes it possible for men like B. F. Yoakum and his associates to use the deposits of the people to buy a railroad for \$3,000,000 and then issue \$10,000,000 worth of bonds on that same property and not put a dollar of that vast sum back into the property by way of road extension or betterments of equipment is badly in need of reform.

I hope, Mr. Chairman, the day will speedily come when enough men in Congress will have the courage to pass a law in the interest of the people that will make such transactions a criminal offense.

Mr. Chairman, I believe that day will come just as soon as the Progressive Party assumes control of the Government. I warn you gentlemen of the second minority to leave your sinking ship before the life preservers are all gone and get aboard the good ship "Progress" while there is still opportunity for "all ye who are weary and heavy laden"; for I say to you that she is steaming ahead full speed under the flag of an awakened public conscience and she is due to arrive in port March 4, 1917, loaded to the gunwales with a cargo of machinery intended to place the Government back in the hands of the people, and that machinery will be labeled: "Initiative, referendum, recall, preferential presidential primaries, equal suffrage for women, and the short ballot."

Mr. BURKE of Pennsylvania. Will the gentleman permit me to ask him a question?

Mr. HINEBAUGH. If it is a short one.

Mr. BURKE of Pennsylvania. Has the good ship "Progress" been taken off the rocks since last Tuesday?

Mr. HINEBAUGH. If the gentleman refers to the election in Maine I am very glad to answer the question. I want to say to the gentlemen of this House that until the election occurred in Maine I was not dead sure whether I belonged to a real party. I want to say to you now, Mr. Chairman and gentlemen of this House, that I do know that I belong to a real party and that they cast nearly 7,000 votes in a standpat, rock-ribbed, hidebound Republican district in Maine, with unlimited money and machinery, and at a time when a Democratic tariff bill was waved in their faces as a reason why they should vote for the Republican candidate; and the result of the election in Maine demonstrated to me, gentlemen, that I do belong to a party that is in this land to stay, and if you live long enough you will observe the truth of that statement. I want to say in further answer to the gentleman that on the basis of the percentage ratio of the vote cast in Maine, in the presidential election of 1916 throughout the Nation there will be enough Progressive votes to keep the second minority—the Republican Party—where it is to-day.

Mr. ADAMSON. Will the gentleman permit a question?

Mr. HINEBAUGH. A short one.

Mr. ADAMSON. When gentlemen persist in asking questions about Maine is it not well to remember, according to the poet, that Maine always was "hell bent" even in times when a more respectable party was running against them than now?

Mr. HINEBAUGH. Mr. Chairman, the action of the gentleman from Minnesota [Mr. ANDERSON] in resigning from the Ways and Means Committee and the reasons given by him are significant of a new order of things in governmental affairs in this country. The gentleman should, and I believe will, become a member of the Progressive Party. After nearly three years of service in this House he finds that the system built up by the Republican Party and perpetuated by the Democratic Party makes his efforts to represent his district so hopeless that he felt constrained to say:

I have had no part in making the tariff bill which passed the House and is now pending in the Senate. I shall have none. I am overwhelmed, discouraged, disheartened by the uselessness and the terrible fruitlessness of it all.

Mr. KELLEY of Michigan. Will the gentleman yield?

Mr. HINEBAUGH. For a question.

Mr. KELLEY of Michigan. Only to suggest to the gentleman that Mr. ANDERSON was up in Maine advising voters to stand by the Republican Party only last week.

Mr. HINEBAUGH. Well, I can only say to that, if it is a question—

Mr. KELLEY of Michigan. It is a suggestion.

Mr. HINEBAUGH. That Mr. ANDERSON evidently, when he got back from Maine, found out the thing for him to do was to stand up on the floor of the House and read his declaration to the rock-ribbed members of the Republican Party, and that is what he did, and he said—I quote:

There is yet another essential to good legislation. It is that the acts of Representatives should be always open to the scrutiny of the public. The Constitution recognizes this, for it provides:

"Each House shall keep a Journal of its proceedings and from time to time publish the same * * * and the yeas and nays of the Members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal."

The caucus destroys the force of this provision. The caucus is the real legislative body, and its proceedings are essentially secret. The yeas and nays and the proceedings of the House are valuable records to the public only when they record the real transactions of the House and the real attitude of its membership. The real attitude of the majority party, under which the caucus system is in complete control of legislation, is disclosed only in the caucus, and hence the record provided by the Constitution is a false or at least inaccurate and useless one.

The same reasoning which now attempts to justify a caucus would justify a despotism. I can not believe in a despotism because I know that despots have done some good in the world. Nor does the right of representation seem less precious because it is denied by this benevolent beast, the caucus.

The caucus holds the same place in legislation that the holding company does in finance.

The holding company enables a few men to control the policy of great corporations by the investment of a small amount of capital.

The caucus enables a few men to control the policy of legislation by the exercise of a limited amount of power.

Mr. SHACKLEFORD. Will the gentleman yield?

Mr. HINEBAUGH. Yes.

Mr. SHACKLEFORD. I want to ask the gentleman if he does not think that the gentleman from Minnesota [Mr. ANDERSON] has occupied two positions, one being that of a Member of the House where the majority kept him from having anything to say, and another on a committee where he had nothing to say, and just to point a moral and adorn a tale, he gave up that position to which no salary attached and held on to the one that did. Was not that good judgment?

Mr. HINEBAUGH. Well, I do not think that is a question I am really called upon to answer. I believe Mr. ANDERSON was actuated by a high patriotic sense of duty to the people of his district, and from his standpoint did the only thing for him to do, feeling as he did. If he had asked my advice I would have said to the gentleman from Minnesota, "For God's sake stay where you are and stand by Mr. MURDOCK on that committee and make its hearings open and not secret," and then he would be able to come in the Progressive Party, as surely he will in the next election, and say "I have done all that I could to help the people of my district."

After all, gentlemen, what a farce are these debates that are being carried on here in this House? Four hundred and thirty-five Members constitute the membership of this House. Of that number, less than 75 at any time have listened to the different Members as they have presented their remarks and their ideas upon this important question of currency legislation.

Mr. YOUNG of North Dakota. That is true now. [Laughter.]

Mr. HINEBAUGH. I presume that the American people suppose that these conditions do not exist. Our only excuse, perhaps, for taking up the time of the House at all in these discussions is that our views on these important subjects may be inserted in the RECORD and sent out to the people at home, so that the people may have at least some way of finding out what we think on these subjects and how we propose to vote on them.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield right there?

The CHAIRMAN. Does the gentleman yield?

Mr. HINEBAUGH. I will yield for a question.

Mr. MURDOCK. The gentleman began his speech with a statement that his relation with the banks had been as a borrower. I would like to ask the gentleman if he knows from his banking experience how a banker tells to what use the money that the borrower takes from the bank is to be put?

Mr. HINEBAUGH. I will say to the gentleman that if an applicant has an honest face and looks as though he belonged to the Progressive Party, the banker does not ask him any questions. [Laughter.]

Mr. MURDOCK. I am serious about the question. I will ask the gentleman this: If he applies to his local bank for money he gives his local bank a note, as a rule, and there is no inquiry passing between the banker and the gentleman as to what use the money is to be put. But how does the bank in a city determine whether the money borrowed is not to be used for the purchase of stocks or bonds?

Mr. HINEBAUGH. The banker does not ask the borrower a question unless he suspects that the borrower is untruthful. But I will say this: I believe it is the rule, especially in country towns, for bankers in loaning a large sum of money to first ascertain what that money is to be used for.

Mr. GLASS. Mr. Chairman, will the gentleman allow an interruption?

Mr. HINEBAUGH. Yes.

Mr. GLASS. Is it not the rule everywhere, whether it is in the small town or in the large town, to ascertain that information? And as a matter of fact under the Canadian system does not the banker require each one of his patrons who does a considerable business with him to furnish him with an itemized statement of all his business transactions or prospective business transactions during the year?

Mr. HINEBAUGH. Yes; that is true.

Mr. MURDOCK. I do not think that is done in the majority of cases in this country.

Mr. GLASS. Oh, undoubtedly it is. Probably it would not be the case if the gentleman from Kansas wanted a small accommodation merely, but if the gentleman should want to borrow money to the extent of ten thousand, twenty thousand, or thirty thousand, or forty thousand, or fifty thousand dollars, it would be a very improvident banker, indeed, who would not first find out what use was going to be made of that money.

Mr. LINDBERGH. Mr. Chairman, will the gentleman allow me to interrupt him?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Minnesota?

Mr. HINEBAUGH. Certainly.

Mr. LINDBERGH. Does not that depend entirely upon whether or not a man is acquainted with the bank? I know as a matter of fact, by my own experience in the banking business, that the bankers do not ask such questions if they know a man himself. Of course, if a stranger comes to the bank and wants to borrow, they find out.

Mr. GLASS. That is to say, if they know the man and his habits and to what use he is going to put his money, they will not ask the questions.

Mr. HINEBAUGH. I think, as a rule, the country banker knows what his patron is going to do with the money.

Mr. RAKER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. HINEBAUGH. Yes.

Mr. RAKER. In the case of city banks, when a man desires a loan he files a written statement of the amount he wants, the amount of property he owns, and what he wants to do with the money.

Mr. HINEBAUGH. I will say to the gentleman that if a real estate mortgage is to be given as security, that is usually so, but not unless a mortgage is to be given.

A North Carolina preacher is authority for the statement that "When hell was dropped out of religion, justice dropped out of politics." [Laughter and applause.] In view of some very recent happenings, I incline to the belief that the preacher was right.

On the 28th day of July last the market quotation of the Government 2 per cent bonds bearing the note-circulation privilege was 95½ bid, 96 asked, in the city of New York.

The Secretary of the Treasury very soon thereafter was reported to have said that—

The 2 per cent bonds are worth par, notwithstanding their decline on the New York market, a decline due not to any impairment of their intrinsic value but almost wholly to what appears to be a campaign waged with every indication of concerted action on the part of a number of influential New York City banks to cause apprehensions and uneasiness about these bonds in order to help them in their effort to defeat the currency bill.

If the Secretary of the Treasury was warranted in making that statement, as I believe he was, surely justice has dropped out of politics, whether hell has been dropped out of religion or not. We are told that a panic is a collapse of credit and that the corner stone of credit is confidence. We have been visited by at least three collapses of credit in our day—the panics of 1873, 1893, and 1907.

It has always been asserted, and to my knowledge never denied, that a very large share of the blame for those panics was due to the unwise manipulation of the people's money by the banking world, and especially the banks of New York City, which have always held the lion's share of the banking reserves of the country.

Whether or not the New York bankers are to blame for these frequent disgraceful smash-ups of our financial system, or whether it is due to our cumbersome and unscientific banking system, or to both, the self-evident fact remains that legislation of some kind is needed, and it is the duty of the Sixty-third Congress to provide such legislation.

It is apparent that this Glass currency bill is in many respects like a railroad time-table—subject to change without notice.

The impossible task of an outsider endeavoring to study and analyze a bill that changes its spots like a leopard overnight can only be appreciated by those of us who have had the temerity to attempt it.

Not being able to break into the Democratic committee room or secret caucus with a sledge hammer or a catapult, we were reduced to the painful necessity of doing the best we could under the circumstances.

A study of our financial history during the last 50 years will convince anybody that the United States has experienced more great financial disasters and currency makeshifts than any other civilized country in the world.

You need not be a banker to discover that fact. It is probable that we would all agree that the most serious defects of our present banking system are lack of coordination and centralization and lack of elasticity in credit.

Under the law at present in times of threatened disaster a bank is a place where you can not get credit. It should be a clearing house for credit.

In times of threatened panic the banks need the power to extend credit much more than they need the authority to issue notes, which only increase their liabilities.

Every banker conducts his business on the theory that honor or common honesty is a basis for credit as well as actual securities.

He is limited in his power to extend credit by the assumption that from 15 to 25 per cent of the depositors of the country may demand their money at any given time.

We should not be surprised that Members of this House do not agree on the probable effect of this bill. The bankers themselves are unable to agree.

Mr. Forgan, president of the First National Bank of Chicago, says the bill as it stands would contract the loans of the national banks \$1,800,000,000.

Mr. Charles G. Dawes, president of the Central Trust Co. of Chicago, says it would result in such an expansion of credits as to invite disaster.

These men are both eminent in the banking world, and assuredly must be students of finance, but they certainly can not both be correct in their interpretation of the effects of this measure.

Let us briefly examine the bill and see what it does provide.

This bill is to be known as the Federal reserve act. It provides that the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency shall comprise a committee to be known as the reserve bank organization committee. It empowers this committee to establish Federal reserve cities, and to divide the United States into not less than 12 Federal reserve districts.

The committee is authorized to organize in each of these districts a Federal reserve bank, and the name of each Federal reserve bank shall include in its title the name of the city in which it is located, as for example, the Federal Reserve Bank of Chicago or the Federal Reserve Bank of New York.

It provides further that every national bank located within a given district shall be compelled to subscribe to the capital stock of the Federal reserve bank of their district an amount equal to 20 per cent of its unimpaired capital, one-fourth of such subscription to be paid in cash and one-fourth in 60 days, and the other half, or any part thereof, is made a liability of the subscribing banks, subject to call and payment whenever necessary to meet the obligations of the Federal reserve bank.

It will be noted that this provision is compulsory. The only alternative is for a national bank, in any given instance, to reorganize as a State bank.

Each Federal reserve bank must have a paid-up capital at the time of beginning business of at least \$5,000,000. The capital stock of the Federal reserve banks is to be issued in shares of \$100 each and may be increased from time to time as the subscribing banks in the various districts increase their capital, or as new banks are established, and become subscribers to the Federal reserve bank.

Provision is also made for the decrease in the capital of the Federal reserve bank in each district as subscribing banks reduce their capital or go out of business or go out of the organization.

A Federal reserve board is created, consisting of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, and four members to be chosen by the President of the United States, by and with the advice and consent of the Senate, not more than two from the same party. The four members chosen by the President are to receive a salary of \$10,000 each and the Comptroller of the Currency, in addition to the salary now paid him, is to

receive the sum of \$5,000 annually for his services as a member of the board.

This section of the act has received more adverse criticism than any other part of the proposed law, the most serious objection to the organization of the board being directed against the method of selecting its members. It is contended that a board so appointed would obviously be dominated and controlled by political expediency.

Politicians, and even some bankers, affirm that the three ex-officio members of the board would hold their positions by reason of their political affiliations, and that the other four places on the board would be treated as party plums and handed out as a reward for party service.

Personally, I do not believe that this would of necessity follow. Certainly under our form of government we must assume that the President of the United States is and always will be an honest, broad-minded, capable man, and therefore a man who would not use the power of appointment in such a case simply to build up a personal political machine at the expense of the general welfare of the people.

I am inclined to the opinion that the real milk in the coconut is whether or not the Federal reserve banks shall primarily be under the control of the bankers or the Government. It is only human for bankers to object to Government control.

In the provision for a Federal advisory council, composed of as many members as there are Federal reserve districts, each of whom in all probability will be an experienced banker, we find that the objection to Government control is largely overcome. While, of course, the Federal reserve board has absolute and final power, still the right of the advisory council to meet at least four times each year and confer directly with the Federal reserve board on general business conditions, and the right of said advisory council to make written representations and suggestions concerning any action proposed to be taken by the Federal reserve board, is a wise provision which, in my judgment, overcomes very largely the objection urged against a politically controlled board.

The Federal reserve board may establish branch offices within each Federal reserve district, but the total number of such branches shall not exceed one for each \$500,000 of the capital stock of each Federal reserve bank.

ORGANIZATION.

Each Federal reserve bank must be organized and conducted by a board of directors, whose powers are to be the same as the board of directors of national bank associations under the existing law. Each board of directors will be composed of nine members, who shall hold office for three years, and be divided into three classes. Class A shall have three members, chosen by the stockholding banks; class B shall have three members, who shall represent the general public interests of the district; and class C shall consist of three members, to be named by the Federal reserve board. The directors of class A and class B are to be chosen by the member banks of the district who are stockholders in the Federal reserve bank. These member banks are to be divided into groups containing, as nearly as may be, one-third of the entire number of the banks holding stock in the Federal reserve bank of the district and as nearly as may be of the same capitalization, and each, through a representative, shall vote for a director of the Federal reserve bank.

DIVISION OF EARNINGS.

It is provided that after the payment of all expenses and taxes the share-holding banks shall receive annually a dividend of 5 per cent on paid-in capital. One-half of the net earnings, after the payment of such dividends, shall be paid in to the surplus fund until that fund amounts to 20 per cent of the paid-in capital, and of the remaining one-half 60 per cent shall be paid to the United States and 40 per cent to the member banks in the ratio of their average balances with the reserve bank.

Every Federal reserve bank is to be exempt from Federal, State, and local taxation, except taxes upon real estate.

Any bank or trust company incorporated under the special or general law of the State may make application to the Federal reserve board for the right to subscribe to the stock of the Federal reserve bank within the district where the State bank or trust company is located, and it is within the discretion of the board to accept or reject the application of any State bank or trust company organized under State laws. The State banks and trust companies are required to have a paid-up, unimpaired capital sufficient to entitle them to become national banking associations under the provisions of the national bank act. This will prevent many State banks from becoming member banks of their reserve district.

We are to have in the Department of the Treasury an additional bureau, charged with the execution of all laws passed by Congress relating to the issue and regulation of currency, and

the Comptroller of the Currency is to be the chief officer of that bureau.

POWERS OF THE FEDERAL RESERVE BOARD.

The Federal reserve board is authorized and empowered to examine the accounts, books, and affairs of each Federal reserve bank and to require the bank to make statements and reports as often as the board may deem necessary.

The board may permit, upon application, a Federal reserve bank to rediscount the paper of another Federal reserve bank, or in time of emergency may require the reserve banks to rediscount the discounted prime paper of other Federal reserve banks, but such compulsory action may not be taken without the consent of every member of the Federal reserve board.

This provision has been bitterly denounced by many of the leading banks of the country. They are opposed most strenuously to any provision which would make rediscounting compulsory and insist that all such transactions should be left to the option and discretion of the individual bank. I believe there is merit in this objection.

The board is also authorized to regulate and supervise the issue and retirement of Treasury notes to Federal reserve banks. It may add to the number of cities classified as reserve and central reserve cities under existing laws or it may reclassify existing reserve and central reserve cities and designate the banks therein situated as country banks.

It may require the removal of officers of Federal reserve banks for incompetency, neglect of duty, fraud, or deceit. It may require doubtful or worthless assets on the books and balance sheets of Federal reserve banks to be written off.

The board also has the power to suspend all operations of any Federal reserve bank and to appoint a receiver when necessary.

Any Federal reserve bank may receive from any of its stockholders deposits of currency funds in lawful money, national bank notes, Federal reserve notes, or checks and drafts upon solvent banks, domestic or foreign. The bank may discount the notes and bills of exchange arising out of any commercial transaction of any member bank upon the indorsement of such bank. That is to say, all notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes may be discounted at the Federal reserve bank by any member bank, subject, however, to the right of the Federal reserve board to determine or define the character of the paper eligible for discount.

Notes or bills issued for the purpose of trading in stocks, bonds, or any investment securities may not be discounted by the Federal reserve bank, except such notes or bills which mature within a period not exceeding four months and which are secured by United States bonds or bonds issued by any State, county, or municipality of the United States.

The Federal reserve board may authorize each reserve bank to discount the direct obligations of member banks whenever, in the judgment of the board, the public interest demands. The member banks are required to deposit satisfactory securities. The amount to be loaned the member bank shall not exceed three-fourths of the actual value of the securities deposited, nor more than one-half the amount of the paid-up capital of the member bank.

The Federal reserve banks, under the supervision of the board, may buy and sell in the open market, from or to domestic or foreign banks or individual bankers, bills, cable transfers, and bills of exchange of the kind made eligible for rediscount, as provided in the terms of the bill.

The reserve banks are also authorized to deal in gold coin and bullion both at home and abroad; to make loans thereon, and to contract for loans of gold coin, giving therefor, whenever necessary, acceptable security, including United States bonds. The reserve banks are also given the right to invest in United States bonds and in short-time obligations with the United States, or any State or foreign Government.

All moneys now held in the general fund of the United States Treasury are to be deposited in the Federal reserve banks, and thereafter the revenue of the Government shall be regularly deposited with the reserve banks.

The Secretary of the Treasury is directed, from time to time, to apportion the funds of the Government among the Federal reserve banks, and to fix the interest charge thereon from month to month, at a rate which shall be regularly paid by the banks holding such deposits.

The only depositors in the reserve banks shall be the United States Government and the various member banks of the Federal reserve districts.

With the evident purpose of making it possible to increase the amount of money in circulation provision is made for the issue of Federal reserve Treasury notes in such an amount as the Federal reserve board may deem necessary.

The Federal reserve Treasury notes are to be a legal tender for all taxes, customs, and other public dues, and are redeemable in gold on demand at the Treasury Department, in the city of Washington, or at any Federal reserve bank, and when any such notes are deposited as aforesaid they may be struck off by the bank making the deposits against Treasury balances on its books.

If the directors of any Federal reserve bank so vote, the bank may apply to the Federal reserve board for such an amount of the Treasury notes as it may require. The application must be accompanied by a tender of collateral security to protect the notes, and the security must be equal in amount to the sum of the notes applied for.

The Federal reserve board is given the power, in its discretion, to require the banks to maintain on deposit in the Treasury of the United States a sum of gold or lawful money equal to 5 per cent of such amount of Federal reserve Treasury notes as may be issued to them, and the board is given the right to reject in whole or in part the application of any Federal reserve bank for Treasury notes.

The Federal reserve board is empowered to suspend for a period of 30 days—and to renew such suspension for periods of 15 days—any and every reserve requirement specified in the act. The importance of this provision is very ably stated by Mr. Stickney, who says:

The reserve requirements of the present law are so drastic and unelastic that they have greatly aggravated, if not produced, many of the past financial disasters.

The present reserve laws provide that whenever the lawful money of the national banks shall be below the legal requirements they shall make no new loans or discounts until the required relation of its money to its deposit liabilities is restored.

As all commerce and other business transactions are carried on with bank credits, with an extremely limited use of actual money, the constant creation of banking credits is a matter of vital necessity; hence, while the reserve provisions can be enforced as to a single bank which would get the necessary cash to restore its reserves from other banks, whenever conditions arise whereby the reserves of all the banks have been depleted, the literal and complete enforcement of these drastic provisions would ruin a majority of the industries of the country.

Besides it would not produce the desired results. These conditions have occurred and they have always produced a run on the banks for actual money without proportionately reducing their liabilities. History is replete with illustrations.

In 1844 the system of transferring bank credits was largely with bank notes instead of checks. Hence to limit by law the amount of notes by which the Bank of England could issue in strict relation to its gold reserve was in effect the same restriction as our own reserve laws.

In 1846 there was a commercial panic in England which caused unusual demands for bank notes—discounts. The bank restricted its discounts, but continued to loan its notes until it was within £2,558,000 of its legal limits. This restriction of loans did not decrease the bank liabilities, but it did decrease its gold reserve in seven months from £16,000,000 to £9,800,000.

I quote: "When the public saw that the whole loanable resources of the bank was only £2,558,000 a complete panic seized both the public and the directors. The latter adopted severe measures to check the demand for notes. The interest rate was not only raised to 5 per cent, but this was only applicable to bills having only a few days to run, and a limit was placed on the amount of bills discounted, however good they might be. Merchants who had received loans were called upon to repay them without being permitted to renew them. Many failures followed. In one week there were failures amounting to £15,000,000."

Finally the Government sent a letter to the directors of the bank recommending a disregard of the reserve laws and if necessary an unlawful issue of notes, but to restrain their operations within reasonable limits a higher rate of interest should be charged which, under the circumstances, should not, they thought, be less than 8 per cent; that if such a course should lead to an infringement of the law they would be prepared to propose to Parliament a bill of indemnity.

"This letter was made public about 1 o'clock on Monday, and no sooner was it done than the panic vanished like a dream! Mr. Guernsey stated that it produced its effect in 10 minutes! No sooner was it known that notes could be had than the want of them ceased! Not only no infringement of the act took place, but the whole issue of notes in consequence of the letter was only £400,000, so that while at one moment the whole credit of Great Britain was in imminent danger of total destruction, within one hour it was saved by the issue of £400,000 sterling."

Substantially the same experiences were repeated in the panics in 1857 and 1866, when there were failures and distress while the banks were restricting credits in conformity with the letter of the law, all of which disappeared with the reception of the letter from the Government authorizing a disregard of the law.

Of late years none of the European banks attempt in times of commercial crises to arbitrarily restrict the issue of their credits, but rely entirely on the manipulation of the interest rates.

The suspension of our reserve laws in times of commercial crises would have the same effect upon panics as the letter from the Government had in the English precedents which have been cited.

Mr. MURDOCK. Is this the Mr. Stickney who was once the president of the Chicago Great Western Railway?

Mr. HINEBAUGH. Yes.

Mr. MURDOCK. He was early an expert in the matter of railroad rates.

Mr. HINEBAUGH. Mr. Chairman, it is estimated that at the present time the national banks of the country hold, locked securely in their safes, the tremendous sum of \$800,000,000 as reserves, which they can not touch, and in addition the United States Treasury contains approximately \$250,000,000 of the same kind of money.

The entire reserves of all the banks of England are only about one-fifth of that amount, and she is supposed to be the principal credit nation in the world.

I am told that under the provisions of this bill it is estimated that about one-half of these reserves will become available for use by means of the Federal reserve banks. If that be true, nearly \$500,000,000 will be obtainable for emergency purposes without using a single dollar of the Federal reserve Treasury notes.

If this be protected by the power to fix rates of interest sufficiently high it will prevent the use of this vast sum of money for speculative purposes, and at the same time serve as a guard against possible panics.

REFUNDING BONDS.

Section 19 provides for the gradual retirement of approximately \$700,000,000 of national bank notes now in circulation. All national banks holding 2 per cent bonds of the United States bearing the circulation privilege are permitted, upon application to the Secretary of the Treasury, to exchange each year 5 per cent of their bonds bearing the circulation privilege for 3 per cent bonds of the United States without the circulation privilege payable 20 years from date of issue and exempt from Federal, State, and municipal taxation, both as to income and principal.

It is provided that in proportion to the outstanding 2 per cent bonds deposited with the Treasury and exchanged, the power of the national banks to issue circulating notes shall cease, and after the expiration of 20 years from the passage of this act every holder of United States 2 per cent bonds shall receive in exchange for said bonds 3 per cent bonds of like denomination payable 20 years from the date of issue with the circulation privilege, and at the end of 20 years all outstanding national bank notes are to be recalled and redeemed under such regulations as may be prescribed by the Federal reserve board.

All national banks in central reserve cities are required to maintain a reserve in lawful money for a period of 60 days, such reserve to be equal to 25 per cent of their deposits, and thereafter they must permanently maintain a reserve in lawful money equal to 20 per cent of their outstanding deposits.

Under section 22 every Federal reserve bank is required at all times to have on hand in its own vaults, in gold or lawful money, a sum equal to not less than 33½ per cent of its outstanding demand liabilities.

Just what is meant by the term "lawful money" in this connection I should be glad to have the framers of this bill explain.

BANK EXAMINATIONS.

The Federal reserve board may require examination of the affairs of every national banking association at least twice each year, and as much oftener as the board shall consider necessary; and the Secretary of the Treasury is also authorized, at any time, to direct the holding of a special examination. In addition to such examination, every Federal reserve bank may, with the approval of the board, arrange for special or periodical examinations of the member banks within the district. Such examinations shall show in detail the total amount of loans made by each bank on demand or on time and the different classes of collateral held to protect the various loans.

Under section 24 the national banks are forbidden to make any loan or grant any favor to any bank examiner, and it is provided that the officers of a bank violating this provision shall be deemed guilty of a misdemeanor and shall be fined not to exceed \$500; and any examiner of a bank accepting a loan or gratuity from any bank which he may examine shall suffer a like punishment, and he shall be forever disqualified from holding office as a national bank examiner.

This is an excellent provision, in my judgment, and will, if enforced, guarantee careful and honest bank examinations.

FARM LOANS.

Section 26 contains the very excellent provision authorizing any national bank not situated in reserve cities to make loans, secured by improved and unencumbered farm lands, and repeals so much of section 5137 of the national banking act as prohibits the making of such loans by banks so situated. It is to be regretted, however, that the loans upon farm lands are limited to 12 months. Everybody knows that farm loans are usually made for a much longer period.

This provision will be of little practical advantage to the national banks in competition with State banks unless it is amended, extending the time of the loan to at least three years.

Any national banking association, one year after becoming a stockholder in a Federal reserve bank, may open a savings department with the permission of the Comptroller of the Currency, provided that not less than \$25,000 in assets or in cash be set apart for the uses of the proposed savings department.

FOREIGN BRANCHES.

Provision is made for any national banking association having a capital of \$1,000,000 or more to establish branches in foreign countries, for the purpose of extending the foreign commerce of the United States and to act, when necessary, as fiscal agents of the United States, under such conditions and circumstances as may be prescribed by the Federal reserve board, and when such branches are established in foreign countries the Comptroller of the Currency may demand information concerning the condition of such foreign branches from time to time, as he may deem proper.

This provision ought to be appreciated, especially by the larger banks in Chicago and New York.

Mr. Speaker, I regret that the President and his advisers have conceived it to be the duty of the administration to make this banking and currency law a party issue. Men of all shades of political faith believe that reform of some kind in our banking system is absolutely necessary to meet the demands of our ever-expanding commerce and our industrial prosperity. We all know that our entire financial structure stands on a basis of clearing of credits—the scheme of using the token for the actual cash—and we also must realize that any banking system which is not so formed that a general demand for cash as a result of fear and distrust is not made impossible will be unsafe and no improvement over our present system.

It does not require the expert knowledge of the banker to know that a system which makes the commercial paper which the banks buy an immovable asset is not only wrong in principle but it locks up the capital of the banker and leaves the cash in his vault, the only quick asset he has, and this he dare not use.

It surely must be a fundamental principle of good banking that any plan which makes the reserves of the bank unavailable at the very moment when they are most needed is radically defective. Every man's love of country rather than his political prejudices should be appealed to in framing and passing this law. The secret caucus and the secret committee hearings should have been avoided and every Member made to feel his personal responsibility. It is not true that the majority party alone is charged with the entire responsibility of this particular legislation. This bill is more important and will have a more direct influence upon the prosperity of the people than the tariff bill which passed this House last spring and which is now wending its devious and uncertain way through the Senate. It is the patriotic duty of every Member of Congress to forget politics and to unite his efforts with the members of all parties to effect legislation in the interest of the whole country on this most important subject.

It may be true, and, if all reports are to be believed, it doubtless is true, that there has been money in politics, but it certainly can not be true that there is or should be politics in money legislation. Men differ on currency legislation very materially, but it is a difference of opinion based on what each man believes the plan should be, rather than any deep-seated political conviction. When this bill becomes a law it should be the result of the most careful study of the banking systems of the great nations of the world, and should contain the best features of all these systems, so far as they can be made applicable to American industrial and commercial conditions.

The history of the Banks of France, England, Germany, and the United States should be gleaned for information, and we should be able to profit by what history shows to have been their mistakes. In my judgment the Bank of France is an ideal institution and is doubtless the strongest banking system in the world to-day. It had a stormy history, and it was not until 1849, when the departmental banks were abolished and the Bank of France was given a clear field in the issuance of circulating notes, that it became a powerful agency in the prosperity of France. The Bank of England, by a series of changes in the law, now enjoys a substantial monopoly of the note issue in England and Wales. Since 1844 its circulating notes have been issued upon securities and deposits of coin and bullion.

The first Bank of the United States was incorporated by the first Congress in 1791 and was a part of Hamilton's scheme to strengthen the new Federal Government. The men in public life at that time who had opposed the adoption of the Constitution, because of its centralizing effects, also opposed the granting of a charter to the bank upon the ground that the Constitution contained no express grant to enable Congress to establish such a corporation. They argued that the case fell within the rule which was subsequently embodied in the tenth amendment; that powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, or to the people. Jefferson and Randolph both held that the bill was unconstitutional, but Washington followed the advice of Hamilton and approved the bill.

The bank's capital was fixed at \$10,000,000, and the charter provided that the Government should subscribe one-fifth of the capital, and a loan was made to the Government equal to the amount of the Government's subscription. The bank was authorized to establish offices of discount and deposit in the several States, and \$4,700,000 of the capital was reserved for the central bank at Philadelphia. The remainder was divided among eight branches which were established at New York, Baltimore, Boston, Washington, Charleston, Savannah, and New Orleans, something like the proposed district plan in this bill.

Opposition to the Bank of the United States did not die with Washington's administration. The strict constructionists opposed the renewal of the bank's charter, and on the 12th day of July, 1803, Jefferson wrote a letter to Gallatin, in which he said:

I am decidedly in favor of making all the banks republican by sharing deposits among them in proportion to the dispositions they show.

The Bank of the United States finally went down, if we read history correctly, because so powerful an institution in a republic like ours could not or at least did not escape political entanglements and the suspicion of the abuse of political power.

The political dangers of a great central bank or 12 great central banks under the proposed bill are yet to be demonstrated. Let us hope that the future may prove this objection groundless.

Banking and politics are twin devils, driven by some wild Mephistopheles roughshod over the backs of the people. From every standpoint of legitimate banking they should be kept separate. The principal objection to the Aldrich plan was the proposed concentration of all reserves in a single bank, subject to political control. The present bill overcomes this objection in a measure, I believe, in its proposal to establish not less than 12 Federal reserve banks with independent boards of directors, each of which will hold part of the reserves of its member banks, and each of which it is contemplated will be strong enough to lend whatever assistance may be necessary in the way of credit or cash to the member banks of its district on demand.

Whatever criticism we may make of the plan it must be remembered that the power to mobilize credits and reserves must exist somewhere in time of need. It has been well said "that next to the inelasticity of our currency there is nothing in our monetary conditions that calls more urgently for a remedy than the immobility of our cash reserves." The National Monetary Commission regarded the latter to be the greater evil and it proposed as a remedial measure the establishment of a central bank where such reserves, including cash in the Treasury, would be concentrated and mobilized in time of trouble for the purpose of aid and defense. Under the present conditions the reserves are either scattered or concentrated in the wrong places. It very frequently happens, also, that when there is any very serious change from normal conditions reserves are called in by the individual banks, the result being stringency at the time when extraordinary extensions of credit are required.

Mr. Speaker, in my opinion one of the gravest defects of our present banking system is that by which the legitimate credit and successful operation of any sound business in the country may be made entirely dependent upon the whim or malice of a local banker. Everybody knows that the loaning power of every financial institution in the country is less than the deposits of the people in those institutions. It follows therefore that by controlling the people's money, when the country was otherwise prosperous, a few men have acquired tremendous power, and in times of unrest have been able to bring about panics by unfair manipulations. The panic in 1907, in my judgment, is an excellent illustration of just such a condition. There were no business reasons for a financial panic at that time. The farm value of the crop of 1907 exceeded that of 1906 by \$482,739,929. The year's business for the United States Steel Corporation for 1907 exceeded that of any other year in its history. The net earnings of the railroads in 1907 exceeded those of 1906 by \$206,147,835. The total amount of cash held by all banks was \$100,000,000 more in 1907 than in 1906. The balance of trade was with us. The excess of exports over 1906 was more than \$500,000,000.

There were no commercial reasons for a panic in 1907. There were speculative reasons why a panic might serve special interests. A panic came.

Mr. Speaker, the Progressive Party, to which I have the honor to belong, and which—as we all know—is the first and most powerful minority party, believes, and so declared in its national platform, that there exists imperative need for prompt legislation for the improvement of our national currency system. We believe that the present method of issuing notes through private agencies is harmful and unscientific. We emphatically

declared that the issue of currency is fundamentally a governmental function, and the system should have as basic principles soundness and elasticity. The control should be lodged with the Government and should be protected from domination or manipulation by Wall Street or any special interests.

We can not, however, develop a banking system in a day. It requires years for the people to adjust themselves and their business operations to the financial policy of the Nation, and for that reason uprooting changes can not be made immediately but must come gradually.

Andrew Jackson killed the second Bank of the United States because he believed it to be a great private monopoly. We want a system that will prevent monopoly, and for that reason the earnings of the shareholders are limited to 5 per cent by this bill, and removes to a large degree the danger of monopoly.

I believe an honest effort has been made by the framers of this bill to gradually place in the hands of the Government the function of currency issues, and I also believe an earnest effort was made to provide against domination or manipulation by Wall Street and to provide for Government control; and, although the bill is defective in some particulars, and should in my judgment be amended in some important sections, and doubtless will be before it becomes law, I am thoroughly convinced that it is a very great improvement upon our present banking system, and I shall, therefore, vote for the bill. [Applause.]

Mr. HAYES. I yield 10 minutes to the gentleman from Pennsylvania [Mr. LEWIS].

Mr. LEWIS of Pennsylvania. Mr. Chairman, seated in a smoking compartment on one of our trains in the West some time ago, four gentlemen were talking about the famous inventors of this country. One contended that the greatest inventor was Robert Fulton, the inventor of the steamboat. The next one contended that in his judgment the greatest inventor was Bell, the inventor of the telephone. The third man contended that the greatest inventor was Edison. Over in the corner of the compartment a small weazen-faced man was sitting, his face bearing strong marks of his Hebraic origin. One of the men inquired, "Who do you think was the greatest inventor?" After considering awhile he said, "Well, the men you have named were great inventors, but the fellow that invented interest was no slouch." [Laughter.]

And I want to say, Mr. Chairman, that those who are responsible for the framing of this bill, particularly so far as it relates to certain clauses and provisions in the bill, were certainly no slouches.

Mr. Chairman, in my experience of a number of years as president of what is commonly known as a country national bank, I have reached the conclusion, after much discussion with others versed in banking lore, that "elastic currency" is like electricity—its many uses are known, but no one has been able up to this time to determine what it really is.

To establish an elastic currency, my understanding of the question would be the providing of a means whereby a bank can provide the community in which it is located with the currency or money at all times which the legitimate needs of that community demand, subject, however, to effective Government supervision so that the bank is compelled to make its circulating notes good when presented for payment.

With this understanding of what an "elastic currency" is to provide, will the Glass bill, as drafted, provide relief from existing economic evils?

A careful perusal of the bill will convince any person, I believe, that the thought uppermost in the minds of those who prepared it, is to redistribute present bank reserves, returning them to the section of the country from whence they came.

It will, of course, be apparent that this, interpreted, means a desire to decentralize the reserves now held in the centers. Why this should be done or what good is to be accomplished by it I do not know, but I have reason to believe it has as its basis a desire to stifle speculation, and, more specifically, to prevent the flow of money to New York to be loaned in stock exchange transactions. It may be possible that to pass a law determining the question of where and how bank reserves are to be carried will change human nature, but I do not believe it.

Speculation will exist so long as the desire to "take a chance" is inborn in the human race, and since business is a means through which gain is sought, speculation will exist as long as business exists. All the legislation in Christendom can not stop it. You may try to regulate it by attempting to regulate the business which is most inclined to breed speculation, but destroy it, never.

I am of the opinion that this drastic and unwarranted removing of reserves from the natural centers where business re-

quirements have caused them to be without manipulation will disturb business and hamper the public in securing credit accommodations.

Another defect in the Owen-Glass bill is that while it compels all national banks to come into the scheme within one year or be dissolved (national banks can exercise no authority save by permission of the Congress), there is no attempt to compel State banks and trust companies to do so, but it is with them merely optional. Either the system to be established by the bill is right in principle or it is not. If it is right Congress should compel State institutions to join or else to retire from business by making it impossible for them to otherwise carry on business successfully. If the system is not right the bill should not be passed. It is competent for Congress to compel them to join by legislation, and the failure to do so appears at present to assure the failure of the system. If State banks and trust companies in New York or Chicago should form a clearing-house association and have it guarantee deposits it would be difficult, if not impossible, for national banks in such a city to carry on business. One of the greatest evils of the present banking system is that the banks very frequently do both a speculative and legitimate banking business of a commercial nature. The country banks, through their correspondent banks in the large cities, speculate in bonds and stock, with the result that very frequently speculation gets the greater part of the banking capital, and when the speculation fails the legitimate business interests of the bank invariably suffer. This bill gives to the banks all the money they care to use. Is it not evident that, as a plentiful supply of money inevitably invites wild speculation and hazardous financing, it will follow that this supply will become a certain stimulant to speculation by the banks?

To make loans on farm lands for a period not longer than 12 months is neither fair to the farmer nor the bank.

It is an error to try to make provision for loans on real estate, presumably for the benefit of the farmers. No bank which accepts deposits payable only on demand has any business to make loans on long time. All real-estate loans should run from one to three or five years, and farmers who contract such loans for shorter periods invite trouble. There should be separate banks, or else a separate department of existing banks, having authority to accept deposits on long time only, say, nine months to three years, and to loan funds on similar long time; and these two kinds of deposits, demand and time, should at all times be kept and accounted for, each wholly independent of and distinct from the other. And, finally, Mr. Chairman, the vital objection to this bill lies in the fact that if this bill is passed our banking system will be again projected into politics. If anyone would know what this means to the business and prosperity of the Nation, let him read the financial history of this country from 1830 to 1840. In an editorial in a recent edition of the New York World the danger is clearly stated, as follows:

President Wilson thinks the country can more safely trust its Chief Executive than it can trust its bankers, and that is what most people think. That is what the World thinks, too, but at the same time the bill makes the Presidency a financial prize such as American institutions have never yet known. This is unfortunate. With the President in complete authority over banking and finance, the banks have the strongest possible inducement to control the Presidency. This should not be so if it can be helped. Thanks to publicity laws and corrupt-practice legislation, the obstacles in the way of such control are much greater than they were even four years ago, but they are by no means insurmountable.

The bill provides that two Cabinet officers and the Comptroller of the Currency are to be empowered to organize Federal reserve banks throughout the United States. There must be no less than 12 of these great banks, and each must have a capital of not less than \$5,000,000. Every national bank in the district served by the reserve bank must subscribe to the stock of this reserve bank in an amount equal to one-fifth of the capital stock of the national bank. Every bank and trust company in the country is to be invited to become a stockholder in the Federal reserve banks. While this invitation may sound optional, it certainly is a command, for it stands to reason that it would be difficult for a bank or trust company to maintain prestige as against its competitors which had joined the vast organization controlled by the Government.

The Federal reserve board created by this bill is to consist of seven members, including two Cabinet officers and the Comptroller of the Currency. The four members who are not part of the administration are to be appointed by the President. This board is to have full power over the new Federal banks, to require or permit the rediscounting of bank paper, to establish the rate of discount, to regulate the issue of Treasury notes, to remove officers of Federal banks, to pass upon the value of securities in Federal banks, and to suspend the operation of such banks. The bill authorizes the board to issue \$500,000,000 in

Federal reserve Treasury notes, which may be issued by the Federal banks. The banks are not required to hold in their vaults more than one-third of the amount of gold or lawful money required to redeem these reserve notes.

While the bill is intended, no doubt, to serve a good purpose, yet it will revolutionize the financial system of this country and lodge in the hands of the seven members of the Federal reserve board a power greater than that now wielded by the President of the United States—the power that would enable an administration to build up an invincible political machine, depress or stimulate the market, inflate the currency, favor one section of the country and discriminate against another, and absolutely control the financial affairs of the people of this whole country. No one believes that President Wilson will place in the hands of his party a means that might be used to perpetuate a party in office, but it seems clear that the effect of the bill would be to enable politicians to accomplish these ends.

Mr. MURDOCK. Will the gentleman yield?

Mr. LEWIS of Pennsylvania. Yes.

Mr. MURDOCK. I should like to ask the gentleman, who has knowledge of the banking business, what emphasis he puts upon the work of the advisory board of bankers as provided in this legislation? What does he think the advisory board of bankers will do in their connections and relations with the central reserve board?

Mr. LEWIS of Pennsylvania. They will pass upon paper.

Mr. MURDOCK. In their advice about the control of this system, does not the gentleman think the advisory board of bankers, who are to be associated with the national reserve board, will have a good deal to say about this system and how it is conducted?

Mr. LEWIS of Pennsylvania. I will say to the gentleman that they will have a good deal to say, and it depends entirely upon what motives prompt them to determine what they may say.

Mr. MURDOCK. The gentleman puts particular stress on the fact that there is great danger in having a political board at the head of our banking system. I want to know if he does not think the advisory board of bankers will in the end dominate the political board? I think they will.

Mr. LEWIS of Pennsylvania. That would be a safe proposition, provided the advisory board were not imbued with political motives.

Mr. SLOAN. Has that advisory board any power whatever to say anything, and will they determine anything? I do not so read it. I may be mistaken.

Mr. LEWIS of Pennsylvania. Absolutely not. It is just as the gentleman says.

Grave political dangers are involved in this great centralization of power, for under this system the President, through the Secretary of the Treasury and the Comptroller of the Currency, would practically hold a power of life and death over the national banks and over the whole financial system of this country.

While it is true that either the Government is to control or the bankers must control the financial system of the country, yet it would be safeguarding the interests of our people by putting neither in absolute and unrestrained control, as this bill provides.

My judgment is that the bill is wholly wrong in principle and will be vicious in operation, for which reason I am unable to see my way clear to support it.

Mr. GLASS. I yield 15 minutes to the gentleman from Indiana [Mr. GRAY].

Mr. GRAY. Mr. Chairman, I believe that the small banks, the moderate and strictly commercial banks, have a common interest in the currency of the country with all the people, because they are a part of the people and interested with them in the every-day affairs of all business transactions.

But I believe that the speculating, the manipulating, and investing banks have a special interest in currency which is adverse to the small banks, to the moderate banks, and the strictly commercial banks as well as to the masses of the people.

I believe that the issue of money and its control and distribution is a vital public function which should be exercised only by the people themselves through the instrumentality of government.

As between any or all banks of the country and the Government I believe that the money should be issued by the Government.

But as between the many banks which are now issuing money and a central bank under private control, I am in favor of leaving the issue of money where it now is—among all the banks.

For 50 years the people have been striving to recover and reclaim to the Government its constitutional power to issue and

control the volume and distribution of money, but with every effort they have been met with the claim by the special banking interests urging the great merit and superiority of national-bank issues and their declaration that this money was the best in the world.

After this long and losing fight for more than half a century to reclaim this constitutional right to issue their own money and control their own credits, with defeat following defeat, finally in 1906 the advocates of the people's money, discouraged and despairing of all hope of ultimate success, ceased their efforts.

The usurpers of the people's rights, taking courage from their long successful defense and the discontinuance of all efforts of the people to reclaim their rights to issue and control their own money and feeling secure in their hold upon the currency of the country, but with greed for power, which is never satisfied, and to furnish an argument and to pave the way for a greater and more complete control over money, the great banks began a series of concerted criticisms against the national-bank system, declaring that system to be dangerous and inefficient for want of flexibility, elasticity, and power to assemble and shift reserves, and as liable at any time to bring a panic upon the country and a paralysis of business, seeking thereby to arouse apprehension and distrust, and to secure an abandonment of that system to rear upon its ruins a central autocratic bank.

What was but yesterday the best system in the world was now the worst system in the world and none were so poor as to do it reverence.

The great investing, manipulating, and speculating banks, while enjoying a great measure of control over money and credits under the national-bank system were continually compelled to maintain an organization to control and secure the cooperation of the smaller banks, which always involved a question of some degree of uncertainty in their plans for the manipulation of the currency.

When this movement was begun to acquire increased power and control over money by supplanting the national-bank system with a central bank under private control, there was no greater necessity or emergency existing for monetary reform than had existed from the day the national-bank system was created in 1863. The national-bank system was not only as good as it ever had been, but in some respects it had been made better. In 1881 William Windom, Secretary of the Treasury under Garfield, secured the passage of a law to prohibit the contraction of national-bank currency by the banks without notice to the public. While this law has never been carried out to effect the purpose intended, it has remained upon the statute books for enforcement.

But there always has been during every day and every hour from the time of the enactment of this law a pressing need, not for its amendment or modification but for its repeal and the restoration to the Government of its right under the Constitution to issue money and to control its volume and circulation among the people; and the pending bill is to accomplish this purpose, for which the people have so long striven in vain, and when it shall have been enacted into law they will at last have come into their own.

I quote from the Bankers' Magazine of January 5, 1906, volume 72, page 10, showing the launching of this currency scheme, later to be known as the Aldrich central-bank plan, by Jacob H. Schiff, a Wall Street banker, before the New York Chamber of Commerce:

Jacob H. Schiff, of the banking firm of Kuhn, Loeb & Co., New York City, made a speech at the meeting of the Chamber of Commerce of the State of New York January 5 favoring an elastic bank-note circulation. The speech has attracted wide attention, both on account of its character and its source. As with many similar matters, the discussion in regard to an elastic currency has been thus far of necessity more or less academic. But Mr. Schiff's speech at once lifts this question out of the domain of the theoretical and makes of it a problem of immediate practical importance. Mr. Schiff is at the head of one of the leading international banking houses of New York, and is far removed from the doctrinaire type of currency reformer.

As the speech is printed elsewhere in this issue, we shall only refer to its specific proposal, which is contained in the following extract: "If any increase of circulation is secured solely by legitimate commercial paper—commercial paper based upon, possibly, a deposit with certain clearing houses in the country—it is certainly safe."

This suggestion contemplates the issue of bank currency based on a deposit of commercial paper with certain clearing houses, and this is one of the soundest and most practicable plans yet devised for issuing an elastic bank-note circulation. It is to be hoped that the marked impression created by Mr. Schiff's timely and forceful address will lead the chamber of commerce to take steps to give practical effect to his recommendations.

This movement was inaugurated to bring about a change in our monetary system under a plea for elasticity and the mobilization of reserves to guard the country from panics and financial disasters, as claimed, a basis was to be secured for an unlimited bank-note issue, the currency was to be centralized under

private control, and the money in the Public Treasury was to be gained possession of for manipulation and private use.

I also quote from the same publication, volume 72, February, 1906, page 201, showing the favorable reception of the movement in New York and an outline of the scheme contemplated as being the same ultimately indorsed by bankers' conventions and later embodied in the bill reported to Congress by the Monetary Commission and known as the Aldrich bill:

The movement inaugurated by the Chamber of Commerce of the State of New York for reforming the bank currency of the United States promises to have far-reaching and beneficial results. By taking the initiative in this movement the oldest and most prominent commercial body in the country has set an example that is certain to be followed by other trade organizations.

While political instrumentalities will have to be employed before this agitation can produce results, the question of an adequate and efficient currency is largely a commercial problem. It is a hopeful sign that this fact has been recognized by the business men of New York, and that they have taken proper steps to arouse public opinion so as to give effect to the demand for a bank currency based upon the trade of the country, not upon its public debt, and which shall be as perfect a means for carrying on and developing that trade as it is possible for experience and skill to devise.

No bond-secured bank notes or "emergency currency" can possibly meet this requirement. A bank note to be truly serviceable to commerce must be issued on the short-term negotiable paper to which the commerce itself gives rise. When thus issued the volume of notes will agree exactly with the demand as indicated by the volume of sound commercial paper, and no emergency issues will be needed. Through what agency the notes shall be emitted, the method of redemption, the proper reserve required—all these are matters of detail that can be worked out at the proper time.

We believe that the effort to secure a judicious reform of our currency system should be made now while the country is prosperous and not wait until action is forced by the disasters incident to a panic. It is not too much to hope that a wise revision of the currency may greatly lessen the shock of such disasters, or even altogether prevent panics such as we have experienced heretofore. This is a good time to begin work with that end in view.

The special currency committee of the New York Chamber of Commerce on October 4, 1906, submitted its report to that body approving the central bank currency plan which was adopted by that body, and I quote from New York Chamber of Commerce Reports, volume 49, 1906-7, page 20, the following:

By the control of its rate of interest and of its issues of notes, it would be able to exert great influence upon the money market and upon public opinion. Such power is not possessed by any institution in the United States.

In the answers prepared by the currency commission of the American Bankers' Association to questions formulated by a subcommittee of the Banking and Currency Committee of the United States Senate, said answers being approved by the special meeting of said currency commission held at Atlantic City, N. J., June 18 and 19, 1913, the following appears:

32. Are you familiar with the recommendations of the National Monetary Commission to Congress in January, 1912? If so, what is your opinion of the plan and what modifications would you suggest, if any?

Answer. We are familiar with the recommendations of the National Monetary Commission made to Congress in January, 1912, and are on record as having indorsed and recommended that measure.

4. Should national banks continue to have a bond-secured currency?

Answer. No. In the use of Government bonds as security for circulation the volume of currency, instead of fluctuating with the varying requirements of trade, is limited by the volume of bonds and fluctuates according to their market prices. These prices are determined, not by the general investment value of the bonds, but by the profit possible to banks in using them as security for circulating notes, resulting in artificial stimulation of Government bond prices. One unfortunate consequence of this artificial condition is that the Nation's bonds, which should be widely held by its citizens as their choicest investment, are held almost exclusively by banks to secure circulation or Government deposits.

So bold and brazen was this plot to seize the last vestige of control over the people's money that it amazed even the most audacious financiers of Wall Street. The Bankers' Magazine of August, 1907 (vol. 75, p. 315), in discussing the new movement initiated by the chamber of commerce, scoffed at its acceptance by the people and commented as follows:

But even if it could be demonstrated that it is preferable to have a central bank to issue currency and act as a regulator of the money market instead of depending upon existing independent scattered banks to perform those functions, it does not follow that such an institution could be had. Many plausible arguments might be adduced to show that a limited monarchy or even a benevolent despotism is better than a republican form of government, but whoever would undertake to supplant our present form of government with any of these systems would have an uphill job. But it would be child's play compared to the task of securing the consent of Congress to the introduction of a central bank into this country. That this is true is well known to everyone conversant with public opinion in the United States.

The report of the Monetary Commission recommending the Aldrich currency plan filed January 8, 1912, shows the object of the bill is to secure a basis for an increased bank-note issue in order to prevent the issue of money by the Government, the same as urged by the New York Chamber of Commerce in 1906, as shown by that report at pages 16 and 17, and from which we quote the following:

That our present system of bank-note issues based upon Government bonds is defective and that a change in the manner and character

of issues must take place at an early date is admitted on every hand. There are now outstanding less than \$200,000,000 of United States bonds with the circulation privilege attached not owned by the banks and held for circulation purposes. These bonds are largely of a class which it would not usually be profitable for the banks to buy as a basis for circulation. Congress has inaugurated the policy of issuing bonds without the circulation privilege. It is evident from these facts that if we are to provide for any future demands of the country for currency the adoption of some other basis for note issues will be necessary. Our bond-secured currency has all the qualities of ultimate safety, and its prompt redemption is guaranteed by the United States, but it is not, as our experience has amply shown, responsive, either in expansion or contraction, to the ever-changing conditions and demands of business.

The next year, 1907, when nature responded with a most bountiful harvest, when the granaries and warehouses were bursting with grain and all the wealth of the farm, when manufactories were running full time and their output was far beyond the normal product, when labor was employed everywhere at fair wages, when the channels of commerce and trade were choked by an unprecedented tonnage of the products of factory and farm, when our exports were exceeding all former years, and the excess of exports over imports was more than \$400,000,000, when the production of the world's gold supply was exceeding all former years, when the total money in circulation had reached a greater volume than ever before, when every natural condition favored the greatest prosperity and were such as to preclude and prevent a panic, a panic was suddenly precipitated upon the country and the only explanation given to the people was that it was a money panic. The deposits of the people all over the country in the local banks were found hoarded in the banks of New York City, made possible under a law which prohibited the use of reserve by banks in their own locality, even upon the most stable security, but permitted the same to be kept in the banks of other localities to be loaned out to stock gamblers and bond speculators. The people could not obtain their money which they had placed on deposit for safe-keeping for their use.

The panic came like a bolt from a clear sky, a hurricane without a cloud in the horizon, not as a business depression, nor as a commercial stagnation, but as a money stringency with more than the normal amount of currency available for the business of the country.

Under the provisions of the national bank law as amended for the benefit of the great manipulating banks of the country, the reserves required held by the banks generally to safeguard depositors, and which under the law could not be loaned in the localities where the deposits were made by the banks receiving them, were permitted to be deposited in so-called reserve banks in the great cities.

Under this law millions of the people's money had been collected from the little banks all over the country and concentrated in the New York City banks and there loaned out to stock gamblers for use in speculating and in manipulating the stock market.

When the annual crop-moving time arrived in that year the New York banks not only denied the country banks the usual accommodations of currency upon which they had come to depend for that purpose, but withheld from them even their deposits of reserves. Thus the New York bankers, while loudly proclaiming a great stringency in the money market of New York, where millions of the people's funds were being held, and while holding all their own funds under lock and key they were able to enforce an actual stringency throughout the country and thereby to assure the success of the panic as an argument for currency reform.

But this was not all, and to guard against the possibility of relief to the people from the stringency which the banks had thus created by the General Government supplying funds to the country banks, the New York bankers hastened to Washington and secured from the Public Treasury a loan of the money which might have been made available to the country banks.

In all \$42,000,000 was thus obtained, and the possibility of the country being relieved by the direct interference of the General Government was thereby obliterated.

The Bankers' Magazine of December, 1907, volume 75, page 778, currently comments as follows on the runs made on the banks in the course of the panic:

The bank runs in New York at first were made almost entirely by the well-to-do, and at no time did the ordinary depositors take fright in large numbers. There may have been exceptions to this in the case of some of the banks, but it was true generally.

It will be observed that the managers of the panic had not taken the small depositors into their confidence, and therefore the small depositors were not advised when to make the run, it being evidently expected and counted upon that they would join in the run as soon as the hue and cry was raised and the run started by the "well-to-do." This failure and inadvertence to arrange for concerted action by the small depositors was not

fatal to the success of the panic, as the "well-to-do" generally participated in the runs.

In order to appreciate the full force of this current comment, it must be realized what the phrase "well-to-do" signifies. It has a different meaning in different localities. In some localities it would only signify a moderate amount of wealth. In New York City, however, it has a special significance, and the phrase there would include only millionaires and multimillionaires. These were the men who made the runs.

Incidentally with the creation of a great argument for a central private-controlled bank, in the form of a panic, the occasion was taken advantage of by the interests in control of the financial situation under which the panic occurred. A great amount of stock which had depreciated as a result of the panic in the hands of innocent bystanders and unsuspecting investors was purchased at a ruinous sacrifice and held and resold at par value. Twenty-five million dollars, together with other sums to the amount of \$42,000,000, under an indirect threat of continuing the panic unless their demands were complied with, were extorted from the Public Treasury.

And the opportunity was further taken advantage of to secure the absorption of the Tennessee Coal & Iron Co. by the Steel Trust, its only formidable competitor, thereby making monopoly in the steel industry complete, in violation of law, under a threat of continuing the financial disaster in progress unless such absorption should be submitted to.

A great object lesson and warning to the people was now before the country. The Government had been humiliated by the invasion of its Treasury and its pillage by the few, and its laws against monopoly had been defied and trampled under foot.

The next year, 1908, with the practical example of the panic before the country to point to, Congress was successfully importuned to act and to enact legislation to prevent a repetition of the disaster so vividly portrayed to the public; the banks were given authority to issue more notes and more control over the currency and greater latitude over the manipulation of reserves, all as a safeguard to the country, as claimed.

But the act of May 30, 1908, was not intended to afford the banks the power over the currency which they were demanding and seeking to obtain under the plea of elasticity and the mobilization of reserves. It was enacted only as a temporary measure to pave the way for a great central bank under private control, with power to issue bank currency based upon general bank assets instead of bonds, and to control the volume and distribution of money independent of real Government supervision, and directly to afford an opportunity to appoint a commission to formulate the legislation ultimately contemplated for presentation to Congress in the most favorable form to secure public approval. A Monetary Commission was thus created under the following sections of the act:

SEC. 17. That a commission is hereby created, to be called the "National Monetary Commission," to be composed of nine members of the Senate, to be appointed by the Presiding Officer thereof, and nine members of the House of Representatives, to be appointed by the Speaker thereof, and any vacancy on the commission shall be filled in the same manner as the original appointment.

SEC. 18. That it shall be the duty of this commission to inquire into and report to Congress at the earliest date practicable what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency, and for this purpose they are authorized to sit during the sessions or recess of Congress, at such times and places as they may deem desirable, to send for persons and papers, to administer oaths, to summons and compel the attendance of witnesses, and to employ a disbursing officer and such secretaries, experts, stenographers, messengers, and other assistants as shall be necessary to carry out the purposes for which said commission was created. The commission shall have the power, through subcommittee or otherwise, to examine witnesses and to make such investigations and examinations, in this or other countries, of the subjects committed to their charge as they shall deem necessary.

SEC. 19. That a sum sufficient to carry out the purposes of sections 17 and 18 of this act and to pay the necessary expenses of the commission and its members is hereby appropriated out of any money in the Treasury not otherwise appropriated. Said appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said commission, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of such commission.

While the above provisions were appended to the act as an incident to the main object, they evidently embodied the principal purpose to be obtained, as the Monetary Commission thus created has been constantly uppermost in the horizon of Wall Street financiers, while the increased power assumed to be given to effect elasticity and the mobilization of reserves has fallen into obscurity for want of exercise or even casual attention.

The Monetary Commission during its investigations visited many countries in Europe, interviewing foreign bankers and capitalists in quest of financial data, and conducted hearings in many cities of the United States during prolonged and continued junketing trips. The commission also collected a vast amount of miscellaneous monetary laws, reports, and financial essays

written to uphold and support the special views of their authors, most of the matter published being a revision of books and a recast of documents of value mostly as history, without any special reference to present-day problems, and more calculated to bewilder and awe the mind and impress both the common bankers and the citizens generally of the magnitude of the subject under investigation and the impossibility of a full comprehension of the problems involved by the ordinary mind, to the end that the special few, assuming superior wisdom and financial judgment, might be allowed to dictate without question the reforms so urgently demanded.

In the meantime a great nation-wide campaign of education had been organized to create public opinion and a demand for currency legislation to be reflected upon Congress, and thereby to blaze the way for a central bank under private control. The New York bankers who had initiated this movement in the New York Chamber of Commerce through Jacob H. Schiff, January 4, 1906, had entered upon this campaign and were conducting their operations through the American Banking Association for the education of their country correspondents and the western bankers. To show the plan and system of education carried on among these bankers I here quote a circular letter which was used by this association in 1893 during a similar campaign, bearing date March 11, 1893, and circulated among the influential national banks of the United States.

This circular letter was read at the time by Hon. CHARLES A. LINDBERGH, of Minnesota, now a Member of Congress from that State, and is as follows:

The interest of national banks requires immediate financial legislation by Congress. Silver, silver certificates, and Treasury notes must be retired and national-bank notes upon a gold basis made the only money. This will require the authorization of five hundred millions to one thousand millions of new bonds as the basis of circulation. You will at once retire one-third of your circulation and call in one-half of your loans. Be careful to make a monetary stringency among your patrons, especially among influential business men. Advocate an extra session of Congress to repeal the purchasing clause of the Sherman law and act with other banks of your city in securing a large petition to Congress for its unconditional repeal per accompanying form. Use personal influence with your Congressman, and particularly let your wishes be known to your Senators. The future life of national banks as fixed and safe investments depends upon immediate action, as there is an increasing sentiment in favor of Government legal-tender notes and silver coinage.

Later, to act in conjunction with the campaign in progress for the special education of the bankers, the National Citizens' League was organized to cooperate in the education of the country bankers and for the advisement of the people generally. The plan of cooperation by the New York bankers, through the American Bankers' Association, with the National Citizens' League thus organized is shown by the following letter sent out by the New York bankers to their western correspondents during the time the same bears date, and read in the House of Representatives by Hon. CHARLES A. LINDBERGH, Member of Congress from Minnesota:

THE CHASE NATIONAL BANK,
New York, February 21, 1912.

GENTLEMEN: We inclose a letter from the National Citizens' League, which we have been asked to forward to you. The campaign of education which the league is conducting in favor of currency and banking reform is nonpartisan in character and national in scope. We believe it of direct importance to the business interests of the country. The merchants interested in the work have felt that while they regard themselves as responsible for the raising of funds for the prosecution of the work the country at large should know that the banking interest is in sympathy with the work. Any correspondence should be taken up with Mr. Isidor Straus, treasurer, Broadway and Thirty-fourth Street, New York, and any contributions made direct to him.

Yours, sincerely,

A. H. WIGGINS, President.

In a circular issued by the National Citizens' League, showing its headquarters at 223 West Jackson Street, Chicago, Ill., and giving its officers and State branches, the following language appears in explaining its origin and objects:

At the annual meeting of the National Board of Trade, held in Washington on January 25, 26, and 27, 1910, the following resolutions were unanimously adopted:

"Whereas we assume that a plan for the revision of our currency system will be formulated after the National Monetary Commission has made its final report."

On January 17, the day preceding the conference, the tentative plan of the National Monetary Commission for banking reform was published and copies were already in the hands of the delegates. Many of the details failed to find acceptance, but it was recognized that it contained essential features which would give us a constructive banking and credit system of the highest value to the country.

Acting on the authority of these resolutions a committee was created, which held a conference in Chicago, April 26, 1911. It was agreed by this committee that the responsibility of creating a national organization would be left with the business men of Chicago, who would conduct a nation-wide campaign from their city.

The new movement was initiated by the Chicago Association of Commerce. A joint meeting of the board of directors and the executive committee of the association was held on May 29 and took action by passing the following resolution.

"Resolved, That the Chicago Association of Commerce, recognizing the distressing effects of panics on trade, capital, and labor, the conse-

quent need of a sound banking system in the interest of all the people in the country, and the suggestion made for the creation of a national reserve association, hereby requests John G. Shedd, Marvin Hughitt, Graham Taylor, Harry A. Wheeler, B. E. Sunny, Cyrus H. McCormick, Julius Rosenwald, Charles H. Wacker, Frederic A. Delano, John Barton Payne, A. C. Bartlett, A. A. Sprague, J. Lawrence Laughlin, John V. Farwell, Clyde M. Carr, Fred W. Upham, F. H. Armstrong, and Joseph Basch to form a national citizens' league, the object of which shall be to give organized expression to the growing public sentiment in favor of and to aid in securing the legislation necessary to insure an improved banking system for the United States of America."

The organization was named the National Citizens' League for the Promotion of a Sound Banking System, and a certificate of incorporation was granted by the secretary of state under date of June 6, 1911. Article 2 of the certificate of incorporation is as follows:

"The object for which it is formed is to give organized expression to the growing public sentiment in favor of, and to carry on a campaign of education for, an improved banking system for the United States of America."

It will be observed that while the movement was initiated by the New York Chamber of Commerce in New York City, and while the banks of New York City were conducting the campaign of education among the bankers of the country and their respective correspondents, the headquarters from which the campaign for the education of the people generally was to be conducted had not only shifted from the New York Chamber of Commerce and the New York City banks, but it had been relocated far to the Middle West, and with its change of location there had also come a transition in name and style under which it was to operate—the National Citizens' League.

The following is taken from the report of the National Citizens' League, Chicago:

The league was obliged to get publicity through other sources. It printed and distributed in the first six months of 1912 nearly 1,000,000 pamphlets. It began the publication of a semimonthly—now published monthly—news bulletin, and, as interest increased under this system, it prepared hundreds of newspaper articles.

The league's textbook, "Banking Reform," was published in May. It was sent free to members of the league, and about 1,500 copies were distributed. The circulation of the news bulletin, "Banking Reform," is now 30,000 copies.

Subsequent to the Monetary Commission's report indorsing the central bank under private control and reporting a bill to carry its recommendations into effect, the National Citizens' League held a conference at the Great Northern Hotel, Chicago, Ill., at which James P. Farwell, the president, during the course of his opening address, said:

The National Citizens' League, with organizations in 44 States of the Union, with its members drawn from all our agricultural, manufacturing, and mercantile interests, is the strongest organization of its kind ever enlisted in a great public service.

Mr. Farwell also stated in the course of his remarks:

We do not advocate any bill now before Congress.

And while the president of the National Citizens' League assumed to advocate no special bill, he stated:

We do, however, recognize in the report that has been unanimously made by the National Monetary Commission the greatest step that has yet been taken in this country to give us a sound banking system. We believe that this report embodies those fundamental principles for which we all stand. The report is a conscientious, painstaking effort to provide a working basis for legislation in Congress. We will continue to advocate these principles, confident that Congress will give us the legislation the country demands.

During the course of this campaign of education by the New York bankers in connection with the National Citizens' League hundreds of thousands of letters were circulated through the mails. Speakers were everywhere on the platform, editors were publishing daily column after column, both as editorial and as news matter, all showing the imperative necessity for the creation of a central bank to be operated under private control.

The report of the Monetary Commission indorsing a central bank of issue under private control, with currency based upon general bank assets, was scheduled in the regular order of things to appear early in 1911 following the congressional elections in the fall of 1910.

But just at the time when the plans for the Aldrich central bank scheme were to be consummated the unlooked for happened, the unexpected came about. The administration in power suffered a reverse in the 1910 elections and lost the House of Representatives to the Democrats. This reverse, and with the administration facing an unfriendly public and a presidential election already approaching, had made this an inopportune time for the Monetary Commission to submit its report urging a central bank. Legislative strategy necessitated a postponement. The educational campaigns in progress among the people generally must be continued to steady the administration and the party in power, and the evident necessity of dealing with a new House of Representatives called for further time in which to make a canvass of its membership and to provide for their special advisement in financial matters.

This delay and change of program in the time of reporting out the Aldrich central bank bill seems not to have been generally understood by those who were watching for the report to

come out on schedule time, and they manifested much impatience. Laboring under a misapprehension of the cause for the delay, the commission was criticized and even accused of withholding its report for the purpose of continuing salaries. This criticism was not well founded, as the commission had evidently completed its work on schedule time and the bill was prepared and ready for report out, for a draft of the same was on January 17, 1911, submitted to the National Board of Trade, largely attended by bankers, then in session in Washington, to consider currency reform, where the bill was indorsed. The bill as drafted and the report reporting the same, however, were still withheld from the public.

The following report of the meeting of the National Board of Trade, which convened at Washington January 18, 1911, is given in the annual report of the New York Chamber of Commerce for 1910 and 1911, at page 165, as made to that body March 2, 1911, and as embodied in the remarks of Paul M. Warburg, chairman of the delegation to the monetary conference:

I think you could not fail to have been impressed upon the reading of our report with the remarkable degree of unanimity with which the proposed central reserve association was approved. The delegates met, and after 10 minutes they knew that they agreed on that question. We then met with the delegates of the New York Produce Exchange and Merchants' Association. It took us about half an hour to agree. We went to Washington to the conference. At that conference there were representatives from all over the country and from Canada. After discussion the central reserve association was agreed on, with but one dissenting voice.

Meanwhile, Senator Aldrich's plan had been brought forward, and it recommended the same plan that had been recommended by our resolution. Since then a body of bankers has met in Atlanta—over 20—representing all parts of the country, and they again, after going over this plan most thoroughly and giving it searching criticism, unanimously adopted it, with some amendments as to details. They adopted the underlying principles of the report. So there can be no doubt that the country is ready for this plan and for its adoption.

Finally the educational campaign which had been continued, having been considerably advanced and favorable public opinion believed to be sufficiently crystallized to reflect approval upon Congress, and the new Members having received special advisement, and hastened by the criticism of needless delay by the friends of the bill who had not been taken into confidence respecting legislative strategy, the commission reported the Aldrich central bank bill, January 8, 1912, with full explanation of the merits of the system and reasons for its adoption. But the favorable public opinion expected to be reflected from the people and the approval of the new Members looked for as the result of their special advisement failed to materialize, and a growing Democratic sentiment was found to prevail instead. The praises of the Aldrich bill by the report fell on dull and irresponsible ears.

Most fortunately for the people, a change in administration came just in time to warn the party in power and defeat a colossal conspiracy to wrest from them the last vestige of public control over their currency, and to prevent a central bank octopus from being fastened upon them for 50 years, and as well as a most opportune time to reclaim to the people their full dominion over their money. The change had come at a moment when the breastworks of the money power had been thrown down for its assault upon the finances of the country and when it would be estopped from opposing Government control by its old-time defense of declaring the great merit of existing bank-note issues.

Heretofore all attempts to obtain such full control of the money of the country by the Government have been successfully opposed and defeated by the claim of the great merit of the national bank currency. The special money interests in order to effect greater private control having condemned the national bank currency are thereby precluded from making their old-time defense against public control, and it is certainly a most opportune time for the people to gain control of their money system and lodge this vital public function in the General Government, where it rightly belongs.

The favors of fortune are not more mysterious than the calamities of fate.

Accordingly, the Aldrich bill, under which it was intended to create a central bank under private control, has been changed, modified, and revolutionized to conform to Democratic principles of control by the people. Private control over the currency by a central bank has been supplanted by public control in the Government. The power to issue money has been taken from a central bank under private control for selfish interests and vested in the Government for the general welfare. The basis of money has been changed from general bank assets and made to rest upon the obligation of the Government supported by all the property of all the people.

And the act of 1908, while not intended seriously or for actual use, but only to furnish an opportunity for the creation of the Monetary Commission, yet it has been taken advantage of by

the Government to relieve the people from the very interests which secured its enactment to serve their special purpose. Thus fortune has again strangely favored the people and the instruments which were forged for their further enthrallment have been made use of not only to resist further encroachments, but to throw off the burden already existing upon them. The fortress of the special money interests has been captured and the guns which had been forged and mounted for use against the people have been turned upon the special financial interests in retreat.

The outcome of this attempted usurpation illustrates a common occurrence in the affairs of man. He who would gain the whole world shall lose the whole world. The men who have attempted to defy all law have lost the protection of all law. Greed and monopoly, by reason of their avarice and their efforts to usurp all and subject all to their control, must finally fall the victims of their own acts and selfishness.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. GRAY. Gentlemen, I have just got into my speech. My time and not my subject is exhausted. It is to be continued under the five-minute rule. [Applause.]

Mr. GLASS. Mr. Chairman, I yield 15 minutes to the gentleman from Tennessee [Mr. McKellar].

The CHAIRMAN. The gentleman from Tennessee [Mr. McKellar] is recognized for 15 minutes.

Mr. McKELLAR. Mr. Chairman, for many years there has been an urgent and insistent demand for currency legislation. Practically ever since the foundation of our Government periods of financial depression and panic have come to our people, entailing great hardships and losses, and these panics have invariably been attributed to a deficient or a pernicious currency system. These various panics have always come from artificial rather than natural causes. Our country has been so rich in resources that there has never been such a failure of crops as to cause famine, or actual want, or even anything bordering on famine or want. Indeed, it seems remarkable that a country so rich in resources as ours should ever be visited by times of real depression, and yet we know that these periods have come frequently in our history, and so often that we hear on every side that "hard times" come in regular cycles.

Since I have been old enough to understand such things I have witnessed two of these distressing periods of hard times or panics. One was in the years 1890 to 1893 and the other was in 1907, the one in 1890 to 1893 being the much severer of the two. In both of these periods, however, the crops of this country were abundant, and there was apparently no natural reasons for these panics. Evidently they grew out of artificial conditions and for the lack of a safe, uniform, practical, proper, and efficient currency system.

PRINCIPAL FINANCIAL PANICS.

The first great financial panic came in the fall of 1814. We were engaged in a war with England, and the first United States Bank had gone out of business, its charter having expired in 1811 and not having been renewed. All deposits of the Government had been placed in State banks. In the fall of 1814 every State bank outside of New England failed or suspended specie payment. The Government alone lost \$9,000,000 of its deposits which had been placed in nearly 100 State banks. This period of depression lasted for several years.

The second United States Bank was formed in 1816, and specie payments were nominally resumed in 1817. Upon the reopening of the second United States Bank there was a great inflation of paper money, and in 1819 the second great panic came on, which lasted for three years. In 1837, upon the failure of the Government to recharter the second United States Bank, there was the third great panic. In 1857 there was a fourth great panic, and various expedients were resorted to by the Government to restore nominal conditions. One of these expedients was the issue of \$52,000,000 of currency notes bearing interest at the rate of 6 per cent, which notes circulated as money. Of course, shortly after the Civil War came on the banks all suspended specie payment, and this condition of affairs remained until 1879. The severest trouble, however, came in 1866 and 1873. In 1884 there was a panic of smaller proportions. The next severe panic came in 1890 to 1893, and the last one in 1907.

SHORT FINANCIAL HISTORY.

Before going into the subject matter of the present bill itself, I desire very briefly to give a short history of the currency systems that have been used in our country since the organization of our National Government. I need not refer to the currency used during the colonial period, as it was for the most part a variegated, "wildcat" currency, a discussion of which would perform no useful purpose here.

Our financial history must be divided into three distinct periods: First, the period from the organization of our Government in 1789, or shortly thereafter, to 1837, which may generally be called the United States Bank period; second, the period from 1837 to 1863, which must be called the State-bank and Independent Treasury period; and, third, from 1863 to date, which may be termed the national-bank period.

THE FIRST UNITED STATES BANK.

In 1791 Congress, upon the recommendation of Mr. Hamilton, the first Secretary of the Treasury, concurred in by President Washington, passed a law chartering the first United States Bank. By the terms of this act this bank was given a life of 20 years. The object and purpose of the bank was to furnish a single fiscal agent for the new Government. At that time, notwithstanding that the Constitution provided that "Congress should have the right to coin money and regulate the value thereof," and, further, that "no State shall * * * coin money, emit bills of credit, make anything but gold and silver coin as tender in payment of debts," yet every State in the Union was exercising the right to establish banking corporations, which emitted notes and bills, and which passed as money. There was no limitation of any kind upon the amount of this State-bank money and practically few restrictions governing its issue.

The result was that the value of the issue of each bank depended upon the solvency of the individual bank and there was the widest variation in the value of the circulating medium of the country. A great many people have supposed that during the period of the United States Bank we had a system of currency somewhat like the Bank of England. This is wholly incorrect. The United States Bank was simply the only bank chartered by the United States Government, and was more powerful than most State banks because the financial operations of the Government were conducted through it and its revenues were deposited in it. It is proper to say, however, that during the existence of this first United States Bank the financial affairs of our country were in fairly good condition and no unusual panic occurred. This central bank was advocated by Hamilton, Washington, and Knox, and opposed by Jefferson, Randolph, Madison, and others. Mr. Jefferson believed that the States had a right and it was their duty to provide the currency of the country. This view was also shared by Mr. Madison. The bank charter expired in 1811, during the administration of Mr. Madison, and because of the administration's opposition to its recharter the bill for its recharter failed.

THE INTERIM.

Accordingly, therefore, between the years 1811 and 1817 the Government's money was deposited in the various State banks under the direction of the Secretary of the Treasury, the first United States Bank having gone into liquidation. Much of the Government's business was transacted in the private bank of Stephen Girard, of Philadelphia. Almost immediately there was a strong demand made in Congress for the incorporation of a new United States Bank. A bill for this purpose passed in both Houses in 1814, but was vetoed by Mr. Madison. It will be remembered that this was during the time of our war with England of 1812, and our financial affairs became greatly confused.

THE SECOND UNITED STATES BANK.

In 1816, however, a new bill was passed meeting the presidential objections and it duly became a law. By this bill the United States Bank was incorporated, with \$35,000,000 capital. As gentlemen have frequently referred to the present bill as a rejuvenation of the old United States Bank which Gen. Jackson fought and killed, it may not be amiss here to point out some of the principal provisions of the charter of this second United States Bank. As stated before, the capital was \$35,000,000. Seven millions, or 20 per cent thereof, was subscribed by the United States Government. The remaining stock was subscribed for by individuals and corporations. About \$7,000,000 of the stock was owned abroad. Five of the directors were appointed by the President and all of them were resident citizens of the United States. The bank was a private corporation purely, the Government simply being one of its stockholders and the President simply having the right to appoint 5 of the directors, which constituted a minority of the board of 25.

Practically speaking, the Government had no control of the bank. The Government, it is true, was to deposit, and did deposit, all of its funds in the bank. It gave the bank a monopoly of the Government's business, and for a while the Government's deposits, but it was in no sense a Government institution. It was a private corporation, and its officers and directors were not responsible to the Government or in any sense subject to governmental control. The five Government directors were powerless. The bank was not a success from the beginning. There

had been a great financial depression, or crisis, or panic, in the years following the British war, and the abolition of the first bank and the consequent inflation of the country with paper money by State banks. The directors of the bank at first boomed its stock. They did not require the stockholders to pay in full, but in some instances allowed them to draw out what they had paid. There were gross irregularities for the first four or five years, both in the management of the parent bank and in its branches, and much political agitation rose in reference to the bank. Frequent efforts were made in Congress to forfeit the charter of the bank or to modify it. In 1823 Nicholas Biddle became the president of the bank, and during his presidency the bank greatly prospered, and the industries of the people and the finances of the Government prospered from 1820 to 1835, and in this interim the national debt was paid, and the stock of the bank rose in the market until it commanded a premium of 20 per cent. (Knox, p. 61.)

During this prosperous period under the presidency of Mr. Biddle, who was a strong, self-willed man, this bank became a great power not only in finances, but in politics, and it appears that Mr. Biddle felt that he and his bank were really stronger and more powerful than the Government which created it. This brought about a political controversy in reference to the bank as early as 1824, when Gen. Jackson was an unsuccessful candidate for the Presidency. When Gen. Jackson became President, in March, 1829, doubtless knowing the views of Mr. Biddle and being convinced that the Government was greater than any creature which it had made, President Jackson became greatly incensed against this national bank and against Biddle. The bank and Biddle were the subject of controversy during President Jackson's entire administration. Naturally, this spirit of opposition was encouraged in President Jackson by all those who believed in State banks and all those who were interested in State banks. The result was, several years before the bank's charter expired the President, through the Secretary of the Treasury, withdrew all funds of the Government out of the United States Bank and deposited them in the various State banks. He kept up an incessant and determined warfare against this bank, and the bill for its reincorporation never became a law. In this connection it may be remembered that a vote of censure was passed upon President Jackson on account of his attitude toward this bank in the Senate, which resolution of censure was afterwards literally expunged from the Journal of the Senate by a resolution fathered by Thomas H. Benton. With the expiration of the charter of the bank in 1837 the last central United States bank was at an end. The State of Pennsylvania chartered this bank, and it was continued by Mr. Biddle for three or four years, when it went into bankruptcy.

NO ANALOGY BETWEEN UNITED STATES BANK AND BANKING SYSTEM PROVIDED FOR IN THIS BILL.

Some people profess to see some likeness between this bank and the system established by the Glass bill. There is not the slightest analogy between the United States Bank which Gen. Jackson fought and killed and the banking system proposed in this bill. The United States Bank was a monopolistic private corporation. This bill provides for a system of banking under the direct supervision of the Government and prevents private banking monopoly. The United States Bank was a private corporation wholly uncontrolled by the Government. The present bill provides for a banking system with supervisory control by the Government. The United States Bank was a chartered concession to certain individuals for profit, and gave those favored individuals the right to make as much profit out of the same as possible. The present bill provides the terms and conditions upon which banks may use the money entrusted to their care, and puts a limit upon their charges for the use of the money. The United States Bank permitted a concentration of the funds of the Government in the hands of a favored few. The present bill provides for the distribution of the Government deposits in such a way that they will be most available for the commercial, industrial, and agricultural demands of the people. In short, by the charter given to the United States Bank the Government gave its vast revenues to certain individuals in return for those individuals conducting the Government's private banking transactions, and without any regard whatever to the necessities of all the people for a safe circulating medium. The present bill, on the other hand, enlarges and makes more perfect our banking system, frees the people from the domination of any particular set of banking interests, and provides for the distribution of the deposits of the Government so that all the people in all sections of the country shall receive the benefits of the Government funds and the Government's activities, and secures a safe, flexible, elastic, and practical currency.

STATE BANK PERIOD.

As I have said before, State banks of issue flourished or failed, but were in common use all during the United States

Bank period, but after President Jackson had overturned the United States Bank there was no other kind of banks or of paper money, except the issue of State banks. This currency was issued in great quantities. It had no uniformity of value, and there was no method of determining what its real value was. The issue of some banks in some States was worth par, while the issue of other banks in the same States was worth 50 cents on the dollar, and so on.

The National Government exercised no control whatever over these State banks, and the States themselves exercised very little control over them. A more haphazard, ineffective, speculative kind of money could hardly be imagined than the currency known as State-bank currency. The only thing that could be said in its favor was in those days communication between States was so slow and difficult that the necessity for a circulating medium uniform in kind and value was not so great then as it would be now. Nothing but the natural resources of our country kept it from disaster during this period.

THE PERIOD OF NATIONAL BANKS.

Upon the outbreak of the Civil War the National Government found itself in need of funds, and many plans were offered by which these funds to carry on the war might be raised. The general plan of the national-bank system was suggested in a report of the Secretary of the Treasury, Salmon P. Chase, as early as 1861. This was referred to a committee, and in 1862 Mr. E. G. Spaulding, a Member of this House from Buffalo, N. Y., drafted the original banking law and is commonly regarded as the father of that law. However, late in February, 1863, substantially the same bill was reported by Senator John Sherman, and this Sherman bill was passed in both Houses and became a law. Mr. Spaulding, however, was the real author of the bill. This national-bank law has been amended or modified by almost every Congress since its passage. Everybody seemed to realize that the law in many of its features was a good one, but at the same time it needed and still needs modification and perfecting. At the time of the passage of this law State banks were still issuing money on their own account, but in 1865 a tax of 10 per cent was placed upon the issue of State banks, and it was thought that this would perfect the national-banking system and prevent the issue of money by State banks. This first prohibition of the State banks, however, seemed not to have been effective, and in 1875 an amendment was passed, and since that time there has been no issue of money by State banks. This was one of the most important amendments to the law. By these acts the issue of State banks was prohibited from circulating as money.

LEGAL-TENDER NOTES, OR GREENBACKS.

During the war the Government issued \$400,000,000 of legal-tender notes, or mere promises to pay, commonly known as greenbacks. This circulated as money and was receivable and is still receivable for public debts, except duties on imports and the interest on the national debt. These notes were issued as war currency, and it was expected to call them all in and retire them as soon as possible after the war. The amount was reduced until the sum outstanding was \$346,000,000, and that amount is still outstanding and commonly used as money. In 1873 the coinage of silver was discontinued, and the only currency from then till 1879 was national-bank notes and greenbacks and a small amount of subsidiary currency. In 1879, however, there was a resumption of specie payments, and in 1890 there was a compromise silver measure, known as the Sherman law, and the coinage of silver was resumed. Laws were passed allowing gold and silver certificates to be issued based upon the gold and silver deposited with the Secretary of the Treasury, and this paper was used instead of the actual specie. From 1868 to 1873 there was a violent panic in this country, which lasted until 1879 with more or less severity and which caused great hardships and suffering.

GREENBACK PARTY.

It was during this period, or just before, the Greenback Party was started in this country—a political organization which had for its cardinal principle the issue by the Government of paper money of the kind hereinbefore referred to; that is to say, merely a promise by the Government to pay. This party became popular and had a candidate for President, but with the resumption of specie payments in 1879 it became a thing of the past, leaving, however, a sentiment in the public mind in favor of greenback currency or legal-tender notes that has prevented any retirement of the three hundred and forty-six millions of greenbacks outstanding; and though few scientific financiers believe in fiat money, yet no one has offered to retire this particular fiat money—a very interesting fact.

FREE SILVER.

After the passing of the greenback craze, the next monetary propaganda was that of free silver. This continued from the

early eighties until 1896. It reached its zenith when the Sherman bill was passed in 1890. This law was repealed by the Democrats under Mr. Cleveland, and thereafter the celebrated campaign of 1896 was waged by Mr. Bryan, with free silver as the principal issue. Mr. McKinley was elected, and in 1900 a law was passed extending the provisions of the national banking act and allowing the national banks to issue money to the limit of the par value of bonds held by them. This greatly increased the circulating medium of the country, and new gold fields being discovered and developed the supply of gold in our country was enormously increased—that is to say, some five or six fold—and for a time our currency system seemed to be adequate. However, it lacked elasticity. It was subject to being centralized in the great monetary cities, especially in New York, and when so accumulated it produced great speculation; and in 1907, almost without notice and in a season of almost unexampled prosperity, the country was plunged into a great panic, showing the great defects in our currency system.

During Mr. Taft's administration a monetary commission was established to examine into and report upon our currency situation, and a bill was passed, known as the Vreeland bill, providing for the issue of five hundred millions of what was known as emergency currency. This, of course, was a makeshift and no general bill for the reform of our currency was passed during the Taft administration, though Senator Aldrich had reported a bill known as the Aldrich bill, which, however, never became law.

PLATFORM PLEDGES.

The Democratic Party, in its Baltimore convention, declared against the Aldrich bill and central bank. It declared for systematic revision of our banking laws. It declared that banks should exist for the accommodation of the public and not for the control of business. It declared against methods of depositing Government funds in a few favorite banks largely in the control of Wall Street.

It will thus be seen that the platform sets a high standard, and the question is, Does this bill meet the promises of the platform and the needs of the people? My proposition is that it does. The full provision of the platform is as follows:

We oppose the so-called Aldrich bill or the establishment of a central bank, and we believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or dominion by what is known as the Money Trust.

Banks exist for the accommodation of the public and not for the control of business. All legislation on the subject of banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public and of complete protection from the misuse of the power that wealth gives to those who possess it.

We condemn the present method of depositing Government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities and subject to call by the Government.

COMPARISON OF THE PENDING BILL WITH THE SO-CALLED ALDRICH BILL.

The Aldrich bill provides for the incorporation of a central bank fashioned exactly after the United States Bank hereinbefore referred to. The bill provides that the capital of \$300,000,000 shall be subscribed to only by national banks having a minimum capital of \$25,000. It having been contended that the Glass bill is a revamp of the Aldrich bill, it will be of interest to point out the essential differences between this bill and the Aldrich bill.

DIFFERENCES BETWEEN GLASS AND ALDRICH BILLS.

Under the Aldrich bill the Government was to have no control of the central bank or its branches, except that the President of the United States was given the right to appoint and discharge for cause the governor of the bank. The Glass bill gives the Government absolute control of all the banks obtaining Government deposits. The Aldrich bill would give the individuals controlling the national banks an exclusive monopoly of not only the banking business of the United States for 50 years, but an exclusive handling of all the Government's funds without interest for the same length of time, without any governmental control of the institution whatever.

In addition to this, under the rule of law laid down by our Supreme Court in the Dartmouth College case, this charter would be a contract with the central bank which could not be amended by Congress. In the Glass bill, if any mistakes are made, they can be remedied at any time by amendment.

The Aldrich bill makes the central bank the principal beneficiary of the Government's power to tax, in that all of the Government's funds are to be placed in said banks without interest and without the Government being given any control over the bank. The Glass bill, on the other hand, gives the Government absolute control of its own money and a supervisory control over the entire banking system, which all fair-minded men must consider just and right.

The Aldrich bill creates a banking monopoly. The Glass bill prohibits a banking monopoly. The Aldrich bill would permit the central bank to centralize all the money of the country in a few hands, and at one or more places, just as it saw fit, as the Government would have no power to prevent it. The Glass bill, on the other hand, prevents a concentration of money in any particular locality, but provides an elastic currency sufficient for the needs of any particular locality. The Aldrich bill provides that the local branch banks shall be governed by a manager and deputy manager, who shall be appointed by the governor of the central bank, thus absolutely taking away the right of local self-government. On the other hand, the Glass bill provides that each Federal reserve bank shall elect two-thirds of its own directors, thus giving local self-government to this reserve bank and merely the right of supervision to the central reserve board, which is not a bank at all.

Complaint by the favored bankers has been made that the Glass bill provides that the subscribing bank is entitled to only a dividend of 5 per cent of its capital and a possible division of the remaining profits in the future, the bank getting only 40 per cent thereof after the surplus reached 20 per cent. The Aldrich bill provided that the shareholders should receive only a profit of 4 per cent and that future earnings shall be divided, one-half to go to the surplus of the central bank until that surplus amounted to 20 per cent, one-fourth to go to the Government, and one-fourth to go to the shareholding banks until such banks received 5 per cent, and thereafter they were to receive no more. This provision was entirely satisfactory to the banks under the Aldrich bill, but these same bankers now claim that a better and more satisfactory provision in the Glass bill is not satisfactory to them. Naturally the New York banks ought to have been pleased, as they doubtless were, with the Aldrich bill, and I do not see how the country banks could have ever agreed to it.

The Aldrich bill provided that the national banks may subscribe to the stock of the central bank in amount equal to 20 per cent of the capital of such subscribing bank. The Glass bill provides that each national bank in a reserve district is required to subscribe stock in such Federal reserve bank in amount equal to 20 per cent of the capital of such subscribing bank within one year, under a penalty of dissolution if it did not within one year.

These are the principal differences between the Aldrich bill and the Glass bill. These differences are fundamental. They go to the heart of the question.

SIMILARITIES BETWEEN ALDRICH BILL AND GLASS BILL.

There are a number of similarities between the Aldrich bill and the Glass bill. The committee framing this bill has evidently not turned down good provisions simply because they happened to be incorporated in another bill.

The first similarity is that the country is divided into 12 or more Federal reserve districts partially after the manner of the Aldrich bill.

Second. The amount of stock that a national bank would be required to subscribe, the difference being that under the Aldrich bill the subscription would be to the stock of the central bank, and under the Glass bill the subscription is mandatory and would be to the stock of the Federal reserve bank.

Third. The division of the earnings is substantially the same, the Glass bill giving the banks a slight preference.

Fourth. The establishment of local associations under the Aldrich bill with a capital of \$5,000,000 each is similar to the establishment of Federal reserve banks of \$5,000,000 each. The election of the directors of these local associations are in some manner similar.

Fifth. The election of the directors of the reserve association of the Aldrich bill, which is the real bank, is quite different from the election of the directors for the central reserve board provided for in the Glass bill. They are similar only that the Secretary of the Treasury and the Comptroller of the Currency are to be members of the board under both plans. The executive officers of branches are provided for in a wholly different way.

Sixth. Function of the local association in the matter of rediscount of paper is much the same as the function of the Federal reserve bank of the Glass bill, but the provisions in the Glass bill are much more elaborate.

Seventh. The rate of discount is to be fixed by the Federal reserve board in the Glass bill, and it is to be fixed by an executive committee of the Federal reserve association in the Aldrich bill.

Eighth. The central bank in the Aldrich bill is given the right to deal in bonds of the United States, gold or bullion, to deal in foreign exchange, and to maintain branches in foreign countries. These rights in a general way are given to Federal reserve banks in the Glass bill.

Ninth. The functions of national banks are enlarged in both bills. In the Aldrich bill they are allowed to conduct business in foreign countries, they are allowed to have State savings deposits, and they are allowed to organize as trust companies. Generally speaking, these functions are given to the national banks in the Glass bill.

Tenth. The last striking resemblance in both bills is it is provided that the national bank notes are to be retired as rapidly as possible, consistent with the public interest, and that, in room and stead of these notes, notes shall be issued by the various national banks in this country. In the Aldrich plan the central reserve bank is to issue this currency, and under the Glass bill the Government is to issue under the direction of the Federal reserve board. The reserves required under each bill are virtually the same.

It will thus be seen that practically all of the good provisions of the Aldrich bill are brought forward under the Glass bill. In other words, the committee bringing forward this bill has included all the good that was in the Aldrich bill and rejected all the bad therein. It has declined to recommend a bill that would build up a money monopoly in this country in the hands of a few people, but have brought in a bill that is manifestly to the interest of all the country banks and all the people—that is, all the banks outside of New York City and other great money centers—and in my judgment will eventually bring about a money system in this country under which there will be no panics.

THE INDEPENDENT TREASURY.

The Independent Treasury idea, which is in effect abolished by the Glass bill, was first established by a law that was enacted in 1840 during the administration of Mr. Van Buren. This law was repealed in 1841. The Whigs, under the leadership of Mr. Clay, passed another United States Bank bill which was vetoed by President Tyler. This bill and its veto caused the disruption of the Whig Party. In 1846 a new Independent Treasury bill was passed by Congress and signed by President Polk. By this bill the Treasury became the financial bank of the Government, and has remained so ever since. That this Independent Treasury system has been a success—that is to say, it has been better than the system of depositing public money in State banks and better than the system of giving to the banks a monopoly like the old United States Bank, the exclusive use of the Government money—no one can deny, and yet it is interesting to note what the bankers of that day thought about it. In a review of the subject the editor of the *Bankers' Magazine*, representing the banks of that day, 1846, said this:

That scheme [Independent Treasury scheme] we consider utterly impractical and indefensible, and such a law can not be enforced for six consecutive months, or will, it is our opinion, be strictly complied with for 48 hours.

This statement from the bankers is interesting in view of the published statements we see from Mr. Reynolds, Mr. Forgan, Mr. Wade, Mr. Wexler, and bankers of national fame every day in the newspapers. While on this subject it is interesting to note what the bankers thought of the national banking system when it was first suggested. They claimed that the proposed bank, from the fact that the applications were chiefly for banks with small capital, and judging by the locality where they were located, it was evident that the national law encouraged the organization of banks for circulation only, and not regular banks for deposit and discount, and was what was known in our Western States by the expressive term of "wild-cat" banks.

The banking interests further declared that the proposed currency was to be a depreciated currency; that—

it was not a legal tender between man and man, nor has any banking association or banking institution a right to pay them out in discharge of its debts to an individual or corporation; that it would be a depreciated currency, and when used by the laboring man or the poor woman they would find 5 or 10 per cent added to the price that they would be required to pay, provided they could offer legal-tender notes.

Lastly, these New York bank officers claimed that this national currency "would, by its issue, supplant a like amount of legal-tender notes which the Government could issue free of all interest and which amount the Government would have to borrow and pay interest on at the rate of 6 per cent. This loss on \$300,000,000 would amount annually to \$18,000,000." This was a report of a committee of bank officials held in New York in December, 1863. None of these predictions have been fulfilled.

How similar in tone are these fulminations of these bankers to their present diatribes against this bill! In 1846, when the Independent Treasury system was started, and when, in 1863, the national banking system was started, throughout Wall Street the lamentations of these same banking interests were heard against the proposals. And now when a better system is being started we hear the same predictions of financial disaster. The

truth is that the principal business of bankers is to make money out of running their respective banks. They take the system as they find it. They are able to make money out of it, and they do not want it changed. They have fought consistently and historically every improvement and betterment of our banking system. They fought the State banks and the Independent Treasury system in favor of the United States bank. Later on they fought the national banking system in favor of the Independent Treasury system, and now they are fighting governmental supervision and control of our banks in favor of private monopoly of our public and private finances. In making this statement I do not mean to include all of the banks. It is my belief that while Chicago and St. Louis bankers are taking the lead in this fight, this is only so nominally, and the real fight is being waged by the banking interests of New York. The great body of bankers throughout this country are not fighting this measure. At heart they are in favor of this measure. No one knows better than they do their present and past absolute dependency upon New York bankers for their money. They get this money in crop-moving periods at 8 per cent, an outrageously high and extortionate rate of interest. The New York banks will say they charge but 6 per cent. Yes; but they require the country banks to keep on deposit in their banks in New York an amount about equal to 25 per cent of what they borrow.

MR. McADOO'S RECENT ORDER.

Mr. McAdoo's recent order depositing money in country banks for the purpose of moving the crops on prime commercial paper as security was the first rift in the clouds for the country banks.

In the early part of July, this year, at Atlantic City, I talked with a leading banker of my district. This banker told me that he had just been to New York and that he was very uncertain as to the future; that the banks in New York were looking for hard times; that they were all uncertain and worked up over the pending currency bill; that they did not believe in bringing forward the currency question just at this time. He did not know whether his New York correspondents were going to furnish money to move the crops or not, and he thought the outlook was exceedingly dark and gloomy.

I talked to other country bankers who had been to New York about this time. They all talked in this despondent mood. They all denied that the New York banks were threatening, but were all afraid the New York banks would bring on a crisis if the administration persisted in its course of having currency legislation at this session of the kind proposed. About a week or two afterwards Mr. McAdoo, with that promptness and fearlessness that has characterized his life and that has made him one of the leading figures in public life, issued a statement in which he said the Government would deposit money in country banks for the purpose of moving the crops on prime commercial paper, and the financial scare was over. The very bankers that had before claimed that there would be no money to move the crops were loudest in their assertions that New York had all the money necessary and would lend all necessary money to move the crops. This caused criticism by the New York bankers of Mr. McAdoo for thus lending the money. They could not say the Secretary of the Treasury had no precedent for depositing Government funds and thus relieve financial trouble, because other Secretaries of the Treasury had frequently done so. But other Secretaries of the Treasury had deposited money in New York banks. Mr. McAdoo's offense consisted in lending or offering to lend the money to country banks. The proposal of Mr. McAdoo at once had the desired effect. The amount of money thus deposited in the country banks was immaterial. The fact that these banks could get it from the Government was the all-important one. It at once created two markets for money.

And this is what I regard as one of the most important features of this bill. It establishes in this country a competitive money market. As all of us who have had anything to do with banks—and I have had to do with them all my life—know that we have now but one real money market in this country, and that is in New York. How different it will be when these reserve banks throughout the country are established. Then the country banker can either make his arrangements in New York, just as he now does, or he can deposit his paper with the regional reserve bank and secure there what he wishes. It means an immense lowering of interest rates all over the country, in my judgment, to the benefit of all the people.

Mr. MURDOCK. Will the gentleman yield for a question?

Mr. McKELLAR. With pleasure.

Mr. MURDOCK. Under the new system the reserve bank will have the right to fix the discount rate, subject to the veto of the central reserve board.

Mr. McKELLAR. That is my understanding.

Mr. MURDOCK. But the reserve board, as I understand it, will have no power to fix the rate of interest made by the member bank to the individual borrower. How will the discount rate made by the reserve bank to the member bank reach the individual borrower so as to benefit him?

Mr. McKELLAR. In this way, that it will establish the principle of competition; and if the country bank gets the money cheaper it will be enabled to lend the money to its customers at a cheaper price. As I say, after Mr. McAdoo's order the country banks were no longer solely dependent upon New York, and I do not believe that there is a fair-minded man in this country, be he New York banker or anyone else, who in his heart does not know that this proposal of Mr. McAdoo was wise, just, beneficent, lawful, and right, and that it averted a financial crisis which many New York bankers hoped would come on is the firm belief of many intelligent people. My own view is that it was the wisest stroke of financial statesmanship that has ever been made by any Secretary of the Treasury in this country. It has given the people of this country absolute confidence in our Democratic administration. It has made the great body of the people believe that the financial interests, commonly known as Wall Street, did not control this administration, as, indeed, they do not. It has made the great body of the people feel that the revenues of the Government during these four years are not to be a pawn to be fought over by rival individual banks in New York City, but that they are to be used for the protection and development of our agricultural, commercial, and industrial interests throughout the country.

In 1907, when the stock and produce gamblers had gambled all their money away in New York there was a panic, and the Secretary of the Treasury then, after the panic had come, remedied the situation by depositing \$25,000,000 of money in the New York banks to relieve the situation. In that case the Government did the work and gave Mr. J. P. Morgan the credit for it, but the damage had already been done to the country. This time practically the same situation was staring us in the face when Mr. McAdoo placed the money in honest and legitimate channels, where it could perform a real work, and there was no panic, and the country in general is receiving the benefit.

Verily this administration is living up to its promises made to the people in the Baltimore platform.

NO FURTHER HOARDING OF MONEY BY THE GOVERNMENT UNDER THIS BILL.

Under the Independent Treasury system, which has been discussed by me before, necessarily the Government has had to hoard money. The hoarding of money has always been regarded as an evil. Money is simply a circulating medium of exchange. That is the only service it can do in this sense. When it is hoarded by an individual and taken out of the channels of trade and commerce it can not do any work. If individuals or corporations lock their money up in vaults or private boxes it is withdrawn from circulation and the business of the country is to that extent injured. And so when the Government hoards money it is withdrawn from circulation and injures business. The Government has necessarily had to do this under the present currency system. That is shown by a reference to the circulation statement of date September 2, 1913, issued by the Treasury Department. This shows that there was held in the Treasury as assets of the Treasury on that date \$367,000,000.

Mr. MURDOCK. Does the gentleman mean outside of the reserve?

Mr. McKELLAR. Yes; outside of the reserve.

Approximately that amount is kept on hand in the Treasury habitually. It is hoarded. It does no money work. By section 16 of the Glass bill it is provided:

That all moneys now held in the general fund of the Treasury shall, upon the direction of the Secretary of the Treasury, within 12 months after the passage of this act, be deposited in Federal reserve banks, which banks shall act as fiscal agents of the United States, and thereafter the revenue of the Government shall regularly be deposited in such banks, and disbursements shall be by checks drawn against such deposits.

It is further provided in said section that the Secretary of the Treasury must apportion the funds equitably between the different sections, and a small interest charge is provided for.

The practical result of this provision of the law will be to add this heretofore hoarded treasure to the circulating medium of our country. It withdraws it from the strong box of the Treasury and distributes it among banks, where it may do money work. In my belief it is one of the best provisions of the bill and will add greatly to our national prosperity.

THIS BILL EVOLUTION NOT REVOLUTION.

This is not a revolutionary measure. There is no violent change in the system. The change from a system of national bank notes to notes issued by Federal reserve banks is extended over a period of 20 years. It is arranged this way so there

might not be any violent convulsions. On the contrary, it is arranged so that it is but a natural and simple growth and development. Experience has taught us that national-bank notes issued upon Government bonds does not form an elastic currency. Accordingly, there is provided in the bill that this national-bank currency shall be gradually superseded by the Government notes based upon collateral security, not only of Government bonds, but of various State, county, and municipal bonds and prime commercial paper, as provided in this act. In other words, the currency provided for by this bill is to be issued upon a legitimate demand of trade and commerce and not upon ability to deposit bonds of the United States. This has been the demand by bankers for a long time, and I believe it will form a safe, elastic, and efficient currency. It is exactly the kind of currency that the Aldrich plan provided for, except that this currency is to have the backing of the Government instead of the banking monopoly provided for in the Aldrich plan. The plan is the same, but the control is different. The Aldrich plan was a good one, but was conceived in the interest of favored private bankers. The Glass plan has the same elements of goodness in it, but it is put in the hands of the Government, and safeguarded so that the benefits may go to all the people instead of the favored few.

A COMPETITIVE MONEY MARKET.

Another beneficent feature of the Glass bill is that it creates a competitive money market for the country banks. Now they all have to go to New York. Under this plan any national bank or State bank complying with the terms of this act can go to its own Federal reserve bank and get money if it so desires. The country bank is not in any way prohibited from going to New York and borrowing its money there, as usual, but it does not have to do so. It can get money from its own Federal reserve bank at its election. The principle of competition is applied to our national finances where there has been heretofore financial monopoly. This principle will tend to reduce the amount of interest charged. This will be a great benefit to the people of this Nation. The days of lending southern and western banks money at 8 per cent will be over. This does not mean that the banking interests of New York will be ruined at all. They will lend money just as usual, but will lend it more safely, and they will have to take a smaller profit, and they still have the same opportunity to grow and prosper.

SPECULATION LESSENER.

The prohibition of rediscounting paper for speculative purposes is another feature of the bill. This matter of stock and produce gambling has been carried on to such an extent in our leading financial centers that there seems to be a wide demand for its curtailment. New York as our leading financial center has drawn money and now draws money from all over the country and will continue to do so. New York bankers find it exceedingly profitable to lend their money on call at enormous rates of interest, running oftentimes from 10 to 50 per cent. Naturally, much of the money of the country is used in this way, because those who have the capital want to get the best returns therefor. At the same time these gambling transactions are of great hurt to the agricultural, commercial, and industrial interests of the country, in that they withdraw just this much money from the more legitimate avenues of trade and commerce. Any man that pays 10 per cent or more is in essence a gambler, and this kind of use of money is, in my judgment, largely responsible for the various panics that we have had in the past.

THE AUTHORSHIP OF THIS BILL.

Much has been said in the newspapers and elsewhere about the authorship of this bill. It was introduced in this House by Mr. GLASS, the chairman of the Banking and Currency Committee of the House, for and on behalf of that committee.

I have heard the discussion of the bill by Mr. GLASS and the Democratic members of that committee, and surely while the bill, as all such bills are, in a sense is of composite authorship, still I do not believe that any fair-minded man could say, after hearing Mr. GLASS and these Democratic members, that this bill was anything else than the bill of the committee. Mr. GLASS himself being its principal author. Some have asserted that the President had something to do with it. Others have asserted that the Secretary of the Treasury has had something to do with it.

If they took any part in its making they should feel very proud of their work, and the country should be very grateful to them for aiding Mr. GLASS. I have no doubt the suggestions of the President and the Secretary of the Treasury have greatly aided Mr. GLASS in the preparation of this bill, and I say that it is a great credit to both of these gentlemen that they have taken part, as it was their duty and their right, to bring about a

better banking system in this country, and to carry out the pledges that the Democratic Party made to the people in its platform last year. But to Mr. GLASS and his colleagues on the committee the greatest credit is due for this splendid measure, and I believe that the whole country will, in less than a year after it has been in operation, unite in saying that it is the greatest currency measure that Congress has ever enacted.

RURAL CREDITS.

The provision of the bill permitting national banks to lend money upon farm lands, of course, is a step in the right direction. It is unfortunate that this provision is not more elaborate. It, perhaps, would have been better if we could have had a report from the commission which has been sent abroad to study foreign systems of rural credits before any action was taken at all, inasmuch as a postponement of any relief in this regard might have been misconstrued. It may be and is just as well that the provision should now be included in the bill. We hope that at some future day, after the report of this commission is made, to extend and enlarge the system of rural credits in a way that it will be to the best interest of the farmers. No more important legislation could be devised than a safe system by which the farmers could get the money with which to produce the greatest results on their farms. We owe all to those who are engaged in the tilling of the soil, and we should leave no stone unturned in giving to them the best and cheapest methods of obtaining the necessary means to make their crops at the smallest cost. [Applause.]

Mr. GLASS. I yield to the gentleman from New York [Mr. LEVY] 10 minutes.

Mr. LEVY. Mr. Chairman, in voting for the pending measure, which I shall do because my party has deemed it wise, I desire to bear testimony to the display of a high order of constructive legislation shown by its authors, to its inherent adherence to true economic principles, to its manifestation of an earnest and patriotic desire to serve the true interests of all the people, but I would not be true to myself nor to my constituents if I did not call attention to what I consider manifest defects in some of its provisions, with the hope that before the bill comes back to this House further discussion may tend to perfect the measure by the introduction of amendments which will meet with general approval as being conducive to the general welfare.

There has been a tendency shown on this floor and in the party caucus preceding the presentation of this bill to repress the expression of adverse opinion by those who happen to represent a locality where the predominant financial interests of the country are, upon the theory, expressed or implied, that these interests are antagonistic to the general welfare of the country, and that some local or sectional advantage is sought. I deplore more than I am able to express the encouragement of such inferences, for when men in high places indulge in the public expressions of such thoughts it gives encouragement to socialistic tendencies, which should find no lodgment among a free and self-governed people.

I beg to repeat what I said in the Fifty-sixth Congress, which seems equally applicable now as then. "Every currency bill or financial measure which comes before this House for discussion is made the pretext for these unjust attacks. New York is characterized as the abiding place of all the evils that ever have afflicted or ever will afflict this Government and as the home and refuge of all the enemies who seek to destroy the welfare of our Nation. But wherein lies the reason for these charges and calumnies? New York rejoices in the prosperity which has come to every State in the Union, and her own prosperity is only an index of the advancement of the whole country. She does not hoard her wealth, but is constantly applying it to the betterment of the various sections of the United States seeking her aid.

"She builds railroads and highways. She sells your securities and finds a market for your properties. She is the clearing house and clearing port of a majority of the States. She is their market for supplies to be purchased from or sent abroad. She controls, as it were, the markets of the world and brings them to your feet. She moves your crops and finds investment for money from East, North, West, and South. She does everything that brains can devise and activity carry out for the advancement of our Union."

In the time of distress New York has been foremost with her assistance. She contributed \$2,408,983.10 to the San Francisco earthquake fund, of which amount the New York Chamber of Commerce collected \$782,881. The total amount subscribed for this fund throughout the United States was \$8,228,978.25; therefore New York contributed over one-quarter of the total amount subscribed. When contributions were being solicited throughout the country for the relief of the western flood sufferers during the spring of 1913 New York contributed \$595,303.41. The

total amount collected for this fund was \$1,750,000, and it will be observed that New York contributed over one-third of this fund.

A financial center or predominance of wealth in one place is not peculiar to this country; it must and does exist in every country and will always continue to so exist. If men of wealth and fortune congregate in one locality more than in another is that any reason to suppose such association is a combination for the disadvantage of others, for the restraint of the rights or the liberties of those in other places? Does the Virginian or the Georgian or the Texan or the Californian because he locates in New York thereby lose the influences of his previous environments or lose his loyalty to his native State? Will change in locality destroy men's inherent natures? Does not the great cosmopolitan character of New York City prove the contrary? No matter what our legislation may be, New York will always continue to have predominating financial influence. Nature has made it so from her location, and men in congregating there—who thereby add to her development—have only given expression to these natural advantages.

From the publication by the Monetary Commission I am enabled to gather the following statistics, which I have worked into percentages. Though the figures are not the most recent reports the percentages still apply:

The total capital and surplus of all the banks and banking institutions of the United States reporting April 28, 1909, is \$3,624,000,000, of which New York's share is \$901,000,000, or 24.8 per cent. The total deposits in all the banks are \$14,006,000,000, of which New York's share is \$4,039,000,000, or 28.8 per cent. The total resources of all such banks are \$21,046,000,000, of which New York's share is \$5,960,000,000, or 28.3 per cent. Perhaps a more striking feature is shown in the clearings of New York as compared with the rest of the country. The total clearings of the United States of all reporting cities, from this source of information, is \$165,608,000,000, of which New York's share is \$103,588,000,000, or 62½ per cent. In comparison with the clearings of the three next largest cities, it may be mentioned Chicago has \$13,781,000,000; Boston, \$8,440,000,000; and Philadelphia, \$7,021,000,000.

It may be of interest to note that the clearings of New York City are the largest of any city in the world, being nearly double the clearings of London and much more than double the clearings of Berlin and Paris combined.

Assets.

[From the Monetary Commission Report. Figures below one million omitted.]

	All banks.	New York State banks.

New York's percentage of whole clearing, 62½ per cent.

This predominance has never been abused. The cosmopolitan nature of the development makes abuse of local power and influence in reference to tributary localities impossible. The exercise of power in financial and commercial affairs everywhere is made through individual control of resources, and the influences which control any one individual located in a financial center may be and probably are so identified with other parts of the country and so interwoven with other individual interests that a cosmopolitan representative can not seek advantage for one locality to the detriment of another. I maintain, therefore, that when I speak for the material benefit and advantage of New York City I speak for the material benefit and advantage of the whole country as exemplified in its financial center.

It should not be presumed that the business growth and development of the financial center of the country is or can be made antagonistic to the general welfare of the country. The success of this center, wherever it may be, is so intimately interwoven with the general prosperity of the country and, indeed, is so dependent upon that prosperity that any legislation which would hamper or destroy one would hamper or destroy the other.

When we, therefore, seek to enforce by law some provision which we think will benefit the general welfare of the country

by interfering with the acknowledged welfare of some particular locality, we might as well try to regulate the digestive system of the human body, under the theory that the circulatory or nervous system will not be thereby affected.

New York has always been helpful in her supremacy. She has been instrumental in furnishing the capital for all the large enterprises of the country. She has built our railroads and our steamship lines and has gathered from the uttermost parts of the earth the necessary capital for our wonderful industrial development. And when grim-visaged disaster has come to any section of our beloved country by flood, fire, or earthquake what has shown that it pulsed more in unison to humanity's cry of distress than this noble and princely city, where I am proud to say I was born and reared? [Applause.]

I have heard it stated on this floor that the commercial panic of 1907 was caused by the speculative excesses of Wall Street, and some have gone so far as to say that it was intentionally brought on by the financial interests there represented. This latter is so absurd to any thinking and normal mind that it is hardly worth while to combat or consider.

A few days ago a prominent bank officer of Chicago, who was during that panic in the position to know the facts, stated before the Banking and Currency Committee of the Senate that the pride of many bank officers throughout the country, as an excuse for maintaining their reserves at abnormal proportions and not meeting their obligations in currency, induced them to encourage the idea that it was caused by their inability to realize on their New York balances, when in point of fact the demand for New York exchanges which could not be supplied proved these balances had been paid.

The truth is that New York City did more to alleviate the panic than any other city. Her banks, regardless of reserve requirements, shipped \$106,000,000 of currency outside of New York and received but \$57,000,000; or, in other words, New York City paid out \$109,000,000 more than she received between July and December of that year. During the entire year of 1907 the total receipts of the New York banks were \$140,898,000 and the shipments were \$247,563,000, or an excess of \$106,665,000 over receipts, and this proves conclusively the banks of New York paid out more than they received during the panic of 1907 and relieved the situation.

Any student of the economic causes which brought on that panic knows that the suspension of the banks throughout the country was caused by the defects of our banking and currency laws, which prohibited and prevented the utilization of credit in the form which the necessities of commerce and industry demanded.

Happily, Mr. Chairman, the recurrence of such a needless calamity in the commercial and industrial world as that of 1907 can not recur if the purposes sought to be attained by this bill are enacted into law. I believe I correctly stated the problem which had to be met when, at the beginning of the consideration of this question before the Glass committee, I said we had to legislate whereby the people could safely substitute for coin in their daily interchange of property and service bank debts represented by deposits and circulating notes, giving the banks a reasonable profit for such substitution.

I introduced a bill which I thought, and still think, would meet the necessities of the case, but those in charge of the legislation, while conforming to the general principles of that bill, which principles must be followed in any and every effort for sound currency reform, have adopted somewhat different variations as to the form of remedy to be applied.

I propose now to consider some of these variations and give reasons why I think the bill under consideration should be amended before being finally enacted into law.

I am opposed to the compulsory or mandatory character of the measure. I do not believe there is any conflict of interests between the general prosperity of the whole country and the welfare of the banking community. I think the two go hand in hand, and that the growth and development of the banking interests arises by reason of general prosperity, and in a measure contributes thereto. I therefore want to see the present banking interests of the country indorse heartily the measure we adopt. I want them to feel that they are willing, enthusiastic adherents of the Federal reserve system, and that we have no intention or desire to uproot the present organization for the purpose of building up new ones to conform to a new system. I do not expect universal indorsement. Some men are so constituted that they can not survey with satisfaction a field of general prosperity in which they form a part, and can see no benefit except in the returns from the particular patch they cultivate. But I do not want to see the "big stick" wielded. Our predecessors came to grief under its compulsory blows, and we may take warning from their experience.

NOTE ISSUES.

My thought is that the bank function of note issue should not be taken away from the individual banks and confined exclusively to the Federal reserve banks. It is true that under the bill the bond-secured currency may be continued over a period of 20 years, with a graduated annual reduction of 5 per cent, but there is no provision for a bank currency to take the place of this annual reduction, except the issue of Government obligations through the Federal reserve banks, which involves a rediscount of commercial paper.

I apprehend this feature of rediscounting is very much overestimated. It has never been a weakness of our financial system and never so contended until very lately that there was ever difficulty in finding a ready market for actual commercial paper with a bank's indorsement. You can inquire in any of our financial centers and this statement will be confirmed. The difficulty, whenever it existed, in finding such market has been in abnormal times, under panicky conditions, and has been created by the want of currency—a want caused by our defective currency system entirely distinct from a market for the sale or rediscount of commercial paper. In my opinion, we have ample facilities now for the rediscount of commercial paper, and I do not believe it is wise to encourage banks to engage in this practice nor to legislate whereby they must do so in order to exercise the normal function of note issue. You may set it down as a fact, which will be confirmed by every experienced banker, that any bank which is continuously asking rediscounts is trading beyond its means, and instead of requiring facilities for rediscounting requires more capital for the safe conduct of its business. As stated, under this bill there is no method for the exercise of the bank function of "note issue," except through the exercise of an entirely different and dissociated bank function called "discount." No matter how urgent the demand of a bank's customer may be for currency, the Federal reserve bank can not issue a circulating note unless some member bank asks for the discount of commercial paper.

The reserve bank might be urgently in need of gold for its reserves and some member bank might at the same time desire to exchange gold for notes, and yet, under this bill as it is now written, that bank could not have the use of circulating notes unless it produced time commercial paper and paid the discount or interest charges thereon.

If the Federal reserve banks are intended to exercise the note-issue function only in times when there is a general demand for note issues or bank indebtedness in this form, which, in my opinion, should be the case, then the plan as outlined is admirable for this purpose, but the ordinary demands of business often require bank notes by men who do not need to ask discounts; some men already may have the amount available in the form of bank deposits and do not find it convenient or desirable to use checks. It appears to me the two functions of discount and note issue are too closely united in the reserve banks to meet all commercial needs. The exercise of the bank function of note issue should be made at the option of the customer of the bank and solely for his convenience. The individual bank is in contact with the customer, knows his needs, and should be in the position to supply them without being hampered with unusual and onerous restrictions beyond safety in giving the customer the choice of the form in which he desires the bank debt, nor should there be any special inducement in the way of profit to the bank for putting its debt in the form of a circulating note. The safety and convenience of the public should be the ruling factors, not the sale of bonds nor the profits of the bank, as was the case in providing for our present bond-secured currency.

The bill wisely provides to finally get rid of this undesirable, inelastic bank currency, and I want to see such currency replaced *pari passu* with a true bank currency safe beyond any possible doubt on a gold basis in contact with and hence responsive to the demand of trade, while at the same time preserving the individual initiative of our financial system, coupled with "equality of opportunity." This can be had by amending this bill so as to allow any national bank being a stockholder in a national reserve bank and having outstanding circulation notes to the extent of 50 per cent of its capital secured by United States bonds to receive from the Comptroller of the Currency additional circulating notes not exceeding in the aggregate the amount of its capital by depositing with the Federal reserve bank of its district as collateral security an amount of discounted paper equal to the amount of notes received, with the right of substitution. Such notes when issued to be additionally secured by 50 per cent gold reserve, of which 25 per cent must be kept with the Federal reserve bank of its district or with the United States Treasury, where all notes are to be redeemable, in addition to the counter of the issuing bank, the notes to have priority of lien in case of liquidation.

This will give us a safe, elastic bank currency, secured as is provided for Federal reserves notes. It is confined to member banks of the Federal reserve system, so as to induce not only all national banks to willingly come into the system, but also State banks, in order to avail of the circulation privilege. The gold reserve provided is suggested 50 per cent, not so much on account of the added security but to prevent note issue as a matter of profit per se.

BRANCH BANKS.

Another amendment which, in my opinion, is essential if we would have State banks as members of the Federal reserve system is that they may be allowed to retain their branches located in the same municipality. It should be the purpose of the measure to have all banks, whether national or State, as members of one complete and perfect whole (*quam fluctus diversi quam mari conjuncti*), with their individuality preserved yet united for the common weal. Unless this amendment be made it is folly to expect State banks or trust companies which have already large established businesses to consider any change.

DISCOUNT OF COLLATERAL LOANS.

Under the bill as it is drawn a reserve bank can not discount paper which is secured by United States or State securities or municipal bonds. The framers in their anxiety to prevent the speculative dealing in securities have actually prohibited the discount of paper when it is secured by bonds which the reserve banks are allowed to invest in. The same paper with a satisfactory personal or corporate indorsement may be discounted, but if in addition to the indorsement the member bank should take collateral security the security would have to be separate from the obligation before offering for discount. This is a grave defect and should be remedied.

The interest of New York is so vast that you can not pass a bill unless you consult her great and gigantic institutions. The savings banks in the State of New York alone have deposits of \$1,724,607,300, or more than all the gold in the United States Treasury. The deposits in the State banks, trust companies, and savings banks throughout the Empire State are nearly equal to the entire money in the United States.

I trust my colleagues will give due consideration to the suggestions I have made, for my earnest purpose is to see the bill, when enacted into law, receive so hearty indorsement from the whole country as to advance the material prosperity of all interests and redound to the fame and glory of its authors, and mark an epoch in the successful administration of the triumphant Democratic Party. [Applause.]

Mr. HAYES. I yield 15 minutes to the gentleman from West Virginia [Mr. Moss].

Mr. MOSS of West Virginia. Mr. Chairman, no man who has a proper conception of his duty as one of the Nation's lawmakers will oppose a really meritorious bill for partisan reasons. I concede the fact that party organization is indispensable to the country's welfare and that the clash of party arms oftentimes gives a clearer vision of important public questions. I have always been a party man, believing that through organization alone can great progressive measures be initiated and consummated; but I trust the time will never come when I shall help to stand in the way of a measure that is beneficial to the people merely because my party does not especially advocate that measure. To be a party man one must concede, must yield, along certain lines; must not stand out for the dotting of an "i" or the crossing of a "t"; must make concessions, in order that the great primal object shall be attained, but need never stultify his conscience. No party in this country can afford to stand still. This is not a standstill age. Medicine, law, chemistry, astronomy, business, invention, and even religion are developing daily, and progress is the great watchword of the times. And in keeping with that progress the Republican Party, with its honorable and historic past, must lead, or else lose its prestige as the great party under whose leadership have been accomplished the great progressive measures of our Nation's history. I sincerely believe that this party has awakened anew to the realization of this demand for progress. Every indication points to that fact, and those who at one time felt it necessary to leave that party are coming back and working together for the common good with their compatriots of the past and are receiving a hearty welcome home from those who after all espouse the same basic principles; and I venture the prediction, Mr. Chairman, confronted as we are by the peril of Democratic tariff rule, that before the next battle of ballots this splendid band of Progressives, with their great leader at their head, will be found fighting side by side and shoulder to shoulder with the mighty host of Republicans to again redeem this fair land from the ruinous invasion of European competition. [Applause.]

This great party realizes full well the necessity of reform in our currency. It has long recognized the weakness of the pres-

ent system and has given much study to its improvement. It realizes that it is not a partisan question, but purely and simply a business proposition. When currency legislation was demanded by President Wilson this demand met with no hostile reception on the part of the Republicans. They may have objected to the form of the Executive demand, but not to its substance, and so I believe that there is no real reason why the Republican minority in this House, collectively, or any of us individually, should oppose the currency bill that has been introduced merely because it has been introduced by our Democratic brethren on the other side. The truth is that, for one, I recognize the absolute necessity of extraordinary measures to relieve the financial stringency that must follow the passage of an un-American, illogical, irresponsible, and repugnant tariff bill. [Applause on the Republican side.] If no one else in the country agreed with President Wilson as to the vital necessity of securing some kind of artificial aid to administer in large doses to the industries of this land as an antidote to the poison of tariff legislation that will be poured down their throats within the next three weeks, still would I agree with the President on this point. The truth is we all realize that something must be done, and even those Congressmen who are clamoring for return to their native heath, after spending their summer months in this delightful summer resort, do not loudly complain when from the innermost recesses of the White House there issues forth, in stentorian tones, "Thou shalt not go."

Seriously, Mr. Chairman, something is needed, and needed quickly, to stem the tide of depression that will start as soon as this new tariff law has played its part for even a short time upon the stage of American politics. I have wanted to support this money bill, because while I realize that the greater the disaster that overtakes this country as a result of unwise tariff legislation the quicker will be the transition in the political complexion of this House, yet I believe that a man must always put patriotism before partisanship, and I had thought that this present bill, although framed in secret caucus, and about to be rushed through this House by the mere dead weight of the Democratic majority, without deliberate consideration, might at least be an improvement upon our present system. But, Mr. Chairman, as I have studied this bill, there are features of it which seem to me to demand correction before they should be incorporated in the law of the land. Time will not permit even an attempt at analysis of the different provisions of this bill. Suffice it to say that, in my judgment, many of its features are good and meritorious, and if enacted into law would certainly have a tendency to relieve money stringency at critical times. But over against this fact must be placed the vital proposition that in enacting measures for the relief of some people we must not infringe upon the constitutional rights of other people. I despise the rantings of the demagogue who seeks to profit by declamation against certain classes in this country. I have no respect for the man who is willing to ride into public office or to stay in the saddle by arousing class hatred in this country. We are all one people, bound together by ties of brotherhood, by the inspiration of a common ancestry, by a glorious history, and the promise of a splendid future. I refuse to put the laboring man against the capitalist, the consumer against the producer, the borrower against the banker, to prejudice one class against the other for political reasons. And so I say in the consideration of this money bill, "The bankers of this country are entitled to a square deal—the little bankers as well as the big bankers." It is, after all, the little fellow that is often hit the hardest by injustice. The big fellow is usually able to survive.

I say that the provision in this bill which gives to these little banks only 5 per cent on their money and makes it mandatory that they shall put up for Federal reserve 20 per cent of their capital and 5 per cent of their deposits and accept the provisions of this bill, whether they desire to do so or not, is in direct violation of their charter rights and of the Constitution of the United States. There is no better settled legal proposition than that you can not pass any law which violates the terms of an existing contract. I am aware of the fact that it will be claimed that a bank charter or a Government permission to establish and maintain a national bank is not a contract. But I respectfully submit that this view is absolutely untenable. The great decision of Chief Justice Marshall in the case of *Trustees of Dartmouth College v. Woodward* (17th U. S. Supreme Court Reports, p. 518) and the long line of decisions based upon that great case settled this question. In that case the court held that—

the charter granted by the British Crown to the trustees of Dartmouth College in New Hampshire, in the year 1769, is a contract within the meaning of that clause of the Constitution of the United States (Art. 1, sec. 10), which declares that no State shall make any law impairing the obligation of contracts.

And further, that—

an act of the State Legislature of New Hampshire altering the charter without the consent of the corporation in a material respect is an act impairing the obligation of the charter and is unconstitutional and void.

In that great case the act of the Legislature of New Hampshire was entitled "An act to amend the charter and enlarge and improve the corporation of Dartmouth College," just as the title of this money bill indicates that there will be an enlargement and an improvement. But you can not enlarge and improve according to your judgment unless the judgment of the other party with whom the contract is made coincides with your view that it is to be enlarged and improved. And in that case Daniel Webster, whose eminence could well have rested alone upon his argument therein, asserts—

If the legislature can at pleasure make these alterations and changes in the rights and privileges of the plaintiffs, it may, with equal propriety, abolish those rights and privileges altogether. The same power which can do any part of this work can accomplish the whole.

And, that—

These acts are not valid and binding upon them without their consent, 1, because they are against common right and the constitution of New Hampshire; 2, because they are repugnant to the Constitution of the United States.

A law which deprives a national bank of the use of a portion of its capital, or discriminates between the Government and an individual as to the legal rate of interest the bank shall charge, and reduces that rate to the Government to a less per cent than many small banks can afford to accept, is a violation of the charter of the bank; is depriving that bank of property without due process of law, and without just compensation; is a retroactive or retrospective statute—all of which is absolutely contrary to specific provisions of the Constitution of the United States, namely, the fifth amendment, the fourteenth amendment, and the very spirit of the Constitution, which prohibits any State from passing any law impairing the obligation of contracts. If a State is thus prohibited surely the legislative branch of the Government has no such privilege.

In the case of *Farrington v. Tennessee* (95 U. S. Supreme Court Reports, p. 679) the syllabus is as follows:

The charter of a bank granted by the Legislature of Tennessee provides that the bank shall pay to the State an annual tax of one-half of 1 per cent on each share of capital stock subscribed, which shall be in lieu of any other taxes.

It was held, first, that "this provision is a contract between the State and the bank, limiting the amount of taxes on each share of the stock"; second, that "a subsequent revenue law of the State, imposing an additional tax on the shares in the hands of stockholders, impairs the obligation of that contract and is void." And in this case the learned court, treating the charter as a contract, says:

A compact lies at the foundation of all national life. Contracts mark the progress of communities in civilization and prosperity. They guard, as far as is possible, against the fluctuations of human affairs. They seek to give stability to the present and certainty to the future.

In the case of the *Planters' Bank of Mississippi v. Thomas L. Sharp et al.* (6 Howard, 301) it was held that where a bank was chartered with certain powers ordinarily possessed by banks that a statute of the State declaring it to be unlawful for any bank to transfer any note, bill receivable, or other evidence of debt conflicted with the Constitution of the United States and was void, the court holding to the well-established doctrine that a charter can not thus be modified and annulled.

I venture to say that there is not in all this broad land a country bank that charges less than 6 per cent discount or interest. Their money at this present time is bringing them that interest. They have, therefore, a right to charge the Government the same rate of interest as they charge an individual, and yet this great Government proposes by this money bill to forcibly take out of their vaults 1 per cent on the money that they have and to say to them, "There is no relief, because the Government demands it." Mr. Chairman, to me the Government of the United States is the most truly beneficent institution of a civil nature that God Almighty ever created. It represents, in my mind, justice, equality, and liberty before the law, and I can not hear with patience the argument that that great Government is entitled, any more than an individual is, to deprive a person or a corporation of its property without just compensation. What is a banking corporation? It is a collection of individuals, banded together under one name, to carry out a lawful object. There are worthy and there are unworthy corporations. The acid test is, Do they obey the law? If they do, give them the protection of the law and of the Constitution. If they do not, lawfully punish them, or rather their officers, and, if necessary, take away their charters by proper judicial procedure. The stockholders of the 19 national banks in the fourth congressional district of West Virginia, which I have the honor to represent, consist of men and women, mostly of

limited means, who, in many instances, have put their all into these institutions. And so it is that we must consider them, and the thousands like them who are scattered throughout this Nation, who are little stockholders in little banks. Under the terms of the charters which authorized these banks they were not compelled to take a large part of their capital and deposit it with the Government at a reduced rate of interest. They came into being with that understanding. Their stockholders became such with that understanding. Can you say to them now, "We will make you do it, whether you want to or not"?

Ah! But some gentleman will say, "You little banks should not complain of this, because, while it is true we are taking from you, yet in other ways we are giving to you." On the same principle you would peel a man's skin off his face and put it back on his arm. The point of the whole matter is that these little banks are entitled to say whether they want their anatomy to remain the way it is or whether they want it changed.

I do not contend that Congress can not pass laws regulating national banks and providing for their strict examination and proper conduct, and restraining usurious charges, and, in fact, I believe the power of Congress to enact laws governing national banks is ample, but what I want to make clear, from this argument, and from the high authorities I have cited, is that you can not compel them to enter into and become part of the scheme provided in this pending bill, and this bill should therefore be so amended as to make it discretionary with the banks to enter into the plan and to bear its burdens, as well as to receive its benefits, and should not be made compulsory, when compulsion is clearly against constitutional limitations. To enact an unconstitutional statute is to defeat the very object that you seek.

Mr. MURDOCK. Will the gentleman yield?

Mr. MOSS of West Virginia. Yes.

Mr. MURDOCK. The gentleman's contention is that if the bill passes as it is, unamended, the courts will hold it unconstitutional?

Mr. MOSS of West Virginia. They will, in my judgment.

I trust that it will be the pleasure of the majority in this House to so amend this bill as to obviate this constitutional objection. The bill is by no means otherwise perfect, but perfection can not be expected in the product of the human mind, and, for myself, I say I shall not permit mere trivial objection to prevent my support of a bill covering legislation which in the time of stress will be so badly needed. But if the bill is not amended in certain material matters I now believe it will be my duty to vote against it, believing, as I do, that it is unconstitutional.

I am not of those who fear the creation of a political hierarchy by the terms of this bill. I can not yet bring myself to believe that any American President would so far prostitute the honor of his lofty position as to construct a political machine from the material supplied by this bill. His honors are so high, his responsibilities are so great, his patriotism is so lofty that no man whom the American people would select to sit in the presidential chair could ever stoop so low as to barter away our Nation's credit for a mess of petty politics. You can not make me believe that such men as William McKinley, Theodore Roosevelt, William H. Taft, and Woodrow Wilson would for a moment betray their sacred trust for party advantage. No man in this House has a higher respect for the intelligence, the lofty purpose, and the patriotism of our present Chief Executive than I have; and while I believe that especially in his attempt to reduce this country to European industrial standards he has gone far afield, and has departed from the traditions and the very principles upon which this Government was reared and upon which alone it can endure, yet I give him credit for absolute honesty of purpose and purity of thought. His service will be brief. His time is short, for already from the rock-bound coast of Maine there echoes forth the glad refrain that the American people will once more return to the faith of their fathers and that in the year 1916 the great party of Lincoln will again come into its own and by an overwhelming vote will place in the presidential chair a man who stands for and exemplifies the great and eternal principle of protection to American industries, American labor, and American homes, for sound finance, for national prosperity, who belongs to a political party that has always been able to successfully solve the momentous questions that have confronted the American people. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman, the debate thus far had on the pending bill in this House, in the press, and by the public generally, seems to tend toward a conclusion that this bill, in its present form, under the present whip and spur, will pass this

House, but in its ultimate form of enactment into law will be fundamentally different and we hope vastly improved. For this reason I shall attempt no complete or comprehensive analysis of the bill, but shall content myself with discussing certain phases which seem to me important.

The American people, regardless of faction or party, recognize and expect amendment to our banking and currency laws growing out of our expansion and evolution of business. We need a more elastic system of currency and a more flexible means of handling our credits so that the supply of credit and of money may wait upon demand with a reasonable certainty of meeting it.

My first objection to the bill is the lodging of the complete control of our whole banking and currency system in the President without such salutary check and restraint as might be obtained through the Government's dominance, but with a minority representation in the controlling body fairly representative of the interests of those who furnish the capital and those who are interested in business, at least in a measure, separated from politics.

The constitution of the reserve board provided in this bill being all nominees of the President, this board in turn having much to do with the business policies of the regional reserve banks, which in turn must obey authority above, while doing business with those below clear down to the humble borrower at the village bank, makes a system so involved and complicated with politics that a change of administration in this country could not be effected short of revolutionary process. I feel that I can speak frankly on this subject without offense to the present administration. Its head was elected upon a platform limiting his tenure to one term. I think when this bill reaches a deliberative body which will not be caucus bound there will be wrought out a general system which will recognize the Government's supremacy, with proper checks and safeguards, and a system of banking and currency subordinate thereto which will be bound neither by the ties of our past systems nor dictated by the systems of England, Germany, or France, but which will be a fair reflection and outgrowth of our industries, commerce, and financial advancement, and which may be properly called an American system of banking and currency. That my point of view may be understood, permit me to say that I have had for a number of years a limited experience in banking, both State and national. However, I have not for several years past had any interest in any national bank. In my home county, with more than \$2,000,000 on deposit, there is no national bank. There are in my district, which is essentially agricultural, 34 national banks. The capital is practically all locally owned, and a very large portion of it by the farmers and landowners of the district.

The largest capitalization in the district of any national bank is \$100,000. If the 12 regional banks were established, the average distance from the several banks in my district to the nearest probable regional bank would be 100 miles. If that probability did not mature, the distance would be several hundred miles. A study of the capitalization and surplus of national banks suggests to me the following generalizations: First, the farther the banks from the regional point the smaller the capital; second, the smaller the capital the less the percentage of surplus. This bill proposes to lay forcibly the hand of the law upon each bank and require the absolute payment of 10 per cent of its capital and the conditional payment of 10 per cent more, should necessity present, for the formation of the regional reserve bank.

We know that the permanent bases to banking are: First, its capital; second, its accumulated surplus. After that, the loaning of deposits, and so forth, is uncertain as to amount and stability. As a matter of practice, it is known that a surplus once set aside is seldom diminished, but is usually merged, if its form be changed, into increased capital. So it seemed to me that the proper basis for demanding contribution of the banks for the regional bank would be the capital and surplus treated as a unit. Under the bill as it at present stands, for every thousand dollars of the bank's capital and surplus there would be contributed by the city of Philadelphia \$72.50; by the city of Boston \$100; by the city of New York \$101; by the city of Omaha \$115; by the city of Lincoln, the capital of my State, \$150; the average of the banks of my district, \$135. This injustice is emphasized when we consider that from the small banks is taken out and far away from their communities this contribution to be placed in one of the large cities for addition to its growth, while in the large cities, at least some of them, their small and forced contribution may be invested in valuable improvements and increased business in the immediate vicinity of original ownership.

Another objection from the standpoint of the agricultural interior is found in section 14. Authority is given for any Federal reserve bank to discount paper based on domestic transactions, the same to have maturity of more than 60 and not more than 120 days, but provided that not more than one-half of such discounts should have a maturity of more than 90 days. It further provides that a Federal reserve bank may discount acceptances of any member bank which are based upon exportation or importation of goods and which mature in not more than 6 months. So the average time upon which banks could discount domestic paper would be 105 days, as against 6 months given to the foreigner and the importer on similar paper. So, if the farmer of Nebraska or elsewhere in the interior should endeavor to trade with a great grain merchant in New York for grain or supplies to be used in metropolitan consumption, the grain merchant can say to the farmer or his dealer: "On matters between us we are confined to an average of 105 days. If we operate upon a credit basis and if I do business with the Canadian or the Argentinian I have two advantages: First, both in point of time are nearer the port of New York than are you. There are no tariff obstacles under the Underwood bill, and under the new currency bill I have 180 days' time with them, while with you I have but 105."

How long and how far do you gentlemen desire to press this special favor to the foreigners? Well did your Committee on Ways and Means say in passing upon its own bill: "In our judgment, the future growth of our great industries lies beyond the seas." [Applause on the Republican side.]

It would seem that this bill is shrewdly intended as a companion piece of legislation to run with the Underwood tariff bill to the favor of the capital and the labor "beyond the seas" against the laborer and producer in the United States. I may be prejudiced in tariff and currency legislation, but I believe in an American tariff and an American currency drafted and operated in the interest of the American people. And if they operate to the prejudice of the foreigner, well, we can not help that. Thus far he has had his choice upon what shore to pitch his tent.

There has been seriously urged against this bill the unconstitutionality of the Government's requirement of banks to invest in a venture which will bring profit to the Government or lose their charter. The serious question is raised as to the financial readiness to effect the changes necessary to set in operation the machinery of the proposed system. Its advocates upon the floor of this House have presented with no degree of certainty the reasonable probability of effecting such change without danger of such financial friction as to precipitate a more or less serious stringency bordering upon a panic.

Other objections are presented, so that at this stage more than heretofore supporters of this bill who once spoke with enthusiasm and superconfidence are now pausing and deliberating. Caution for the first time seems to have been found in the lexicon of the caucus members. This being true, and assuming that all Congressmen and substantially all our citizenship are patriotic, and while differing as to methods, all desire sound business, prosperity, and the common weal, the sponsors for this bill needed every supporting factor available to not only evolve a working financial machine but to reduce all possible friction, but more particularly to inspire public confidence in the feasibility and the desirability on the part of the whole people after the enactment of the law to put it into successful operation.

This leads me to the most important objection to the bill in its present situation. Of all people interested in banking from whom I have heard in my district, but one thus far has spoken favorably of this proposed legislation. He expressed his limited study and understanding of the measure itself, but urged the one great fact that the legislation, if adopted, should not be partisan. He was a Democrat, and his suggestions were made in view of the winding and uncertain course followed by his party on the currency and banking question for the last 16 years. [Applause.]

From the arguments presented by the chairman of the Banking and Currency Committee and other members, as well as numerous speakers on the floor supporting the bill, have come the strenuous statement that the bill is a nonpartisan measure. These statements were made in part before any attack had been made on the floor of this House on the bill as being partisan, it being given in anticipation, and would lead one to think that the importance of the proposition was highly appreciated by the supporters of this bill. Now, however little that consideration was given up to this time in the progress of the bill, it seems to me that they "protest too much." Is it partisan? Abraham Lincoln once propounded this question: "Calling the tail of a dog

a leg, how many legs would he have?" The answer was given, "Five." "No," said Lincoln, "only four; calling a tail a leg does not make it one."

If this were a nonpartisan bill, it would have been introduced by a Member, referred immediately to the Banking and Currency Committee; there considered by the 21 members of that committee, who are presumed to have been students of those subjects and experienced in legislation thereon, who would with unbiased minds consider the plan, adopt it or reject it after full interchange of thought and argument, or evolve a new general plan; then amend and change it in detail where the wisdom of the collective membership might dictate; then report it to the House for its action, buttressed with the support of men of the three political parties representing various angles of financial thought, theory, and experience; then in the Committee of the Whole House, with every Member "wearing his rights as royal robes, his manhood as a crown," forgetting partisanship, labor and strive in untrammelled debate to bring out of the bill, the report of the committee, and the collective wisdom of the House a law which would drop the shackles of the past and copy no system of any continental nation; but which would be a fair expression of our industrial, commercial, and financial conditions and necessities woven into constructive legislative phrase; constitute a distinctively American institution, operating with no injustice to anyone, but relieving the necessities of sections and classes; constitute an American system of banking and finance through which the greed and oppression of capital might not operate, nor yet through which vast political advantage and opportunity might be gained by whomever the people in the future should choose as their ruler. [Applause.]

If we were to accept the statement of Chairman GLASS, that this bill is a nonpartisan bill, our ideas of nonpartisanship must be essentially modified.

This is the history of the proposed legislation: The original bill was introduced by Chairman GLASS on the 26th day of June, 1913. The Speaker referred the bill to the Committee on Banking and Currency, but the Committee on Banking and Currency, as a committee, never received that bill. True, the committee room was taken charge of by the 14 majority members, the 7 minority members excluded, and there given distinctively secret and partisan consideration. After those members of the committee finished their deliberations, slightly amending the original bill, it was taken up by the Democratic House caucus, which for several weeks, with guarded approaches, closed doors, and secret sessions, gave it such partisan consideration as was seen fit, the account of which could not reach the public. The bill, then, as amended by the caucus, was sent to the Banking and Currency Committee, where all the membership were called in and discussion begun; but the majority members informed their minority colleagues that they felt themselves bound by the instructions of the caucus, which, of course, rendered futile and made a mockery of any discussion which might ensue. So that the bill itself is perhaps the most distinctively partisan measure ever presented to this House for consideration.

Even now an amendment proposed by a minority member is met by a rule of the caucus that the majority members shall not vote for it. So that, beginning with the unknown authorship of the bill, up to the present time no element of nonpartisanship has yet appeared.

Chairman GLASS may be able to convince the ultra loyal members of the majority that this bill is not partisan. He may influence some members of the minority that it is not absolutely partisan; but he will never be able to convince the American people that it is nonpartisan. If you go up against that proposition, you will have a task before you that the rolling of the Sisyphæan stone up the hill will, in comparison, be a case of mild calisthenics, and you can not obtain that confidence in your bill which nonpartisan action would have inspired in the American people.

I say this with all due respect to the Democratic Party, though old, rejuvenated, and strong, and for many facts of whose record I have a great deal of admiration, that for its record on currency and banking, which has been the product, not of study nor of nonpartisan consideration, but to the heated action of caucuses and conventions, the American people have not confidence in its record or ability. In 1896 you unfolded to the American people a "cure all" for banking and currency.

In the heated atmosphere of the Chicago convention you declared in favor of the free and unlimited coinage of silver at the ratio of 16 to 1. In 1900, in the torrid atmosphere of Kansas City, on the 4th of July, you again declared in favor of the sacred ratio and the twinning of the metals. In 1904 your platform was silent on the money question; you left that blank, and your money plank was a gold telegram sent from New

York by Mr. Parker. In that place where a declaration on banking and currency might have been we find in your platform as follows:

We favor the nomination and election of a President imbued with the principles of the Constitution, who will set his face steadily against Executive usurpation of legislative and judicial functions, whether that usurpation be veiled under the name of Executive construction of existing laws or whether it takes refuge in the tyrant's plea of necessity or superior wisdom.

In the present-day discussions held upon this floor the foregoing paragraph needs little further consideration. In 1908, with the panic of 1907 fresh in vision, your means of rectifying all banking and currency ills was a declaration in favor of a guaranty of deposits in the banks. This is your record for 16 years on banking and currency questions.

In all fairness I desire to ask which one of you gentlemen on that side, under the five-minute rule, which we will soon enter for debate, will rise in his place and ask to amend this bill, which is a gold-standard bill, by inserting a clause declaring the Government in favor of the double standard and the sacred ratio?

Again I ask, Who will rise in his place and ask to amend this bill by providing for the guaranty of bank deposits? These were the articles of your faith for 16 years. No man among you will say you believe in any of them now. If you so solemnly in conventions declare as heretofore, and having so declared have so soon abandoned, what warrant have you that the American people have any confidence in your caucus-canned currency legislation of to-day? [Applause.]

Mr. PHELAN. Mr. Chairman, will the gentleman yield for just a second?

The CHAIRMAN. Does the gentleman from Nebraska yield to the gentleman from Massachusetts?

Mr. SLOAN. Yes.

Mr. PHELAN. Will not all that lack of confidence be removed when a lot of Republicans vote for the bill?

Mr. SLOAN. I do not know whether any Republicans will vote for this bill. I do not think it should be a bill that should divide political parties. When you gentlemen go into secret caucus to draft your bill and do not give your real reasons here on the floor of the House for its passage, you are serving notice to the American people that you want the entire credit for passage of the bill. You do not invite anybody else to support it. But let me tell my friend from Massachusetts [Mr. PHELAN] this: Put this bill into operation for six months, and you will be looking around, not for the purpose of claiming the exclusive credit for its passage, but you will be looking vainly for a distribution of the responsibility. [Applause from the Republican side.]

Mr. J. M. C. SMITH. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes; briefly.

Mr. J. M. C. SMITH. Speaking of the control being placed in the hands of the President, what has the gentleman to say about the appointments to the central board being made by the President by and with the advice and consent of the Senate and House of Representatives?

Mr. SLOAN. I would simply say this, that that would amount to simply the same as any other line of patronage that the President of the United States had. I am not afraid of offending President Wilson, and that is why I speak so boldly on this proposition. Neither President Wilson nor his friends can take umbrage about our protest against a political power that is to be transferred to the President of the United States through the operation of this bill; because we know that President Wilson ran on the Baltimore platform, which says only four years for him. Of course, I presume, whether that platform said so or not, when the American people get at him in four years it will amount to just the same thing, whether the platform be binding or not. [Applause on the Republican side.]

Mr. HELVERING. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes.

Mr. HELVERING. Did not the gentleman see on yesterday where Senator Sherman of Illinois objected to the appointment of a Democratic postmaster, and he was not confirmed?

Mr. SLOAN. Oh, yes; those things happen; the little fellows die; but it is an exception, they say, that proves the rule. The gentleman knows that it is a matter of courtesy among Senators, which has been recognized in the Senate for years, that when a post-office appointment in a Senator's own home town is sent to the Senate for confirmation and the nominee is personally objectionable to the Senator he never is confirmed.

Involved in this bill is the greatest grant of power ever transferred to the Presidency since the inauguration of George Washington. Its effects can not be measured by the judgment, and the imagination quails at the task. The use of this power in the hands of a good and wise President, of course, would not be abused; but well has it been said that jealous restriction of power rather than the too confident placing of it, coupled with continued vigilance, alone can thwart the grasp of power which is sweet to the being of every man who attains a measure of control over his fellow man or that which is his.

OSCAR W. UNDERWOOD, speaking about the power that was granted to the seven appointees of the President, is reported as saying, as to whether it would be good or bad "that fact depends altogether on whether these men were angels or devils." We have been fortunate in usually having wise and good rulers. That may not always be the case. It is easier to grant power in this Nation of ours than it is to recall it, and the high virtues of present occupants of high places is no guaranty of equally high-charactered succession through the ages.

In commenting upon this phase of the question, Chairman GLASS graphically depicted a dramatic and solemn scene recently had in the presidential chamber, when a banker suggested that sometime some President might misuse the power delegated in this bill for political purposes. He quotes the President, saying:

I shall not soon forget the emphasis with which the President of the United States declared that "no man would ever be found who would be willing to imperil his reputation or tarnish his fame by so flagrant a prostitution of his high office."

The chairman said he was wonderfully impressed, but his impression, apparently, was that of hero worship and political idolatry rather than a critical consideration. Had others been there less devoted to the political fortunes of his fellow Virginian, they, too, might have been impressed; but that impression would prompt retrospection as future vision is denied.

They would recall the 13th day of August, 1787, in the Constitutional Convention held at Philadelphia, when, after sharp and profound debate, it was determined to make this House the origin of all revenue legislation. The most important reason seemed to have been given by the great Randolph, himself a Virginian, that origin of revenue measures should be withheld from the Senate and lodged in the people's representatives to the exclusion of all other powers and influences, for the reason that the Senate would be amenable to the influence of the President and that the House would not, because that part of the Constitution already framed provided for many conjunctive acts in the administration of the Government between the Senate and the President.

This would immediately recall the fact that the last Congress, having the same majority party as this one, placed itself on record as favoring free sugar at once and retaining wool upon the dutiable list. This was approved by the great Democratic national convention. They would further remember how, early in this session, Mr. UNDERWOOD, the great Democratic leader of this House, stood up and humiliated every one of you by saying that the House was in favor of giving free sugar now and was in favor of keeping a duty on wool, but owing to the insistence of the President these two important positions of the House were reversed.

In that constitutional convention no Member dreamed that any President of the United States would, under any circumstances, except of course by public message in person or in writing, ever dare seek to influence the action of the House of Representatives on a tariff measure however much he might mingle with the question in the Senate. And with these facts of political history in mind well might the President of the United States and Chairman GLASS find themselves mistaken as to what some future President might do if the grant of power proposed in this bill should be conferred.

Who is asking for this action? Who is asking for this transfer of power? It is not the House of Representatives. The House is not traveling fast. It is not exceeding the speed limit in the matter of transfer of that power except in the matter of limiting the general debate. And is the Senate itself in haste? Yes; it has moved with alacrity, with speed, zeal, and enthusiasm in transferring this power; but it is the speed, the zeal, and the enthusiasm of the galley slave scourged to his dungeon. [Applause.]

It is unfortunate that a bill of this character comes from the mintage of the caucus. It is at least criticizable that an Executive should call and hold both Houses of Congress in session for the long and weary months which the Constitution contemplates shall be their opportunity to mingle with their people and do the work that should be done at the district end, and then, after coming here with commissions from our people, find our-

selves barred from the Hall which was constructed for national legislation, while we know that there are those within who are usurping the power and prerogative of effective legislation in that secrecy which the Constitution of the United States and the genius of its institutions abhor. Then, when the doors are finally thrown open, we meet on the floor a majority pledged not to legislate as the Constitution contemplates; not bound by the oath of office, but by the shrewd coercive act of an artificial majority of a majority. And then but a few hours of debate are given—debate which amounts to hollow-sounding mockery, because it falls upon ears of those who overrule reason, judgment, and rights and interest of the people by the blind obedience to caucus command. It is not reassuring to the American people who have their interests and future under consideration to know that back of darkened doors men are plotting to aid or injure, to make or mar, to raise or ruin their fortunes or their prospects.

Effective as may be caucus action for a time, its results are objectionable because in time it breeds lack of confidence, distrust, and suspicion. During the caucus consideration of this bill there was generally reported to the public and proclaimed by the press that the great Secretary of State, who is engaged in the solution of delicate international questions, the far-reaching consequences of which in the final analysis would seem to require that all political forces and influences should be marshaled back of our Government for the contest of diplomacy or, possibly, the clash of arms—it was reported that at the critical period of the life of this bill in the caucus the great Secretary sent a letter carrying with it the full force and influence of the State Department, in which he successfully urged, and did effect, the adoption of this bill by the partisan caucus. A great many will refuse to credit this statement for a number of reasons. First, we would not expect the great Secretary to be partisan at such a time; second, the adoption of this bill would mean the fastening of the gold standard on the American people for an extended period of time. We well remember in 1896 when he was asked why he did not assail protection, he stated, "while protection has slain its thousands, the gold standard has slain its ten thousands." And now since protection is stricken down he would take an opportunity to perpetuate the gold standard, thus causing the ruthless slaughter of the 10,000 innocents to go remorselessly on. I for one will not credit it; can not credit it. Palsy the imputation, perish the thought. And yet how and when can we determine its truth or the lack of it? Not until "graveyards yawn," "the sea gives up its dead," and the awful records of the caucus are revealed. [Applause.]

Mr. PHELAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to; accordingly the committee rose, and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, Mr. EVANS was granted leave of absence, for three weeks, on account of sickness in his family.

RECESS.

Mr. PHELAN. Mr. Speaker, I move that the House do recess until 8 o'clock to-night.

The motion was agreed to; accordingly (at 6 o'clock and 23 minutes p. m.) the House stood in recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House was called to order by the Speaker.

RELIEF OF DESTITUTE AMERICAN CITIZENS IN MEXICO.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent for the immediate consideration of the resolution which I send to the Clerk's desk.

The SPEAKER. The gentleman from Alabama [Mr. UNDERWOOD] asks unanimous consent for the present consideration of the joint resolution which the Clerk will report.

The Clerk read as follows:

Joint resolution (H. J. Res. 130) to provide for the relief and transportation of destitute American citizens in Mexico.

Resolved, etc., That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for relief of destitute American citizens in Mexico, including transportation to their homes in the United States, to be expended under the direction and within the discretion of the Secretary of State, and to be immediately avail-

able, \$100,000. Authority is hereby granted to the Secretary of State to reimburse from this appropriation the appropriation for "Emergencies arising in the Diplomatic and Consular Service," for such sums as shall have been expended from that appropriation for purposes of relief and transportation in and from Mexico since January 1, 1913.

Mr. UNDERWOOD. Mr. Speaker, I have a letter from the Secretary of State explaining the urgency of this matter.

The SPEAKER. The Clerk will read the letter.

The Clerk read as follows:

DEPARTMENT OF STATE,
Washington, September 12, 1913.

The Hon. OSCAR W. UNDERWOOD,
House of Representatives.

MY DEAR MR. UNDERWOOD: At the time the department's recommendations to Congress were made for appropriation for the relief of Americans in Mexico, and even as late as the time when the deficiency bill containing the proposed appropriation was reported to the House, it was believed that the appropriation for emergencies arising in the Diplomatic and Consular Service would be sufficient to cover the expenses of extending relief to Americans in Mexico and transporting them to their homes in the United States until the deficiency bill had become law. Contrary to expectations, the expenditures have increased more rapidly than was anticipated until the department now finds itself with less than \$12,000 available and a daily expenditure for relief and transportation approximating \$2,000. In view of the fact that the deficiency bill is still pending in the Committee on Appropriations of the Senate and will not become law before the available appropriations have been exhausted, it is essential that there should be placed at the department's disposal at once a sufficient sum to enable it to carry on the work of relief and prevent the hardship and dissatisfaction which a discontinuance of that work would entail. Besides the obligations resting upon this Government under existing conditions of affording a safe and speedy means by which Americans may leave Mexico and reach their homes in the United States, there are political reasons which render it of the highest importance that the work which is being carried on should not be brought to a sudden stop.

The amount already expended from the emergency appropriation since January 1, 1913, for the relief and transportation of Americans in and from Mexico is at the present moment approximately \$52,788.29. Nearly all of this amount has been expended since March 4, 1913. It is highly important that the emergency fund be reimbursed by the amount so expended, in order that the department may be in a position to meet other demands upon it during the remainder of the fiscal year.

If the proposed appropriation shall be made, there will be left for purposes of relief and transportation after the reimbursement of the emergency fund only approximately \$47,211.71, which will probably be inadequate for the purpose for which it is intended. It is therefore suggested that all, or at least half, of the appropriation proposed to be made on the deficiency bill be retained in that measure and be placed at the disposition of the Secretary of State in case he should be called upon to afford relief and transportation to an amount in excess of that appropriated by the appended resolution.

Very sincerely, yours;

W. J. BRYAN.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. KELLY of Pennsylvania. Reserving the right to object, Mr. Speaker, I would like to ask the gentleman from Alabama [Mr. UNDERWOOD] as to what effect the passage of this resolution will have on the appropriation carried in the urgency deficiency bill of \$100,000?

Mr. UNDERWOOD. This resolution will not have any direct effect, but I suppose this resolution will be taken up immediately in the Senate and passed, making the \$100,000 that is in the urgency deficiency bill immediately available, and then if no more money is needed it will be stricken out of the urgency deficiency bill.

Mr. KELLY of Pennsylvania. That may be taken up later?

Mr. UNDERWOOD. Yes; and if they need more money they will keep the item in. It is an emergency, and that is the only reason why I take it up at this time.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. UNDERWOOD, a motion to consider the vote whereby the joint resolution was passed was laid on the table.

CURRENCY.

Mr. PHELAN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, with Mr. GARNER in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. PHELAN. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. RUBEY].

Mr. RUBEY. Mr. Chairman, money in some form or other has been used as a medium of exchange by people, both civilized and uncivilized, in every age of the world's history. We read in that holiest of holy records, the Bible, the wonderful story of the creation. We are told of the land of gold and that the gold was good. Abraham, it is related, was rich "in cattle, in silver, and in gold." When the Lord prospered him and he had journeyed into a strange land, we read the pathetic story of the death of Sarah, his wife, and how he begged to be allowed to buy for her a burial place. A burial place was generously offered him by the sons of Heth, who declined, however, to receive pay for it, but Abraham was insistent, and we read: "Abraham weighed to Ephron the silver, which he had named in the audience of the sons of Heth, 400 shekels of silver, current money with the merchant." Thus we see how the term "money" found its way into sacred writings and how it was recognized as a measure of value among the earliest people of whom we have any authentic record.

Barter, which is the exchange of one commodity directly for another, existed among the uncivilized, but only to a very limited extent, for even the barbarous savage soon learned the value of a medium of exchange, and beads, shells, ornaments, and various other things of value soon became his money.

IN COLONIAL DAYS.

In every age, as we study the world's history and read the story of the rise, progress, and fall of nations, money has been an important factor, but it has been only in modern times that its true relation to the progress and development of a nation's growth has been recognized. The history of money during our own colonial days is quite instructive and interesting, but the time allotted to me in this discussion will not permit me to go into it at any great length. Practically every colony had a medium of its own—tobacco in Virginia, rice in South Carolina, and fur in Massachusetts. Arbitrary laws were enacted in each colony to protect its own money or medium of exchange. For example, when the abundance of the crop of tobacco in Virginia increased the supply of money or "expanded the currency," as we would say now, the farmers were limited in the amount that each could raise, and when that failed to decrease the supply they were even prohibited under heavy penalties from raising it at all for limited periods.

The wise old fathers who were called upon to frame our Constitution were fully conversant with the difficulties under which the colonies had labored, and they realized by actual experience the unwise policy of having a different kind of money or circulating medium in each of the States. They realized the importance of having a uniform standard recognizable and receivable everywhere and coming from one source, namely, the Government of the United States. They therefore stipulated that—

Congress shall have power to coin money, regulate the value thereof, and of foreign coin * * *

And they further decreed that—

no State shall emit bills of credit, make anything but gold or silver coin a tender in payment of debts.

STATE BANK CURRENCY.

Notwithstanding this latter provision of the Constitution, State banks supplied the currency of the country in a very large measure for more than three-quarters of a century; in fact, until the prohibitive tax of 10 per cent was placed upon their notes, in 1866. The existence of State-bank-note circulation was probably due to the fact that in the early days of the Republic communication between the States was slow and difficult and each State found it absolutely necessary to have some kind of circulating medium to be used in the transaction of its own affairs, and, besides, the United States Government in those days did not attempt to supply a currency to take care of the business of the whole country. State-bank circulation was issued in great quantities; its value varied in the different States. There was no uniformity in value; the issue of some State banks was at par, while that of others was below par; indeed, some of it was worth less than 50 cents on the dollar.

Be it said to the credit of many States that their notes were always paid at par. The Suffolk Bank of New England, organized as early as 1824, was one; the Bank of New Orleans was another that paid dollar for dollar in gold until Gen. Butler swooped down upon it during the Civil War, captured it, and

took away its gold. The banks of Missouri, Indiana, Iowa, and Kentucky were all well-managed institutions and paid their notes at par until taxed out of existence in 1866. I may be pardoned if I refer with some State pride to the fact that the bank notes of the old State Bank of Missouri are good to-day, and it has been only a short time since one of these old notes was found, presented to the State, and paid in full.

BANKING AND CURRENCY LEGISLATION.

Before taking up the consideration of the pending measure let us briefly advert to the history of banking and currency-legislation in this country. In 1791 Congress passed a law chartering the first United States bank. Under the terms of its charter it was given a life of 20 years. It did not attempt to furnish any kind of a currency circulation, and its purpose was to be a fiscal agent through which the Government could conduct its financial operations and in which it could deposit its funds.

The charter of this bank expired in 1811 and Congress refused to renew it. From 1811 to 1817 there was no United States bank and the Government deposited its funds with State and private banks and transacted its business through those institutions. In 1816 Congress passed a bill chartering for a second time a United States bank. This institution began its operations in 1817 and continued until the expiration of its charter in 1837. This is the bank against which President Jackson made his memorable and successful attack. Much has been said in this debate about this bank, and some of the opponents of the pending measure have tried to make it appear that the proposed bill is but a reestablishment of a similar financial scheme. They are in error in this regard, and to prove it we have only to recount briefly the provisions of the charter of the United States Bank and state the facts concerning it. As with the first bank the charter for this one extended for a period of 20 years; it was capitalized at \$35,000,000, and of this sum the United States subscribed one-fifth, or \$7,000,000—the remaining shares being subscribed for by individuals and corporations. Its affairs were managed by a board of directors composed of 25 men, of whom the President appointed 5. It was in no sense a Government institution. It was a private corporation incorporated, it is true, by the Government, and in which the Government was a stockholder—a minority stockholder at that. It was not even controlled by the Government, but by its board of directors—20 of which were chosen by the individual stockholders and 5 chosen by the President. The Government deposited its funds with this bank as it did with the first United States Bank until during the administration of Jackson, when, at his direction, its funds were withdrawn by the Secretary of the Treasury. During the first few years of its existence its affairs were badly managed and it fell into disrepute. Efforts were made, but unsuccessfully, to forfeit its charter. In 1823 Nicholas Biddle was made President of this bank, and under his management the bank prospered. It was a gigantic financial corporation. It had an absolute monopoly of the Government's financial business and was without the pale of the Government's slightest control. Jackson made his fight against it, and in that great struggle he had the sympathy and hearty cooperation of the American people. Anyone who professes to see any resemblance whatever between the United States Bank which Jackson fought so bitterly and so successfully and the system sought to be enacted must, indeed, see through darkened glasses or view the matter from a prejudiced standpoint.

From 1837 to 1863 we have a second period in the history of our country in which the banking business was done wholly by State banks and in which the currency of the country was supplied through State-bank notes. In 1863 the present national banking act was passed and national-bank notes were put into circulation. In 1866 a tax of 10 per cent was levied by the United States Government against the note issue of State banks and soon thereafter their circulation ceased. The national-bank act has been amended from time to time and supplemental legislation in reference to currency has been enacted.

During the war \$400,000,000 in legal-tender notes—promises to pay, commonly known as greenbacks—were issued, of which nearly \$350,000,000 are still outstanding. To this has been added in more recent years gold certificates, silver certificates, Treasury notes, and these, together with the national-bank notes and the gold and silver and subsidiary coin, make up what in general parlance is termed "the money of the country."

In 1908 an emergency bill known as the Vreeland bill was passed. It was brought into the House under a rule which prohibited the offering of amendments and limited debate to four hours. The provisions of the bill have never been put into operation. It is a dead letter, and will become a dead bill in 1914, as it expires then under its own provisions.

The Monetary Commission was provided for in the Vreeland bill. This commission made an extensive investigation, visited foreign countries, spent over \$200,000 of the people's money, and finally reported to Congress, recommending the passage of what is known as the Aldrich bill. The findings of this commission, however, were never acted upon by the Congress of the United States.

DEFECTS OF THE PRESENT SYSTEM.

Having thus briefly outlined the history of banking and currency legislation, let us next turn our attention to some of the defects of the present system and the attendant evils that have come with them. The national banking act was established and the national bank note created with but one end in view, that of selling Government bonds at a time when the United States was in the midst of a great civil war and when our credit was at the lowest ebb. From the standpoint of purely banking institutions the national banks have been highly successful and have played an important part in the development of the country.

They have been safe, well managed, and are a credit to the financial history of the country. It is not my intention to find fault or criticize them as purely banking institutions. As to the currency they have furnished to the country, however, such is not the case. A currency founded upon the indebtedness of a nation may perform its functions well in times of war, but when peace comes and that indebtedness is or should be diminished, then some other basis should be found upon which to base the country's currency. During the 50 years that this system has been in operation, notwithstanding that in all these years, with the exception of the brief period of the Spanish-American War, the country has been practically at peace with all the world, no effort has been made to pay the national debt. In fact, the debt can not be paid without first doing away with the national bank notes. A system of currency with such a basis of circulation is radically wrong. Again, the currency furnished by the system is rigid, not elastic. It can not be expanded and contracted to respond to the fluctuating business demands of the country. There can be no question about that; all men are agreed upon that point.

The bill now under consideration has for its object not only the establishment of an elastic currency, but it goes much further, and seeks to eliminate the evils which have sprung up under the national banking system. Let us see what some of these evils are. It seems to me that the greatest evil of the present system is the fact that under its workings the money and credit of the entire country is concentrated into one financial center and are there used by the gambling speculators on the stock exchange, to the detriment of legitimate business. There are in the United States over 7,300 national banks, classed as follows:

First. The banks of the three central reserve cities—New York, Chicago, and St. Louis.

Second. The banks of the 47 reserve cities.

Third. The remaining banks outside of the central reserve and reserve cities, which are designated in law by the name of "country banks."

All national banks located in central reserve cities are required by law to keep 25 per cent of their deposit liabilities in actual cash in their own vaults. Those in reserve cities are required to keep 25 per cent, of which 12½ per cent shall be in cash in their own vaults and the remainder deposited with banks in central reserve cities. Country banks are required to keep 15 per cent, of which 6 per cent shall be in cash in their own vaults and the remainder in banks in either reserve or central reserve cities. These reserve funds find their way from country banks to reserve city banks, then to central reserve city banks, until they finally accumulate in the one great money center, New York City. The great banks located in New York City give every encouragement to the country banks and to reserve city banks to deposit their money with them, offering as an additional inducement interest on daily balances. These influences combined with the requirements of the law bring about the accumulation of vast sums of money in this great center. Idle money within a bank's vaults is of no advantage to that institution. Something must be done with it to make it remunerative. It can not be loaned on long-time paper. It must be loaned in such a manner as to be readily available should it be called for by the depositing bank. Under this system there have sprung up in New York what are denominated "call loans." Hundreds of millions of dollars are loaned on "call" to the men who buy and sell stock upon the stock exchange and who deal in what is ordinarily termed "futures." These speculators do not deal in the commodities themselves; they buy and sell without any intention of delivering the commodity sold or receiving the commodity purchased. It is gambling, pure and simple. Not only that, but by their manipulations they control the markets of the country and are enabled

to raise and lower prices at their own sweet will to the detriment of both the producer and the consumer. These conditions are deplored by all right-thinking men everywhere. Congress can remedy this evil by legislation. I have introduced a bill which prohibits the use of the telegraph and the mails in dealing in "futures," and I hope that it or some similar measure will be passed.

The people throughout the length and breadth of the land are, unknown to themselves, silent partners. The farmer who sits by his fireside in the evening and reads in his daily paper of these operations in Wall Street little dreams that he himself, with his small sum deposited in a near-by country bank, is an unwilling and unknowing party to these great gambling transactions. He and hundreds of thousands of others are furnishing the capital with which the stock gambler carries on his nefarious business.

The reserves deposited by country banks should always be subject to their call. Of what benefit is a reserve to a bank if it can not use it when it is needed? Yet it has often happened that at the very time this reserve money is needed the banks of New York City have refused payment. Such was the case in 1907, and their refusal to deliver to country banks what was their own was the cause of the financial panic of that year.

It has been said on the floor of this House that the money and credit of the country is controlled by the banks of the country. Such is not the case. As I said before, there are over seventy-three hundred banks; these seventy-three hundred banks do not control the money and the credit of the country. Not all, but just a few, of the banks do the controlling. Under the present concentration of the finances of this country the money and the credit are controlled by a few great banking institutions located in the great money center, New York City; and a few men—it is said, less than a dozen—who own and control these great institutions are to-day in absolute control of the finances of America, and every banking institution in the land is subject to their dictation.

The proposed bill, which we are going to pass and place upon the statute books, will change this situation. It will decentralize the money of the country and place it in 12 regional reserve banks, where it will be under Government control and where it will be subject at all times to the call of the bank to which it belongs. The money and the credit of the country, instead of being controlled by a few men in a few banks, will be placed in these regional reserve banks, each managed by a board of directors of nine members, all under the supervision of the Federal reserve board, appointed by the President, representing and acting for and in behalf of the entire people of the country. By the passage of this bill we will not only decentralize the money and credit of the country, but we will strike a deathblow to the stock gambler in New York City, who has during all these years been depending upon the people of the country to furnish him the capital with which to transact his business.

As I said before, we will take the control of the money and credit of the country out of the hands of the few and place it, where it justly belongs, under the absolute control of the Government itself.

In 1907 the country was in a prosperous condition, crops were bounteous, manufacturing industries were prosperous, and yet without the slightest warning the country was thrown into a financial panic and all because hundreds of millions of dollars were in the hands of the speculators in New York City, and the banks of that city, for their own protection and safety, refused to ship currency to their corresponding banks, and they in turn were compelled to resort to questionable means to meet the emergency of the hour and to tide over the great crisis. Had it not been for the common sense and confidence that the farmers, merchants, manufacturers, and laborers had in the local banks of the country there would have occurred a financial crisis such as had never before been seen in this or any other country. It has been said, and truly said, that under the present system panics have been more frequent than under any other system in the world. If we can so modify this system as to prevent these oft-recurring financial disasters, we shall have done the country a service that will be appreciated not only by every banker in the land, but by every depositor, every borrower, and everyone interested in the development and progress of the country.

FLUIDITY UNDER PROPOSED SYSTEM.

Under the present financial system, the money and credit of the country does not flow readily from place to place, and is not found where it is most needed. We have seen that demonstrated during the crop-moving period, and the Secretary of the Treasury has had to come to the aid of the great agricultural sections time and again and furnish money from the Treasury

to assist in the moving of the crops. As water seeks its level, flowing from a higher to a lower point, so should the money of the country be made to flow readily from the place where it has been accumulated and not needed to the place where it is not so abundant and where it is needed in the legitimate transactions of business. Such will be the case under the provisions of the pending measure.

Under the provisions of this bill it will be the duty of every Federal reserve bank to furnish accommodations to its own member banks. Not only that, but the funds of the Government itself will be deposited with the 12 reserve banks, and whenever in any community money is needed for legitimate purposes the local member bank will be enabled by the discounting of its paper with the reserve bank to secure the money necessary to protect and to promote the commercial, the agricultural, and the manufacturing interests of its community.

A WORD AS TO MY OWN PEOPLE.

The district which I have the honor to represent is a purely agricultural one. My people are for this measure not because of any special benefit they will derive from it, but upon the broader ground of the general good. There are in my district 79 banks, of which 7 are national banks and 72 State banks. I take it, Mr. Chairman, that the banks in my district have but one interest in this measure, and that is a patriotic one; they want a banking system which will win for the banks of the entire country the increased confidence of the people. They know that such a system will inure to the general welfare and progress of the country and will at the same time, as a matter of course, vastly benefit the banks themselves.

BANK CHECKS—CONFIDENCE IN BANKS.

This brings me to the consideration of a character of "medium of exchange" which has been discussed but little in this debate, and yet it has to do with more of the business transactions throughout the country than all of the various kinds of currency put together. I refer to bank checks. Nearly 90 per cent of the business of the country is done by the use of checks and drafts, without the transfer of a single dollar of currency or money of any kind. The farmer is in need of furniture, clothing, and groceries. He takes to a near-by town some of his live stock or grain or produce of some kind; he sells it and receives for it a check upon the bank. He takes his check to the bank, deposits it, goes to the furniture store and buys his furniture, to the other merchants and buys his clothing and groceries, giving in each case his own check upon the bank. He returns to his home in the evening, having disposed of his products and purchased his necessities, it may be, without the use of a dollar in money of any kind.

The greater the confidence of the people in banks, the greater will be their use of the bank check. Give us a system of banks having the absolute confidence of all the people and the necessity of a large circulating medium of currency will be greatly reduced. No one knows this better than bankers, and they have always favored rigid laws and strict supervision of banks by both State and Nation. It therefore seems but natural that they would heartily welcome a change, such as is proposed in this bill, which takes from a few great bankers and financiers the absolute control of the money and the credit of the country and places it with the Government, thereby assuring to all alike, both great and small, fair play and honest treatment.

WHAT THIS BILL ACCOMPLISHES.

Now, let us see what this bill accomplishes. It decentralizes the money and credit of the country and places it in 12 reserve banks, which are under Government control, where it will always be available when needed by the bank to which it belongs. It will tend to break up gambling upon the stock exchanges by making it more difficult for the speculators to get funds with which to carry on their business. It will render it impossible for a few men to control the money of the country, fix discount rates, and regulate prices. In other words, the passage of this bill will do much to break up and destroy what is popularly denominated the Money Trust. It will give us an elastic currency, mobilize credits, make them readily available, and bring about that condition so much desired by all and referred to by the President in his address to Congress, when he said:

We must have a currency, not rigid as now, but readily, elastically, responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private, must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

There are many other benefits to come from the passage of this bill, but the limited time at my disposal prevents the discussion of all of them. Under this bill the Government funds will be placed in the reserve banks, will be available, and will go into circulation instead of being kept idle in the vaults of the Treasury and subtreasuries or deposited in part in favored banks here and there throughout the country as is done under the present system. National-bank notes will be gradually retired and the Government debt paid. Savings-bank departments are authorized in connection with national banks, and branch banks will be established in foreign countries to take care of the foreign trade. For the first time in the history of banking and currency legislation this bill opens the doors to State banks. They will be encouraged to come into the system from its very inception. There are now in our country between seventeen and eighteen thousand State banks. There is no doubt but that many of them will come into and become a valuable part of this great system.

This bill has had the careful study of the Committee on Banking and Currency. It was considered for nearly three weeks by the Democratic Members of Congress in caucus, and before it passes this body will have had its careful consideration for the greater part of two weeks. No bill can meet the approval of all in every detail. I must confess that some of its provisions do not meet with my entire approval, and while the measure was being considered in the caucus I offered a number of amendments, some of which were adopted, others were not. All legislation is more or less the result of compromise, every important provision of our National Constitution was written only after long discussion and was the result of compromise; yet that instrument stands to-day as the greatest of its kind in all the history of the world. Taking it all in all, the pending measure is excellent and will meet the requirements of the country. Should defects be found here and there in its administration it will be an easy matter for future Congresses to correct them.

RURAL CREDITS.

Mr. Chairman, I trust I may be pardoned for devoting a part of the time allotted to me in this debate to the discussion of a kindred subject, one which, in my opinion, is of equal importance to that now under consideration. I refer to the subject of rural credits. The pending measure, the currency bill, while it by no means goes far enough, benefits very much the farming interests of the country. At the very beginning of the formulation of this bill the Secretary of Agriculture was selected as one of the three members of the organization committee, and also designated as one of the members of the Federal reserve board. This was indeed a compliment to the greatest industry in the country, and is an absolute warrant that the agricultural interests will be treated fairly in the administration of this new system.

Under the section making provision for rediscounts we find agricultural paper specifically taken care of and the farmer's note made subject to discount at the reserve bank. The rediscount and note-issue features will provide the means of moving capital and credit from one part of the country to another and thus furnish an adequate supply to agricultural communities during the crop-moving periods, and at the same time the Federal reserve board, exercising its authority, will equalize interest rates and thereby benefit the farmers.

Loans on real estate are legalized for the first time in the history of bank legislation. The national-bank act, when it discriminated against the farmer and prohibited the loaning of money to him upon real-estate security, worked untold injury to that industry. The removal of this unjust discrimination is but an act of simple justice too long delayed. When the national banks were prohibited from making real-estate loans, the State banks naturally looked upon this kind of security as undesirable, with the result that the farmer has been compelled to pay commissions and unjust rates of interest. While the provision in the bill legalizes real-estate loans, the benefits to the farmer are minimized by the time limit of 12 months; hence, as a real help it will only apply in so far as it assists him to meet his temporary annual necessities. It should have gone further. The time limit should have been eliminated, and it would have been had an amendment to that effect which I offered in the Democratic caucus been adopted.

It is to be regretted that a comprehensive rural credit system could not have been worked out and made a part of this pending measure. Every industry in the land except agriculture is able to secure money at reasonable interest rates. The great railway systems issue their bonds, float them, and vast sums of money are secured at low interest rates. It frequently happens that the bonds are issued, sold, and the money in the hands of the company long before the railroad is built, equipped,

and put into operation. The manufacturer, the merchant, the mining operator, every corporation, great and small, gets loans at comparatively low rates, while the farmer, representing the greatest industry in the land and the one upon which every other industry is dependent, is compelled to get money wherever he can and pay whatever rate is asked.

The rate the farmer pays is excessive, it is exorbitant, and frequently confiscatory. It has often happened that because of the high rates and the short time of the loan the farmer has found it absolutely impossible to meet his obligations, and the result has been the foreclosure of the mortgage and the loss of everything.

The average rate of interest paid by the farmer, we are told, is 8½ per cent, while the average rate paid by other interests is 5 per cent. Cities, towns, and school districts are able, by the issue of bonds, to borrow large sums of money for improvements at low rates of interest. Large farming communities, offering the best security in the world, are compelled to pay high rates of interest. This is because under present conditions the farmers must act separately and independently and not as a community. Can not some plan be devised whereby the farming communities, acting in cooperation, can secure equally as satisfactory rates as those secured by cities, towns, and school districts? This has been done in foreign countries. In the countries of Europe where rural credit systems exist we are told that the average rate of interest is below 5 per cent, which is more than 3 per cent less than the average rate of mortgage loans in our own country. In this country there were, according to the last census, 6,688,722 farms, which, together with buildings, machinery, and live stock, were worth over \$40,000,000,000. More than one-third of the farms were mortgaged, and the annual interest charge was \$510,000,000, a sum nearly equal in value to the entire yearly wheat crop of the country. These figures clearly indicate that it is our duty to do something to relieve the enormous burden under which the American farmer is laboring.

The financial needs of our agricultural population may be thus classified:

First, The permanent capital requirements of the farmer; that is, the money needed by him to be permanently invested in land, buildings, machinery, and other things necessary to thoroughly equip his farm for successful operation.

Second, The temporary capital requirements of the farmer; that is, the money needed by him to meet his annual expenses, such as fertilizer, seed, planting, cultivating, harvesting, storing, and marketing the crop.

The first of these financial needs, permanent capital, can be supplied only by some system of long-time loans, based upon real-estate security, bearing a low rate of interest, containing a sinking-fund provision, so that it may readily be accepted as an investment security in the money markets of the country.

The second, or temporary needs, can and will be taken care of by the bankers of the country, under the provisions of the pending measure.

I respectfully submit, Mr. Chairman, that the farmers have a right to demand of the Congress the enactment of a rural credit system. The farmer's needs are just as important to the farmer as the merchant's are to the merchant, or the manufacturer's are to the manufacturer. A system of rural credits is just as important to agriculture as a system of commercial banking is to the commercial world. The farmer is the bone and sinew of the country; upon his prosperity depends the continued greatness of the Nation. Give us bumper crops and prosperity reigns; give us a crop failure and want and desolation follow.

In conclusion, Mr. Chairman, I will say that the farmers of this country will not ask in vain of this, the Sixty-third Congress. President Wilson has taken a decided stand for the establishment of a system of rural credits. The commission sent abroad to make an investigation of the systems in other lands has returned and will soon report to this body; the Democrats in caucus assembled have instructed the Committee on Banking and Currency to prepare and submit without delay a bill, and before the close of the coming regular session this body will have legislated upon that important subject.

We have been told, Mr. Chairman, in every campaign for several years that the Democratic Party is a party of negation—that it tries to tear down and not build up; that it finds fault but never furnishes a remedy; that it is a party of destruction, and not a party of construction.

If proof be necessary to refute these unjust charges made by our opponents in the heat of political contest, we have only to point to the work of the present Congress. Already the House has passed the Underwood tariff bill; it will pass the Senate and soon be the law of the land. That this currency measure will soon be enacted into law no one doubts. These are two

of the greatest constructive measures ever enacted by the American Congress. Within a few months another great constructive measure will be passed, and that will be the enactment into law of a just and equitable system of rural credits.

Mr. PHELAN. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. GRAHAM].

Mr. GRAHAM of Illinois. Mr. Chairman, I doubt very much if there has been a bill before this House during the service of any now present which is of greater importance to the American people than the pending one. The currency of the country is to the business of the country what the blood is to the body. It should be pure and healthful, it should be of sufficient quantity, and it should circulate without unnecessary or unhealthy obstruction.

There has been and there can be no civilization, no real progress without money of some kind or other. True there may be direct barter or exchange of products or commodities, but it can be only on a very narrow and limited scale. When a common measure of values exists, however, there is no practical limit to the amount of barter which may be carried on by that means. This common measure of value is what we call money. It may be of any material; it has been of a great many different materials in different times and places.

The Indians, and in some instances the early New England settlers, used wampum as money. Tobacco was used as money in Virginia and Maryland. Beaver skins, musket balls, corn, and wheat, and even fish have been used as currency in the early colonial days. Iron, copper, platinum, nickel, silver, and gold have all been used for that purpose. At present most of the countries of the world use gold as their real money—their standard of values.

To provide by law for the proper amount and the proper kind of currency is a great problem. It is the problem Congress is now trying to solve.

In considering this subject it should be constantly borne in mind that the great bulk of the business of the country is not based on the payment of money at the time of the transaction. Over 95 per cent of it is based on credit. It is only rarely and as a rule in small transactions that the money or currency actually passes. Those who have money generally deposit it in banks, where they get credit for the deposit, and check on the bank. The person receiving the check may and often does deposit that check to his credit in the very bank on which it was drawn, so that the barter or exchange is effected without withdrawing a cent from the bank's funds. And even if the check were deposited to his credit in some other bank the difference would not be great, for other checks drawn on the one and deposited in the other bank would substantially offset it, so that when the banks came to settle up on their various check accounts they would find that a very small sum in money would pay the difference, the actual money, except this balance, remaining all the time in the banks. Thus the money deposited in the banks is helping to do the business of the country, and thus, too, the banks become the means or the instruments by which credit is created and sustained.

The fact that the money on deposit in the bank is thus used by the banks for their own profit impresses on them a sort of public character—they become trustees, as it were—and so far as laws affecting them are concerned puts them on a different plane from ordinary corporations or individuals. In becoming the custodians of the money of a community they are in a position to keep it going, making it a real circulating medium, keeping the business of the community in a state of healthful activity, and promoting credit on which the great bulk of business transactions rests.

Thus it is clear that the more money there is deposited in the banks and the more it is kept in circulation the better for business and, of course, for the banks, too. Money that is hoarded or hidden away is doing nobody any good, but when it is taken out of its hiding place and deposited in a bank it soon gets into the channels of trade and helps business along, or, to use a common figure of speech, it becomes a part of the lifeblood of commerce and promotes the general business health of the community. Hence, the greater the extent of these bank credits the greater will be business activity. Indeed, the largest possible expansion of bank credits consistent with safety is the real objective, the great desideratum in banking and currency legislation.

That we have not reached a solution of that problem is apparent from the fact that we have had more money panics than any other nation in the world. Prof. Laughlin says:

The national banking system as at present conducted is in a sense a breeder of panics, while it fails entirely to grant any adequate relief from these commercial convulsions. It entirely fails to supply a note circulation—elastic, sound, adequate, and well adjusted to local necessities. It furnishes no general market for commercial paper, no matter

how high the quality of such paper may be. It fails to meet the legitimate demands of the farmer, the depositor, the small merchant, and of other customer classes, just as it imposes upon the banks themselves severe hardship, due to their inability to protect themselves adequately against loss of confidence.

Another writer on the subject of banking and currency compares our system to a ship that can sail only in fair weather and is apt to founder in the first storm. The pending bill is intended to correct these evils and to remedy these defects.

In preparing remedial legislation consideration should first be given to the evils to be remedied. What, then, are the defects and evils in our present Federal system of banking and currency?

First. All agree that a good currency should be elastic—that is, it should contract and expand readily to meet the changing needs of business; that it should be mobile, moving easily and quickly from where it is not needed to where it is needed; and that it should aid in keeping credit good and safe at all times. Our present currency is defective in all these respects. It is a menace to credit, and it is neither mobile nor elastic.

Second. With a sound currency system there should not be dangerous currency concentration at any one place. Our present system, naturally and almost necessarily results in concentration at the national metropolis—New York City.

Third. A sound currency system would discourage undue speculation. Ours leads to and encourages such speculation.

Fourth. A sound system would give us a currency justifying the name; that is, a currency which would be current—moving, circulating, helping to do the country's business, and helping to maintain the stability of prices. Ours does not meet this requirement.

Fifth. Under the existing law large amounts of money are gathered into the United States Treasury and subtreasuries, piled up there, and kept out of circulation. So far as its effect on business is concerned it might as well be in some other country. This should be and can be remedied.

Sixth. Under the present system we have not and can not have any banks or branches of banks in any foreign country, a very grave and injurious defect, so far as our foreign trade is concerned. This should be and can be changed.

Seventh. There is no cooperation among the various national banks. They are entirely independent of each other and can not have a general or uniform policy with reference to the use of reserves, the rates of discount, the making of loans, and all that. This bill provides for coordination and cooperation.

These are some of the manifest defects in our present system.

On the other hand, this system—if such it may be called—has effected some good. It has given us a uniform, stable, and convenient, though inelastic, form of currency which is accepted without question everywhere in the country. It has also given us a fairly good system of bank supervision.

Surely a system can be devised which will retain whatever of good there is in the present one, eliminate what is harmful or useless, and add such provisions as are necessary to give us a sound and practical currency and banking system.

Let us consider the objections suggested in their order.

First. As to an elastic currency.

Most of our present currency rests on a foundation of Government bonds. The national banks have to buy these bonds as a foundation or basis for the bank notes or currency which they issue. They very naturally issue all the bank notes or currency the bonds they own will permit of, and this maximum amount of currency is in existence at all times and at all seasons of the year. The amount is rigid and inelastic. It does not rise or fall with the necessities of business.

There is no safe provision for increasing or expanding it, and there is no desire on the part of the banks to diminish or contract it. They naturally want to keep it all on hand in the hope of making a profit by loaning it to customers. But more currency is needed when the crops are being harvested and marketed than at other times; hence if the amount of currency issued is enough for the harvest season it is too much for the other seasons, and, on the other hand, if it is only sufficient for the cropping time it is insufficient for the harvest time. This condition is equally applicable to industrial and commercial affairs.

Second. When there is more currency in the banks than the transaction of the country's business requires it naturally drifts to the banks in the great centers of wealth and population, where inducements are offered to those who will borrow it. Under such circumstances many are willing to take chances in the stock market by borrowing and investing in stocks and bonds of various kinds, investments of a speculative character, which can not always be realized on when the loans become due and the money is needed for legitimate purposes. In this way the excess of currency in the dull season leads to its being tied up

so that it can not get to where it is needed when it is needed, thus tending to stagnate business and leading to unsettled and even panicky conditions.

Third. The present bill aims to correct this evil by a discount provision which will lead to the withdrawal of the excess from circulation when it is not needed for agricultural and business purposes and making the issue of additional currency easy when it is needed for such purposes, always, of course, provided there are plenty of sound assets back of this additional issue. In this way elasticity can be assured.

By a system of central reserve banks, not less than 12 in number, scattered over the country, under the control of a governing board having power to compel loans from one reserve bank to another, currency and other forms of credit can be easily passed from a portion of the country where it is not greatly needed to another portion of the country where it is greatly needed, but under restrictions and conditions which will constitute an inducement to the borrowers to pay it back as quickly as they can. This will result in mobility, in ease and readiness of movement.

The present arrangement, as has been suggested, tends to concentrate money in New York and a few other great centers of wealth and population, and the fact that the country banks are now allowed by law to keep a part of their reserves in the metropolitan banks and draw interest on it exaggerates this tendency, thus centralizing money and credit in the great cities, mainly in New York, where, as I have shown, it tends to promote stock speculation and stock gambling and other unwise and improvident forms of investment. In this way, in a financial sense, the law induces the people to sow the wind, and in due course, when the money thus tied up in vicious speculation is needed for legitimate purposes elsewhere, we reap the whirlwind, and the New York banks, as they did in 1907, refuse to let them have their own reserve money with which to pay the reapers.

Fourth. A currency system which produces such results as were experienced in 1907 is unworthy an intelligent people. As I have already explained, at that time much of the country's circulating medium and of the bank reserves found their way to New York City, where they were virtually tied up. This money was very badly needed throughout the country, where it belonged, but the New York banks refused to part with it, even to the owners. It was practically out of circulation. Then, too, the large sums held in the Federal Treasury and subtreasuries added to the stringency. As a matter of fact, there was money enough in the country, but under our absurd system it could not be made to circulate where it belonged and where it was so badly needed. The proposed measure will greatly improve these conditions.

By making not less than 12 reserve centers, as this bill does, it goes without saying that it will tend very strongly to break up the present concentration or centralization of credit and money.

Fifth. Under the present subtreasury plan large amounts of revenue are collected by the Government and kept in the Treasury and in the various subtreasuries, where it lies idle, entirely out of the channels of trade. The money thus stored might as well be at the bottom of the sea, so far as business is concerned, if existing law were observed. In the past large sums have been transferred from the Treasury to favorite banks in times of stress, and perhaps at other times, and some of this money is now being placed in small amounts in various banks all over the country. This is not done in pursuance of law, but rather in violation of law. It is an official recognition of the utter insufficiency of our present system, which is so impractical and absurd that Secretaries of the Treasury have felt and still feel compelled to ignore it.

The pending bill would abolish such a mistaken policy and would place the public money not in hidden vaults to lie dormant, but in the regional reserve banks, where it would be in the channels of trade activity, assisting to do the business of the country.

Sixth. A very serious defect in the present system is that it provides no plan for our foreign exchanges. It is a humiliating if not a shameful confession that nearly all the trade balances between the United States and other countries, including the South American countries, are paid by exchange on London banks. There is no way under our present system by which a national bank can have a branch in any foreign city or country. This has been and is a great hindrance to our foreign trade, and now that American enterprise and energy are about to be unshackled and given a fair opportunity to enter foreign markets, it is essential that proper banking facilities should be arranged. Under this bill such arrangement is provided for and can be and doubtless will be speedily made, and when

made it will mark our financial and final declaration of independence of Great Britain.

Seventh. The lack of a provision for cooperation among the national banks is a very grave defect. So far as the present law is concerned each one of the 7,437 national banks is absolutely divorced from every other one of them. There is no coordination, no connection, no plan for cooperation, for combining and utilizing their reserves in time of need, no cooperation with reference to rates of discount, or, indeed, with reference to anything connected with the transaction of their business.

This is unfortunate, and especially so with reference to the bank reserves.

It is strange, indeed, that some plan has not been put in operation for the purpose of mobilizing bank reserves; that is, so using these reserves that portions of them could be quickly assembled in regions where there was no strain and concentrated where there was pressing need for them.

In the early colonial days, when Indian raids might reasonably be expected, the settlers usually built a stockade or rude fort at some central strategic point and kept in it a good and sufficient supply of food, arms, and ammunition in anticipation of danger. In other words, they mobilized their reserves in this stockade or central reserve. In case they feared their central reserve force was not strong enough to meet the emergency they managed to send a call for help to the nearest settlements—that is, they got assistance from the nearest available central reserves—and if they were vigilant enough to act in time they were almost certain to escape the threatened danger, and the Indians soon ceased to make attacks where they knew the defense was complete.

Had each settler kept his entire means of defense in his own cabin they would all probably have perished.

Just so in times of financial stress. If each bank holds its reserve independent and without cooperation or coordination with the others, it is in great danger of disaster in time of stress or panic; but if all the banks in a given territory cooperate, build a stockade, so to speak, and fortify it with a fund taken in proper proportion from the reserves of all, so that in time of danger they are combined into a phalanx to meet an assault on any one or more of them, they will be well-nigh impregnable.

If, however, the assault is too vigorous to be met in that way, what is to be done? To meet such a contingency the whole country is to be organized into cooperative, coordinated regions, and if the assault could not be resisted in the region where it occurred, other regions, under the discretionary power of the governing board, will be required to come to its assistance. It is quite improbable that financial disaster would overtake every part of the country, every region, at one time, so that those not affected would be in a position to aid those that were. Thus the common reserve will prove a common defense. It will ward off panics even more certainly than the stockade warded off the attacks of the aborigines.

With a portion of each bank's reserve in its regional reserve bank, and with 12 or more such regional reserve banks under the control of a single Government board having power to direct the combined strength of all in any required direction, I think it is not extravagant to say panics will be virtually impossible, a consummation most devoutly to be wished. What a triumph it will be to abolish those hysterical business convulsions in a country which has suffered more from them than any other on the face of the earth!

National bankers have long complained that they are not permitted to loan money on real estate security. There is no better or safer security than a mortgage on improved agricultural land. It ranks side by side with Government bonds. All are agreed that this prohibition should be removed. This bill provides for its removal.

Let us examine some of the objections urged against the bill.

First. It is said the governing board will become a political body, bringing the banks and the money of the country into partisan politics.

This board is to consist of seven members, the Secretary of Agriculture, the Secretary of the Treasury, and the Comptroller of the Currency as ex officio members, and four other members, to be nominated by the President and confirmed by the Senate.

I am inclined to think this method of choosing them is as good as any. It would be difficult to provide for their popular election, as the boundaries of the regional reserve districts may not, and doubtless will not, coincide with present lines of political units. A single regional reserve district in the far West would necessarily embrace many States and vast extent of territory. Such a plan would not be practicable; and even if it were, would it eliminate politics or would it insure the selection of men better adapted for the positions? I doubt it very much.

The members of the Supreme Court of the United States and members of the Interstate Commerce Commission are chosen in the same way which this bill provides for the choosing of the members of this board, and while some may claim that partisan politics has at times been manifest in Supreme Court action, yet I think it will be admitted that neither the Supreme Court nor the Interstate Commerce Commission is fairly open to the charge of being under partisan control or of being a political body.

The Comptroller of the Currency under the present system has been in complete control of the national banks for 50 years, and I think all will admit that those who have held that office have been reasonably, if not absolutely, free from the charge of partisanship in the administration of that great office.

It is claimed that the bankers should be allowed to choose the four members or at least some of those who are not ex officio members.

Few except the bankers would support such a claim, and a great many bankers would not support it. The ordinary banker devotes very little of his time to a study of financial systems. He devotes himself rather to the immediate management of his bank, such as determining the soundness of the paper he discounts, the character of the loans and investments made for the bank, and all that. In fact, he is so close to this part of the field that it is quite difficult for him to have a clear and disinterested view of the entire field. If the bankers were allowed to choose the members of the governing board, then the lawyers should be allowed to choose the judges of the Supreme Court, the railroad officials should be allowed to choose the Interstate Commerce Commissioners, and the packers and others who prepare our foodstuffs should pick those who administer the pure-food laws. It is not likely that such a plan would meet public approval.

Nor would the experience of other countries justify turning the board over to the bankers. There is not a single banker on the board of directors of the Bank of England, and I think the same is true of the Bank of France. I feel very confident that the American people want Government control of the currency rather than bank control. Indeed, it is fairly open to suspicion that the difference between Congress and the banks on this point is fundamental and irreconcilable. The banks want a bill which will increase their profits or, at least, that will not diminish them.

The purpose of the bill is not primarily to benefit the banks, although it is hoped and believed it will ultimately have that effect. It is intended rather to secure depositors, to aid in the transaction of business—agricultural, industrial, and commercial—and to prevent panics. If it accomplishes these results, as we hope and believe it will, then it will benefit banks and bankers as well as all other classes of citizens.

The bill provides that the four members who do not act as ex officio members shall serve eight years each. This long term of service will prevent a President from making radical changes in the board during a single presidential term.

Without reflecting in any way on the bankers, it seems to me wiser to have the legal control of the currency and of the banks in a Government board rather than in one chosen by or under the domination of the banking interests. If the banks were allowed to control this board, it would be but a short time till all the power possessed by the board would pass into the hands of one or a few of the big banks, to the detriment of the small banks and the people.

Second. It is said that the bill works an injustice to the banks, and particularly to the country banks, by compelling them to subscribe 10 per cent of their capital stock to the Federal reserve bank, on which amount the subscribing bank can get only 5 per cent per annum interest.

This criticism is based on a misapprehension. The bill allows 5 per cent interest, cumulative; that is, if the interest falls below 5 per cent in any year, the deficit may be made up out of the earnings of any subsequent year or years; and the excess of the earnings over 5 per cent is divided in the ratio of 60 per cent to the Government and 40 per cent to the subscribing banks, so that if the reserve bank earns 10 per cent per annum the local bank would get 5 per cent straight as interest, and 40 per cent of the other 5 per cent, or 7 per cent in all. If the earnings of the reserve bank reached 15 per cent, the local bank's interest would be 9 per cent. This additional and contingent interest furnishes a stimulus for better management.

Third. It is objected that taking so much of the local bank's capital will decrease its loaning power and thus tend to injure it.

This is also a misapprehension. Indeed, the contrary is more likely to be the truth. The plan provided in the bill to enable the local bank to discount its prime commercial paper in the reserve banks and the arrangement for enabling the reserve

banks to draw on each other will, in my judgment, tend to extend rather than to curtail its loaning capacity.

I do not claim the bill is perfect. It would be idle to do that. That portion of the economic field is too little understood to justify such a claim. Indeed, currency is not a matter which can be handled with scientific accuracy. Jevons, one of the most learned and profound writers on that subject, says that currency is to economics what squaring the circle is to geometry or what perpetual motion is to mechanics; in other words, there is and can be no such thing as a perfect currency system. But this bill, should it become the law, will lead to higher and safer ground than we have ever occupied. It will throw into the channels of legitimate trade hundreds of millions of dollars heretofore used for stock-gambling purposes; through the 12 regional reserve banks it will furnish a constant market for agricultural, industrial, and commercial paper, superior to any market that has heretofore existed in this, and I think I might say or in any, country; it will tend to keep the country bank reserves within the zone in which these banks are located, and it will go very far, when in complete operation, toward rendering panics practically impossible.

It is said the reserve provisions will encourage inflation. That is true to some extent, but when a panic is threatened because of a scarcity of currency reasonable inflation is rather desirable.

The inflation will result from discounting absolutely good commercial paper. The discount rate—that is, the interest to be paid on the additional issue—is fixed by the Federal reserve board and can be made so high that the additional currency will be retired as soon as the necessity has passed. By its control of the discount rate the board can easily prevent dangerous or undue inflation.

As I have said, I do not claim that the bill is a perfect one. It has, no doubt, imperfections in it, but it is unquestionably a good long start in the right direction, incomparably better than the present law or than the Aldrich-Vreeland law, or than any law of the kind we ever had. Time and experience will soon locate its imperfections, and as the main features are sound the less material matters can be easily corrected by future Congresses. For the reasons given, and for other reasons which lack of time forbids me giving, I shall cheerfully cast my vote to pass the bill.

Mr. PHELAN. Mr. Chairman, I yield 45 minutes to the gentleman from Kansas [Mr. NEELEY].

Mr. NEELEY. Mr. Chairman, the pending currency bill provides for the division of the United States into 12 regional districts to be apportioned with due regard to the convenience and customary course of business of the community and without any reference to State boundaries. These districts may be readjusted and new districts carved therefrom by the Federal reserve board whenever the exigencies of the situation demand that such action be taken, upon the application of 10 member banks desiring to be thus organized. Each bank located within a given district is obliged to subscribe to the capital stock of the reserve bank located therein in sum equal to 20 per cent of the capital stock of such bank, of which sum 5 per cent shall be paid in cash, 5 per cent additional shall be paid within 60 days from the time such subscription is made, and the remainder of the subscription or any part thereof being subject to call and payment whenever such action may be necessary to meet the demands of the Federal reserve bank or consistent with the demands of sound banking.

The capital stock to be issued to each member bank is to be divided into shares of \$100 each; each Federal reserve bank must be incorporated, with rights of succession for a period of 20 years from its organization, unless sooner dissolved by Congress, and shall be conducted under the oversight and control of a board of directors possessing the same powers and performing what will doubtless be practically the same duties as now enjoyed and performed by the boards of directors in national banking associations under the existing law. This board of directors is to consist of nine members, three of which are to be selected by the banks, three others to be representative of the public interest of the reserve district, and the last three to be designated by the Federal reserve board to represent the Federal Government in the actual management of the business of such district.

Each regional reserve board of directors is presided over by a chairman who is subject to removal by the Federal reserve board at its pleasure, without notice.

Each of the shareholders of the different Federal reserve banks shall, after the payment of expenses and taxes, be entitled to receive an annual cumulative dividend of 5 per cent on the amount of capital paid into the bank and any additional profit that may be left after the payment of these ex-

penses, and such dividend is to be held for the surplus fund to the amount of 20 per cent of the paid-in stock of each regional bank; from the remaining one-half, 60 per cent is to be paid to the Federal Government and 40 per cent to the member banks according to the amount of balances held in each reserve bank for the preceding year. Each reserve bank is exempted from Federal, State, and local taxation, except for taxes upon real estate, and national banks are allowed one year within which to become members of the reserve bank of the district within which they are located. State banks or trust companies are permitted to become members of any regional reserve district in which they are located upon complying with the rules and regulations of the Federal reserve board, provided such State bank or trust company possesses a paid-up, unimpaired capital of at least \$25,000 in any event, or a sum sufficient to entitle it to become a national banking association in the place where it is situated; but should such State bank or trust company fail to comply with the banking law or with any valid rule or regulation of the Federal reserve board, the Federal reserve board may require it to surrender its stock upon the repayment of the original subscription.

The Federal reserve board is to consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, together with four other members appointed by the President and confirmed by the Senate. Of the four members thus appointed by the President, not more than one shall be from any one Federal reserve district, each shall be selected so that the different geographical districts shall be as nearly represented as is possible, and each one shall devote his entire time to the business of the board. This board is to have general supervisory powers over the entire currency system; shall make an annual report of its fiscal operations to the Speaker of the House of Representatives; may examine the affairs of each Federal reserve bank; may require one reserve bank to discount the paper of other reserve banks; may suspend the reserve requirements of the act; supervise and regulate the issue and retirement of reserve notes; add to the number of reserve cities; suspend officials of reserve banks and remove them for incompetency, dereliction of duty, fraud, or deceit, subject to the approval of the President; require the charging off of worthless paper in reserve banks; suspend Federal reserve banks and appoint receivers therefor; and perform any other functions directed or implied by the act.

To this board is added an advisory council of 12 members, 1 from each district, who are to serve without compensation, but may confer with the Federal reserve board and make such recommendations as in their judgment are necessary and proper under the terms of the bill and the limited powers which such advisory board possesses.

The reserve banks are authorized to receive deposits from their member banks and other Federal reserve banks and may rediscount notes and bills of exchange arising out of commercial transactions; and the bill then provides—

but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise, from being eligible for such discount—

thereby withdrawing the privileges of the act from stock-exchange transactions and providing for the discount of what is commonly termed agricultural paper.

Moneys now held in the general fund of the Treasury are to be deposited in the reserve banks, and such reserve banks will hereafter be the fiscal agents of the Government, subject to the right of the Secretary of the Treasury to apportion these funds equitably among the different sections of the United States and to charge interest thereon, but prohibiting such reserve bank from paying interest other than to the United States and also limiting them to the receipt of deposits from their member banks and the Federal Government.

The bill provides for the issuance of Federal reserve notes, to be the obligations of the United States, acceptable for the payment of all taxes, customs, and other public dues, and redeemable in gold or lawful money on demand, and also provides for the refunding of what is known as the 2 per cent bonds, now eligible for deposit by the national banks to secure the circulation privilege. In their place are to be issued 3 per cent bonds without the circulating privilege, payable 20 years from the date of issue, but limiting the redemption of such 2 per cent bonds to 5 per cent of the amount of bonds on deposit in the Treasury by any bank in any one year. At the expiration of 20 years the holders of all 2 per cent bonds outstanding at that time are to receive payment therefor at par, together with accrued interest, but in the meantime national banks owning the 2 per cent bonds bearing the circulating

privilege may deposit them with the Secretary of the Treasury and secure circulating notes therefor.

Country banks, as defined by existing law, shall maintain a reserve of 12 per cent of their aggregate deposits, not including savings deposits. Of this sum five-twelfths must consist of money now counted by national banks as legal reserve, and must be in the banks' vaults; for a period of 14 months after the passage of the act, at least three-twelfths, thereafter five-twelfths of such reserve must consist of a credit balance in the Federal reserve bank, the remainder of the 12 per cent for a period of three years may consist of balances in central reserve cities as now defined by law; but after the expiration of three years from a date to be fixed by the Secretary of the Treasury the remainder of the 12 per cent reserve shall consist either of reserve money in the banks' vaults or a credit balance in the Federal reserve bank of the district in which such bank is located.

If a reserve city bank, it shall hold for 60 days a reserve equal to 25 per cent of its aggregate deposits, not including savings deposits, and 18 per cent thereafter. At least one-half of this amount must be such money as is now counted as legal reserve by national banks and held in its own vaults; after the expiration of the 60 days and for a period of 1 year, three-eighths, and thereafter five-eighths of the reserve shall consist of a credit balance in the reserve bank of the district in which the member bank is located. The remainder of the 18 per cent of reserve for a period of three years may consist of balance in central reserve cities, but after the expiration of such three years the entire 18 per cent of reserve shall consist either of reserve money in the banks' vaults or a credit balance in the reserve bank.

If a central reserve city bank, it shall keep a reserve of 25 per cent of its aggregate deposits for a period of 60 days from such date as may be fixed by the Secretary of the Treasury, and thereafter it must keep 18 per cent. At least one-half of this reserve shall consist of money which national banks may now count as reserve, and must be held in its own vaults; at least one-fourth shall consist of credit balance in the reserve bank, and the remainder of the 18 per cent shall either be reserve money in the banks' vaults or credit balance in the reserve bank.

Each Federal reserve bank must keep on hand in its own vaults gold or lawful money of not less than 33½ per cent of its outstanding demand liabilities, and the act gives the Federal reserve board authority to compel a compliance with this provision.

Every national bank must be examined at least twice each year, and as much oftener as the reserve board may deem necessary, and the examiner has authority to make an examination of the directors under oath, touching the bank's business. It also places bank examiners on a salary instead of giving them a fee allowance as now provided, and provides that no two successive examinations shall be made by the same examiner, giving the Comptroller of the Currency the right to arrange for special examinations of any member of the reserve bank, and prohibits officers and directors of banks from accepting fees, gifts, or commissions for negotiating purchases and sales of securities or the making of loans on behalf of the bank of which he was an officer, providing a penalty of a fine of \$5,000 or imprisonment of five years, or both, for violation of such law.

The bill provides that national banks may make loans on improved, unencumbered farm lands for periods not exceeding 12 months, and for amounts not exceeding 50 per cent of the value of the property, such loans to be in an aggregate sum not in excess of 25 per cent of its capital and surplus and of 50 per cent of its time deposits; and in addition thereto, national banks may open savings departments, upon the apportionment of a part of its capital and surplus for such purpose, the savings department to receive deposits, make loans, and buy and sell such securities as may be specified by the Federal reserve board.

FOR IMMEDIATE ACTION.

Mr. Chairman, I trust that we may add any amendment that will make this bill stronger and better, will promptly pass it, send it to the Senate, and that it will promptly pass there, be signed by the President, and become a law.

Ever since this proposition has been under discussion, I have favored early action. On the 20th of last June, I stated on the floor of this House:

I favor currency reform at the earliest possible date, not only to meet present-day needs, but to be built upon a foundation broad enough to care for the emergencies of the future.

No person conversant with present conditions will dispute the necessity for this action, and I have full confidence that this Democratic Congress, acting in conjunction with the President, will be able to devise a plan free from the control of special and profit-expecting interests ample to meet the demands of the country and conserve the interests

of all our people alike. The good faith of the Democratic Party is pledged to do this as soon as we may, even though it be necessary to remain here the entire summer and until the regular session convenes in December to accomplish the task before us.

We have now spent the entire summer considering these questions and are entering upon the last leg of our journey to the fulfillment of the promise to the people for which our party pledged its good faith and best endeavor.

The pending bill is not a perfect one. It is a radical departure from our present financial system, lays the foundation for an entirely new plan conceived upon broader lines and founded upon principles that I believe will meet with the general support and commendation of our people.

FOUR SPLENDID FEATURES.

The bill has four features that make me enthusiastic for its final adoption. They are: (1) Governmental control of the Federal reserve board; (2) prohibiting the rediscount of paper executed for the purpose of securing funds with which to speculate and gamble on the stock exchange; (3) the recognition of agricultural paper by directing its rediscount by the central reserve bank on the same basis as other paper; and (4) permission granted to national banks to make farm loans.

Considerable discussion has been provoked by the provisions of the bill giving the Government complete control of its administrative features, and the charge has been frequently made that this will result in partisan administration instead of for the best interests of the country. This objection is not well founded. The members of the Federal reserve board will doubtless be in full sympathy with the national administration, but this is as it should be.

The Democratic Party is here charged with the creation of a great piece of constructive legislation; upon the success or failure of this plan depends the material welfare of a hundred million people, and it is both reasonable and just that if you are to charge it with the responsibility of the installation of this great plan, the President, as the leader in this movement, will desire the active cooperation and assistance of individuals who believe in the plan itself, and who desire to see it safely pass the shoals of destruction. The failure of this plan would be directly charged to the administration in power, and justly so. Therefore in installing it and in its future ministrations, no matter what political party may be in power, it should be directed by those who are in sympathy with the administration charged with the responsibility of its proper conduct.

There is another good reason why the Government should have control. All Government funds are to be deposited in the reserve banks, and they are henceforth to be the Government's fiscal agents. This means that from \$125,000,000 to \$150,000,000 will be immediately deposited in these banks, and that such deposits will be gradually increased to perhaps \$200,000,000 to \$250,000,000. These regional banks are under the immediate control of a board of nine members, selected to represent the banks, the citizenship of the district where the reserve bank is located, and the Federal Government alike, and it would certainly be the height of business folly for the Government to deliver its entire funds into the custody of these reserve institutions, clothe them with all the powers provided by this bill, confer all of the privileges and benefits that must follow the distribution and use of this great sum of money, and then sit idly by during the time that these gentlemen would band themselves together, unhampered by governmental regulation or control, into the most gigantic combination ever conceived by the finite mind. The time has not yet arrived in this country when that may be done.

Public opinion has long since vindicated the provision of the bill prohibiting the rediscount of paper for stock-gambling purposes. I have yet to learn of a single disinterested individual who has even attempted to justify present-day practices since the publication of the Pujo report. The public has been led to believe that the practices of the stock exchange were the outgrowth of business experience and necessary to the creation and retention of a public market for the country's commodities. This has been fully exploded, and they now understand that many of its practices are the result of an arrogant assumption of power, illegally and often viciously exercised for the advancement of selfish interests. There is a place for the properly organized and controlled stock exchange in this country as a market for existing commodities, but that section of this bill prohibiting the use of Government funds to fleece the unwary or to bolster up values that exist principally in the imagination of the individuals seeking to dispose of bogus securities will receive the hearty commendation of an intelligent public.

For the first time in the history of financial legislation in this country the agricultural industry and the agricultural section has been recognized in currency legislation. The clause in this bill recognizing notes and bills of exchange "secured by

staple agricultural products of other goods, wares, or merchandise," on the same basis and under the same terms and conditions as other paper, is a splendid recognition of equality in financial legislation.

This proposition was vigorously debated by the majority members of the committee, and its rejection provoked the caucus and the minority report by the gentleman from Texas [Mr. EAGLE], the gentleman from South Carolina [Mr. RAGSDALE], and myself. The caucus began its labors under an agreement for eight hours' general debate, four of which was to be controlled by the earnest and hard-working chairman of our committee [Mr. GLASS], and four hours by myself. But as the interest in the discussion grew the debate lengthened, until before we were ready to report the bill back to the committee we had consumed nearly three weeks of time in its discussion.

The incorporation of this principle for which we contended, both in the committee and in the caucus, is a recognition of our desire to be of service in presenting constructive legislation along lines sufficiently broad to meet the general approbation of the country and is an added evidence that the Democratic Party intends to treat every section and every interest alike. I have discussed this subject with many persons, have received hundreds of letters with reference to it, as well as many telegrams, and have yet to find a single person able to give any substantial reason why the paper of a farmer secured by a mortgage on staple agricultural products, goods, wares, or other merchandise, is not as good as any commercial paper that may be offered. In fact, the bankers of my State say that the most liquid and best paper handled by them is paper secured by cattle and wheat, and which, under the terms of this bill, is given that full recognition to which it is entitled. The insertion of this amendment fully answers the criticism that this is a sectional bill, and while it still has some defects that I trust the Senate will cure, it is entitled to the enthusiastic support of every Member of this House.

The provision authorizing national banks to make short-time farm loans is in response to a demand from every section of the country. I do not believe the privilege will be very generally exercised, but will be reserved for emergencies. The real advantage in it arises from the fact that it is the opening wedge for the establishment of a national system of farm loans, sufficient in scope to meet the demands of the country.

During the time that this section was under consideration in the caucus the gentleman from Oklahoma [Mr. MURRAY] offered a motion that certain pending amendments be referred to the Banking and Currency Committee with instructions to report a complete bill providing for the establishment of a national system of farm loans before the expiration of this Congress. The motion was amended by myself so as to direct the Banking and Currency Committee to report such a bill at the next session of this Congress, and was thereupon unanimously passed. We have already received the assurance of the President that he is in hearty sympathy with this plan, so that I believe as an outgrowth of our contention for the recognition of agricultural credits and farm loans in the pending bill we will soon secure the establishment of a national farm-loan system.

THE OPEN CAUCUS.

I believe this bill would have been a better one had it been framed in the clear light of the open day, where the public could have the privilege of criticizing, commending, or suggesting anything of value to the subject itself. [Applause.] Because of this belief, I voted to throw open the doors of the committee, and after a majority of my brethren had declined to incorporate certain propositions that to me seemed fundamental, and it became necessary that the bill go to the caucus, I there made a motion to open the doors of that caucus, so that the white light of publicity would not only be turned on the bill itself, but might beat down directly upon the membership of that caucus and the public see and understand the motives that actuated every man who participated in the deliberations therein. [Applause.]

Mr. Chairman, there may have been a time when secret caucuses were justified in this country. There doubtless are conditions at this time when it might be both desirable and eminently proper for a political party to frame legislation protected by an obligation of secrecy, but this was not one of the times nor this bill one of the subjects. I can see no good reason why in this day of enlightened public opinion it should be necessary for any body of men engaged in legislating for the whole people to thus act, and if the Democratic Party is to maintain its position of supremacy and justify the faith of our people in the honesty of its purpose it is necessary that it take those same people into its confidence when framing legislation of vital interest to them. Some may attempt to justify the secret caucus by saying that the Republican Party was enabled

to perpetuate itself in power by the machine constructed in its secret caucus, but you know that very machine was one of the most potent agencies in the disruption of that party and that we are in power to-day because of the faith of the people in our promises of above-board legislation.

SHARP PRACTICE.

One William C. Van Antwerp recently circularized Members of this House with copies of two letters sent me, taking exceptions to certain of the disclosures in the Money Trust investigation. This circular was sent all over my State, to newspapers, bankers, and other business and professional men; but notwithstanding that we have 798 newspapers in Kansas, only one lonesome little paper in the entire State, with a total circulation of 575, according to Ayer's Newspaper Directory for 1913, made any unfavorable comments relative thereto. The well-meaning editor of this paper has a "pain" because of having recently been repudiated for postmaster by the patrons of the local office by a majority of 153 out of a total referendum vote of 687, which fully explains the interest this Kansas paper has in Van Antwerp and the New York Stock Exchange.

These letters have been given wide publicity, however, by the Wall Street Journal and the New York Journal of Commerce, both recognized as official spokesmen for the stock exchange and other Wall Street interests; by the Independent, published at 119 West Fortieth Street, New York City; as well as by the Kansas City (Mo.) Journal, the official organ of the interests both in Kansas and Missouri, and all of which find fault because I did not accept Mr. Van Antwerp's invitation to be his guest and be convinced that the Money Trust investigation was a mistake and that the admissions made by the officers and members of the New York Stock Exchange under oath, as well as the statements of individuals who had been fleeced by the shell game maintained by this exchange, were untrue.

I did not answer this letter because I was under no obligations so to do. Mr. Van Antwerp had an opportunity to appear before our committee and present any evidence he cared to offer. He failed to avail himself of this privilege, and if as a member of the New York Stock Exchange he now chooses to defend the exposed iniquities and infamies of that institution that is his privilege, but life is too short for me to spend it quarreling with a man whom I have never seen and never expect to see.

Mr. Chairman, this is not the first invitation I have received to go to New York City as somebody's guest and be privately convinced that all of the evidence offered the committee was false and its findings and conclusions entirely wrong; but when I went there as a member of the committee, clothed with the authority of this House, to compel the attendance of witnesses and the giving of testimony under oath, we were not so happily received or kindly treated. On the contrary, they met us with three or four of the highest priced lawyers at the American bar, who at the very outset disputed the right of this House to inquire into the business of their institution or any of its practices. So anxious were they that we should not meet at that time that at one time we had 32 deputies from the office of the Sergeant at Arms of this House commissioned to persuade them into our presence, and when they did come we were obliged to "corkscrew" the information which Mr. Van Antwerp now denies from interested and unwilling witnesses over the constant objections of counsel and the insistence of the officers of the exchange that it was not amenable to this House, the American Congress, or any authority in the United States. Some of these gentlemen were so anxious that we should not make their acquaintance that it was reported they sought the colder climate of Canada, and even of Europe, but after the committee had ceased its labors and there was no longer danger of being called before it and compelled to disclose dirty deals under oath some of these same gentlemen became exceedingly anxious to have us accept of their hospitality and investigate such matters as might be of interest; but nobody went.

These letters make certain bald statements, some so closely interwoven with fact, that I desire to call your attention to a few instances to illustrate just how careless people sometimes are with the truth.

HYPOTHECATION OF SECURITIES.

Mr. Van Antwerp dwells long and lovingly upon what he pleases to term the misstatement of fact relative to the hypothecation of a customer's securities, and says that the rules of the exchange prohibit the practice, but overlooks the evidence produced before the committee. On page 794 of the transcript of the testimony Mr. Frank Knight Sturgis is asked the question:

Q. I think you understand the custom as well as anybody. Do you not know it is the uniform custom of brokers who hold stock exchange securities of a customer as collateral to hypothecate them regardless of the amount owing to the broker?—A. I think it is very rarely done; and if it is done, it is done against the requirements of

business. But the exchange as a body has no rule applicable to that condition.

Q. It has no rule prohibiting it at all?—A. It has no rule applying to it at all.

Q. It has no rule prohibiting it?—A. Not to my knowledge.

Q. You have been very active in stock exchange business for years, have you not, until lately?—A. Yes, sir.

Q. Your firms of Wilkes-Sturgis and Strong-Sturgis were very large operators for customers on the stock exchange?—A. True.

Q. You were one of the largest houses in the Street, were you not?—A. I think so.

Q. You know, then, the custom pertaining to lending on customers' securities, do you not?—A. I do.

On page 796, Mr. Sturgis was asked the question:

Q. That being all, there is not in the rules, is there, any regulation specifically and in terms prohibiting the use of the securities of a customer that are deposited with a member?—A. Not that I recall, Mr. Untermyer.

It will thus be seen that notwithstanding the statement of this circular letter, the sworn testimony of one of the biggest operators on the stock exchange conclusively shows that the hypothecation of the stock of the customer was constantly practiced by the exchange members, and was condoned, if not actually authorized, by the exchange.

He also refers to an act of the legislature, passed May 14, 1913, to refute the committee findings in this regard, and states that the law prohibits the hypothecation of securities, and therefore my statement is untrue. He neglects to state that these disclosures were made in January and February, 1913; that the report of the committee was presented to the House February 28, 1913; and that the law to which he so proudly points was passed upon the demand of the people of the State of New York that these larcenous practices thus disclosed be prohibited by law. His own statements prove the need of the investigation, and the now criminal practices it uncovered.

OTHER CORPORATE CONTROL.

The same circular disputes that the evidence shows the New York Exchange to have the control of the New York Telephone Co. On page 334 of the record, Mr. George W. Ely, secretary of the exchange, testified as follows:

Q. Does not the stock exchange control the telephone service of its own building?—A. They own the stock of the telephone company of the New York Telephone Co.; and then there is also the Golden Stock Co.

On page 335 of the record Mr. Ely testified as follows:

Q. Do you not control the telephone service there through your contract with the company, so that nobody but members can use those phones?—A. Yes; that is right. I did not understand you.

The circular also disputes that the evidence disclosed a prohibition against free intercourse between the members of the New York Exchange, but this was also answered by Mr. Ely, on page 327, as follows:

Q. And any man who is a member of the stock exchange, who sends a message or clerk from his own office to the office of a man who happens to be a member of the Consolidated Exchange, is guilty of violating this rule and is liable to expulsion from the stock exchange, is he not?—A. That is the book, what it says there. I do not want to add to or take from it.

Q. You know that men have been punished for it, do you not?—A. For that?

Q. Yes.—A. Yes.

Q. Members of the New York Stock Exchange have been punished and disciplined for sending a messenger or clerk or telephone from their own offices to the office of a man who is a member of the Consolidated Stock Exchange; that is so, is it not?—A. Yes; that is what the book says.

Q. But that is what has been done, is it not?—A. Yes.

The rule of the exchange supporting the contention of Mr. Ely, its secretary, is as follows:

That any connection, direct or indirect, by means of public or private telephone, telegraph, wire, or any electrical contrivance or device, or pneumatic tube or other apparatus or device whatsoever, or any communication by means of messengers or clerks, or in any other manner, directly or indirectly, between the New York Stock Exchange Building, or any part thereof, or any office of any member of said New York Stock Exchange, and any building of the Consolidated Stock Exchange, or any part thereof, or any room, place, hallway, or space occupied or controlled by said Consolidated Stock Exchange, or any office of any member of said Consolidated Stock Exchange who is engaged in business upon said Consolidated Stock Exchange, or any transmission, direct or indirect, of information from said New York Stock Exchange Building, or from the office of any member of said New York Stock Exchange, to the said Consolidated Stock Exchange, or to the office of any member of said Consolidated Stock Exchange who is engaged in business upon said Consolidated Stock Exchange, through any means, apparatus, device, or contrivance as above mentioned, is detrimental to the interest and welfare of this exchange and is hereby prohibited.

From this it will be readily seen that these statements of Mr. Van Antwerp are on a par with the statement of the secretary of the exchange, who, after reciting that the New York Stock Exchange owned the large building in which it is located, controlled the New York Telephone Co., controlled the Golden Stock Co. and its ticker service, listed and permitted the sale on its premises of hundreds of thousands of shares of stock and millions of dollars of other securities, and collected and paid out immense sums of money annually, yet blandly smiled

at the committee and told them under oath that the stock exchange was not engaged in doing business.

WASH. SALES.

Mr. Van Antwerp challenges my statement that the California Petroleum Co. was a speculative proposition manipulated by means of wash sales and winked at by the exchange, so that the manipulators made an immense profit out of the deal. Let us see. The testimony of Mr. Frederick Lewisohn, who manipulated the transaction, shows as follows, on page 920 of the record:

Q. You acted as the market operator, for the first syndicate, did you not, with five millions of preferred and and two and one-half millions of common?—A. I acted in conjunction with other brokers in the transaction.

On page 924 of the record Mr. Lewisohn testified further:

Q. Did you give out orders to telephone brokers to buy and sell?—A. Yes.

Q. How many brokers did you use in making the market for this stock?—A. I do not know exactly. We have given orders to quite a few of the brokers.

Q. Did you give out orders every day to buy and sell?—A. Yes; I bought stock and sold stock; and bought on a scale down and sold on a scale up.

Yet, notwithstanding these sworn statements of the man who manipulated the deal that he bought and sold to himself, every day, through different brokers, resulting in the sale of 362,270 shares of this unknown stock, in three weeks, Mr. Van Antwerp, with characteristic audacity, promptly challenges the statement and defies both the record and the man who performed the coup.

MORE MANIPULATION.

But this was not the only skin game that has been recently manipulated. I am in receipt of a communication from a widow, who details some of her experiences along the same line in the following language:

I wish to personally thank you for the grand and noble stand you have taken in defense of the public from the wicked, unmerciful robberies of stockbrokers. Surely some definite and fast laws should be passed to protect the public from such accomplished and heartless thieves, especially to protect widows and minor children. Pooling worthless stocks and causing the price to soar from 8 or 9 to about 95 and unloading at top prices on innocent investors through any and every sort of trick and lies and then letting the stock drop to almost nothing and calling in assessments instead of paying the promised dividend.

The president and directors getting the large salaries, besides the vast fortunes stolen from the public. This was the case of * * * Co., with * * * president, and is one of his many promotions. During the past 15 years he has harvested about \$20,000,000 from the public in this method, yet no law seems to reach him.

In 1898 I married * * *. I was 23 years of age and he was 49 years of age. He died in 1904, leaving me a young widow and an adopted invalid daughter 3 years of age and about \$100,000, besides my home and contents. * * * attended my husband's funeral; knowing I had no father, no brother, or husband to protect me, he immediately offered to advise me in investing my insurance and other money. He gained my confidence absolutely and I went to him as I would a father, but * * * was a thief; he invested my money in his worthless pooled mining stock, and robbed me of over \$100,000; then snapped his fingers at me and told me "I drew a lemon"; that he thought I would be a good sport, but that I was a squealer. I have sold many of my diamonds, have mortgaged my furniture, and am taking in sewing * * *. Widows and orphans or minor children are the special preys of stockbrokers, and a woman stands almost no chance to recover against such a thief as he is, * * *. Let the good gentlemen in Washington, who have the power, protect the women and children from such cruel outrages.

If Mr. Van Antwerp can find any consolation in defending a system that permits such practices, he is welcome to it. The day of reckoning will surely come.

I sincerely hope that the good work so well begun in this currency bill will be pushed to its completion; that the Judiciary Committee, acting under the instructions of the Democratic caucus, in referring my interlocking directors' amendment, will report a bill so comprehensive in its terms as to settle that evil once and for all; that operations on the stock exchange will be justly and wisely controlled; that a national system of farm loans will be inaugurated; that individual industry will be promoted and legitimate competition fostered in every branch of human endeavor, and peace, prosperity, and happiness reign throughout the land. [Loud applause.]

Mr. HAYES. Mr. Chairman, I yield 45 minutes to the gentleman from Pennsylvania [Mr. BURKE].

Mr. BURKE of Pennsylvania. Mr. Chairman, this bill should be entitled "An act to destroy the national banking system, cripple the people's currency, and create a political machine to control a people's credit."

Mr. Chairman, 10 years ago the generous people of my district honored me with a seat in this body, and since subsequently entering upon my duties I have had a growing conviction from day to day that as a school it has no peer and as a place of pleasant and honorable associations it ranks with, if not excels, any other legislative body in the world.

My sincere regard for its membership and my profound respect for the House as a most important branch of the Govern-

ment both impel me strongly to resent any step in its history that either detracts from its dignity or impairs its rightful influence in the eyes of the American people.

Therefore, I trust that whatever I may say regarding the manner in which this bill has been handled, the rights of committees ignored, and the House itself belittled may be regarded as an expression of regret rather than one of criticism of any individual Member, for the reason that when my career in this House closes I shall carry with me the rarest collection of happy thoughts, inspiring memories, and cherished friendships from both sides of this Chamber that any human being could wish for. [Applause.]

Now to the important measure before us for consideration:

STRANGE HISTORY OF THE BILL.

This bill should be defeated for the honor of Congress and the good of the country.

Should it pass the House, survive the senatorial storm that awaits it, and finally receive presidential approval, it would be as useful to the country as a dollar to a dead man. We would have a bill, but not a bank; a sketch, but not a structure.

Both its career and its contents invite the condemnation of everyone familiar with the record behind it and the ruin before it.

As a lawyer I question its constitutionality, and as a man of business I question its expediency.

Conceived in haste and born in darkness, it was presented to the Banking and Currency Committee of this House after it had attained its full stature during a long and lively career in the nursery of King Caucus.

Ordinarily a great committee selected by the House of Representatives to frame a measure involving the most far-reaching changes in our entire banking and currency system would precede the construction of such a bill by eliciting from every source and section the opinions of those whose industrial, commercial, and agricultural interests are bound to be materially affected by a complete destruction of our present national banking system and the establishment of an entirely new financial structure to meet the requirements of the American people in the exchange and conservation of their credits at home and abroad.

The fact that the majority has seen fit to convert the proposition into a party measure, and by secret committee conference and subsequent secret party caucus treat it as one of political expediency rather than one for the impartial and earnest co-operation of the representatives of all parties, renders it naturally open to suspicion and one of extremely doubtful merit.

POLITICAL METHODS UNDER OUR "NEW FREEDOM."

The double denial of hearings to the public and the right of members of the Banking and Currency Committee to consider and aid in its construction, save those of a single political faith, made it almost inevitable that a bill which was neither wise nor workable would be presented to the House.

But in the light of the new dispensation and under the benign influences of the "new freedom" new methods supplant the old.

The most important question the Congress has been called upon to solve in 50 years—affecting every man, woman, and child who earns, saves, or spends a dollar—is dragged from the field of open debate into the closed room of the caucus and made the subject of the secret machinations of a party which a majority of the American people repudiated at the polls and a minority were enabled to clothe with temporary power.

From the hour the Sixty-third Congress first came into being and the Democratic Party assumed complete control of the Government the question of reforming our currency system engaged the attention of the disciples of our "new freedom."

The Banking and Currency Committee of the House was revolutionized and the groundwork carefully laid for carrying out the plans of the executive department rather than the views of the legislative branch of the Government.

On the 26th of June the first bill was introduced by the chairman of the Banking and Currency Committee. When a majority of that committee voted to dispose of this vitally important question in open meetings it was boldly withdrawn from the committee's consideration and taken charge of by the Democratic members, who proceeded to keep it in secret conference for an indefinite period.

Mr. WILSON of Florida. Will the gentleman yield?

Mr. BURKE of Pennsylvania. Yes; I will yield.

Mr. WILSON of Florida. Does not the gentleman know that there were exhaustive hearings on this subject that could be read by the gentleman and all others before this bill was presented?

Mr. BURKE of Pennsylvania. I know that from the time this bill was written until this very hour there has never been at any time or place a hearing held upon the measure. [Applause on the Republican side.] And I know more—

Mr. WILSON of Florida. Yes; but does not the gentleman know that the hearings that were had were upon every topic of this bill?

Mr. BURKE of Pennsylvania. I know absolutely nothing of the kind; and when the gentleman is more experienced in legislation and in the procedure of this House he will know that the regular method of proceeding on legislation of this kind is for the bill first to be framed, then presented to the House, then referred to the committee, and then to have witnesses, or those who may be affected, adversely and otherwise, summoned before the committee and heard; but that was not done in this case.

Mr. WILSON of Florida. The gentleman was a Member of the House when the Vreeland-Aldrich bill was passed. I want to know what hearings they had then?

Mr. BURKE of Pennsylvania. On the day of judgment, when the Angel Gabriel blows his horn, should the gentleman be late in appearing before the judgment seat and reprimanded, he will blame it on the Vreeland-Aldrich bill.

Mr. WILSON of Florida. That is no answer to my inquiry.

Mr. BURKE of Pennsylvania. There has not been a question asked since the opening of this debate relating to the merits of this measure that has not been answered by a sneering reference to the proceedings on the day the Vreeland-Aldrich bill was passed in 1908.

Mr. GLASS. May I interrupt the gentleman a moment?

Mr. BURKE of Pennsylvania. Yes.

Mr. GLASS. The gentleman's own sincerity and consistency are involved in what he is saying.

Mr. BURKE of Pennsylvania. Certainly.

Mr. GLASS. The gentleman is insisting that a bill of this description should go in regular course to a committee; that there should be formal hearings, and all that sort of thing. In such circumstances it is entirely pertinent to inquire if, when the gentleman was a member of the majority and had an opportunity as a member of that majority to legislate upon a currency bill, the course of procedure which he now advocates was had; whether the gentleman himself, when charged with responsibility, contended for that course of procedure; whether or not the gentleman himself, when opportunity presented, voted for that course of procedure? [Applause on the Democratic side.]

Mr. BURKE of Pennsylvania. I hope the gentleman will concede me the time he is using for these speeches while I have the floor.

Mr. GLASS. That is a fair question.

Mr. BURKE of Pennsylvania. I will say to the gentleman—

Mr. PHELAN. I should like to ask just one question.

Mr. BURKE of Pennsylvania. Let me answer one at a time, gentlemen. The Vreeland-Aldrich bill was an emergency measure. What the gentleman from Virginia [Mr. GLASS] says about the procedure attaching to it is substantially true, and as a consequence of that the distinguished gentleman from Virginia [Mr. GLASS] and every gentleman on that side of the House capitalized it for political purposes and from every rostrum in this country you painted the Republican Party as an unholy alliance engaged in improper procedure under the Dome of the Capitol, and partially because of that you drove the Republican Party out of power; but now that which was a vice on our part becomes a virtue when perpetrated by you. [Applause on the Republican side.]

Mr. GLASS. I take it, then, that the gentleman from Pennsylvania is confessing his sins and repenting. He does not wish us to repeat his folly. He is admonishing the Democratic Party to avoid the evil consequences of his wickedness and that of his party.

DOUBLE SIN OF DEMOCRACY.

Mr. BURKE of Pennsylvania. But our sin was only a single sin. It was a sin committed without a preceding promise not to commit it. Yours is a double sin, because you are committing it in the face of your solemn promise not to commit it, that promise being made by your party leaders throughout the entire Nation in the last and previous campaigns. [Applause on the Republican side.]

Mr. PHELAN. First, you admit that it was a sin.

Mr. BURKE of Pennsylvania. Oh, well, I will allow the gentlemen on that side, who are experts in the use of language from long practice in juggling with phrases in the construction of this bill, to place any interpretation they please to place upon it, especially my learned and genial friend from Massachusetts.

Mr. PHELAN. I am not placing any interpretation upon it except the gentleman's own. I should like further to call the

gentleman's attention to the statement he made to the effect that every time anybody has asked a question with reference to the merits of the bill the question has been answered by a reference to the Vreeland-Aldrich bill.

Mr. BURKE of Pennsylvania. The gentleman himself is a notable exception to that rule.

Mr. PHELAN. I should like to ask him if he means that with reference to any member of the committee, in speaking about the merits of this bill.

Mr. BURKE of Pennsylvania. I will say that in nearly every instance when a critical question was asked, affecting either the procedure in framing the bill or the actual contents of the bill, in nine cases out of ten it was evaded. In some cases the questions were frankly answered, particularly by the gentleman who now propounds this query; but in many cases when the gentleman having the floor was particularly embarrassed the chairman of the Committee on Banking and Currency usually arose and made reference to the Vreeland-Aldrich bill.

Mr. PHELAN. The gentleman spoke about the merits of the bill. I want to know if the merits of this bill have been discussed, or rather the procedure of how the bill was framed or how the bill was gotten into this House, and whether on the merits of the bill anybody has ever referred to the Vreeland-Aldrich bill.

Mr. BURKE of Pennsylvania. And I reply to the gentleman by saying that many questions regarding the merits of this bill have not been answered by the majority members of the committee; and now, since the majority has asked questions with reference to "exhaustive hearings" on this subject, the record printed and paid for by the American people will itself furnish a denial of the assertion that at any time or place there was a hearing held upon this bill. This is what took place: In the month of January there was a special committee appointed to conduct hearings on the question of banking. These "exhaustive hearings," we have heard stated from the leaders on that side of the House, "covered months." I will tell you how long they lasted. They covered 52 hours and 28 minutes and then ceased. And by whom were they conducted? Three of the men who are members of the present Committee on Banking and Currency of 21 were permitted to sit in that room and ask questions, and only three. Some of the men who conducted the hearings are not Members of the present House. The hearings were conducted before many Members of the present House had ever taken a congressional oath.

Mr. GLASS. Surely the gentleman does not want to have a statement of that sort to go in the RECORD.

Mr. BURKE of Pennsylvania. Absolutely. I want every word I say on that subject to go in. I would like to go on now without further interruption. Let me say this and then I will yield to the gentleman [Mr. GLASS], although the gentleman proceeded with his speech for an hour and forty minutes and never allowed a question. Still, I have yielded many times already, and I will yield to him again for any question he may ask, but I do not propose to have all my time consumed by his speeches.

Mr. GLASS. It is not a question of interrogation, but a question of fact. The gentleman said these hearings were held before three men. As a matter of fact these hearings were held—

Mr. BURKE of Pennsylvania. The gentleman did not say that.

Mr. GLASS (continuing). Before a committee of seven men, not three, with all the Republican members present, as well as the Democrats.

Mr. BURKE of Pennsylvania. The chairman of the committee [Mr. GLASS] is evidently laboring under a misapprehension. I said these hearings were conducted by a committee composed of men, only three of whom are members of the present Committee on Banking and Currency, and some of whom are not Members of the present House of Representatives.

Mr. WILSON of Florida. Will the gentleman yield?

Mr. BURKE of Pennsylvania. The gentlemen who conducted those hearings—now, I propose to speak for at least five minutes without being interrupted.

The CHAIRMAN. The gentleman declines to yield.

Mr. BURKE of Pennsylvania. Those gentlemen who are now members of the Banking and Currency Committee, who conducted those hearings, were the Hon. CARTER GLASS, the present chairman; Mr. KORBLY, of Indiana; and Mr. BULKLEY, of Ohio, and there is no other man on the present Banking and Currency Committee who participated in those hearings, or—

Mr. WILSON of Florida. Will the gentleman yield?

Mr. BURKE of Pennsylvania. Not for the time being; I will yield later on. Three men out of the present 21 members were permitted to sit in hearings before this Congress was convened, and let us see what sort of hearings were then had on

this subject, which every statesman should approach with an open mind. On the first day, January 7, 1913, the chairman of the committee admonished Mr. Hepburn, the first witness who appeared, regarding his testimony. Now, mark you, the procedure of that committee—mark you, the announcement of these "investigators" who approached this great problem with free and open minds.

PREJUDICED FROM THE BEGINNING.

The chairman said:

Perhaps I might say without impropriety that, speaking for the majority members of the committee, while we do not propose to restrict the gentlemen who appear in anything that they may desire to say, it is nevertheless a fact that we must recognize and deal with that the party of the majority members (the Democratic) has specifically declared against what is known as the Aldrich bill. We would like to find out from you, though—assuming that you think the Aldrich bill, so called, is the best thing to be had—what is the next best thing to get.

[Laughter and applause on the Republican side.]

Here were the business men of the country answering your summons, and you gave notice at the outset that you were going to give them their second choice. But you did not want their opinion on their first choice. You rejected their opinion. You did not want their convictions expressed, although the subject has perplexed the Nation for a quarter of a century. You wanted them, so far as possible, to coincide in their second choice with your first choice. And that is American statesmanship. That is the statesmanship that has control of the Government at the dawn of the "new freedom."

Mr. GLASS. Now, may I interrupt the gentleman?

The CHAIRMAN. Does the gentleman yield?

Mr. BURKE of Pennsylvania. Yes.

Mr. GLASS. Does my friend object to the frankness of that statement?

A CANDID CHAIRMAN GAGGED.

Mr. BURKE of Pennsylvania. Not at all. I admire it. I admire the candor of the chairman throughout these proceedings. But the candor of the chairman apparently is not one of the assets of the Democratic Party, but rather one of its liabilities, as I find it. Because of the fact that the chairman is candid and wished to be frank with the people and the press, his Democratic colleagues by a vote commanded him to keep silent with reference to the proceedings in the conference of the majority members. [Applause on the Republican side.]

Mr. WILSON of Florida. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Pennsylvania. I can not yield now.

The CHAIRMAN. The gentleman declines to yield.

Mr. BURKE of Pennsylvania. Because, perchance, they knew the gentleman's [Mr. GLASS's] desire to be honest and frank with the American people, they by a vote put the seal of silence upon his lips, and what went on behind those closed doors, while this bill was being altered, never will be disclosed because I know the gentleman from Virginia will never violate that pledge unless the seal is lifted by the Democrats who placed it thereupon. [Applause on the Republican side.]

Mr. GLASS. May I make one statement in the public record?

Mr. BURKE of Pennsylvania. Yes; certainly.

Mr. GLASS. That is that my colleagues complained that I talked too much rather than commanded me to keep silent.

Mr. BURKE of Pennsylvania. My statement and his both lead to the same conclusion. He wanted to be frank but his associates for some reason feared publicity. His candor, therefore, was a Democratic liability not a Democratic asset.

Mr. GARRETT of Texas. Mr. Chairman, will the gentleman yield to one question?

The CHAIRMAN. Does the gentleman yield?

Mr. BURKE of Pennsylvania. Yes.

Mr. GARRETT of Texas. Is the gentleman's opposition to this bill based on the fact that there were not public hearings conducted on it?

Mr. BURKE of Pennsylvania. That is one objection, but not the primary objection.

Mr. GARRETT of Texas. Was the gentleman's opposition to the tariff bill based on the fact that public hearings were not held on it?

Mr. BURKE of Pennsylvania. If the gentleman will ask me a pertinent question, I will answer it, but I do not propose to have my time consumed by useless, irrelevant, and impertinent questions. [Laughter on the Republican side.] And I know that that question did not originate in the splendid intellect of the gentleman from Texas, but it originated somewhere else that is hardly worthy of gentlemen participating in this debate.

Mr. GARRETT of Texas. Does not the gentleman know this fact, that—

Mr. BURKE of Pennsylvania. Mr. Chairman, I decline to yield for irrelevant interruptions. If the gentleman has a question to ask with reference to the procedure upon this bill or

its contents, I will yield to him, but my time is being consumed, and I can not yield all my time for trifling questions.

Mr. GARRETT of Texas. Will not the gentleman be kind enough to discuss the merits of the bill for a few minutes?

Mr. BURKE of Pennsylvania. Oh, the gentleman would, if the bill had any merits, but it has not. [Laughter on the Republican side.]

Mr. GARRETT of Texas. Has the gentleman any word to say in defense of the present system?

Mr. BURKE of Pennsylvania. Certainly. Under the present system we have lived since the Civil War, and the people have prospered, and, according to the declaration of the gentleman's own colleagues, the American people have never lost a dollar on its account.

Mr. GARRETT of Texas. Then why did the gentleman want the Aldrich system?

Mr. BURKE of Pennsylvania. Oh, everybody knows why those who favored it wanted the Aldrich system. It had its defects, but it had its merits also.

Mr. GARRETT of Texas. Not everybody. [Laughter.]

Mr. BURKE of Pennsylvania. Now, Mr. Chairman, I shall be very glad if I can use a little time of my own. I think I have been very generous with my time in yielding for interruptions.

Mr. PHELAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BURKE of Pennsylvania. For a question, certainly.

Mr. PHELAN. When the gentleman says that gentlemen on the other side admit that since the Civil War the American people have not lost a dollar on account of the currency system, he surely does not mean it, does he?

Mr. BURKE of Pennsylvania. I say that under the present national banking system, as a consequence of either its existence or its administration, the American depositors have not lost a dollar. That is what we are talking about. We are talking here of the destruction of the present banking system, and, as the Congress of the United States has no jurisdiction over any other than the national banking system, it is therefore speaking directly to the issue, the only system under consideration. I presumed the gentleman, when he asked the question, had sufficient knowledge of the Constitution to know that the Federal Government has no jurisdiction over any other than the national banking system. [Laughter on the Republican side.]

Now let me proceed where I left off at the last interruption.

Finally, despairing of ever getting the bill through the committee because of dissensions among our Democratic brethren and overwhelmed by the fear of their inability to pass it through the House by the use of normal methods, the bill was sent to a secret Democratic caucus, with instructions by the Democratic members of the committee to the chairman not to divulge what had taken place in the committee conference. What they feared to expose still remains a mystery, and will until the "new freedom" lifts the sacred seal of secrecy from the chairman's lips.

STORMY CAREER IN SECRET CAUCUS.

The caucus began amid a storm of Democratic protests.

Here the whiplash of the taskmaster was heard cracking around the Capitol, and amid wailings and gnashing of teeth the spirit of independence subsided, the opposition faded away, and with that humility which characterized the serfs of other days the Democratic caucus yielded to their masters and did their bidding. [Applause on the Republican side.]

Mr. GLASS. Will the gentleman yield?

Mr. BURKE of Pennsylvania. Yes.

Mr. GLASS. What days does the gentleman refer to; the days of the Aldrich bill?

Mr. BURKE of Pennsylvania. No; the days of slavery before the war. [Laughter.] I will agree, Mr. Chairman, for the sake of satisfying the gentleman on the other side, to have the question about the Vreeland-Aldrich bill inserted at the end of every paragraph of my speech.

STRONG MEN SHAMED.

What took place in that caucus I do not know with any degree of certainty, and the world will probably never know. I do not know except from members of your party, who made limited and lachrymose confessions on the floor. To-day it made my heart bleed when I sat here and listened to the confession and observed the humiliation of my friend the little giant from Georgia [Mr. HARDWICK], one of the ablest men your party boasts of, one of the keenest debaters and most capable parliamentarians, one of the profoundest students of law and economics in your body—when I heard him confess that the whiplash of the taskmaster had brought him into submission. His

manhood revolted against it, but he thought so much of his party that he yielded to the will of the majority.

At the end of that speech I pitied him, and I pitied every man in your ranks who buried his individuality, who laid aside his convictions and yielded to the processes of browbeating that were resorted to by the Democratic bosses in this blessed era of our "new freedom." [Laughter and applause on the Republican side.]

Mr. GLASS. Will the gentleman yield?

Mr. BURKE of Pennsylvania. If it is a question; yes.

Mr. GLASS. I want to ask the gentleman if the complaint he heard to-day from my friend from Georgia—and he is my friend, a gentleman whom I respect—did not sound a little like that from Mr. Prince—

Mr. BURKE of Pennsylvania. O Mr. Chairman, I am not going to allow my time to be taken up by the gentleman quoting words of a man that has not been on this floor, is not a Member of this Congress, and has never had an opportunity to vote on the bill or to discuss it.

Mr. GLASS. It is only a sentence, and I want to show the similarity of the complaint.

Mr. BURKE of Pennsylvania. Now, up to the hour the bill came back to us in the Banking and Currency Committee on the second day of this month not a witness was called to criticize it, no member of the financial or the commercial or the business world was allowed to make a statement of his views or to submit himself to cross-examination on that subject before the committee.

When your humble servant, a member of the committee, offered a resolution that the Comptroller of the Currency, members of the American Bankers' Association then in this capital, and such other persons as the chairman might select be given the opportunity to appear before the committee and be examined it was promptly voted down and in its stead they adopted the Wingo resolution declaring upon its face that "exhaustive hearings" had been held upon these questions, when, as a matter of fact, not a single minute had ever been devoted to that purpose by this committee.

DOORS BARRED AGAINST FREE EXPRESSION.

When or where our Democratic friends held hearings our committee do not know.

But perchance it may be claimed that they refer to the hearings by a small subcommittee in the last Congress. Let us inquire what was the guiding spirit of the committee that did hold its hearings in January? The chairman said, substantially, "We are not guided by our own desire for broad and generous information. We are limited by our party's declaration." Think of it. The Congressmen of the United States, the men who had taken their solemn oaths of office, were limited by a declaration made by somebody over at Baltimore. In the heat of a summer day, in the privacy of a hotel room, somebody wrote something that deprived every Democrat in this House apparently, or at least the members of that committee, of the power of investigating in all its features and discussing in all its phases this great currency and banking question. Is not that statesmanship? Is that the freedom, the receptive spirit, and the willingness to secure facts with which statesmen should approach a great subject, announcing in advance that their hands are tied, their ears closed, and that only certain movements can be made, only certain views can be heard? That was not the case in the old days. But that is the case now in the new days, since the blessed dawn of the "new freedom." [Applause on the Republican side.]

They said in this resolution that was adopted, and we were told by my distinguished and handsome friend, that master of the English language and capable statesman from Arkansas [Mr. WINGO], that these hearings were both long and exhaustive. When and where they were held I do not know. Whether in the White House, in the Treasury Department, in Wall Street, at the headquarters of the Farmers' Alliance, or in the editorial sanctum of our beloved chairman in old Virginia. That fact has never been revealed. It, too, is one of the dark secrets of the "new freedom."

How blessed, indeed, is this "new freedom," which enables the "three wise men" of a past Congress to conduct the investigations and do the thinking for 21 members of a committee which once was a power, and really do the legislating for a House of 435 Members that should be the most influential and potential body of lawmakers in the world. [Laughter and applause on the Republican side.]

Mr. WILSON of Florida. Will the gentleman yield?

Mr. BURKE of Pennsylvania. Not now. Later on in the report and in the speech of the chairman presenting the bill to

the House he used this language: "Those members of the committee peculiarly charged with the framing of this bill."

Mark you, not all the members of the committee, but those members "peculiarly charged" with it. Now, let us see what interpretation we can attach to the word "peculiar."

PECULIAR CHAPTER IN HISTORY.

Peculiar, it is true, that the election machinery of a great Nation should clothe with all the powers of government a party which was repudiated by a majority of the people at the polls.

Peculiar, too, that the party so enthroned and intrusted with financial legislation has been the parent and the guardian of every financial fallacy that for half a century has marked the history of the American people. [Applause.]

Peculiar, again, in the fact that this assumption of power by the majority members of the committee is a violation of every pledge and proclamation of liberty and fairness which the Democratic Party has made for 20 years.

Peculiar, too, is the fact that a few men, without conducting a single hearing, could close their doors to the world and in the darkness of partisan strife solve, with the bewildering swiftness of enchantment, a problem that for over a quarter of a century has perplexed the master minds of a nation. [Applause.]

But, after all, under our "new freedom" miracles will become commonplace, and that which in the past would have been peculiar in the future will become ordinary.

To be entirely consistent with this attitude, which excluded all views except those born in the hotel room amid the excitement and anguish of the Baltimore convention, when the Democratic bosses were busy thwarting the will of the majority and depriving the Hon. CHAMP CLARK of a nomination to which a large majority of his party had declared him entitled, the majority members of the Banking and Currency Committee, when this bill was laid before the whole committee for the first time, on September 2, courteously but firmly notified the minority that the Democrats were so bound by the action of their caucus that no amendments affecting the fundamental features of the bill would be considered.

Like martyrs we grinned and bore our humiliation.

PERIL OF GOLD STANDARD.

Whether the hand that wrote the Baltimore platform dictated the provisions of this bill we are not informed, but it is significant that the bill introduced on June 26 provided that all Federal reserve notes should be redeemed in "gold." It is both significant and amusing also that the bill so "maturely" considered last winter at the same time provided a redemption fund not of gold but composed of "gold or lawful money." It was like commanding a child to go to the spring for a pail of milk.

When the Democratic caucus was reputed to be stormiest, and oratorical fire and smoke and strange sounds reverberated through the corridors of the Capitol and distress signals were going out through every wing of a many-sided Democracy, the aid of the boss of the Baltimore convention was invoked, and, odd as it may appear, he came to the rescue of the sinking ship, and about that same time the word "gold," which was stricken from the Democratic platform in 1896 and carefully excluded ever since, was stricken from the bill and "gold or lawful money" inserted in its stead. If the terms "gold" and "gold or lawful money" mean one and the same thing, why the mysterious and repeated changes of the language in secret caucus?

Mr. MADDEN. Will the gentleman yield for a question?

Mr. BURKE of Pennsylvania. Yes.

Mr. MADDEN. Does the gentleman construe the language "gold or lawful money" to mean that the Government of the United States through this bill repudiates the gold standard and goes back to the fiat proposition advocated in 1896?

Mr. BURKE of Pennsylvania. In so far as this bill can do it, it is an open declaration to the world that we are departing from the gold standard, and that the new money to be handled by the American people in the needs of exchange shall have a basis not of gold, but of gold "or lawful money." And when called upon to redeem it the option may be exercised to redeem it either in gold or possibly in the \$300,000,000 of greenbacks.

The moral and legal effect of the act of March 14, 1900, will be seriously impaired, and those who would artfully dodge the gold standard may triumph at the cost of the country's credit.

The danger in this provision is apparent to every banker and business man who understands this measure's possible consequences. There should be an unqualified requirement for the redemption of these notes in gold on demand at the bank of issue.

LANGUAGE SHOULD BE CERTAIN.

Ambiguity has no place in currency legislation. The language contained in the statute which declared a dollar to "consist of 25.8 grains of gold nine-tenths fine" is the kind of certainty that should mark every measure relating to our monetary system.

Mr. PHELAN. Will the gentleman say wherein that differs from the present national-bank laws?

Mr. BURKE of Pennsylvania. I will tell you where it differs from the present national-bank laws. Our present national-bank notes are not receivable at the Treasury for customs, and thus, and to that extent, they do not bar gold from finding its way to the Treasury. Our present national-bank notes are secured by Government bonds, and in addition the Secretary of the Treasury may call upon the bank for other security in case of depreciation. Of course there is now a statute that provides, as I said before, for our keeping all money on a parity with gold, and fortunately that standard has been preserved; but you are providing now an entirely new system, with no limit to the possible inflation in the end. You are creating a new issue of a new kind of money, and that money is worth on the first day just what it is worth on the last day when it is to be finally redeemed. In a crisis it is worth what I can get for it when I take it to its final destination for redemption.

And what does this bill provide? It provides that the Treasury may redeem these notes either in gold or in lawful money. Now, it may be all right in prosperous times and their parity be self-sustaining. You and I may be satisfied in our private transactions, and while times are good they may readily pass. They may be perfectly satisfactory to people for a while and no question may be raised about them, but in times of stress, when the Treasury is depleted of gold, when the gold is not there to redeem them and the American people and the people of the world, who hold the notes, know there is no gold there to redeem them, and know, further, that they may be redeemed in greenbacks, what will be the inevitable consequence?

Will that money remain to the end as valuable as gold or will it depreciate like every other species of fiat money that has been issued in the past?

Mr. PHELAN. Will the gentleman kindly state what national-bank notes are redeemable in under our laws?

Mr. BURKE of Pennsylvania. I am speaking now of these new notes that are to be issued by an entirely new process, and by which you create an entirely new condition in the Treasury itself by opening the doors to the payment of debts due the Government in a new kind of money. The national-bank notes are based on Government bonds. These are not. Under the act of 1864 national-bank notes are barred from being received by the Treasury in payment of duties on imports. These are purely Government notes, issued by the Government, redeemable by the Government, or you might call them the joint and several promissory notes of 13 institutions—12 regional banks and the Government. Furthermore, they may be received at the Treasury in payment of all taxes, customs, and other public dues. Where, then, is the Treasury going to get its gold?

Now, it may throw some light upon the subject, as I said before, to remember that at the very time this "friend" of the gold standard was called upon to help out in the caucus the word "gold" disappeared, just as it disappeared from your platform in 1896, and has never appeared since. [Applause on the Republican side.] Yet I would hardly call this the Bryan bill, as I do not know who wrote it, and no living man, so far as I have ascertained, is able to tell who wrote it. It bears the name of our able and courteous chairman; it is called the "Glass bill."

A "GLASS" BILL—OF WHAT SORT?

Mr. MADDEN. Can you see through it?

Mr. BURKE of Pennsylvania. Well, at first I thought to call it the "window-glass" bill, until I found that no one was to have a look-in during its make-up. When it came out of the committee conference, altered as it was, I thought we might call it the "cut-glass" bill, but when it came from the Democratic caucus I concluded it should be called the "stained-glass" bill, because no living man could see through many of its provisions.

But there is one thing certain, it will end its career as the "broken glass" bill, for the reason that if the Senate does not smash it the American people will. [Applause.]

When the bill was submitted to us on September 2 for the first time, and we were notified that no change of a substantial character would be allowed because of the caucus decree, the last function of our committee was destroyed and the last legitimate privilege of our committee wiped out.

Do you wonder that such a bill possesses many absurd features and vital defects?

Do you wonder that those who have set aside the usual order of legislative procedure, thwarted investigation, and denied deliberate consideration of a measure so vital to the Nation have in the bill itself reversed the order of everyday life and ignored the lessons of everyday experience?

Do you wonder, in the presence of such procedure, that Members of Congress who have a profound respect for the influence of the House in legislation and the dignity of membership on its important committees regret this entire procedure?

INFLUENCE OF HOUSE IMPAIRED.

It is such chapters as this that lower the standard and destroy the influence of the House, and lead the people to believe that legislation is no longer perfected in the House, but merely started in crude form on its way to the Senate, where it is more maturely considered and made worthy of Executive consideration.

As a consequence, in this very case the eyes of the country are not upon the House, for that has already determined by gag rule that the measure will not be amended in any substantial manner or treated as a great deliberative body should treat it, but must pass it on to the Senate as it came from the secret chambers of a party caucus.

You have practically effaced the Banking and Currency Committee and made a legislative cipher of the House of Representatives.

In their place you give the American people a star-chamber conference and a star-chamber caucus of a single party. [Applause on the Republican side.]

AN ACT TO DESTROY.

As for the bill produced by this caucus it might well be entitled "An act to destroy a national banking system, cripple a people's currency, and create a political machine to control the people's credit." [Applause on the Republican side.]

By its terms you bar all persons experienced in the science of banking from participating in the real management of our fiscal affairs; you destroy the incentive for individual initiative and place a premium on carelessness in the management of banking institutions.

You might as well in time of plague place the afflicted patients in a hospital in charge of a board for treatment and provide that only one of them may be a physician. [Applause.]

As well might you create a judiciary general committee of the House to pass upon the constitutionality and construction of the statutes and provide that only one of them may be a lawyer. [Applause.]

INJUSTICE TO BANKERS.

Thirty-five thousand men whom the Nation clothed with credibility in granting them national-bank charters and who have never dishonored their position are told to turn over the vast fortunes held in their own right and in trust for others to a political machine, and they step aside while the novice experiments, the partisan plays politics, and the cunning commercial schemer ruins the well-managed bank in one section by depleting its resources to repair, perchance, the criminal carelessness in the management of another.

Ninety-five per cent of business is done on credit and eight dollars of actual business is done for every dollar of cash that exists.

Therefore, the banker's business is far beyond the realm of coining money, fixing the value thereof, and punishing counterfeiters, which properly are governmental functions under the Constitution.

That the Government has the legal or the moral right to invade the banking world to the extent of assuming complete and absolute control over every department of its activities is a doctrine to which no trained lawyer or sensible legislator will subscribe.

When you attack the system already erected upon Federal laws for the purpose of forfeiting charters before their expiration, and not only paralyzing present institutions but ostracizing from the higher councils of the country's future banking systems the individuals who have erected a creditable monument to the American people, you do that which no fair-minded people will tolerate and no enlightened court sustain. [Applause.]

A ROLL OF HONOR—A RECORD OF ACHIEVEMENT.

You not only bar the banker, but you would indict him before the world as unworthy of confidence or devoid of ability. And yet you admit that for half a century, with all the thousands of billions of money that have passed through the national banking institutions of the country it is substantially true that the American people have never lost a dollar.

You bar the doors against the men who in the very nature of their profession have been acting as the chosen trustees of the thrifty merchants and toiling masses of the Nation. You bar the doors against the men who are a part of the very

backbone of nearly every community's commercial soundness. You bar the door against the men whom millions of people intrust with their savings from day to day; whom the lawyer, the physician, the merchant, the minister, and the church of every creed intrust with their earnings and their donations with undiminished confidence from year to year [applause]; men who from the foundation of the Government until now have guarded the trust funds of widows and orphans in every section of the Republic; men whom the school children of our country have intrusted with millions of dollars representing the savings of pennies in their early lessons of thrift; men who have encouraged legitimate enterprise and marshaled the financial forces with which railroads have been stretched across the plains, pierced the hills, and skirted the valleys, annihilated distance, and united sections together as one; by which farms have brought forth harvests of golden grain, deserts have been made to blossom as the rose, and by which towns and cities have been erected and great enterprises launched and sustained in every section of the Nation—these men for the first time in our history you bar from those activities for which their moral, intellectual, and financial equipment fits them beyond a doubt. [Applause.] If the Government is afraid to trust them, why should they trust the Government's political machine?

Had these views and this practice governed in the early struggles of our national existence a different story might cover the pages of history and the world's map present a different picture of that of to-day.

TRUSTED BY WASHINGTON AND LINCOLN.

With all these splendid achievements rightfully credited by the historian to Washington and Wayne and Green, to Jefferson, Madison, and Hamilton, there was one without whose aid all of these great leaders would have failed. He contributed his private fortune to enable the infant structure of our Government to sustain itself through the most trying period in the world's history, and with a skill and a genius unsurpassed in all the annals of finance, without credit abroad or resources at home, he devised the plans and furnished the money that kept the Continental armies in the field, our ships upon the seas, until our Republic was recognized as an independent Nation. That man was a banker, a Pennsylvania banker, who bore the immortal name of Robert Morris. [Applause on the Republican side.]

In that other hour when the Nation's life was imperiled a million men were kept in the field and our ships were sustained upon the ocean by the skill and patriotism of another banker, whom Lincoln called to the Nation's service—Salmon P. Chase. [Applause.]

And so in every military and commercial crisis in our history the bankers have never been found wanting in the brave and patriotic discharge of their duties to the American people. [Applause.]

Upon what blind prejudice, therefore, is this you feed that induces you to discredit them and bar them from the management of their own and their patrons' business?

Why, in the erection of a great structure based upon the accumulated wealth of the most enterprising people the world has ever known, do you bar from its management the men qualified by experience to preserve it and promote its development into what should be the strongest financial structure on earth?

You reply that the members of the Interstate Commerce Commission are not railroad men. No; but you only give that commission the power to curb abuses and prescribe reasonable rates and methods for the public safety. These roads enjoy the great privileges of eminent domain and are quasi public highways. But you do not take the control of the railroads out of the hands of the officials chosen by the stockholders; nor would that commission think of ordering a well-managed railroad in Illinois to send its cars for indiscriminate use or abuse on a railroad in another section whose roadbed was rotten, whose bridges were unsafe, and whose management was notoriously incompetent; much less would they dare to divert the dividends of one to furnish rolling stock for another.

You say the Supreme Court is appointed by the President, as the central reserve board will be. Yes; but they are appointed for life and beyond the whims and caprice of political leaders. Their proceedings are public, and their decisions are controlled by a century and a quarter of legislation and those well-defined principles of jurisprudence which are the pride and glory of the Anglo-Saxon race. [Applause on the Republican side.]

The proceedings of the reserve boards and central reserve boards are private, and selfishness, which always thrives on secrecy, will feed and fatten on its new opportunity.

DEFECTS AND DANGERS OF THE BILL.

The bill is defective in the provision which forfeits the present charters of our national banks before their expiration or

forces the bankers to join and contribute \$105,000,000 of their capital and \$410,000,000 of their deposits to a new institution in whose management they are practically without a voice. It is defective in the unlimited powers conferred upon a board, five-sevenths of which belong to one political party and two-sevenths to another; and as all are appointed by the titular head of a single party, those two, it may reasonably be assumed, will differ little from or with their associates on the board.

The Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency are partisan appointees, and, as I stated, the other four may reasonably be presumed to be partisans or political ciphers.

All are removable by the President. He also designates which shall be manager and which shall be vice manager.

CENTRALIZATION GONE MAD.

The manager is the "active executive officer," subject to the control of the Secretary of the Treasury, which official is also given additional powers through the increased authority conferred upon the controller's office under him. And what is the Secretary of the Treasury? He happens only to be chairman of the board, supervisor of the manager, and director of the vice chairman.

Shades of Andrew Jackson! How is that for centralization of power?

Was ever a board as abundantly clothed with power? Let us enumerate some of the central reserve board's powers.

First. They appoint three of the nine directors of each Federal reserve bank, including the chairman, who is the official representative of the Federal reserve board.

As a member of the board, chairman of the board, agent of the central board, he might easily dominate the institution unless he be a man of putty, in which case he should not be appointed.

Second. They may remove three of the six directors elected by each Federal reserve bank, thus giving them control of six of the entire nine men in charge.

Third. They may close the doors of the Federal reserve banks and appoint their receivers.

Fourth. They may fix the salaries of the chairman of the board of each Federal reserve bank and also grant or deny compensation outside of actual expenses to all the other directors, and compel the Federal reserve bank to foot the bill.

Fifth. They may control the volume of currency by granting or denying the reserve banks' requests.

Sixth. They may define such commercial paper as may be rediscounted by Federal reserve banks and fix the amount of such paper of certain maturities as may be rediscounted.

Seventh. They may force one Federal reserve bank to rediscount for another Federal reserve bank.

Eighth. They may compel each Federal reserve bank to write off any assets which in their judgment alone are worthless.

Ninth. They may approve or reject the rates of discount fixed at any time by each Federal reserve bank.

Tenth. They may constitute themselves into a clearing house or allow or compel Federal reserve banks to exercise these powers.

Eleventh. They may grant or deny reserve banks the right to do a foreign banking business.

Twelfth. They may join forces with the Secretary of the Treasury and apportion as they see fit the entire volume of Government funds.

Thirteenth. They may increase or decrease the number of reserve and central reserve cities.

Fourteenth. They may accept or reject the application of State banks seeking admission, remove practically all restrictions as to the character of the business to be done by the savings departments of national banking associations, and may define limitations under which savings departments may purchase certain securities.

Fifteenth. They may suspend for 30 days at a time indefinitely every reserve requirement except as to reserve cities.

Sixteenth. They may dismiss the chairman of the board of directors and without assigning cause therefor may suspend all other officials of Federal reserve banks, and, with presidential approval, may give written reasons and remove all officials of a Federal reserve bank.

These are the 16 powers of the new fiscal-political oligarchy.

SIXTEEN TO ONE.

How many powers are left to the bankers?

One.

What is that?

Come under the yoke or go out of business.

Thus, a favorite Democratic doctrine of 16 to 1 is revived again in a new form at the very dawn of our "new freedom."

In fact if there is any power they failed to confer upon this oligarchy, it was because it was difficult for the most fertile Democratic imagination to give it birth.

It is defective, because it makes the reserve notes the notes of the Government and not the notes of the bank.

It is defective, because at a time when we are compelled to make our most desperate struggle to hold our place in the markets of the world our money is placed on a basis long since repudiated by every enlightened nation on the earth.

Great Britain coins gold as full legal tender and silver as subsidiary coin and stops there.

The Bank of England issues its notes and is bound by redemption in gold to maintain their parity.

Germany has discarded and repudiated the different State systems of fiat money and now coins full legal-tender gold and limited legal-tender silver, and the Imperial Bank issues bank notes and maintains their parity by gold redemption.

The Bank of France issues the circulating notes and redeems them in gold.

WEAKENED AS WE ENTER WORLD'S CONTEST.

Every one of these nations is to-day stripped to the waist and armed with the strongest of weapons, a healthy currency, and thus fortified and prepared for the coming commercial struggle in the great international arena.

We should not be behind. Let the banks issue their notes and let us compel their redemption in gold. Let us be leaders in sound finance, not trailers, among the nations of the earth. [Applause.]

It is fatally defective, because every member of the central reserve board may be removed with or without real cause at the whim of a single individual.

VICIOUS CLASS LEGISLATION.

It is fatally defective, because it discriminates between the wage earner and the farmer; because it invites the farmer with unencumbered real estate to participate fully in its privileges, while the millions of toilers in the Nation's towns and cities who either own or seek to own a humble home are barred from the benefits conferred upon the wealthy farmer a few miles beyond the city lines. [Applause.]

It is fatally defective, because it is another example of that class legislation with which the Democratic Party has stained our statute books and for one of which you compelled the present Chief Executive to make a humiliating apology to the world when he attached his name to the sundry civil bill a short time ago.

Such vicious and unfair legislation can not fail to arouse those jealousies and inspire those hatreds which inevitably undermine the structure which the fathers of the Republic intended should shelter all alike.

May it die on its way to the White House and save its sponsors from sorrow, its intended victims from ruin, and our country from ridicule in the eyes of all the world. [Loud applause on the Republican side.]

Mr. GLASS. Mr. Chairman, I yield 10 minutes to my colleague on the committee, the gentleman from Florida [Mr. Wilson].

The CHAIRMAN. The gentleman from Florida [Mr. Wilson] is recognized for 10 minutes.

Mr. WILSON of Florida. Mr. Chairman, it was not my purpose to address the committee to-night on the pending measure, but after listening to the gentleman from Pennsylvania [Mr. Burke] I am moved to make some remarks in regard to the bill which we have presented for the consideration of the House.

The gentleman from Pennsylvania has discussed everything, Mr. Chairman, except the merits of the pending measure. He has made a partisan, a political, speech. He has made a speech which he wishes to read into the RECORD, to use in the campaign next fall.

The burden of his complaint, Mr. Chairman, is that the Republicans were not brought into our committee to help frame this bill. He decries against a secret caucus. He decries against a conference of the members of the Democratic majority of this committee. I wish to know from the gentleman from Pennsylvania when he found his redemption, because it is a fact that under the domination of the Republican Party, more stringent and more powerful than ours, he was a suppliant follower of Joe Cannon and of every method that he pursued when he was at the head of this House. He followed not a caucus of the Republican Party, perhaps, but one man who dominated this House, when he voted for the Vreeland-Aldrich currency bill. And now he comes in here, not with the purpose of doing a patriotic duty for the benefit of the country, but for the purpose of using what he has said against the Democratic Party in the next election.

If we have erred in the matter in which he says we have erred, the party upon the other side of the aisle has erred more grievously than we have. But, Mr. Chairman, this bill, presented to a Democratic caucus and passed upon by a Democratic caucus, is the will of the majority of this House. It is not the will of one man. It is not the will of a few men, but it is the solemn judgment of the majority of this House that this bill, as presented here for your consideration, should become a law.

It is astounding to me to hear the remarks of the gentleman from Pennsylvania [Mr. BURKE] in criticism of this measure, making it upon a political and partisan basis. When I sat in the committee when there was a roll call upon the question of whether or not this bill should be reported to this House favorably every member of that committee, as I recall it, voted "present" except the Democratic members, who voted "aye," with the exception of the gentleman from Pennsylvania. He voted "no." He ostracizes and criticizes his Republican fellows on that committee in the speech that he has made here to-night.

Mr. Chairman, no such speech would ever have fallen from the lips of my distinguished friend from California [Mr. HAYES]. The gentleman from California, I believe, has looked at this measure not in a partisan spirit, not in a spirit of political partisanship, but he is looking at it, Mr. Chairman, as we are trying to look at it—in the spirit of broad patriotism, in an endeavor to do something for the good of our country. [Applause on the Democratic side.]

Another word, Mr. Chairman, in regard to the secret caucus. I heard the other day the gentleman from Pennsylvania [Mr. MOORE], who has been, so far as I know, an abject follower of the Republican tenets, decrying against the methods we have pursued in presenting this measure to this House. I have heard it from the gentleman from Pennsylvania [Mr. KELLY], a Progressive—indeed, they are all from Pennsylvania—a gentleman who seeks to lead this House out of the wilderness of darkness, that we are pursuing measures which will be repudiated by the American people. It is amusing to me, it is amusing to everybody who has read American history, to hear from the lips of my good friend from Pennsylvania [Mr. BURKE], my good friend from Pennsylvania [Mr. KELLY], and my good friend from Illinois [Mr. MANN] speeches decrying against the methods that we are here pursuing. I hope that the American people have sufficient intelligence, and I believe they have sufficient intelligence, to disregard the mimic and mock warfare that is being waged upon the other side of the aisle.

Now, with reference to this bill, Mr. Chairman, I want to say only a few words. As a member of the committee, and zealously trying to do what I think should be done for the benefit of the American people, I have voted for and zealously supported the pending measure. For some seven or eight weeks we considered this bill in the committee. It is true that I came here as a new member of this committee, but I have studied the fundamentals of the bill, I have tried to learn what ought to be done with reference to banking and currency, and I stand strenuously for the pending measure.

I have heard criticism after criticism of the majority members of the committee. I have heard shafts aimed at our beloved and distinguished chairman. And let me pause for a minute to say that I believe that no man ever lived who has a more sincere, a purer, and more patriotic desire to present a measure for the benefit of the whole people of the country than our distinguished chairman. [Applause on the Democratic side.]

I shall not attempt to analyze the manifold features of this bill. They have been covered very carefully and studiously by the gentleman from Virginia [Mr. GLASS] and by other gentlemen on the committee.

But let me say, Mr. Chairman, that it must be readily understood by all gentlemen who have studied our financial system that our present national banking act is not the act which will serve the needs of the country. It has been more than 50 years since any measure of this kind has been attempted to be passed by the Congress. The Republican Party have delayed and trifled with the national banking act which was passed in 1863-64, but they have never offered a large, complete remedy, as we seek here to offer to the American people.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GLASS. I yield to the gentleman 10 minutes more.

Mr. WILSON of Florida. This is the first time in the course of half a century that the Congress has sought to remodel and remedy a system which is inadequate to our commercial requirements.

It has been the solemn promise of the Democratic Party in many platforms that it would revise the present system. And now, since we are in power in the House, the Senate, and at

the other end of the Avenue, we do not shirk the promise we have made, but we bring before the American people the measure which we have here given you for your consideration. It is obviously necessary that we should have legislation upon this subject. Gentlemen have said that the present system has proven good, and that we have prospered under it. That is true to some extent, but gentlemen must also recognize that at regular stated periods we have had calamities in our commercial life which call imperatively for some legislation on our money system.

This bill may not be perfect, may not be exactly what we want it to be, but it is, in my opinion, a very long step in the right direction. Whether it brings entire strength, whether it cures the evil entirely or not, yet it may be said that it is a measure which is in the direction of curing the existing evil. We have here a system of cooperative banking. We have here a system which will keep in the communities that want it, and where it should be kept, the reserve fund and the deposit funds of the banks of the district. Instead of sending our money to New York and getting 2 per cent for it, instead of relying upon the big central cities for the money when we need it, under the system which we propose we will be able to get it at home, or not a long way from home. The United States is divided into 12 regions under this bill and more if necessary in the opinion of the Federal reserve board, and each region will take care of the territory adjoining it. It will not be as it has been heretofore in times of crisis and disturbance, that we will have to seek aid from New York or seek aid from Chicago or from St. Louis or the central reserve cities, but we will have it at home where we can go to our own regional banks and discount the commercial paper in the banks of that region.

It seems to me one of the best systems devised that a bank becoming a member of this association will be able to use its commercial paper and its agricultural paper for the purpose of rediscounts in the regional banks, thereby procuring notes which will circulate among the people of the region in which the bank is situated. That is what we want, Mr. Chairman. Under the system which we have devised it will readily go out when needed, and as readily come back when not needed, assuring to the people that there shall be no inflation of the money and no contraction of the money.

In conclusion, Mr. Chairman, I will say a word in reference to the Federal reserve board. I have heard it from the other side of the aisle that this board will be a partisan and political board. I wish to state to the gentlemen upon the other side of the aisle that the same opposition, as our distinguished chairman told us the other day, was raised to the creation of the Interstate Commerce Commission. The Interstate Commerce Commission has the right to fix rates and the right to suspend rates over all the great railway systems of this country, and I believe there is not a gentleman in this House who will deny that the Interstate Commerce Commission has done a good service for the American people.

Besides that, in the transaction of governmental affairs you must let some power and some discretion rest with human beings. There is no law that you can hedge about that will not leave to the discretion of frail humanity the disposal of important questions.

The President of the United States possesses more power, probably, than many of the monarchs of Europe. The judges of the Supreme Court of the United States possess a power over us in saying that which we do is within the provisions of the Constitution. You will say that they follow precedents, but, Mr. Chairman, they oftentimes blaze the way, just as this Federal reserve board will.

I will not consume further time, Mr. Chairman, but I will say that it was the promise of the Democratic Party to revise the tariff downward. It was the promise of the Democratic Party to revise our currency system in this country, and it is the purpose of the President of the United States and his party associates here to fulfill those pledges. [Applause.]

Mr. GLASS. Mr. Chairman, I yield 10 minutes to my colleague [Mr. BALTZ].

Mr. BALTZ. Mr. Chairman, I feel a little embarrassed to be called upon to discuss this most important legislation. I have never before held a political office in my life, but am greatly interested in the discussion of the Glass banking and currency bill. There are several reasons why I am interested in this proposed legislation. I am the vice president of a country national bank, but make no pretense of being a scientific banker. I am a farmer, and when I make that statement it means that I actually do the work. Besides that, I have other business interests in my home city.

I represent the twenty-second congressional district of Illinois, the State which sent a delegation to the national Democratic

convention at Baltimore that for 42 ballots stood by that grand Democrat, that great harmonizer of the Democratic Party, the present Speaker of the House, the Hon. CHAMP CLARK, of Missouri. [Applause.]

In my younger days I never dreamed that I would to-day have the honor of representing my congressional district in this body. It would be unnatural, indeed, if I did not appreciate the honor of being one of the successors of one of the most illustrious of Americans, a wise statesman, a great scholar, true patriot, Col. William R. Morrison, who now sleeps the sleep which knows no waking in the beautiful cemetery of the little city of Waterloo.

Mr. Chairman, I have read and studied with much interest the proposed bill establishing national banks and Federal reserve banks to provide additional circulation when required. I have given this bill a great deal of thought, and in my opinion it comes as near covering the ground and at the same time providing a medium of circulation, meeting the requirements of the banks of the country, as it would be possible to devise. I can not see wherein any person who has the good of his country at heart can criticize this bill as being one drawn for the purpose of favoring any class or creed. That it is vastly superior to the old national-bank act and system no honest man can deny. The principle underlying the establishment of the Federal reserve board is wise and sound, while the supervising powers of this board are necessary and proper precautions in the interest of legitimate business.

A provision that appeals to me as being very much justified is that one which allows State banks to become subscribers to the capital stock of the Federal reserve bank, thus giving State banks all of the benefits of this great regional bank, which will insure to State banks the right to discount their prime commercial paper and to procure regional reserve notes at times when an emergency exists. This privilege in the hands of both the National and State banks makes it almost an impossibility for this country to ever be the victim of another money panic such as our people suffered in 1907. The system of the Federal reserve board and the regional reserve banks is a great victory in the interest of the people.

For years many communities have suffered because national banks have been prohibited from making short loans upon real-estate securities. This bill authorizes loans to be made for a period not longer than one year; that is, by national banks which have no savings department; but if they have a savings department organized under this bill then they can make real-estate loans for any reasonable and proper period. From my actual knowledge of the banking business I know this will be a great assistance to national banks and the cities in which they are located.

There are a number of other important provisions in this bill that I would like to discuss, as I indorse them unreservedly, but the limited time allotted to me will not permit me to discuss them with you. Technical questions involved in this bill I leave to the lawyers in this body. There are a great many of them, and I know they are more competent to discuss questions of that kind than myself.

I shall endeavor to speak from the standpoint of a business man and a farmer, as I view it. In my judgment, this is one of the most important bills ever introduced in the House of Representatives. The whole bill is a patriotic offering toward the solution of a problem the right working out of which will immeasurably benefit the people of each section that puts the plan into successful operation.

The evils of the present system have borne heavily upon the producers of wealth in this country. The system of reserves of national banks by which the larger part of the available money in this country is collected and put into the hands of a few big bankers in New York City, who loan it to stock brokers who use it for purely gambling purposes will be ended forever when this bill becomes a law. It positively prohibits the national banking system from being used in stock and bond gambling on Wall Street. This financial cancer has eaten into the vitals of American business, and nothing short of such a measure as the Glass banking and currency bill will put an end to it. The people have suffered enough; it is time to let them rule. The big bankers, who have always handled our money, never produced anything, but always got all of the money. Now, we propose that the producers of this country, those who do the real work of the world, shall get the benefit of their own labors.

The producers of this country are the first to feel the effect of a panic and also the last. In this bill we propose to prevent any money panics in the future. The only objection any of the big bankers make to this bill is that they think the banking system should be managed by the big bankers in Wall Street. As for me, I think we have reached the time when we are compelled to make a choice between Wall Street regulating the

banks of the country and the Government itself, or, the country regulating the banks. This bill permits the Government to regulate the banks, including the big ones in New York as well as the smaller country banks; and I am a firm believer in the ability of the officers of this Government to perform this duty. The banking business of America, involving, as it does, the hopes, the happiness, and the prosperity of 90,000,000 people, is of too vast importance to be made the plaything of an aggregation of stock and bond gamblers in one of the great cities of this country. The Government should control it, and it will control it as soon as this bill passes the Senate and is signed by President Wilson.

During the tariff debate in the United States Senate I heard some Republican Senators say that the tariff bill discriminated against the farmers, while at the same time, in the other end of the Capitol, I heard Republicans claiming that the banking bill was written in the interest of the farmer and against the interest of the banker, while Progressive Members of this body claim that the bill is written in the interest of the banks; and I want to say to you that if this bill is satisfactory to the farmers and the bankers of the country, and I believe it is with a few slight exceptions, then it is a mighty good bill. [Applause.] In my opinion, the passage of the present bill will materially benefit the farmers, merchants, manufacturers, and the laboring class, who can then look forward with certainty to securing at a reasonable rate of interest the funds necessary to meet their legitimate needs.

Under the present system it has been shown repeatedly that a small group of men could expand or contract currency or credits at their pleasure. I do not believe this is so much the fault of the men as the law and the lawmakers who made the law. You can not blame men for assuming the power which is given them. Knowing these facts, it is our duty to pass a law that will correct this evil. We must pass a law that will provide for an elastic currency, one that will expand and contract automatically in the interest of all the people instead of being expanded and contracted at the behest of a few men who wish to either run prices up or run them down. Knowing these things, as we all do, it is our duty to meet them squarely and provide against them in the interest of the people who sent us here.

For a few years I had experience in a private bank, which was later changed to a national bank. While the people of my community had confidence in the private bank, when we reorganized into a national bank our deposits very greatly increased. I saw money come to that bank that was moldy and unsanitary; money that had been hoarded in the homes of the community because of the fear of private financial institutions. The national bank had their confidence, and they believed they would in it receive adequate and proper protection for their savings. I am confident that within a radius of 6 miles of this country bank there are thousands of dollars buried in mother earth, and when the people know that the Government will safeguard their finances the money will flow into banks out of hidden places.

Objection is made by the opposition to this bill, claiming it would give the President too much power in appointing the Federal reserve board. The bill provides these appointments shall be made with the advice and consent of the Senate. They also claim this board would be under political control. Political control is governmental control. Who constitutes the Government in this country? The people. Do you want to deny the people the right to govern themselves?

Heretofore a few financiers on a certain street in New York City have controlled the finances of the Nation. This bill is constructed so as to prevent speculation in stocks, bonds, and other securities. All the panics we have ever had in this country were caused by wild speculation. This measure guards the interest of the people, strengthens the banking system, and widens and makes available the credit and financial solidity of the United States. This should not be viewed as a partisan political measure, and I appeal to my friends on the other side of the House, and especially to my Progressive friends, to support this proposed progressive legislation. Let us not delay the enactment of this law, which will give the public such assurance of stability of the financial institutions in which they are interested that all the people of this country may with confidence participate in the unexampled prosperity which in the near future seems destined to pervade this entire Nation. [Applause.]

In conclusion, let me say that this Congress enjoys the confidence of the American people in a higher degree than any Congress since the Civil War. The Republican Party is absolutely discredited, and its leaders are so disconcerted that they do not know what step to take. They are simply waiting for us to make a misstep. That is the only hope they have. If we give

the country a sound banking and currency system, the people will keep our party in power for half a century. [Applause.]

This bill will be passed by the House. It will then go to the Senate, where it may be amended in some particulars and then passed. When that is done it will go to the President, who will affix his signature to it. Then we will have placed upon the statute books of the United States the best banking and currency bill ever introduced in Congress. [Applause.] And this is not all. The President will attach his commendation of that law in these words, "The people shall rule." I firmly and honestly believe that Woodrow Wilson is the greatest President we have ever had since the days of Thomas Jefferson. [Applause on the Democratic side.] With his inauguration we inaugurated in truth and in fact that Democratic doctrine of equal and exact justice to all and special privileges to none. Under his administration the blessings of government will fall, as Gen. Jackson said they should fall, "like the gentle dews of heaven, unseen and unfeigned." I will give the banking and currency bill my hearty support. [Applause on the Democratic side.]

Mr. GLASS. Mr. Chairman, I yield 10 minutes to my colleague [Mr. GORMAN].

Mr. GORMAN. Mr. Chairman, in supporting the measure now before the House I do so not because I believe it to be the best possible bill that might be proposed, but because it is a vast improvement upon our present banking system and will correct in a large measure the defects and guard against the dangers which constantly present themselves to the business, banking, and commercial interests of the country under the existing law. That there is room for improvement in our monetary system no one will deny; that this need is pressing and imperative is testified to in no uncertain terms by the expressions of approval which came from all parts of the country and from all lines of business when President Wilson presented his message to the Congress inviting its attention to the necessity for currency legislation.

We are operating to-day under a banking system which has outlived its usefulness. Organized in 1863, and largely with a view to meeting the exigencies of war, and with but few substantial alterations since its organization, our national banking system as it at present exists is inadequate to meet the constantly growing and expanding needs of trade and commerce, and is out of harmony with the best thought of the present day on the subject of banking and currency. A number of bills have been presented to Congress during the past 10 to 15 years, and while the attention of Congress and the country generally was directed to these attempts to improve our currency system, nothing substantial came of them.

The Democratic Party, charged with the responsibility of government, both in the legislative and executive departments, and alive to its obligations to the country, presents for the consideration of the House a bill which we on this side of the Chamber believe is much better adapted to the current needs of the commercial community, and is better designed to furnish suitable protection to the business interests, to the farmers, and to the salaried and consuming masses of the country than the existing law. As a Democrat it is gratifying to me to know that in our efforts to relieve the pressing and legitimate needs of the commercial community our efforts meet with the approval of the distinguished gentleman from Kansas, leader of the Progressive Party on the floor of this House [Mr. MURDOCK], and that the distinguished gentleman from California [Mr. HAYES] finds many features of the bill possessed of substantial merit and worthy of his approval. I know of no subject which is likely to engage the attention of the present Congress upon which so vast a variety of opinions have been expressed as upon the subject of banking and currency, and the number and variety of remedies for our banking and currency ills are equaled only by the number of nostrums which flood the market and which are advertised to cure all the ills to which human flesh is heir.

Finance and credit have been the bulwarks of the greatest glory and power of governments since organized government began, and they have also proven to be the rocks upon which individuals and governments have crashed and gone to destruction. This entire subject of currency legislation, when placed in the crucible of final analysis, resolves itself into a question of facilities for extending credit. The possession of credit means power; the lack of it means weakness, and possibly destruction.

I shall not bore the committee with a discussion of all the provisions of this bill. I intend to vote for it in its present form, and in voicing my approval of it I shall limit myself to a few observations on one feature of it which marks a long advance in our banking and currency system, and which we will do well to emulate in all branches of our industrial and commercial pursuits, and that is cooperation.

I cherish the hope, Mr. Chairman, that before many years will have elapsed the spirit of cooperation will have so taken possession of us all that even here, in the greatest legislative body in the world, partisan rancor and the desire for partisan advantage shall have vanished, and that we will be actuated solely by motives of purest patriotism, cooperating cheerfully one with the other for the common good of all our people. With the coming of that happy day the only protection which will be urged in this House will be a protection against the shafts of genius which are from time to time hurled at us in poetic form by the popgun poet from Pennsylvania, and the gentleman from Kansas [Mr. CAMPBELL] will probably arise to inform us how the people of our poverty-stricken country, whose mills will be idle, whose factories will be closed, whose men, for lack of employment, will be dressed in rags because of the passage of the Underwood tariff bill, will earn the money with which to pay his friends from France for the cargoes of goods, wares, and merchandise of French manufacture which they are about to dump upon us.

I have listened to some criticisms of this bill during this debate which appeal to me as being sound; but, as I understand it, it is not presented to the House upon the theory that it is a perfect bill. If no legislation ever passed this House until it had attained perfection, there would be no legislation. This bill has been criticized by some as a banker's bill, by others as a violation of the rights of the banking fraternity. Some bankers have said that if this bill passes in its present form they will surrender their national-bank charters and go out of the national-banking system; so that some of those who oppose this bill predicate their opposition upon the ground that it gives the bankers of the country too much power, and others object to it on the ground that it curtails the rights of bankers and strips them of power heretofore exercised by them. Both these views are unwarranted, in my judgment. This bill confers no favors on the bankers, nor does it deprive them of any right they now enjoy and for which they are not duly compensated.

If we legislate so as to injure the banks, we injure the entire country. If our legislation does harm to the business interests of the country, as distinguished from the banking interests, the banks can not escape harm. The ideal legislation is that which comprehends and seeks to conserve the interests of all, and I firmly believe that this bill does so in full measure. When reference is made to the banking interests of this country in its broad sense, we comprehend not only the officers, directors, and stockholders in national banks, but we also include every man, woman, and child who has money on deposit in such banks. They are all interested in the banking business in the broadest sense of the term. I have heard the criticism that under the terms of this bill the Government will engage in the banking business. I do not think there is anything in this bill to warrant such a criticism.

It might as well be asserted that the Government went into the law business when we established the Supreme, appellate, and inferior courts and charged costs to litigants who applied to the courts for relief, or that we engaged in the transportation business when the Interstate Commerce Commission was organized, or that we engaged in the produce business when the pure-food laws were passed, but if there is any warrant for the claim that this bill forces the Government into the banking business, if the proper control of the national banking system requires that the Government shall engage in or participate in the banking business, I think it far better that that course should be adopted than that the banks should be permitted to engage in Government business.

I, too, have indulged in some criticism of this bill because of its failure to prohibit interlocking directorates. I was in hopes that the Banking and Currency Committee, when they presented their bill to the House, with the knowledge which they possessed resulting from the disclosures made before the Pujo investigating committee, would incorporate in their bill a provision making the interlocking of directorates a penal offense. I trust to the assurances, however, made before the Democratic caucus that such legislation will be enacted during the regular session of Congress beginning in December. I had hoped, too, that when this bill came before the House it would provide a limit on the rate of interest and commission that may be charged by national banks on call loans and thereby make unprofitable the loaning of funds by national banks in wildcat speculations. On reflection, I incline to the view that the practical operation of the proposed law, with the large powers and the wide discretion granted to the Federal reserve board, may render unnecessary the provisions I have here suggested. Under this law, the banks of the country will be brought under closer scrutiny of the Government officers and the bankers will be less disposed to take doubtful risks with the money of de-

positors. In this connection, I desire to direct the attention of the committee to the statement of Comptroller of Currency Murray, who, when testifying before the National Monetary Commission during the second session of the Sixty-first Congress, quoting from Senate Document 404, page 280, said:

In going over the records of 500 banks which have failed, it is shown that nearly all of them, except those where there were defalcations and stealing, have failed because the directors have paid no attention to the banks at all but have just let them drift until they finally became insolvent. The history of the office shows that no bank which has stayed within the law or where the directors have required the executive officers to stay within the law has ever failed, and I believe one never will fail. I make that broad statement. The records of the office show it. A bank which has stayed within the law and heeded the directions of the comptroller has never failed.

Then, too, the proposed measure is so vast an improvement upon our existing system that it ought to be passed without delay, and the proposition of altering or amending its provisions in any respect may be safely left to a future session of the present or some succeeding Congress when the knowledge gained from experience in its operation may illumine the pathway of the legislator in proposing amendments to or changes in the bill now under consideration.

One of the admirable features of our present banking law is its freedom from monopoly. There is no legal restriction on the number of banks which may be organized, nor as to the persons who may engage in the banking business. As a business it is open to all, and this is likewise true of the Glass-Owen bill. The development of clearing houses, which are a great help to the banking fraternity, has been so manipulated as to develop a sort of monopoly among certain banks, especially in the larger centers of population, and this tendency to monopoly and domination by a few banks in large centers will be effectively controlled under the provisions of this bill, which permits the Federal reserve board to act as a clearing house for Federal reserve banks and authorizes the board to designate one of such banks to act in that capacity for the others.

With this brief reference to a few of the details of the bill and to some of the criticisms directed against them, I call the attention of the committee to what will prove to be one of the strongest features of the Glass-Owen bill, and the lack of which is one of the greatest defects of our present system. The first question propounded by a subcommittee of the Banking and Currency Committee of the United States Senate, to the currency commission of the American Bankers' Association was, "What are the essential defects of our banking and currency system?" and the answer, in part, is as follows:

A principal defect of our system is the absolute rigidity of our currency. A bank in order to take out circulation must invest more money in Government bonds than it is permitted to issue in currency, thereby impairing, rather than increasing, its power to aid commerce and trade. The system lacks cohesiveness, there being no provision for cooperation among the banks in it. Under ordinary conditions this is not so much felt by the banks individually, but under strained financial conditions, when each bank is thrown on its own resources and must in self-protection act independently of all the rest, the lack of a system under which all could cooperate through a common policy of action becomes keenly felt, and it becomes evident that what is really lacking is a system. The requirement that the banks must individually control their own portion of the legal reserve money of the country, without being provided with the proper means for the protection or replenishment of their legal reserves, is unscientific and economically wasteful. An unsound system of reserves under which in periods of anxiety it becomes necessary in the protection and maintenance of individual reserves for each bank in the national system to contend against every other bank: the dissipation and scattering of the great bulk of the reserve money of the country into a large number of smaller hoardings, completely destroying in times of stringency the strength and power which might be gained by unification and massing of reserves for the mutual support of the banks and the common good of the public.

So that in addition to the defect in our national banking system so frequently referred to, the absolute rigidity of our currency, the next great fault complained of by the bankers is the absolute lack of cooperation among the bankers and the absence of facilities to make cooperation possible. Of course there are fair-weather friendships among the bankers. They have their associations and they attend banquets, and they discuss measures with a view to promoting the banking interests. They greet each other as friends and associate as companions, but under strained financial conditions, at a time when cooperation, fellowship, friendship, and mutual assistance would be genuine, all of these elements are lacking; each banker is looking to his own resources, competition becomes accentuated, the struggle for existence takes on its most brutal form, the cry of the banks is "Each one for himself and may the devil take the hindmost."

Now, a word about our currency and our reserves. This country is now, and practically all commercial countries are, upon a gold basis. Our currency consists of gold certificates, silver or silver certificates, Treasury notes or greenbacks, national bank notes, and bank checks. These are all demand-credit instruments, and when they pass in discharge of a debt are intended to be so many grains or ounces of gold. They do

not take the place of gold, but they represent gold, and the creditor accepts these credit instruments, confident that they will be redeemed in that metal when presented at the proper place for redemption. Bank deposits are also a form of demand credit. While our currency is rigid and inelastic, our demand credit in the form of bank deposits is very elastic and susceptible to great expansion. This expansion may be due to legitimate business transactions, as when a merchant borrows money at his bank and gives security for his loan in the form of commercial paper or other approved security. Such transactions are perfectly legitimate, the volume of demand credit being based in such cases upon existing wealth in tangible form. There is, however, another method of increasing the volume of demand credit which is purely speculative, and this process has a disastrous effect upon our financial system.

As a concrete instance, take the case of a railroad which was purchased for \$40,000,000, and the purchaser then bought it and common-stocked it and preferred-stocked it to the tune of \$120,000,000. The stocks and bonds of this railroad were deposited in banks as security for loans or sold in the stock exchange, and this increased capitalization was made the basis for demand credit to the amount of the capitalization. In polite society this process is called "financiering," but in simple truth it is grand larceny, so grand, in fact, that the law does not reach it, and this process of inflating our volume of demand credit will continue to go on as long as financial pirates are permitted to sail the financial seas unrestrained by law.

This process has been going on to a very great extent during recent years. A brief reference now to our reserve requirements will further illumine the process we have been discussing. Banks in central reserve cities are required to carry 25 per cent of their deposit liabilities in actual cash in their vaults, and there are three central-reserve cities. Banks in reserve cities—there being 47 such cities in all—are required to carry 25 per cent of their deposit liabilities, of which 12½ per cent may consist of deposits with banks in central-reserve cities. Country banks—that is, banks outside of reserve and central-reserve cities—are required to maintain a reserve of 15 per cent, 9 per cent of which may consist of balances with other banks. Now, when this process of increasing the demand-credit liabilities of banks by the grand-larceny method heretofore referred to is carried on in profusion, when stock gamblers are running riot and money is being made in fabulous sums not by honest industry, not by any increase in the tangible wealth of the country, not by honest toil, nor the results thereof, but by the stroke of a pen in a stock-gambling den, the bank which negotiates the deal in consideration of the interest, commission, and increase of dividends involved must increase its reserve in proportion to its increased though fictitious deposit liabilities, so that the banks in central-reserve cities where these gambling transactions are carried on call for funds from the banks in reserve cities, and they in turn call upon the country banks, so that the money of the country is being drained into the banks located in cities where this saturnalia of gambling is going on, and this continues into the fall of the year, when the country banks need funds for the crop-moving period.

This was the situation in 1907 when the worst panic of our history came upon us. The country was in a flourishing condition, the people generally were prosperous, work was plentiful, crops were good, and although we had a Republican majority in Congress and a Republican President in the White House, and a Republican high protective tariff bill on the statute books, all of which, according to Republican philosophy, is absolutely preventive of a panic and disaster, the country nevertheless found itself, under a Republican administration, plunged into a panic. What was the cause of this panic of 1907? Simply this: While the farmers were busy in their fields, during the summer of 1907, raising cotton with which to clothe the world, and corn and grain to feed the millions; while the miner was digging in the depths of the earth at the risk of his life to produce the coal with which to keep the fires of industry burning and give the glow of heat and cheer to the winter firesides of the masses, producing metals and ores for use in the arts, in trade, and commerce; while the workman and mechanic were toiling from day to day to reduce the raw materials into finished products that contribute to our comfort or provide for our necessities and add to the world's wealth; during this same period the money barons and stock gamblers of Wall Street were vigorously plying their stock-gambling trade. They had absorbed the bulk of the money of the country and had tied it up in so-called securities of inflated and fictitious values. When the demand of the country banks began to come in for their deposits, the money barons of New York, the knights of the interlocking directorates, the manipulators of bloated bank deposits and demand-credit liabilities, were unable to give back to the country banks the money they had

deposited. The money barons of Wall Street had taken the money of the country which was needed in the channels of legitimate trade and commerce and used it in prosecution of their gambling enterprises in stock-jobbing dens of Wall Street.

The only cooperation which has heretofore existed among national banks was that cooperation brought about by the interlocking of directorates and which was in turn responsible for the cooperation or conspiracy between the banks and the stock-market operators. This kind of cooperation is fatal to legitimate business.

The Glass-Owen bill proposes a cooperation which will aid legitimate business and not speculations. I hurl no indictment against banks or bankers generally. The vast majority of the bankers in America are among the best men in our country, are ornaments to American citizenship, but there are among the banking fraternity, as among other lines of business, men whose worship of the golden calf prompts them to sacrifice every element of honorable manhood and prostitute every impulse to the service of selfish ends to satisfy their greed for gold, and the power those men arrogate to themselves, made possible by virtue of the wealth they control, makes them the most dangerous men in the community when their power is directed along selfish lines.

Henceforth there will be cooperation among national banks, not only in fair weather but at the time when cooperation is most needed, when an emergency arises.

Paragraph B of section 12 requires—

to permit or require, in time of emergency, Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks, at least five members of the Federal reserve board being present when such action is taken and all present consenting to the requirement. The exercise of this compulsory rediscount power by the Federal reserve board shall be subject to an interest charge to the accommodated bank of not less than 1 nor greater than 3 per cent above the higher of the rates prevailing in the districts immediately affected.

The illuminating statement of Comptroller of the Currency Murray is reflected in section A of paragraph 12, which provides that the Federal reserve board shall be authorized and empowered—

to examine at its discretion the accounts, books, and affairs of each Federal reserve bank and to require such statements and reports as it may deem necessary. The said board shall publish once each week a statement showing the condition of each Federal reserve bank and a consolidated statement for all Federal reserve banks. Such statements shall show in detail the assets and liabilities of such Federal reserve banks, single and combined, and shall furnish full information regarding the character of the lawful money held as reserve and the amount, nature, and maturities of the paper owned by Federal reserve banks.

I want to remind my Democratic friends that I do not regard lightly the absence of a provision to prohibit the interlocking of directorates in national banks. I have no hesitation in saying to you that if I believed such a law would not be enacted during the next session of Congress no caucus rule could prevent me from voting for such an amendment if offered in the House now. But recognizing the force of the suggestion that such legislation should not be limited to national banks, but should apply to all corporations exercising public franchises, and that the Committee on the Judiciary will report such a law to the regular session in December, I am content to accept this bill without such an amendment. I have heard much about the unconstitutionality of this bill. The Constitution has been mentioned in connection with the tariff bill, the income-tax law, and it could not be overlooked in connection with the present bill.

The Constitution is a grand old document, and it has as many friends among the proponents of this measure as among the opponents. The Constitution is being read and interpreted to-day in the light of modern progress, and it adjusts itself readily to our marvelous growth and development. It keeps pace with our progress. The Constitution possesses the quality of being at once elastic, expansive, and sound. It is as much the bulwark of our liberties to-day as it was when it applied to 3,000,000 people and 13 States. It has adjusted itself to the requirements of 100,000,000 people and 48 sovereign States; and not only this, but it defines the status of the people in the distant islands of the sea where the flag of our Union floats.

Many of our statesmen frequently invoke the aid of the Constitution, but I fear it is very much misunderstood. Like the naturalist who adjusts his glasses so that he can distinctly see the flea on the lion's hide but can not see the lion at all, many of our statesmen so restrict their view of the Constitution that they see the letter clearly, but they do not see the spirit at all. It is the spirit of the Constitution which has made it responsive to the requirements of the increase and complexity of our population and our marvelous Territorial expansion.

As an illustration of the development of constitutional interpretation, let me cite this instance: Some years ago the Legis-

lature of Illinois passed a law prohibiting the employment of women in certain industries for more than a certain number of hours a day.

The women in the affected industries were satisfied with the limitations, the public generally approved, but the employers of women who made their dividends out of the labor of women were not satisfied. So they appealed to the Supreme Court on the ground, not that their rights were being infringed, but on the ground that the constitutional rights of the women in the affected industries—their constitutionally guaranteed right of freedom of contract—was being violated, and the court very solemnly decided that the Constitution was violated in that regard, and the statute was wiped out by judicial interpretation. The right of the women to enjoy freedom of contract was preserved and the opportunity of the employer to take advantage of their necessities and drive them to the limit of physical endurance was also upheld.

A few years ago another statute was passed by the Legislature of Illinois limiting the hours of labor for women in certain industries. Again the employers went to the Supreme Court, invoking the aid of the grand old Constitution. Again the Supreme Court put on its glasses and examined the Constitution. This time they saw something which they had not seen before. Perhaps it was the spirit of the Constitution; perhaps it was the figure of a woman, feeble and gaunt and worn; perhaps it was the figure of a distorted and disfigured child. I do not know; but certain it is they saw something they had not seen before; or perhaps they heard the footsteps of the marching hosts of human progress, with which the spirit of the Constitution has ever kept pace. I can not say; but this time I know the statute was declared to be constitutional, and the right of the employer to exploit the womanhood of Illinois was forever terminated.

The Constitution is a grand old instrument and its grandeur increases with its age. Its letter may be fixed, rigid, and immovable, but its spirit is marching onward. [Loud applause.]

Mr. GLASS. Mr. Chairman, I yield five minutes to my colleague [Mr. JOHNSON of South Carolina].

[Mr. JOHNSON of South Carolina addressed the committee. See Appendix.]

Mr. GLASS. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to; accordingly the committee rose, and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837, and had come to no conclusion thereon.

ADJOURNMENT.

Mr. GLASS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 31 minutes p. m.) the House adjourned to meet to-morrow, Saturday, September 13, 1913, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Black River, Mich. (H. Doc. No. 234); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Nueces River, Tex. (H. Doc. No. 235); to the Committee on Rivers and Harbors and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. SIMS, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 6635) to authorize the county of Hamilton, in the State of Tennessee, to construct a bridge across the Tennessee River at Chattanooga, in the State of Tennessee, reported the same with amendment, accompanied by a report (No. 71), which said bill and report were referred to the House Calendar.

Mr. ADAMSON, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 7472) authorizing the city of Beaufort, a municipality chartered under the laws of the State of South Carolina, to construct, maintain,

and operate a bridge and approaches thereto across Beaufort River, in Beaufort County, S. C., reported the same with amendment, accompanied by a report (No. 72), which said bill and report were referred to the House Calendar.

Mr. BARKLEY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 7469) to authorize the construction, maintenance, and operation of a bridge across the Little River at or near Lepanto, Ark., reported the same without amendment, accompanied by a report (No. 73), which said bill and report were referred to the House Calendar.

He also, from the same committee, to which was referred the bill (H. R. 7470) to authorize the construction, maintenance, and operation of a bridge across Black River at or near the section line between sections 8 and 9, in township 20 north, range 5 east, being a short distance south and east of the town of Corning, Clay County, Ark., reported the same without amendment, accompanied by a report (No. 74), which said bill and report were referred to the House Calendar.

Mr. HUGHES of Georgia, from the Committee on Education, to which was referred the joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education, reported the same with amendment, accompanied by a report (No. 75), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 6620) granting an increase of pension to All McKisic, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. FERRIS: A bill (H. R. 8081) to authorize the President to provide a method for opening lands restored from reservation or withdrawal, and for other purposes; to the Committee on the Public Lands.

By Mr. ANDERSON: Resolution (H. Res. 251) providing for the election of a commission on legislative methods and practices in the House of Representatives, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. AVIS: A bill (H. R. 8082) granting an increase of pension to G. W. Shipman; to the Committee on Invalid Pensions.

By Mr. CLARK of Florida: A bill (H. R. 8083) granting a pension to Adolphus N. Pacetty; to the Committee on Invalid Pensions.

By Mr. CLARK of Missouri: A bill (H. R. 8084) granting an increase of pension to Letitia R. Whitehouse; to the Committee on Invalid Pensions.

By Mr. FESS: A bill (H. R. 8085) granting an increase of pension to Elmore W. Strawn; to the Committee on Invalid Pensions.

By Mr. FRANCIS: A bill (H. R. 8086) granting a pension to John Roberts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8087) granting a pension to Eliza A. Stevenson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8088) granting a pension to Ithamer Pugh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8089) granting a pension to Eloise McKee; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8090) granting a pension to Margaret A. Trimmer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8091) granting a pension to Jennie Saylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8092) granting a pension to John Creighton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8093) granting a pension to Peter Gilner; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8094) granting a pension to Isaac Gossett; to the Committee on Pensions.

Also, a bill (H. R. 8095) granting an increase of pension to Jesse Davidson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8096) granting an increase of pension to James Douglass; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8097) granting an increase of pension to Mary B. Carroll; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8098) granting an increase of pension to Cyrus Spriggs; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8099) granting an increase of pension to Joseph A. Pyle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8100) granting an increase of pension to George W. Pitner; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8101) granting an increase of pension to Martin Overholt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8102) granting an increase of pension to William L. Morris; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8103) granting an increase of pension to Abram McCoy; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8104) granting an increase of pension to William T. Beckett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8105) granting an increase of pension to James S. Stewart; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8106) granting an increase of pension to Samuel Weaver; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8107) granting an increase of pension to John D. Liddick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8108) granting an increase of pension to Abisha C. Thomas; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8109) granting an increase of pension to George W. Guthrie; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8110) granting an increase of pension to Mary Daugherty; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8111) granting an increase of pension to George W. Grisinger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8112) granting an increase of pension to William Henderson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8113) granting an increase of pension to Jonas S. Giesey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8114) granting an increase of pension to John L. Hefling; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8115) granting an increase of pension to Oliver Harding; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8116) granting an increase of pension to David Martin Howell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8117) for the relief of George E. O'Neal; to the Committee on Military Affairs.

Also, a bill (H. R. 8118) for the relief of Henry Noble; to the Committee on Military Affairs.

Also, a bill (H. R. 8119) for the relief of Jonathan Milburn and granting him a pension; to the Committee on Military Affairs.

Also, a bill (H. R. 8120) for the relief of Frederick Horning; to the Committee on Military Affairs.

Also, a bill (H. R. 8121) for the relief of George Duncan; to the Committee on Military Affairs.

Also, a bill (H. R. 8122) for the relief of Joshua Algeo; to the Committee on Military Affairs.

By Mr. JOHNSON of Washington: A bill (H. R. 8123) granting a pension to Hiram A. Walker; to the Committee on Pensions.

Also, a bill (H. R. 8124) granting a pension to Charles L. Taylor; to the Committee on Pensions.

By Mr. KIRKPATRICK: A bill (H. R. 8125) granting an increase of pension to William E. Hill; to the Committee on Invalid Pensions.

By Mr. LAFFERTY: A bill (H. R. 8126) to correct the military record of Richard Prendergast; to the Committee on Military Affairs.

By Mr. LA FOLLETTE: A bill (H. R. 8127) granting an increase of pension to Luisa M. Carothers; to the Committee on Invalid Pensions.

By Mr. TAVENNER: A bill (H. R. 8128) for the relief of Austin Mondon; to the Committee on Military Affairs.

By Mr. TOWNSEND: A bill (H. R. 8129) granting a pension to Louise Frances Hastings; to the Committee on Pensions.

By Mr. MOSS of West Virginia: A bill (H. R. 8130) granting an increase of pension to Absalom Shingleton; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. GARNER: Petition of sundry citizens, bankers, and business men of various towns and cities in Texas, favoring the passage of legislation to give Government aid in securing a better marketing system for farm products; to the Committee on Agriculture.

By Mr. JOHNSON of Washington: Petition of the Washington Bankers' Association, Bellingham, Wash., requesting the reduction of letter postage to 1 cent and the readjustment of the rates of each class of mail matter so as to make them self-sustaining; to the Committee on the Post Office and Post Roads.

By Mr. LA FOLLETTE: Petition of the Washington Bankers' Association, Bellingham, Wash., favoring the passage of the 1-cent letter postage rate; to the Committee on the Post Office and Post Roads.

By Mr. RAKER: Petition of the San Mateo (Cal.) Development Association, favoring the passage of legislation to increase the naval defense for the Pacific coast; to the Committee on Naval Affairs.

By Mr. BELL of Georgia: Papers to accompany bill (H. R. 7140) for the relief of Elizabeth R. Nicholls and Joanna L. Nicholls, heirs of Joshua Nicholls; to the Committee on War Claims.

HOUSE OF REPRESENTATIVES.

SATURDAY, September 13, 1913.

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

How deep are Thy mysteries, O God! How exacting and insistent Thy mandates! We think; we plan; we aspire; we struggle; we fall. Thy will is supreme, and Thy will is good will.

Our wills are ours, we know not how;
Our wills are ours, to make them Thine.

The spirit is willing, but the flesh is weak. Bear with our infirmities, and help us from our heart of hearts to say, "Thy will be done," not only in the spirit of humility, but in a firm resolve to act with Thee in the furtherance of Thy plans, under the spiritual leadership of Thy son, Jesus Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill, with Mr. GARNER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GLASS. Mr. Chairman, I yield 30 minutes to the gentleman from Texas [Mr. CALLAWAY].

The CHAIRMAN. The gentleman from Texas [Mr. CALLAWAY] is recognized for 30 minutes.

Mr. CALLAWAY. Mr. Chairman, a paper in Texas, called The Home and State, in its issue of August 23, said editorially:

Sit down and write a short letter to your Representative in Congress as soon as you have read this, and urge him to steadfastly support the administration currency bill. There is nothing to be gained by discussing the details. It is enough for us to know that it is heartily indorsed by Woodrow Wilson and William Jennings Bryan.

Such fidelity as that will certainly appeal to the sympathies and good will of the President and the Secretary of State however much such blind adherence must excite their pity. Be it said to the credit of the electorate of Texas that none have followed the advice of that paper. Those who have written have given reasons for the faith that was in them, whether they were for the administration bill or against it. I had some young mocking birds when I was a boy. They were pretty well feathered out and should have had some sense, but they had a way of throwing back their heads and opening their mouths whenever a hand was passed over them. One day a devilish chap was pranking with them, they shut their eyes, threw back their heads, and opened their mouths. The temptation was too much and he filled them full of the only thing in reach, green china berries. Next morning they were dead. Their faith was all right, but it digested no china berries.

Loyalty is one thing and blind following is another. I want to see this administration succeed as much as any living man, and I want to help in every way possible by thoughtfully giving the best that is in me to make it a success, a success for the whole people, a restoring to them of their equal rights, and opening to them equal opportunities; not giving them something, not fostering them, not flattering them, and not fathering

them. The manhood that is the hope and the reliance of this Republic does not ask to be coddled, fondled, and fathered; it understands that the Government can not favor some without oppressing others; can not give to one without taking from another; and that manhood asks simple justice, even-handed justice. It does not ask for legislative preference nor governmental license to oppress by means of superior strength, superior skill, superior mind, or superior wealth, nor to take from those who earn what is their just due; it asks only that this Government shield it from deprecation while it does and dares, and see that it is not robbed of the usufruct of its endeavor. If this be the purpose of the administration, I am with it heart and soul, but I do not think I can help by shutting my eyes and closing my mind the while I swallow down without question whatever it feeds into me; and seeing and thinking, I must be honest with myself and with those whose commission I hold, and must candidly protest when a measure is laden with dangers to the party, to the people, and to representative government, as I believe this bill to be.

THE REAL SOURCE OF THIS BILL IS THE ADMINISTRATION.

It is true that the Democratic caucus had a report from the majority members of the Banking and Currency Committee, but not one of the majority members, though a majority of them voted to report this measure to the caucus, believes this the best legislation that can be devised, and no thinking man on that committee believes this bill is what it ought to be. It was whipped through the committee by the administration, brought into the caucus and made a party measure by the administration, and whipped through the caucus by the same power. It is now before this House as a Democratic measure. It is not the product of the committee; it is not the product of the caucus; the administration handed it to us, and because it did the committee took it and the caucus took it, and that settled it for this House. Why should this legislation have been made a party question? The platforms of each party in the last national campaign denounced the present banking and currency laws and demanded legislation. Has there been such a clear line of demarcation between the parties on this question as to conclude us that no suggestions the Republicans could offer would render any assistance? Why shut them out completely by binding the overwhelming Democratic majority to this administration bill verbatim et literatim? That was done to protect the bill from Democratic criticism, thinking it would be easier to answer the arguments made against the bill by calling them Republican arguments than to answer them on their merits. You cut off all Democrats from offering amendments and bound them to vote down any offered because you thought it would be easier to vote them down as Republican amendments than to let them be voted on on their merits, and you will excuse yourselves when criticized for your vote and unable to meet the argument by saying you were following the fortunes of the administration and that you are willing to rise or fall with your party. I think this bill ought to have come into this House on its merits, and if it has not got merit enough to survive the criticism of the Democrats and the assaults of the Republicans, who are a hundred in the minority—and divided at that—it must be woefully lacking in merit. I believe it would have gone down. I do not believe a measure promising so little good and capable of so much harm as this could have stood the open fire in this House. I regret as much as any man could that my party has indorsed a bill the fundamental principles of which I consider so dangerous that I am forced to part company with them on it, but that is my situation on this bill.

PLATFORM DECLARATION AGAINST A CENTRAL BANK.

Mr. Chairman, in our platform adopted at Baltimore, and on which we won such a signal victory at the polls last November, we said, "We oppose the establishment of a central bank." I thought we meant that. I was honest in proclaiming that as the real sentiment of the Democratic Party. True, we did not say, "We oppose the establishment of a central board," but I submit in all candor that there is no real difference, so far as the concentration of power is concerned, between a central bank which controls the entire banking interests of the country and a central board which controls the entire banking interests of the country. James B. Forgan, pleading for a central bank before the Senate Banking and Currency Committee on September 2, said this bill practically gives us a central bank. I believe in the platform denunciation of a central bank because of the power concentrated by it. Mr. Wexler, of New Orleans, before the Senate Banking and Currency Committee, said, in answer to Senator REED, that a central bank such as they desired would have as much power over the business interest of the people of this country as the Czar of Russia had over the business interest of his subjects. I believe such power is dangerous, and it

does not lessen my fears to call such a centralization of power a central board instead of a central bank.

PLATFORM PLEDGE OF ABSOLUTE SECURITY FROM MISUSE OF POWER.

We said in our platform:

All legislation on the subject of banking and currency should have for its purpose the securing of those accommodations on terms of absolute security to the public and of complete protection from the misuse of the power that wealth gives to those who possess it.

We were commanded to secure the public from the power that wealth gives. There may be some, with the faith of the home and State editor or of the mocking birds, who will protest that in our platform we did not inveigh against power given by the Government or by the people and contend that power so given will not be abused, but I tell you, and in your heart of hearts you must admit the truth of it, when you have power and are hard pressed you use it to save yourself and crush the opposition, no matter how you obtained that power, whether through the accumulation of wealth, the confidence of your fellows, appointment to place, or by election to office. You claim that you use it properly. The individuals or businesses you crush claim you abuse it. The men with the power of wealth use it. That is all the power they have. Men with political power use that. It is always the instrument at hand that we use when pressed. Give a man political power and the power of wealth combined and when he is pressed he will use the one or the other as the exigencies of the case demand, or both should he understand their use and find it necessary. Men prate of confidence in great officials, and say they have faith that they will not misuse their power, and yet the world's history is full of instances that rebuke such credulity.

John Clark Ridpath, the great historian, in an article in the Arena of April, 1898, on the Government of this country from the adoption of the Constitution, speaking of the abuses of governmental power, said:

This "divine fact," called government * * *, may call itself a prince, an emperor, a czar, a shah, a mikado, a sultan, a president, a Speaker of the House of Representatives. Whatever it is and in whatever shape it comes, whether it be angel or devil, its peculiarity is that it exists and maintains itself and exercises its authority outside of and upon the people governed. Did space permit I should gladly summarize the work of this monstrous thing among the nations of the earth. History is replete with the story of the abuses, cruelties, and tyrannies of the fact called government. It is composed also of the ignorance, superstition, and horrid profanation of the truth done in the name of government. It is composed of the inhumanity and cunning and mock religion which government has practiced. It is composed of the insatiable ambition and gilded pretense and pampered obesity which have been the most conspicuous signs of government. Government has killed one third of mankind, starved another third into specters, and reduced the remaining third to slavery.

You tell me men in great office will not abuse the power given them because of the confidence reposed in them and because of their great responsibility. One of the most dramatic struggles that has taken place in this House in years was the fight to take away from the former Speaker, Mr. Cannon, the power which you claimed he abused; and when I came here I heard men who are now fighting for this bill and contending that there is no danger in giving the President's board of seven power, according to Chairman GLASS, to determine the welfare, prosperity and happiness of every man, woman, and child in the United States arguing for a rule adopted at that time taking away from the Speaker the right to appoint the committees, because they said such concentration of power was dangerous. "Consistency, thou art a jewel." Were you sincere when you claimed the former Speaker had abused his power and that such power would be dangerous in the hands of the present Speaker, or are you sincere now when you claim there is no danger of abuse of power by public officials? We had a fight quite recently over the organization of a budget committee, and though I favored a budget committee, I opposed that organization because I believed too great a concentration of power would ensue if the budget committee was to be composed of the chairmen of the different big committees of this House. I did not oppose it because of the personnel of the committee, but because of the concentration of power. The chairman of the great Ways and Means Committee would have become the chairman of that budget committee. He knows my confidence in him and my love for him. He knows when I oppose him on any question I am following my judgment on a matter of principle and not my feeling. I hope he knows me well enough also to know that my confidence in his judgment and in his integrity and my affection for him, great as it is, does not lead me to follow him further than my judgment is convinced by the reasons he advances. I am sure that I have more real affection for one of the men who will become a member of the board proposed by this bill, should this bill become a law, more confidence in his judgment and integrity, than any man in this House has. I refer to the Secretary of Agriculture. But that does not take the deadly upas contained in this bill out of it nor lessen my fears for the per-

petuity of our free institutions should it become a law and be accepted generally by the 25,000 banks of this country.

OUR FINANCIAL LEGISLATION ALL ANTI-DEMOCRATIC.

Mr. Chairman, in the light of the history of the financial legislation we have had in this country, it occurs to me that we should proceed with the most extreme caution. Alexander Hamilton, one of the greatest of the men who figured in the founding of this Government, but not a Democrat, organized a national banking system by chartering what was known as the first Bank of the United States, in 1791. The charter ran for 20 years. The question of extending it came up during Jefferson's administration, in 1808. Gallatin, who was then Secretary of the Treasury, recommended the extension of the charter. Jefferson, the Democrat, opposed it, and the Congress backed him. In 1811, when the charter actually expired, Congress, dominated by the same men who had served in Congress with Jefferson as President, refused to recharter the bank.

The reasons Jefferson gave for refusing to extend the charter were that the bank had a monopoly that it should not have, a favoritism from the Government that it should not have, and a concentration of power that should not exist. He favored the banks in the different States, and said the small banks were as little apt to abuse the power given them as the gigantic central bank, and when a little bank abused its power the effect was inconsequential, whereas when a giant central bank abused its power the effect was destructive and the disaster widespread. What would Jefferson say about this bill, subject to every objection made to the United States Bank organized by Hamilton?

The second bank was chartered in 1816 during Monroe's administration, and its charter ran for 20 years, expiring during the administration of the immortal Jackson, the second great Democrat. His refusal to allow it to be rechartered is a part of the really great history of this country. The power of the bank was such, with \$55,000,000 capital, that it influenced the House of Representatives and the Senate of the United States, and was claimed to be able to make and unmake Presidents—but not such Presidents as Jackson. Only God and the people can make one of his heroic mold. It succeeded in forcing through the House and the Senate a bill rechartering it, and with a less determined, patriotic, and heroic man in the White House it would, with its great power, have forced Executive approval.

JACKSON SAID "DO NOT TRANSFER POWER FROM THE BANK TO THE EXECUTIVE."

Jackson said, in a paper on the refusal of the bank charter read to his Cabinet:

In ridding the country of an irresponsible power which has attempted to control the Government, care must be taken not to unite this same power with the executive branch. To give a President the control over the currency and the power over individuals now possessed by the bank of the United States, even with the material difference that he is responsible to the people, would be as objectionable and as dangerous as to leave it as it is.

NATURAL AND PROPER BANKING KILLED BY LAW.

The second United States Bank did not control the entire banking interests of the country as this bill seeks to do, nor did it have the monopoly of the note issue, as this bill gives to the reserve board. Its power did not compare with the power given to the President and his board by this bill. The Suffolk Bank of New England, organized in 1824, issued notes redeemable in gold and did the banking business of the New England States until 1866, when it was taxed out of existence in order to give place to the national-bank-note circulation; the bank at New Orleans, organized in 1842, had power to issue notes redeemable in gold and continued to do business with every note worth its face in gold until Gen. Butler captured New Orleans during the Civil War and took away the gold; the Bank of Indiana, with the note-issuing privilege, as stable a financial institution as the country had, answered every demand of that developing State until taxed out of existence in 1866 to give place to national-bank-note circulation; the Bank of Missouri, the Bank of Iowa, and the Bank of Kentucky were all great banking institutions that stood during Democratic administrations as the bulwark of the greatest progress and greatest and most uniform development of this country from 1836 to the Civil War. These banks were redeeming their notes at their face value in gold till taxed out of existence in 1866, when greenbacks of the United States were depreciated and Confederate money was valueless. These institutions are proof positive of the soundness, safety, and common sense of a rightly operated banking system with the note-issuing function, and they were allowed to live while Democracy ruled.

Had this Government maintained the banks scattered throughout the country, left them the right of note issue, but required a uniform note prepared by the Government to avoid counter-

feiting, subjected them to Government inspection, and required them to come to a safe standard of sound and conservative banking, the financial history of this country would have been very different from what it is; but in 1863 the Government, controlled by the Republicans, passed a national banking act which gave to organized national banks the exclusive right to issue notes on United States bonds. This was done for the purpose of forcing a market for Government bonds at an exaggerated price. It would not be difficult to figure the amount of fictitious value created by this iniquitous legislation, but the extent to which it has burdened our industries, kept back our development, and destroyed our institutions could not be estimated.

This privilege of issuing notes on the bonds, however, did not immediately give as ready a market for them as those responsible for the scheme desired, and in 1866 they taxed all other bank-note issues out of existence. This legislation was for the purpose of forcing national-bank-note circulation, and was as damnable and far-reaching in its effect as legislation usually is which is designed to force values, grant privileges, or stimulate industries. It was a fit companion for the protective tariff and other similar legislation indulged in by the party that was in power at that time. This national-bank act based the circulating medium created by it on the Government debt. If we have years of peace, development, and prosperity, during which our debt is not increased, our circulating medium stands still. Should we pay off part of our national debt our circulation is decreased; if we have war or other trials, increasing our national debt, our circulating medium increases. The expansion or contraction of our circulating medium under the present law bears no relation whatever to our commercial or industrial needs or our increase in wealth. The Republicans, even, have grown ashamed of this statutory iniquity, the Democrats have always protested against it, and each party in its platform of last year denounced the present financial system as inadequate and demanded currency revision.

WHY NOT LEGISLATE PROPERLY RATHER THAN HURRIEDLY?

The whole country is aroused at last to the enormities of the present system, and Congress, in obedience to that popular demand, has to legislate. Will you try to excuse yourselves or claim you have obeyed that demand by allowing this bill to be enacted? I had rather endure for a while the bad system we have, the iniquities of which we understand, than to usher in this Trojan horse, loaded with we know not what, and have to go through years of struggle and suffering before we understand its evils. The people of this country are entitled to banking and currency legislation that will be permanent, answer automatically the demands of commerce, be responsive to the strains of business, not subject to the control of any individual or board, safe from the domination of any coterie of financiers, and giving to the people and to trade the most mobile, inexpensive, elastic, safe, sound, and stable currency system that it is possible for the combined wisdom and courage of this Congress to work out; and they are entitled to it as soon as it can be worked out, but they do not want a measly makeshift, and there is no such hurry and pressure as to justify putting on the statute books any half-baked and imperfect legislation.

We can save more time to the people of this country, their industrial interests, and the future of the Nation by taking the necessary time to do this thing right, examine this spectacular monster inside and out, through and through, than we can by hurriedly putting through this legislation, which has been shoved inside the walls of the Democratic majority without them knowing the fatal possibilities lurking in its body. This piece of legislation is before this House for action with the Democrats pledged to pass it; but it is no more understood by this House nor by the Democratic Members of this House than the historic horse was by the Trojans, and should the banks refuse to accept it and thereby retire the \$750,000,000 in bank-note circulation we now have, it will prove as disastrous to the industries of this country as the Trojan monster proved to the people of Troy. Mr. BULKLEY says this is an emergency system. We want and we ought to have a permanent system. Why should we not inaugurate a lasting system now, a system not dependent on the will or caprice of a President or a board?

THE ALL-PERVASIVE POWER OF THE PRESIDENT UNDER THIS BILL.

This bill provides a board of seven, appointed directly by the President, subject, of course, like the Cabinet, to the President's will, which board has discretionary control over the 12 regional banks. The capital of these regional banks is to consist of one-fifth of the capital of the respective banks of their districts, together with 5 per cent of the deposits of these banks. The board has the exclusive power of note issue to the reserve banks,

the power to cancel the membership of any member bank at discretion, the power to accept or reject the security or any part of the security offered by the banks, and the power to fix the discount rate, with the accompanying power to increase or contract the circulating medium of the country at will. Summarize these powers, and you will find that power centered in this board, which Chairman GLASS said "could determine the welfare, happiness, and prosperity of every man, woman, and child in the United States," and majority leader UNDERWOOD declared "resolved itself into faith in the President's board, the whole question being whether the board was angel or devil."

The amount of capital subject to the direct control of this board, should all the national banks come into the scheme, would be 20 per cent of the capital of the banks, or \$206,600,000, plus 5 per cent of the deposits, or \$291,250,000, making a total of \$497,850,000, together with a dominating influence over the entire national banking interests of the country, composed of capital, surplus, and deposits amounting to \$7,708,000,000. Should the State and private banking interests come into the scheme, it would put under the direct control of the board additional capital amounting to \$200,400,000, being one-fifth of the capital of such State and private banks, plus 5 per cent of their deposits, amounting to \$254,450,000 more, aggregating under their direct control from State and private banks \$463,850,000, and giving them a dominating influence over the entire wealth affected by the State and private banking interests, amounting in capital, surplus, and profits to \$7,000,000,000. Jackson said Biddle's bank, with a capital of only \$55,000,000, had attempted to control government and "possessed a power over individuals that should not be intrusted even to the Executive, though he was directly responsible to the people."

If that central bank was a menace because of the enormous power it possessed over individuals, the interests and the commerce of this country, with a capital of fifty-five millions, with no control over the general banking interests of the country except as given it by its capital, with no insight into the innermost workings of each and every banking concern in the country such as this board will have, with no monopoly of note issue such as is given to the board by this bill, what think you of giving into the hands of this board the absolute control of \$661,000,000, together with a dominating influence over the entire capital and surplus and deposits of the banking interests of this country, amounting to \$14,907,000,000? Not only that, besides putting into the hands of the President and his board a power infinitely greater than a central bank would have, the President has combined with this the political power given him by that great office, which is now a dominating influence that most Federal officials stand in abject awe of. He appoints the members of the Cabinet, has the right to call for their resignations at will, and controls the general policy of each department of the Government. Combine this with a controlling partnership with the entire banking interests of the country and you have the President controlling the political and financial interests, and under this bill his board operates in partnership with the bankers. He has to have their cooperation before this bill can become effective, and the banks must have his cooperation after they enter the scheme before their business can be profitable. Necessity makes them act together. Where will the people come in? We are told to ask no questions; have faith, simple faith. Who usually gets a hearing, the man on the ground or the trusting man? Who has been favored in this Government, the principal business of which for the last 50 years has been granting favors to those who were sufficiently close, powerful, and persistent to get what they wanted? Has it been the people with faith? Is it faith or "eternal vigilance" that insures us "life, liberty, and justice"? Jackson said to give the President control over the currency and the power at that time possessed by the bank of the United States over individuals would be as objectionable and as dangerous as to leave it as it was, but here is a proposition to concentrate a power in the Executive infinitely greater than was dreamed of by President Jackson when he made that statement. Jefferson said he had an abiding faith in the common judgment of mankind and full confidence in their voice when honestly and freely expressed. Think you that the people of this country would freely express themselves at the ballot box in the face of such power as this concentrated in the hands of the President? If they did, they would do something this House has not done and will not do when the administration steps in with its present power, but combine with this the power which is given by this bill, according to Mr. GLASS and Mr. UNDERWOOD, and you have enormously reduced the possibilities of a free expression of the Congress or of the people.

It may be argued that all the banks will not come into this scheme, and therefore the wealth subject to the President's

board will not be as great as I have stated; but if they do not come in the scheme is only an iridescent dream, and the business of the country and the administration is at their mercy. If part come in and part stay out, it is not a national financial system, but a mess that gives us a national system in part and a private system in part. The whole argument for this scheme is the necessity for elasticity in the currency and taking the dominating control of the finances away from Wall Street and the Money Trust. If the bulk of the financial interests of the country does not come into this scheme, the domination of Wall Street is not broken, general elasticity of the currency is not obtained, and the bill is worthless. If they do come in, the partnership is established between the Presidency of the United States and the banking interests of this country, and when once the partnership is established they are bound to act together. Then, with the great financiers acting with the President, where are we? There is a partnership formed that must be regarded by each—a power in the President's board, Mr. GLASS says, to affect the interest of every man, woman, and child in the United States; a power, Mr. UNDERWOOD says, which makes the whole question whether the board be angel or devil. With such power in the President and his board, is this a free people and a free country? When a board appointed by any one man has discretionary power to determine the welfare of every man, woman, and child in the country, have we liberty? Is this a free people and independent when subject to a board which means weal or woe as it is angel or devil? The proponents of this measure assure us that the President will not abuse this power, but I tell you this is not a free country when its citizens are subject to any man's will. No man is a free man, no nation is a free nation, and no people is a free people which is subject to the will or caprice of any living mortal or bunch of mortals. This would not be chattel slavery, where men and women are put on the auction block and sold, but it would be industrial slavery, in which the welfare of the people would be subject to the President's board, a worse kind of slavery, said Horace Greeley, than chattel slavery. I am glad it was not left for me to say how absolute and far-reaching the power given by this bill to the President's board would be. I am glad the administration's agent in this House, Mr. GLASS, said it; I am glad the great leader of the majority, Mr. UNDERWOOD, said it. You, the proponents of this measure, can not answer by saying this power has got to be lodged somewhere, that it is now lodged in Wall Street, and that we are commanded by our platform to take it away from there; and then, in feigned obedience to that command, excuse yourselves by claiming that you have moved it to Washington and put it into the hands of the President and his board. We are commanded by the platform to obtain banking and currency accommodations on terms of absolute security to the public and under complete protection from the misuse of power. What protection have we here from the misuse of power? Faith, faith, faith; faith in man, fallible man, swept by all the passions, prejudices, and ambitions, mental misgivings, short-sightedness, and misconceptions of man. You may have such faith and confidence in the present Executive that you are willing to put such power in his hands, with an absolute faith that he will never abuse nor misuse it; but he is not always to be President; his term or terms will expire; and even should he prove to be such a beneficent and wise President as to induce you to abandon the platform and keep him two terms, or even sweep all precedent aside and continue him in office for life, he will not live always, and we hope this Republic will endure.

THE ATTRACTIVENESS OF THE PRESIDENCY TO GREAT BANKING INTERESTS.

When he is gone the control of this board becomes the greatest prize to the financial interests of this country ever held up to an interest such as the banking interest to be fought for; and it does not mean the same to one who would administer it honestly and rightfully as to one who would make it serve his personal ambition and private ends to the utmost. To the one it carries with it the honor and the salary; to the other it carries with it whatever his ingenuity can make of it. The race for it is not equal, nor the reward the same. A prize is the same only when it is of equal value to the different opponents when obtained. This place becomes to the one a prize inestimable, while to the other its limits are fixed. In the formation of this Government we hedged our Executive about by law. He had certain functions to perform within a given sphere; he was bound by law as other officials. Our legislative and judicial branches were also hedged about by law, limited to a given sphere, but this bill proposes to break down the barriers, gives the financial initiative to the President's board, and enables it, directly or indirectly, to hold the reins over the legislative and judicial branches also.

THE DRAIN ON THE INDUSTRIES IN THE COUNTRY.

The administration bill forces all national banks to come into the system and subscribe one-fifth of their capital stock, paying in half of it immediately with the other half subject to call. It allows banks 5 per cent cumulative dividend on the capital paid in, and an interest in 40 per cent of what the reserve bank makes over and above the 5 per cent on the paid-in capital in proportion to their average annual balances with the bank. This requirement that the bank subscribe one-fifth of its capital and pay one-half of it into the Federal reserve bank a thousand miles from home does not weaken or impair the capital of the bank, but the community loses the capital and the bank will be compelled to withdraw exactly that amount from the business of that community and send it as a reserve to the regional reserve bank. The community will suffer the loss, and where industries are already suffering from lack of capital to develop their resources there will be a calamity. This bill collects a reserve by diverting capital from sections now starving for more and profitably utilizing every cent they have, and you console us by telling us we can come to this reservoir and borrow it back provided our industries successfully stand the shock of having one-tenth its capital drawn off and can convince the President's board that our securities are better and our needs greater than other sections that are clamoring to have their paper discounted.

EXEMPTION OF BANKS FROM TAXATION.

This bill exempts the capital of the regional reserve banks from municipal, county, State, and national taxes. The schools, the eleemosynary institutions, the local government are weakened in the exact proportion this capital bears to the wealth of the community. The requirement that the reserve be kept with the reserve bank or in its own vaults cuts small banks off from correspondents which have heretofore, because of reciprocal relations, accommodated the small banks throughout the country and in a way thoroughly satisfactory to the small banks.

This bill is not in answer to any complaint from the small banker that he has not been properly treated by his correspondent banks. He makes no charge against them. His complaint is against the banking and currency laws that make rigid and inelastic our currency, prohibit it from responding to trade demand, and concentrate funds in central reserve cities. He is satisfied with the treatment he gets at present from his correspondent banks. They evidently answer his demands. Will your regional reserve bank do more than answer his demands in a way satisfactory to him? His present correspondents answer his demands without taking away from him control of one-fifth of his capital and taking away from him one-tenth of his capital in cash. What the small banker lacks is capital, and what the community he serves lacks is capital, and you propose to benefit them by hitting them in the weak place. In this bill you are following the doctrine practiced by this Government for 50 years.

To him that hath shall be given, and he shall have in abundance, while from him that hath not shall be taken away even that which he hath.

REFUNDING 2 PER CENT BONDS INTO 3 PER CENT.

The concentration of power—unlimited power—in the President's board is not the only bad feature of this bill. It proposes to refund \$750,000,000 of 2 per cent 20-year bonds into 3 per cents. This change will cost the people of the United States 1 per cent more on the bonds, and they lose the one-half of 1 per cent on the bank-note circulation, which makes this transaction cost them $1\frac{1}{2}$ per cent annually until the bonds are paid off—20 years at least. It amounts to \$11,250,000 annually, or \$225,000,000 in 20 years, nearly a third of that bonded debt. The whole interest on those bonds could be and ought to be saved to the people of the United States by the use of a little backbone, common everyday horse sense, and a pencil. The Government at present guarantees the bank-note circulation, holds the bonds owned by the banks to secure the Government for circulating the bank notes. The Government owes the banks the amount of the bonds. The bank owes the Government the amount of the bank notes, or is bound to call them in and pay them off before it is entitled to its bond placed with the Treasury to secure the Government against the note circulation. The Government pays the bank 2 per cent on the bond; the bank pays the Government one-half of 1 per cent on the note circulation. The Government could, by agreement with the banks, assume complete liability for the note circulation, which amounts to the face value of the bonds, and cancel the bonds, carry a sufficient redemption fund in the Treasury to secure the note circulation, just as it does to-day for the \$346,000,000 greenbacks outstanding, and retire those bank notes as they find it to the public interest. But this bill, instead of doing a

sensible thing like that, refunds the 2 per cent bonds into 3 per cent bonds. If you would do the economical, simple, and wise thing I have just suggested, the Government could retire these bank notes at will as it had the funds, and in such a way as not to disturb currency conditions at all. That would not add to nor take from the circulating medium one cent. Any individual operating his own business would at once take advantage of an opportunity like that to simplify and economize his affairs.

Now, another proposition, and I hope if I get to the end of my time before I get to the end of my paragraphs, either Democrats or Republicans—one will give me time to finish. [Laughter.]

THE CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. CALLAWAY. I hope the gentleman from Virginia will give me five minutes more.

Mr. GLASS. I have no more time.

Mr. CALLAWAY. Will the gentleman from California give me five minutes?

Mr. MURDOCK. Has not the gentleman from Minnesota [Mr. SMITH] got some time?

Mr. HAYES. I will yield five minutes to the gentleman from Texas.

THE CHAIRMAN. The gentleman from Texas [Mr. CALLAWAY] is recognized for five minutes more.

Mr. CALLAWAY. It is a bad way where a Democrat has to get time from a Republican to discuss a measure that is undemocratic. [Applause on the Republican side.]

THE ADMINISTRATION PROSTRATE BEFORE THE BANKING INTERESTS.

If you would make that provision with reference to the bank-note circulation you would remove one of the embarrassing propositions that subjects you absolutely to the will of the bankers. Should the banks fail or refuse to come into the scheme, surrender their charters, and thereby stop the \$750,000,000 of bank-note circulation, contract the circulation that much, you and your majestic system would go up Salt River together. In this bill you are dependent on the bankers with whom you propose to enter into a partnership business. You are going to force them into the partnership or force them out of the national banking system, and should they go out the crash comes. There are 17,000 State and private banks and only about 7,300 national banks. State and private banking seems to be more popular than national banking under the present system. It does not therefore seem improbable that national banks would surrender their charters as national banks and take out private charters unless they get such concessions in this partnership as they desire. They have certainly got the last say. Suppose this measure, so dear to the heart of the President, should pass this House, go to the Senate, and they should pass it and the President approve it. It is then a splendid paper system, without a dollar with which to operate it and no power to get a dollar except the bird in whose presence the fowler has spread his net sees fit to come in and furnish the capital on the terms you have made to him. Has not the banker, then, got the President and his system at his mercy? Can not they say to him, "You can not have a dollar unless you appoint the four men we will name for you"? That is a possibility under this system, and in my judgment a probability.

Not only can they do that before they come in, but they can draw out at any time afterwards should they fail to get such concessions as they want and wreck the system, because it is wholly dependent on the banks furnishing the capital. If New York has the dominating influence in the banking world that is claimed for it, controlling by interlocking directorates and other devices one-sixth of the wealth of this country, \$22,000,000,000—and I do not at all question the claim—have not the New York bankers got the President at their mercy when you have passed this bill? He prepared this bill, pushed it through the committee, through the caucus, and through the House. Should he get it through the Senate, and then the bankers should balk him in putting it into operation, do you not think under such circumstances it would be hard for the President to refuse to accede to the recommendations of those who will have to put up the capital in the appointment of the board?

THE MONEY TRUST LEGALIZED AND DEIFIED.

The big banking interests have never at any time opposed this bill in its entirety. They have asked for changes in it here and there, but the general policy of the bill has suited them. Mr. James B. Forgan said before the Senate committee that this bill could be made, by a few changes not affecting the principle of the bill at all, thoroughly satisfactory to them. He said 12 banks did not suit them as well as 7, nor 7 as well as 5, nor 5 as well as 1; but since you had in this bill the control of all of them in a central board you had practically a central bank. You have 12 banks under one control each of the 12 regional reserve agents directly appointed by this board and

subject to its autocratic discretion. Through these reserve agents all paper has to be presented for rediscount and all issuances of notes made. You have 12 clerks in these regional reserve agents working at 12 respective windows of an immense institution presided over by 7 men who are subject to the will of the President. Forgan says that is practically a central bank, and it is a central bank so interlocked with the politics of the country that not only the banking business and the finances of the country will be controlled by it, but the politics of the country will be controlled by it. And now back to the control of this central bank:

This bill requires the establishment of 12 regional reserve banks of not less than \$5,000,000 each before business can begin. I have shown that the President is helpless when the law is on the statute books unless the banks come in with the required capital. A few big banks in New York, Chicago, Boston, Philadelphia, St. Louis, New Orleans, and San Francisco can stay the organization of the 12 regional reserve banks and force the President to grant such concessions as they demand, because the required capital is not subscribed and can not be had without these big banks come in. They can name the four members of the board, which he must accept or his scheme dies. These are possibilities. The Money Trust can take advantage of these possibilities for their own interest if they see fit. You can safely count on the bankers not overlooking anything that is to their interest, and you ought not to doubt they will take advantage of all possibilities.

These are some of the dangers in this bill as I see them. I have called your attention to them, have done my duty to my people and my country as God has given me to see it. If sustained by my constituents for daring to express my honest convictions, I shall be grateful and happy. [Loud applause.]

Mr. GLASS. Mr. Chairman, I yield 30 minutes to the gentleman from Texas [Mr. HARDY].

Mr. HARDY. Mr. Chairman and gentlemen of the committee, I can not understand the workings of the mind of my colleague [Mr. CALLAWAY] who has just addressed you. He bitterly complains that he has not time to discuss the merits of his own plan and demerits of this bill, and then he takes five-sixths of his time in discussing, not the measure, but extraneous matters, into which I shall not go, because they do not concern me. I am concerned only in the merits or demerits of this bill.

In another way I can not understand the operation of my colleague's mind, because in the time that he did devote to the discussion of the bill he began by trying to show that it is a Government tyranny of the most outrageous sort over the banks of the country and in the last half of his last few sentences on the bill he declared that it would be a tyranny of the banks, who would have a throttle hold on the Government of the country. [Laughter and applause.]

I do not know which he fears most under this bill, Government oppression of the banks or bank oppression of the Government. Mr. Chairman, I am as great a believer in personal freedom and in individualism as the gentleman from Texas or the gentleman from Georgia [Mr. HARDWICK]. I believe so greatly in individualism and personal liberty that I believe it is our duty to preserve the greatest possible amount of freedom of personal action and conduct and to promote individualism as the very highest type of citizenship; but I know that in order to secure such freedom and individualism every man must surrender to society just so much of it as will enable him to preserve the remainder of it. Much must be surrendered in order to preserve much. By refusing to surrender some of our liberty, our privilege, our individualism, we may lose it all. Place no shackles, no restraints on banking; give banks entire liberty, and they will end by enslaving government and commerce. Where to draw the line between absolute unrestraint and complete Government control in order to secure that which is best for a nation is the great problem for statesmen in questions of banking as it is in all other matters.

Now, I want to say just one word in answer to the gentleman from Iowa, Judge PROUTY. His authorities are all good, and he cites many of them, which all show that confiscation, taking property without compensation and without due process of law, is unconstitutional. The trouble with that argument is that there is no such thing done or contemplated by this bill. This bill will dissolve the present national banks, unless they accept its terms, which they are free to do or not to do. The law under which our national banks were created reserved the right in the Government to dissolve them—the right absolute and unconditional. To dissolve them, therefore, is not confiscation.

Now, let me give an illustration: Suppose the gentleman from Iowa and I make a contract, in which we agree that at any time either may terminate it. I come to him and I say: "I am

going to terminate our contract, but if you will accept certain alterations in it we will let it run another year." Is there any confiscation in that? That is all there is in this question of law, so learnedly presented by the gentleman.

I have said this much by way of brief answer to criticisms. I wish now to discuss the bill itself.

Mr. Chairman, the pending bill, when its structure and purposes are fully understood, will be found a startling departure from anything we have ever had in banking legislation in the United States. It violates many ancient precepts of supposed political wisdom. It ignores the protest of those who on all occasions hasten to warn us against paternalism; of those who insist that the Government should keep out of the banking business; of those who insist that the only proper function of government is to prevent crime and preserve property, meaning thereby to limit the definition of crime to such crude acts and deeds as assault, and murder and rape and robbery; and to limit the preservation of property to preventing the invasion of one's home, the taking by violence of one's personal property and the like. To prevent wrongs and preserve rights, both personal and property, is a great part of the proper purpose of government and just law, but the refinements and developments of modern civilization have taught us that our former narrow conceptions of the scope and functions of government must give way to broader views and higher estimates of the powers and duties of the State. We know now that murder may be committed by other means than the bludgeon or the dagger, and robbery by other persons than the highwayman, and that our homes and property may be taken away from us by other methods than violent ones. Therefore, we have entered the mill and the factory and the cities with laws to demand and insure the healthy home and workshop of the poor, the safe housing of the well to do, and sound and healthful food for all. We have said to the hotel builder, "In doing what you will with your own you must not build fire traps," and to the food vender, "You must not sell poison or tainted food." We have found that not the poor alone but the well to do need to be protected from the wiles and schemes and operations of the crafty, the greedy, and the strong, and so we have passed laws to prevent combinations and monopolies, laws that seemingly or perhaps really deny the freedom of contract, that fix hours of labor, that protect childhood and womanhood and even manhood against the strong and selfish who would oppress the helpless by lawful, because not heretofore prohibited, means beyond the power of endurance.

We have found there are other kinds of slavery than that witnessed by iron chains. We have begun to seek to lessen industrial slavery; we have gone even further than mere prevention of wrong, in this broader sense, and concluded that there is a wide scope for law and governmental activity outside of mere prevention of wrong perpetrated by the strong against the weak, and we are building schools and hospitals and giving aid in a thousand ways to help the weak and build up the feeble, but wherever we do, or try to do, any of these things for the betterment of the great masses we are met by the loud protest of fixed wrong and entrenched privilege. At least we are denounced as paternalistic and socialistic. Generally the cry is we are destroying vested rights, we are confiscating private property. I shall not discuss these questions except to say there is no vested right in wrong. That if this bill be paternalistic, the English-speaking peoples have never refused to adopt just such paternalistic laws when self-preservation or even the undoubted general welfare demanded; their wise purpose always being to preserve the greatest amount of individualism consistent with the highest good for the whole people, and to say further that there is no touch or taint of confiscation in the measure.

I grant that this bill does put the Government into the banking business. I shall try to give the reasons why I think the Government ought to go or ought to be in the banking business to the extent it is put there by this bill. What is a bank? A bank creates nothing. Banks keep the money and accounts of people who do create and help them deal with each other in their commodities. Banks have capital stock, which is money or property the banker has earned before he organizes his bank, and this practically is the pledge he puts up for the safe-keeping of other people's money. This is the national or State bank as we now have it and understand it.

But before the State took hold of the matter and authorized a bank charter there was no capital stock. Indeed, there is nothing now to prevent any man from building him a house with a vault in it and saying to all men, "Bring me your money and I will keep it for you and pay it out on your order or pay it back to you on demand." This was what was done by the first bankers. Such men were simply trustees of their depositors. There was nothing to prevent such a man from receiving money and giving a note for it and loaning money and

taking a note for it. Centuries ago the bank and banker proved themselves the finest development of commercial method, the best instrumentality of barter and trade, and of lending and borrowing money; but banking developed something else which I will try to illustrate. Let 100 men engage in gainful industry, earning money. They barter and trade and lend and borrow among each other. They select one of their number to keep their money and accounts with each other. It at once appears that the one man can do this with great saving and convenience to all. At first, doubtless, they would pay him a fixed wage and themselves take all the profits or interest paid by borrower to lender. If a whole State were to do this, employing their custodian and bookkeeper to keep the money and accounts of its citizens, we would have a Government bank pure and simple. But I expect the 100 men would soon say to the man they had selected, "We do not care to look after this matter. We will lend you our money and you loan it out to others. You pay us a certain interest and keep the money safely, loaning it safely for what you can get above what you pay us." In this way a private bank might start. At least this is the principle upon which private banking rested—the free banking so loved and lauded in the past. No capital stock was pledged to secure the deposit. Only the personal word and honesty of the banker was the depositor's security.

Now, in this little community of 100 men I have been talking about, the only man who added nothing of his earnings to the money in the bank was the elected or selected or self-constituted banker. But when that community was augmented to a thousand men or several thousand men and the bank had been running for 10 or 20 years it frequently happened that the earning members of the community had paid to their banker in interest enough more than the banker had paid to them to make the banker by far the richest man in the community. There was nothing wrong in this. The banker was wise, was honest, and effected a great saving to the other members of the community, and this was all fair and right so far. The free-banking advocates will say: Since this was all right, why not leave it at that? But people found that sometimes the banker did not have good judgment, made bad loans, lost their money, and was not able to pay back to his depositors, or he speculated and lost their money that way, or, as sometimes happened, he was dishonest and decamped between two suns with their money. Then people wanted something else. Apparently they applied to the Government to help them, and I have yet to find the man with the hardihood to say they ought not to have done so. Then the Government went into paternalism and into the banking business so far as to pass bank-charter laws, to provide for bank stock companies, the stock to be paid in by subscribers and to be held as pledge for the security of the depositors, and the law placed officers in charge of the bank and in custody of the assets of the bank subject to special pains and penalties for neglect of duty or for corrupt or dishonest acts; and then the paternal Government got very particular and had inspectors visit the banks, and did a great many other things in the interest of the public.

Now, under the extreme ideas of the gentleman from Georgia [Mr. HARDWICK], what had the Government to do with all this matter of safeguarding stockholder and depositor and the public generally? But banks, corporate creatures of the State, were still allowed great latitude, and we had in this country an era of wildcat banking, with thousands of bank notes issued. Other countries had the same, but we seem to have outstripped all others in the last century in the wildness of our wildcat banks. During all this time there were good banks and good bankers, but for a while they seemed the exception and not the rule.

In my opinion it was a good thing that came out of the War between the States, that war necessities caused the Federal Government to drive all irresponsible bank notes, together with some good ones, out of circulation by taxation and to permit no bank notes to be issued except such as were as good as the Government itself—notes based on the bonds of the Government. For that time that was perhaps the best law they could have passed. The same law threw its paternal care also very strongly about the depositors. It made stockholders in the bank subject to double liability for the debts of the bank, and provided periodical Government inspection of the books and condition of the bank, and assumed the right, without due process of law, to take charge of rotten banks. The Government went further into paternalism and into the banking business by, from time to time, going to the relief of banks when a crash or crisis impended and placing millions of dollars of its own in their vaults; but this act of paternalism banks and bankers have not complained of, since it gave them great benefit and brought nothing to the Government. And then we prepared to go into paternalism and into the banking business still further by passing the Aldrich-

Vreeland emergency currency measure, by which we proposed, if a panic threatened, to help the whole people, and especially the banks, by issuing and delivering to the banks five hundred millions of authorized notes on certain collateral they might be unable to realize on elsewhere, in order to enable them to meet their obligations and tide over emergencies; and this act of paternalism and socialism and going into the banking business was not objected to by the banks. And then we established postal savings banks, which would give safety to depositors when banks were not safe; and here the bankers did kick, since for the first time the banker was not to get all the benefit from the Government's banking activities. So that, Mr. Chairman, the Government is already in the banking business up to its neck. [Applause.] We are already paternally trying in every way, at all times, to help the people and the banks through our currency and money handling activities, without profit, but at some burden and some risk, perhaps, to the Government. Does it not seem late in the day to cry out against paternalism and the Government going into the banking business? Is it not all the cry of a selfish interest that is willing to ride on the back of the Government's horse, but unwilling to part with any of the profits it derives from the people through the service rendered with the aid of the Government?

But, Mr. Chairman, another phase of this question is that our Government is almost or perhaps quite the largest depositor in the world in banks. Its deposits have been practically heretofore without interest, and it is practically never a borrower from the banks. We must deposit it unless we would lock up the great revenues of the Government in the Treasury vaults, taking it out of circulation. We do not want to do this, so we ought to deposit our money in the banks that it may enter the channels of trade and industry. If we deposit it, who has more or as much interest in the banks as our Government. Ought these vast deposits be made without charge to the banks or profit to the Government? I say it with some diffidence, but it seems to me that a proper handling of the fiscal affairs of this stupendous Government requires that it be interested in what should be the great banking system of the United States. Any citizen or corporation having and handling such vast sums should take a very great interest in banking, and is the Government a faithful servant of the people if having the means of rightly earning something, having 10 talents, it buries them in a napkin or turns them over to another for another's profit?

But, Mr. Chairman, from another viewpoint, paternalistic, if you please, the question of the Government's participation or at least controlling supervision of banking seems more important still. All the people are interested in having a banking system as nearly perfect as may be. The great revenues of the Government should not be locked up. Neither should the great banks be allowed to lock up their currency as they do in times of stress, because there is no coordination and cooperation between them. It happens under our present system that in times of stress the only money not locked up is the Government's money. In Germany the great national bank, the Reichsbank, practically controls the cash or currency of the Empire, but holds itself at all times ready to discount to any amount the prime paper of any of the solvent banks of Germany, so that practically what cash the Reichsbank has each and every bank in Germany also has to the extent of its prime commercial paper, and in time of stress every bank has a ready helper. Here in the United States, with a crisis eminent, no bank holds itself ready to aid another. Each bank is independent of every other, and is scurrying to and fro to get cash in its vaults.

It is every man for himself and the devil take the hindmost. They all, and each of them, may in a vague way desire that other banks might not fail on account of the ultimate evil consequences to the public and therefore to themselves, but that desire is weak and remote in comparison with the desire to protect themselves individually and especially against immediate danger, and consequently has practically no effect upon their conduct. In the mad panic desire to escape from the burning building every man tramples and crushes every other man who may fall in his pathway. This condition will be greatly relieved, if not entirely removed, by this bill because it will provide each member bank with a source from which it can draw needed cash or currency by discounting its prime paper. It will render the prime paper of our banks equal to cash, just as it is in Germany. I believe this system stronger and better than the German Reichsbank. Let me present another matter. I said a while ago that if one man as banker kept the money and accounts for a thousand other men who were engaged in creative industry, earning money, that the banker by receiving deposits from some and loaning to others would perhaps in 10 or 20 years become the richest man in the community, having in the meantime created nothing.

Now, Mr. Chairman, we have reached a worse point than that in this country, and perhaps it is the same over the world. The community of a thousand men for whom the banker keeps money and accounts, from whom the banker borrows and to whom the banker loans, has become, here, a great Nation of 90,000,000 of people, and to go back no further under the system we have had since our great war our bankers have been steadily accumulating by the interest route the earning of the industries until the national banks alone have a capital stock of over one billion with a surplus, perhaps, of more than another billion and with deposits from the people of perhaps eight billions, all of which they control and all of which constitutes their working capital with which they are building up still further accumulations and by which even now they dominate the large transportation companies and to a great extent the whole industrial empire of the United States. Is not it time for the Government to wake up and get into the banking business for its self-preservation if not for the protection of the liberties and general welfare of the people? The bill before the House, Mr. Chairman, is such a waking up.

I wish to present its main features in such a way as to give a clear idea of its character as a banking system; in such a way as that the people of my district may fairly understand it if they will read what I say. The system begins with a "reserve bank organization committee," whose function is simply to place the system on its feet—to organize it. This committee is composed of the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, and when it has divided the country into 12 Federal reserve districts and organized in each such district a Federal reserve bank having a capital of at least \$5,000,000, as directed by the law, its functions cease. After that, when the Federal reserve board, as provided, has been appointed by the President, the system is upstanding. It is on its feet; it is organized. The Federal reserve board is its capstone. Its pillars are the 12 regional reserve banks, and its foundations are the member banks in each of the regional districts.

The Federal reserve board is composed of seven members. The Secretary of Agriculture, the Secretary of the Treasury, and the Comptroller of the Currency are ex officio three of the members, and the President appoints four others. In naming these four not more than two of them may be of any one political party and no two may be from the same Federal reserve district or the same geographical division of the country. All the members of the board must be confirmed by the Senate. No member may be an officer or stockholder in any bank or banking institution. The creation of this "Federal reserve board," with the powers given it, so criticized and belabored by the enemies of the bill, is the strongest evidence that our Government is at last awake. It is appointed as I have stated, it meets in the Nation's Capital, under the eye of the Nation's chief and the people's representatives, and must report its operations, which in great measure direct or control the operations of the 12 Federal reserve banks, annually to Congress.

It has power—

First. To examine all the books, and so forth, of the reserve banks, require reports, and publish weekly a statement showing their condition.

Second. To permit or require in emergency the rediscounting by one reserve bank of the discounted prime paper of another reserve bank, a power that may be needed to make liquid the entire resources of the whole system and make its whole strength available where it is needed in time of strain.

Third. To suspend the reserve requirements as to deposits and so render bank assets available for emergencies in which they would be needed.

Fourth. To regulate and supervise the issue and retirement of Federal reserve notes and thus break the strangle hold, if necessary, of any giant money combination, while ordinarily giving only such elasticity as any truly proper currency should have by making prime paper readily convertible into cash or currency.

Fifth. To increase the number of reserve districts, if needed; that is, if it shall be found that there is still further need to decentralize money or banking power.

Sixth. To remove for just cause the officials of the reserve banks and to remove at discretion certain of the directors of such banks, if they do not truly represent the agricultural, industrial, or commercial interests as required by the law.

Seventh. To write off worthless assets of such banks.

Eighth. To suspend the operation of a reserve bank for violations of the law and to appoint a receiver therefor.

These are the board's substantial powers and they are ample. Under them the reserve banks will be cooperative and, by the aid of the reserve banks in the rediscounting of prime paper,

all the member banks will be coordinated into a system of such strength as to weather any storm. They are great powers, but they are all for good. Let me tell you some of the powers for evil which this reserve board does not have, things it can not do, which a central bank, so much desired by Wall Street, could do:

First. This board can not loan one dollar.

Second. It can not earn one dollar.

Third. It can not own one dollar.

Fourth. It can not borrow one dollar.

Fifth. It can not finance an enterprise.

Sixth. It can not be interested in an enterprise.

Seventh. It can not crush an enterprise.

Eighth. It can not finance a candidate or a campaign.

After the Federal reserve board comes the Federal reserve bank. There will at first be 12 of them, one for each Federal reserve district. They are about as much public as private institutions. They are severally based and built on the individual or member banks of the several districts. The member banks are each required to subscribe for stock in their respective reserve banks to an amount equal to 20 per cent of their own capital stock and to pay in one-half that amount. The other half is subject to be called for only in case of need to meet the obligations of the reserve bank. The stock so subscribed by the member banks is the only stock in the Federal reserve banks, so that the latter is the link that binds together all the banks of each district.

The reserve bank has nine directors. Six of them are elected by the member banks, each bank, great and small, having an equal voice in their election. Three of these six may be officers or stockholders of the member banks, but the other three must not be officers or directors of any other bank or banking institution and must be fairly representative of the commercial, agricultural, or industrial interests. These latter three are subject to removal at discretion by the Federal reserve board. The remaining three directors are chosen by the Federal reserve board, and one of these is made chairman of the board of directors of the bank and "Federal reserve agent," representing the "Federal reserve board" in its relations and dealings with the bank. It is provided that these banks shall be the fiscal agents of the Government, and all the revenues of the Government are to be regularly deposited with them and disbursed by checks drawn on them, this service to be free to the Government. The Government funds are apportioned among these banks under equitable provisions by the Secretary of the Treasury, with the approval of the reserve board. The reserve banks have no other depositors, and may have none, except the Government, the member banks, and other reserve banks, when permitted or required to make deposits by the reserve board. Underlying, as I have said, the reserve banks are the individual or member banks, which are national banks organized as now—except they are not required to own any United States bonds—and State banks which comply with the requirements of the law. These hold the stock of the reserve bank and are the base of the whole system.

The reserve bank's operations are confined to the purposes named in the bill; that is, to conduct the fiscal operations of the Government and strengthen and support the member bank while making liquid the currency system. Its working capital consists of its paid-in stock and deposits made with it by the Government and by the member banks and of the Treasury notes provided by this bill. These Treasury notes are issued by the Government and loaned to the reserve banks in this way: Whenever a reserve bank needs such currency it takes from its prime paper which it has discounted for member banks the kind of paper described in section 14 of the bill, to the amount desired, and applies to the reserve board through its own local Federal reserve agent for the currency, tendering such prime paper as collateral. If the application is granted by the reserve board, the currency is turned over to the bank through the reserve agent. Whenever the reserve bank pays out any of these notes it segregates and sets aside in its own vaults 33 1/3 per cent of the amount thereof in gold or lawful money for their redemption.

The bank is charged when it receives the notes such rate of interest as is fixed by the reserve board. It may use this currency in rediscounting paper of the member banks of the kind described in section 14 and member banks use it as currency just as present bank notes are used. These notes are not legal tender, but are receivable for all public dues, and the ample provisions for their redemption by the reserve banks or the Government on demand makes them as good as gold.

It is provided that the earnings of the reserve banks shall be, after payment of all necessary expenses and the interest paid to the United States on its deposits, divided thus—

First. A dividend of 5 per cent shall be paid on the paid-in capital stock.

Second. One-half of the remaining net earnings shall be paid into a surplus fund until the surplus equals 20 per cent of the paid-in capital stock.

Third. Of the entire remaining net earnings, 60 per cent shall be paid to the United States and 40 per cent to the member or stockholding banks in proportion to their average deposits with the bank. The bank is allowed to pay no interest on deposits except to the United States. The earnings of the United States from the reserve banks go to pay off our bonded debt.

Mr. Chairman, bankers have complained of the burdens placed on them by this law. It has been claimed that the stock subscription with only 5 per cent dividend allowed is a great burden, and that the advantages arising under this law would not inure to the benefit of country banks, because they would have no paper eligible to rediscount under the law. I desire to examine both of these claims. A bank having \$100,000 capital stock must subscribe for \$20,000 stock in the reserve bank of its district and pay in \$10,000, on which it may receive only \$500 as dividend. If the normal earnings of the bank were 10 per cent on its capital stock, it would seem that instead of earning \$10,000 per annum, as it would under the present law, it would only earn \$9,500, or 9 1/2 per cent, under this law; but let us look a little closer.

A bank with \$100,000 capital stock usually has a surplus and deposits, and its working capital now consists of its paid-in capital stock, its surplus, and 85 per cent of its deposits (when it keeps all its reserve in its own vaults or gets no interest on any of it). Now suppose the First National Bank of Smithville has \$100,000 capital stock, \$100,000 surplus, and \$200,000 deposits. The proposed law reduces the reserve requirement from 15 to 12 per cent, but counting the reserves as the same under the present and under the proposed law, a correct statement of the earnings of this bank under the two different laws would be as follows:

Under present law:	
Capital stock	\$100,000
Surplus	100,000
Deposits	200,000
Working capital	370,000
Under proposed law:	
Capital stock (less subscription)	90,000
Surplus	100,000
Deposits	200,000
Working capital	390,000

If this bank earns 8 per cent on its working capital, under the present law its earnings would be \$29,600, or 29.6 per cent on its capital. Under the proposed law its earnings would be \$29,300, or 29.3 per cent on its capital. If its earnings were 6 per cent on its working capital, under the present law it would earn \$22,200, or 22.2 per cent on its capital, while under the proposed law it would earn \$22,100, or 22.1 per cent on its capital stock. If its earnings were 5 per cent on its working capital then, under the present law it would earn \$18,500, or 18.5 per cent on its capital stock, while under the proposed law it would earn precisely the same. I submit these figures and hope to be shown my error, if there is any error in them, and I submit that the national banker who can not bear the burden shown has only a weak strain of patriotism if this system is well designed for the good of the country, save and except for this burden on the banks.

But, Mr. Chairman, the figures I have given are unfair to the proposed system. In the first place, I have made no allowance for the fact that under this bill the bank will be required to hold 3 per cent less reserve against its deposits than is required now, which would give this bank \$6,000 more working capital from its deposits under the new law than under the old. Furthermore, I have assumed that the bank would not earn anything from its deposits in the reserve bank, although I believe it will. This is offset in part by the fact that I have not taken account of the 9 per cent of their reserves which country banks now generally deposit with the reserve city banks and draw some interest on. I did not do so because I think that practice ought to be stopped, whether we pass this bill or not. It is the lure of a small gain that tempts the smaller banks, to their own hurt and to the country's hurt. Certainly it will not be contended that country banks will have less deposits or make fewer loans by reason of this law. On the contrary, I believe that with better discounting opportunities, less reserve requirements, and a justifiable feeling of greater safety under this law the banks can and will make greater loans.

I come now to the rediscount feature of the bill and the claim of some of our country banks that they are not to receive any benefits under that provision. I have read section 14 of the bill over and over again. I have listened to every discussion of it in Congress. In my own opinion and in the opinion of

the chairman and every member of the Banking and Currency Committee that section will come to the relief of every small bank in the United States if they desire to use it. I think bankers should acquaint themselves and their merchants and other customers with its terms and advise their customers how to arrange their credit paper for possibly utilizing its benefits.

Under this section, if a farmer trades with his merchant all during the spring for supplies while he is making his crop and gives his note, due October 1 or November 1, and the merchant wants money from his banker, he can indorse that note to his banker and get the money, and on the 1st day of August the banker can rediscount that note with the reserve bank of his district and get the cash on it; and thus the local bank can get in the crop-moving season practically the full sum of all the moneys he has advanced during the crop-making season, and with this new supply of cash he is ready again to help the farmer and all other classes needing ready money. The merchant's paper and industrial paper has the same standing as the farmer's. If the banker sees proper he may loan the money to the farmer in the first instance and have the note rediscounted by the reserve bank. The Federal reserve bank will always be able to rediscount such paper as described in section 14—that is, "Notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes"—and having a maturity of not more than 90 days, because if it has not sufficient funds on hand it may make application to the Government and secure the Treasury notes authorized by this law upon this kind of paper as collateral. I have said "having a maturity of not more than 90 days"; by that is meant that when the paper is rediscounted with a reserve bank it shall have not more than 90 days to run. When made it might have had 6 months or longer to run.

Of course, there are restrictions and safeguards in the law, but its terms are so broad and liberal that good short-term paper of the kind described will always be convertible by the banks into cash. Perhaps I ought to further discuss the details of the issue and circulation of the Federal reserve notes, but I can only take time to say a few words. There is no limit to them in amount except the discretion of the Government, but the Government has no interest in them except to provide for the necessities of commerce, industry, and agriculture. They are issued by the Government, but the Government does not pay them out on its own obligations. They are not issued by the banks, but they are issued only to the reserve banks and through them to the member banks, and through them to the people. They are the obligations of the Government in name and fact, but they have back of them and between the Government and any loss, first, the Government's absolute control of their issue; second, 100 per cent collateral, approved by the Government and indorsed by some member bank; third, the entire assets of the reserve bank to which they are issued, and, besides this, one-third of its amount in gold or lawful money of the United States is set apart for its redemption by the reserve bank whenever it is paid out by the reserve bank.

In conclusion, this banking system will give our farming community, our working people—the small man—everywhere an opportunity to make paper that can be rediscounted by the local bank with the reserve bank. By such rediscount the local bank can get further money in order to extend further credit. This system when put into operation will revolutionize the banking conditions of the country banking communities and of the great masses of our people. It is a grand conception, that, in my mind, will work out a grand fruition for the benefit of the whole country. It will break down the tyranny of the money power in the great centers, which grows every year more potent for evil. A new era will come to our people who have nestled down in their homes without any conception of the subtle influences, undermining the independent status and individualism of the average man. It will give them a new and, I trust, a right conception of the power and beneficence of our great Government. It is a measure that will help our people and take away no shred of their liberties. It is a measure that will help our banks, while it subjects them to the power of the Government and subordinates them to the welfare of all the people. I thank you, gentlemen. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 40 minutes to the gentleman from Minnesota [Mr. SMITH].

Mr. SMITH of Minnesota. Mr. Chairman, the National Government is charged with the duty of furnishing a system of currency which will meet the needs of its people. This duty is not peculiar to our own form of government, but is recognized by all the great nations of the world. Neither is this duty a recent economic discovery, but it has been generally accepted since the establishment of the earliest governments.

The framers of the Constitution recognized the necessity of placing in the General Government the power to provide a suit-

able system governing the medium of exchange. Article I, section 8, of the Constitution provides:

The Congress shall have power—
To coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures.
To provide for the punishment of counterfeiting the securities and current coin of the United States.

After the lapse of 125 years, notwithstanding the Constitution in express terms makes it the imperative duty of Congress to provide a monetary system suitable and adequate to meet the country's needs, it is admitted on all sides that our banking and currency system is inadequate to meet the requirements of the present day.

It is in response to a general demand for a better system that the proposed banking and currency bill was introduced in this House.

COMMITTEE METHODS.

If this bill when ready for passage is, on the whole, an improvement over our present system, I shall vote for it, notwithstanding its many defects and notwithstanding the methods adopted by the majority members of the Banking and Currency Committee and of the House in excluding the minority members from the committee room and from this legislative Chamber when this bill was being considered.

A more dangerous and unwarranted method of legislation has never been perpetrated—this in the face of the fact that the country as a whole has demanded that this legislation should be nonpartisan.

There is an imperative demand for legislation—

(1) That will prevent the concentration of the money and credits of the country in one financial center, there to be used on the stock exchange for speculative and gambling purposes to the detriment and often to the complete destruction of legitimate business and in utter disregard of the rights of the public.

(2) That will provide an elastic currency which will expand and contract with the rising and falling tides of trade.

(3) That will make it impossible for any set of men, either through private corporations or political organizations, to control the money and credits of this country.

As to the first of these, it is obvious that so long as speculation in futures and options is permitted to continue in the manner it is at the present time this bill will not be a complete remedy. I am inclined to believe, however, that it will tend to decentralize the flow of money, and to that extent will be an improvement over the present system, providing that the Federal reserve board is properly constituted.

As to the second, I believe that if the law is fairly and equitably carried out by the Federal reserve board without favor or prejudice against any section of our country, we will have a currency that will expand and contract according to the demands of trade.

As to the third, I likewise am of the opinion that if the Federal reserve board is properly constituted this bill will make it impossible for any set of men, either through private corporations or political organizations, to control the money and credit of this country.

POLITICS IN RESERVE BOARD.

The bill provides that the Federal reserve board shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, and four other members chosen by the President of the United States, by and with the consent of the Senate. Of the four non-Cabinet members thus appointed by the President, not more than two shall be of the same political party. One shall be designated by the President to serve for a term of two, one for four, one for six, and one for eight years, respectively, and thereafter each non-Cabinet member appointed shall serve for eight years unless sooner removed for cause by the President.

Thus it will be seen that the Federal reserve board provided for in this act consists of seven members, four of whom—that is, the majority—shall retire immediately upon each change of administration, their successors to be appointed by the incoming President. To make the control of the banking and currency system of this country the prize of every national election is to place in the hands of partisan politics a power for evil the magnitude of which is almost beyond comprehension.

Where the majority of the board know that unless their party wins in the election their tenure of office will be terminated on the following 4th day of March, is it not within the range of probability that the majority will seek to perpetuate themselves and their party in power by using to their own advantage and for political purposes the tremendous power placed in their hands by this act?

BOARD IDEA NOT OBJECTIONABLE.

I do not wish to be misunderstood. I stand unequivocally for a governmental nonpartisan Federal reserve board, to be

appointed by the President of the United States upon the passage of this act; but I believe that the tenure of office of the members should be so arranged that in the future no incoming President shall immediately have the appointing power of a majority of the board as is provided for by this act. The board should be a Government board, but it should not be a political machine. To place in the hands of a political machine the powers vested in this Federal reserve board is dangerous. The misuse or abuse of those powers by a political machine for self-perpetuation would be a calamity.

POWERS OF BOARD.

The powers enumerated on this exhibit are the specified powers expressly conferred on the Federal reserve board by this act. They are as follows:

1. To readjust Federal reserve districts created by the reserve bank organization committee.
2. To create new and additional districts to those created by the reserve bank organization committee.
3. To prescribe regulations for establishing branch offices of Federal reserve banks.
4. To designate the three directors of the Federal reserve bank specified in this act as class C.
5. To remove any director of class B in any Federal reserve bank.
6. To designate the chairman of the board of directors of Federal reserve bank.
7. To prescribe regulations for maintenance of local office of Federal reserve board on premises of Federal reserve bank.
8. To designate the Federal reserve agent.
9. To require and receive reports of Federal reserve agents.
10. To fix compensation of Federal reserve agents.
11. To review proceedings of boards of directors of Federal reserve banks fixing compensation of themselves.
12. To remove chairman of board of directors of Federal reserve bank at pleasure and without notice.
13. To prescribe rules and regulations for permitting State banks and trust companies to become members of Federal reserve bank.
14. To pass upon applications of State banks and trust companies to become members of Federal reserve bank.
15. To establish by-laws governing applications of State banks for membership.
16. To require surrender of stock of State banking association or trust company upon receipt from Federal reserve bank of cash-paid subscription.
17. To require Federal reserve bank upon notice to suspend State banking association or trust company and make payment to suspended member for its stock.
18. To levy semiannual assessments on Federal reserve banks for expenses.
19. To examine accounts, books, and affairs of each Federal reserve bank.
20. To require such statements and reports of Federal reserve banks as it may deem necessary.
21. To permit rediscount by Federal reserve banks of paper of other Federal reserve banks.
22. To compel Federal reserve banks to rediscount paper of other Federal reserve banks.
23. To suspend reserve requirements for not more than 30 days.
24. To renew suspensions of reserve requirements for periods of not more than 15 days.
25. To establish a graduated tax upon the amounts by which reserve requirements of act may be permitted to fall below level provided for in act.
26. To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.
27. To add to number of cities classified as reserve and central reserve cities under existing law in which national banking associations are subject to the reserve requirements of this act.
28. To reclassify existing reserve and central reserve cities and to designate the banks therein as country banks at its discretion.
29. To suspend officials of Federal reserve banks.
30. To remove officials of Federal reserve banks for incompetency, fraud, or deceit.
31. To require writing off of doubtful or worthless assets upon the books and balance sheets of Federal reserve banks.
32. To suspend for cause relating to violation of any of the provisions of this act the operations of any Federal reserve bank.
33. To appoint a receiver for any Federal reserve bank for cause relating to violation of provisions of this act.
34. To determine or define the character of paper eligible for discount.
35. To fix the amount which cash reserve of Federal reserve bank must exceed outstanding demand liabilities to permit discount of paper for member banks.
36. To prescribe rules and regulations governing the purchase and sale in the open market by Federal reserve banks of bankers' bills and bills of exchange.
37. To review rates of discounts fixed by Federal reserve banks.
38. To grant or refuse applications of Federal reserve banks to open and maintain banking accounts in foreign countries and establish agencies there for the purpose of purchasing, selling, and collecting foreign bills of exchange.
39. To approve apportionment made by Secretary of Treasury of Government funds deposited in Federal reserve banks.
40. To charge interest on Government deposits at joint discretion of Federal reserve board and Secretary of Treasury.
41. To issue Federal reserve notes.
42. To call upon Federal reserve banks at any time for additional security for Federal reserve notes issued to them.
43. To assign letter or serial number to Federal reserve bank for notes issued to it.
44. To require in its discretion Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of notes issued to them.
45. To grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes.
46. To establish rate of interest to be paid on Federal reserve notes.
47. To prescribe regulations governing substitution of collateral security for the protection of Federal reserve notes.

48. To make and promulgate from time to time regulations governing the transfer of funds at par among Federal reserve banks.

49. To exercise at its discretion the functions of a clearing house for Federal reserve banks.

50. To designate a Federal reserve bank to act as clearing house for Federal reserve banks.

Mr. KINDEL. Mr. Chairman, if I may be permitted to interrupt the gentleman, has not the gentleman got his trolley mixed? I think the gentleman is reading two numbers ahead, and I want to call attention to that.

Mr. SMITH of Minnesota. In this list of powers from which I am reading I have combined some of the powers which are stated separately in the exhibit. Hence the numbers do not correspond.

Mr. KINDEL. But the gentleman is reading the wrong number.

Mr. SMITH of Minnesota. I have just stated why the numbers do not correspond.

51. To require each Federal reserve bank to exercise functions of clearing house for its shareholding banks.

52. To prescribe period within which and regulations under which national bank notes remaining outstanding after 20 years from the passage of this act may be recalled and redeemed by national banking associations.

53. To require Federal reserve banks to maintain lawful reserve.

54. To appoint receivers for Federal reserve banks failing to maintain lawful reserve.

55. To require examination of affairs of national banking associations as often as it deems necessary.

56. To determine salaries to be received by bank examiners.

57. To assess expenses of bank examinations upon associations examined.

58. To require examinations of national banking associations in reserve cities.

59. To require examinations of Federal reserve banks.

60. To add to the list of cities from time to time in which national banks shall not be permitted to make loans secured upon real estate.

61. To exempt savings departments of national banking associations from any and every restriction upon classes or kinds of business governing national banks.

62. To prescribe rules and regulations governing savings departments of national banks.

63. To make and publish lists of securities, paper, bonds, and other forms of investment which savings departments of national banks shall be authorized to buy, it not being necessary that said lists be uniform throughout the United States.

64. To prescribe conditions and circumstances under which national banking associations capitalized at a million dollars or more may establish branches in foreign countries.

65. To approve or reject applications of national banks to establish foreign branches.

66. To perform the duties, functions, or services specified or implied in this act.

Mr. YOUNG of North Dakota. Mr. Chairman, I would like to ask the gentleman whether he has made any enumeration of the implied powers conferred by this proposed bill?

Mr. SMITH of Minnesota. I wish to say that no man living could make an enumeration of the implied powers of this act. That is a matter only to be determined as the occasion for its exercise may arise. The implied powers often exceed the specified powers.

Mr. GRAY. I would like to inquire if the gentleman has made a list of the powers exercised by the President of the United States and compared that in order to see whether—

Mr. SMITH of Minnesota. No; I have not. Did I understand the gentleman to ask whether I had made a list of the powers of the President of the United States to see whether these powers overlap the powers given to the Federal reserve board?

Mr. GRAY. In order to see where the greater power lies—whether the office of the President should be abolished because of so many powers—

Mr. SMITH of Minnesota. I want to say it does not take much time to arrive at a conclusion on that. If this board is constituted according to the present bill, new and additional powers will be conferred upon the President of the United States far exceeding any he now possesses.

Mr. BARTLETT. Mr. Chairman, may I ask the gentleman has he got something else to suggest in place of this?

Mr. SMITH of Minnesota. Yes. I shall suggest an amendment, and will call attention to it later on.

The unenumerated powers so modestly and unassumingly embraced within the authority given "to perform the duties, functions, or services specified or implied in this act" are the most important and far-reaching of all of its powers.

Under the provisions of this act relating to the issue of Federal reserve or Treasury notes is this express power:

The said board shall also have the right to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes.

George H. Shirley, chairman of the American Bureau of Political Research, in a memorial entitled "Stable money, new freedom, and safe banking" (S. Doc. No. 135), after felicitating upon the success of the Democratic Party at the last election, calls attention to the tremendous political power in the hands

of the first and second national banks of this country in President Jackson's day by terming it the "greatest power then in politics." What was the power of those banks at that time compared with the power of the proposed Federal board if used for political purposes?

PRESIDENT JACKSON'S VIEWS.

Let us see what President Jackson said about that power. In the report read by him to his Cabinet in September, 1833, after stating the facts showing the abuse of its powers by the national bank, he summarizes his conclusion in these words:

The bank is thus converted into a vast electioneering engine which means to embroil the country in deadly feuds and under cover of expenditures in themselves improper extend its corruption through all the ramifications of society.

In that same report President Jackson further says:

It is the desire of the President that the control of the banks and the currency shall, as far as possible, be entirely separated from the political power of the country as well as wrested from an institution which has already attempted to subject the Government to its will.

In his farewell address, delivered March 4, 1837, President Jackson said:

Recent events have proved that the paper-money system of this country may be used as an engine to undermine your free institutions, and that those who desire to engross all power in the hands of the few and to govern by corruption or force are aware of its power and prepared to employ it.

In that same farewell address, referring to the power of the national banks of his day, he continues:

In the hands of this formidable power thus perfectly organized was also placed unlimited dominion over the amount of the circulating medium, giving it the power to regulate the value of property and the fruits of labor in every quarter of the Union and to bestow prosperity or bring ruin upon any city or section of the country as might best comport with its own interest or policy.

How much more "formidable" is the power of the Federal reserve board provided for in this act "to regulate the value of property and the fruits of labor in every quarter of the Union and to bestow prosperity or bring ruin upon any city or section of the country as might best comport with its own interest or policy"? Should this "formidable" power be vested in a political machine?

Should the incentive be legislatively enacted to bring about the condition which President Jackson in that same address so vividly depicted in these words:

The ruthless and unsparing temper with which whole cities and communities were oppressed, individuals impoverished and ruined, and a scene of cheerful prosperity suddenly changed into one of gloom and despondency ought to be indelibly impressed on the memory of the people of the United States.

If such were the effects of the misuse of those powers in that day for political purposes, can you picture the effect of the abuse of those powers in this day for those same purposes?

This bill, by reason of the manner in which the Federal reserve board is appointed, involves the substitution of political control for control by banks. What I contend for is the substitution of nonpartisan, nonpolitical governmental control for control by the banks. The bill falls far short of the ideal governmental control. The great political power which President Jackson saw in the first and second national banks of his day was the power of mere pygmies compared to the gigantic power imposed in the Federal reserve board, and which by the proposed bill is made the prize of each national election.

OPPORTUNITIES FOR ABUSE OF POWERS.

The proposal in the present measure to place in the hands of a political board the control of 7,400 national banks and over 20,000 State banks and trust companies, having aggregate deposits of \$18,000,000,000, with the additional right to issue and distribute an unlimited amount of paper money to such sections of the country as a majority of the Federal reserve board may deem fit and to deny to other sections of the country the privilege of getting or using such paper money, invites opportunities for abuse of this power, the extent of which no man can foresee.

If a method or means can be evolved by which the Government can maintain the control and regulation of the banking and currency system, and at the same time prevent it from becoming a tool and instrument of political pressure and party expediency, it would be a decided improvement over the measure now before this House.

ILLUSTRATION OF POLITICAL INFLUENCE.

The great civil-service system, which is intended to displace the spoils system and to secure to employees of the Government immunity from removal without cause and advancement according to merit, is one of the most praiseworthy institutions we have, and political influence enters less there than in any other branch of the Government. But even promotions of civil-service employees are not always free from the effects of political influence.

This was brought strikingly to my attention the other day. A Senator from a southern State, standing high in the councils of the present administration, secured the promotion of a friend to a more lucrative position in the Government service in the State of Minnesota over the heads of two other employees in the same office by simply writing a letter to the head of one of the departments here having charge of the office.

While the matter is a petty one, it is one of the clearest and most flagrant violations of the spirit of the civil-service law that has come to my attention. If political influence can sway the conduct of men who are sworn to uphold the law in such minor matters, how much greater is the likelihood of its swaying them when matters of moment are at stake and when the continuation of their party in power is in jeopardy and their own tenure of office is at issue?

I am glad to see that the majority members of the committee have seen fit to amend the original bill by providing that of the four non-Cabinet members of the board to be appointed by the President not more than two shall be members of the same political party. This is a step in the right direction, but it by no means changes the board from a partisan political board to a nonpartisan governmental board.

APPLICATION OF CAUCUS METHODS TO FEDERAL RESERVE BOARD.

Let us take as an illustration what is taking place every day in this House. I am a member of the Banking and Currency Committee, which consists of 21 members, 14 belonging to the majority and 7 to the minority. I will ask you gentlemen on the other side of this House, What part have the 7 minority members been permitted to take and what opportunity has been given to them by the majority members to participate in framing this measure?

By the action of the majority members the minority members have been practically excluded from taking part in the consideration of this bill in the committee. That is just what will take place with respect to the minority members of your Federal reserve board. Four members—a majority—will rule. Indeed, it will take four; it will take only three, because they can adopt the same system that you are now adopting, and a majority of the four will control the action of the board just as a majority of your caucus controls the action of this House.

Mr. STANLEY. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Minnesota. Not at present. I will yield in a minute.

Gentlemen, it has been said on the floor of this House that it does not matter how this board is constituted, because we shall always have sitting in the White House a man who is so patriotic and so big that he will never make a mistake as to an appointment on this board. Gentlemen, I yield to no man in my appreciation of the high office of President of the United States, but I want to say to you that I do not think he has any greater respect for the rights of the American people than the House of Representatives has. I would just as soon trust the membership of this House on a matter of business or governmental policy as I would the President of the United States, no matter who he may be. I am not referring to the person. I say it requires just as great a respect for the rights of the American people and your oath of office to be a Member of this House as to be President of the United States. Are you willing to admit that the practices of this House are such that they will never be resorted to by the President of the United States?

Mr. STANLEY. Mr. Chairman, will the gentleman yield now for a question?

Mr. SMITH of Minnesota. Just when I finish this. Then I shall have a little time.

COMPULSORY REDISCOUNT POWER.

The two powers imposed in the Federal reserve board which are most far-reaching in their scope and most likely to be abused when reposed in a political machine are the power to compel Federal reserve banks to rediscount the paper of other Federal reserve banks and the power to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes.

In the original draft of this bill the first of these powers—the compulsory rediscount power, the power to compel a Federal reserve bank in one section of the country to loan its funds to a Federal reserve bank in another section of the country—was made to depend on the will of a bare majority of the Federal reserve board.

The majority members of the committee undoubtedly recognized the far-reaching effect of this power, for they so changed the provisions of the bill as to require the unanimous vote of all seven members of the Federal reserve board in order to invoke its exercise.

This was a great step in the right direction and lessened the probability of the misuse of this power for political purposes;

but, unfortunately, this bill had to go into the caucus, and when it came out the compulsory rediscount power was again placed where it could be easily invoked.

This feature of the bill has been so well analyzed by Hon. A. Piatt Andrew, formerly Assistant Secretary of the Treasury, that I shall take the liberty of quoting him.

Speaking of "the power given to this political board to compel one reserve bank to lend to another reserve bank without regard to the desires and opinions of its managers," he says:

Conservatively managed banks in one section of the country would thus be kept in constant danger of seeing their reserves reduced through an arbitrary order from the Federal board in order to support a weak situation elsewhere arising from imprudent and incautious banking, for which they were in no way responsible and which they have been in no position to prevent. Such concentration of banking power would be unwise under any conditions. It would be most unwise if located in a political committee. This would inevitably tend to sectional jealousy and dissension, to continual suspicion and partisan criticism, even if it did not lead, as it easily might, to actual abuse of power for political purposes.

ISSUE OF FEDERAL RESERVE NOTES.

The power which lies absolutely in the hands of the majority of the board to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes is the most important power which this board has vested in it, and would be the most dangerous in the hands of a political board, because such a board could decline to issue currency to a section of the country that was hostile to the party in power, and it could grant an unlimited amount to a section of the country that was friendly to the administration in power.

ELECTIONS AND CROP MOVING.

The unlimited power of the Federal reserve board to issue Treasury notes through Federal reserve banks encourages inflation of the currency in sections of the country which are in good standing with the administration then in power, and will result in contraction of the currency in sections of the country in disfavor with the administration.

For example, the great Northwest needs over a hundred million dollars each fall to move its crops, and this demand for money comes always shortly before election. Suppose the administration in power, having absolute control of the Federal reserve board, were inclined to take political advantage of the great power of the board, as did the national banks of President Jackson's day. It could either favor or discriminate against that section of the country by either granting or refusing, as it saw fit, the application of our Federal reserve banks for Treasury notes, thereby causing in case of refusal a scarcity of money, which would reenact the scenes depicted by President Jackson in his farewell address, which I have already quoted. Is not just such a condition as I have referred to the thing that in all human probability will happen where the board having such power is always controlled by the governing councils of the party in power?

AMENDMENTS SUGGESTED.

At the proper time I shall propose such amendments as are necessary looking toward the making of the Federal reserve board a governmental board and eliminating the political features embodied in the present bill. The Secretary of the Treasury should not only be a member of the Federal reserve board but should be the chairman of it. The Secretary of Agriculture and the Comptroller of the Currency should be eliminated from the board. The Secretary of Agriculture is one of the members of the President's official family, as is also the Secretary of the Treasury. The Comptroller of the Currency is a subordinate officer under the Secretary of the Treasury. It is obvious that the Secretary of the Treasury will adequately represent the President's Cabinet as well as his own office without requiring the membership of any other Cabinet officer or of any subordinate in his own office. The only conceivable purpose for having all three of such officers on the Federal reserve board is to give each incoming administration those three appointments immediately, which, with the immediate appointment of one of the four non-Cabinet members of the board, insures political control, yielding to the beck and call of the administration in power. This is bound to be its effect and is its manifest purpose.

The Federal reserve board should consist of the Secretary of the Treasury and either four or six non-Cabinet members, to be appointed by the President for terms expiring at such times that no incoming administration will have in its power at its inception the appointment of a majority of the members of the Federal reserve board, so as to make the control of that board the prize contended for at each national election.

If such an amendment is adopted it will, to my mind, eliminate politics, so far as it can be eliminated, and at the same time keep the control of our money system where it belongs—in the hands of the Government.

Gentlemen, I call your attention to this exhibit; and I wish to say to Democrats, Progressives, and Republicans alike that you can not see all that that exhibit represents from any one point of view. Neither can anybody see and know from one point of view all that is to be known and all that should be known in order to enact a banking and currency bill to meet the needs of 100,000,000 people. You should have the combined intelligence of all parties in order to enact such legislation, and even then you will probably fall far short of having an ideal bill.

You can readily see from this exhibit that each incoming administration will immediately have to appoint the Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, and one non-Cabinet member of the board. Gentlemen said here yesterday that the Interstate Commerce Commission was comparable to this board in its make-up. Why, gentlemen, let me put the proposition to you: Are you willing now to change the method of the appointment of the members of the Interstate Commerce Commission and have each incoming administration appoint a majority of them? Are you willing to do that? Are you willing to change the method of appointing the judges of the Supreme Court and let each President that comes into office appoint a majority of that court? Whoever heard of such a proposition earnestly and honestly considered?

I am satisfied that the majority of this House believe that the Federal reserve board, as constituted in this measure, is wrong in principle. It is wrong from every angle. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAYES. I yield 30 minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, when this special session of Congress was called, I knew that probably there would be at least two questions discussed, one the reform of the tariff and the other a change in the currency system, and being a sort of a student of these questions before I came here, I was naturally interested in a further discussion or investigation that would enable a Member on the floor of this House to vote intelligently upon some plan proposed on both of them. And when we got through with the tariff question I took up the study of the currency question anew. As a teacher of political economy for years, I had some sort of familiarity with the currency question. I do not agree with the distinguished chairman of this committee [Mr. GLASS] that there is uniformity of opinion upon this subject. On the other hand, he must recognize that there is no subject that has a greater latitude of opinion than the subject of the currency.

Mr. BARTLETT. And variance.

Mr. FESS. And variance. I prepared an elaborate address, which is written here and upon the table, but I have listened to the remarks of the various Members on this floor, and I find that they have covered almost every conceivable phase of the question, and it seems to me it would be utterly foolish for me at this time to arise to speak as I had prepared myself to speak, when I would be repeating so many things that have been said on both sides of the Chamber. Not caring specially to listen to myself talk, I am going to throw my manuscript away, pay no attention to it, and pay some attention to some of the features of the bill that I wish might be modified, so that we could vote for it.

Ever since I read Mr. Blaine's Twenty Years in Congress—years ago—in which he stated that our national banking system was based upon a Federal or national debt, and in that degree was weak and that it ought to be changed, I have thought about Congress sometime making the needed change. And yet, when President after President has called attention to the need, and when party after party have put it in their platforms, we have come here as a Congress and we find submitted to us this plan without the time for deliberation that we had hoped would be given to everybody, and we are asked to vote for it. I frankly confess to the Democratic Members that I shall be greatly disappointed if I can not vote for the measure, but I am afraid I can not, because there are three features in it that I think are serious. I am not going to take one minute of the time to speak of the strong points in the bill, for they are many. The bill seems to me to be quite comprehensive. But when you estimate the strength of a chain it is not necessary to see how strong the strong links are or how many are the strong links. You must estimate a law the same as you would estimate the strength of a chain, and if there is a weak link in the law that law can not be stronger than the weakest link.

Now, what are the weak features of this bill—not to take the time to discuss the strong ones, for nobody could discuss

them more elegantly, eloquently, persuasively, conclusively, and convincingly than they have been discussed by the chairman of this committee [Mr. GLASS] and my good friend the young Member from Cleveland [Mr. BULKLEY], for whose judgment as expressed upon this floor I have the highest regard?

I will not take a moment of time to speak of that side of it. But there are three features in this bill that are serious, and the first one is the fact that it is placed in politics. And of all the questions that ought to be kept out of politics, the currency question ought to be kept out. Somebody has said that the business of the country is like the business end of a wasp. You must not fool with it or you will get hurt. So it is with the currency question. You can not tamper with the currency question and place it in politics, which is to assure its being left in politics, without disturbing the business of the country. You make this a political bill, gentlemen. You bring it here as a partisan measure. You compel men to vote against it who would like to vote for it, placing certain partisan features in it that make you surrender your own views; and when you put it in that way you have the strongest assurance that that measure will come up in a succeeding Congress, for who can find anything so uncertain as the successive Congresses in this country. One party is on top to-day and another party is on top to-morrow, and what was done to-day as a partisan measure will be undone to-morrow for the same reason.

Why is it that we can not keep this question out of politics? You place it there, first, by creating a partisan board, and you fail to discriminate between the Government operating the banks and controlling the business of the banks. I will vote for any measure that is for Government control of the banking business. That is why I do not favor the Aldrich plan. It did not give the Government sufficient control, and it gave almost all of the power to the banking interests. Therefore it is faulty.

What does this plan do? Instead of putting the operation, the administration, the initiation on the part of the men whose money is used, whose property is used, and giving the operation to these men, under the plea of effective control of the Government you have used the control to extend it to the point of operation and have put the Government in the banking business. That is a thing we do not want to do.

The chairman of the committee said the Government was not in the banking business. Other men say the Government is not put in the banking business by this bill. I disagree. The Government is specifically put in the banking business. You make the Government the operating agent instead of the controlling agent, and what we want is the whole business to be operated by the owners under the most rigid control of the Government, the same as the railroads are operated by the owners of the railroads under the most rigid supervision of the Interstate Commerce Commission speaking for the Government. This is the thing we want. This bill does not give it. This bill supersedes the banking interests by the arm of the Government in making the Government the operating agent.

Somebody says that is not true. Gentlemen, if it is not true, point out why it is not true. I say it is true, and I want to point out why it is true. There are seven members to be appointed on the board, five of whom will be appointed by the same President, even after the present incumbent ceases to act. Out of the five members only one must not belong to the same political party that the others belong to. There at the start is your politics; that is the partisan phase of the matter. Look at the powers given to the board. Why should I take your time to enumerate them now, since they have been so many times enumerated? Take your textbook that accompanies this bill. There are 42 items in the textbook enumerating the powers of the Federal board. Then there is one item that covers all without enumeration of a single one, and that is the last one.

What is that? The board shall have such duties and services as may be expressed or implied in this act. What act? Why, this act. Not that clause, but this act, this bill—such power as may be expressed or implied. Gentlemen, what item of control is omitted in that implication? It covers the whole. The board does not operate directly only, but indirectly as well.

In the first place the board appoints three men of the local directory of each Federal reserve bank. One is to be chairman of this Federal directory. The same man is to be Federal agent. He is to speak as a representative of the Federal board. With them will sit two other men that are appointed by this Federal board, and then there are three more, subject to the Federal board. Hear me, you who believe in fair play. Three more appointed, by whom? Selected by the stockholders and then subject to removal by the Federal board.

Let me say to you that you do not end authority by the elective power in a body. In other words, the elective body does not necessarily imply all authority in the electors. Power to

control is power to remove, rather than power to elect. You have the same thing by removal that you would have by election, if not more. The power in the Federal board to remove three of the local directorate of the reserve banks, without stating the cause, places the local directorates of each reserve bank in the hands of the Federal board. So the board operates both directly and indirectly, and if you can conceive of a greater power than that I do not know what it can be. That is the thing I am afraid of.

Why, a man believing in the bill said to me, "But you need not fear that because the Federal board would not remove these three except for cause, and that cause stated, which is that they must represent an agricultural, commercial, and industrial interest, and if they do not represent these interests they will be removed." I do not want to speak, as would appear, for party reasons, for I hope that I can prove to this body that I will allow nobody to dictate to me as to how I shall vote on any question on this floor. This is what I ask you, my Democratic friend, to think of when I speak about this particular power. The power of this board being first direct and then indirect, what is likely to be its trend, as judged from what we have heard upon this floor recently of the charges that have been made from the Democratic side of the House in the discussion of the tariff question? What do I mean? I mean that every single time that any one of us has risen to speak on the subject of protection that we have had hurled back at us, "Oh, you are the representatives of the interests of this country and we are the representatives of the people of this country." I have heard coming from these men, for whom I have the highest personal regard, the constant charge that if I vote against the Underwood bill then I vote to represent the interests of the country—that I do not stand for the people of the country. What is to hinder a Federal board under the President, appointed by him, to indicate to the three local directors that they stand for a certain interest or they do not stand for a certain interest? Where is the appeal? There is no appeal. Of course, they can be reelected, but the power to elect is nugatory when the power to remove is in another power above the one to elect.

Mr. GRAY. Will the gentleman yield?

Mr. FESS. Yes.

Mr. GRAY. I want to inquire of the gentleman, which does he regard as sacred, the rights of property or the rights of persons?

Mr. FESS. Mr. Chairman, the question is in keeping with other interruptions that have been made upon the money question or the tariff question. Now, certain men would not ask that question, Mr. GRAY. [Laughter.]

Mr. GRAY. Does the gentleman refuse to answer that question?

Mr. FESS. Why, I would refuse to be interrupted because my answer would leave the gentleman where he is now.

The CHAIRMAN. The gentleman refuses.

Mr. BARTLETT. Will the gentleman permit me to ask him a question?

Mr. FESS. I will.

Mr. BARTLETT. I am very much interested in the gentleman's argument, and I want to call his attention to paragraph "(f)," on page 23:

(f) To suspend the officials of Federal reserve banks and, for cause stated in writing with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

Now, I agree with the gentleman in that—

Mr. GRAY. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GRAY. Is it proper to interrupt a person to whom a gentleman has just yielded? Is it proper for a gentleman to yield to an old Member when he will not yield to a new one?

Mr. BARTLETT. That is not a parliamentary inquiry.

The CHAIRMAN. That is not a parliamentary inquiry. It is entirely discretionary with the speaker as to whom he shall yield.

Mr. FESS. I yield to the gentleman from Georgia because he asked a question that is pertinent; the other gentleman did not. [Applause.]

Mr. BARTLETT. I only wanted to ask the gentleman what further restrictions or safeguards would he suggest to guard against removals other than those embraced in this paragraph "(f)" of section 23?

Mr. FESS. I think, Mr. Chairman, the answer is, whenever the final power of appointment is lodged in the President to appoint a board, and that board so appointed is to appoint a local directorate with the power to remove the directorate or a part of it not appointed by that board, but elected by persons not holden to the board, the same power that originally ap-

pointed the men would refuse to retain them if retaining them would interfere with the measures or plan of the administration. In other words, if for partisan reasons the local directorate is removed by the Federal board, for the same party reasons the President who appointed the Federal board would listen to what the Federal board would recommend.

Mr. BARTLETT. They might do it.

Mr. FESS. I think they would do it. I am afraid they would.

Mr. BARTLETT. There is a man now in the White House who will not do that sort of thing even for his party friends.

Mr. HELGESEN. Is he there for life, though?

Mr. FESS. I will allow no man on the Democratic side of the House to go beyond me in his admiration for the personal qualities of the man in the White House. Here we have an opportunity to judge the very sincerity of the man in the White House as to the use of his power. But this very sincerity is the most dangerous thing about it, and the gentleman knows it. Were the President less sincere in his insistence upon early legislation of specific character, it would not matter.

Mr. TEMPLE. Is it not true that the gentleman who asked that question voted for that paragraph on page 22 which gives to the Federal reserve board the power to suspend the officials of the Federal bank?

Mr. FESS. Yes; and not the local directors.

Mr. BARTLETT. The gentleman has not voted yet.

Mr. FESS. Mr. Chairman, there are two other points that I wanted to reach, and I am afraid I shall not have time to reach them. I am not speaking here in the hope that I can convince the gentlemen on the Democratic side who favor this measure, but I do hope that friends on that side will give respectful attention to the things that I think are serious. If you can convince me, I will vote with you on the bill; otherwise not.

Now, on this point I would like to have the arguments of these men—

Mr. WILLIS. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN (Mr. WILSON of Florida). Does the gentleman yield?

Mr. FESS. I yield.

Mr. WILLIS. Before my colleague leaves that portion of his argument I would like to know what his opinion is with reference to the probable political effect of this language, which I read from line 21 to line 24 of page 8, where the bill is undertaking to define the powers of the Federal reserve agent. Then it goes on to say, speaking of the Federal reserve agent:

He shall receive an annual compensation to be fixed by the Federal reserve board and paid monthly by the Federal reserve bank to which he is designated.

What does the gentleman think would be the probable political effect of such a provision in the law?

Mr. FESS. It would have this effect: It would subject the local control, through a local directorate as expressed through its chairman, over the Federal bank, by putting at the head of that local directorate an appointive head whose position as the Federal agent representing the Federal board in the local directorate and in turn acting as the mouthpiece of the Federal board, to do their bidding. It puts him absolutely under the control of the central authority, which the Democrats have always been afraid of. It is another attempt to use the appointive power to secure its purposes.

Mr. WILLIS. His salary is to be fixed by the Federal reserve board?

Mr. FESS. Certainly. That is modern Democratic doctrine.

Mr. WILLIS. Now I want to ask the gentleman another question. Does he know of any other instance in which the Congress has proposed to abrogate its authority to fix salaries than in the section just read?

Mr. FESS. I do not.

Mr. BARTLETT. If the gentleman will permit me, there are a number of cases.

The CHAIRMAN. Does the gentleman yield?

Mr. FESS. I will yield to the gentleman.

Mr. BARTLETT. Take the provision authorizing the physical valuation of railroads. Then there are many others besides.

Mr. LANGLEY. Do they not always fix a maximum and a minimum, beyond which they can not go?

Mr. BARTLETT. No.

Mr. FESS. The gentlemen who framed this bill, investing this dangerous authority in the general board, have ignored the instructions of Gen. Jackson. May I, for the sake of my Democratic friends and in the interest of consistency, read this extract from Jackson's message September 18, 1833:

To give the President the control over the currency and the power over individuals now possessed by the bank of the United States, even

with the material difference that he is responsible to the people, would be as objectionable and as dangerous as to leave it where it is. Neither one nor the other is necessary and ought not to be resorted to.

That is the utterance of Gen. Jackson. Then I want also to refresh the memory of my Democratic brethren by referring to certain things that were said by Thomas H. Benton. I may say with respect to the great representation on this floor by the State of Missouri that it is one of the strongest delegations on the floor, and, with great respect for the presiding officer of this House, I may say Missouri never had a more powerful leader at either end of this Capitol than Thomas H. Benton. You will remember that Thomas H. Benton was the man who stood in favor of Andrew Jackson when the great coalition of John C. Calhoun, Daniel Webster, and Henry Clay battled against him. Finally the influence of those three men put upon the Journal of the Senate a resolution of censure against Andrew Jackson. Thomas H. Benton, after being defeated in his powerful defense of his chief, Gen. Jackson, stood in his place and announced, "At the beginning of every session of Congress I shall renew my efforts to remove that censure"; and he did it after four years and had it expunged in 1837.

Now, listen to what Thomas H. Benton says on this same question:

First, he indicts it for the keeping of the public moneys, which amounted to \$26,000,000.

Query: What would he have said of a proposition to have the custody of a billion dollars?

Second, the notes are receivable for all Government obligations.

Compare that with the Glass bill. It is the same thing.

Third, the bank has the name of the United States and the Government is a party.

The Federal notes are also to bear the name of the United States.

Fourth, it can discriminate against other notes, and so on.

Compare this provision with the proposed bill.

Now this introduces the question that I should like to have my Democratic brethren think of, the note-issue question. You speak of it in connection with the national-bank issue. The note issue, as provided in this bill, is not a national-bank issue. The note issue in this bill provides that the Government is the primary obligor, and the Government must be the redeemer, while the national-bank note is an obligation not of the Government, but an obligation of the issuing bank, bearing its own name. Of course, while the Government will redeem that note if the bank fails, the Government redeems the note with the property of the bank and not with the property of the Government, and that is the difference.

Why did you put that provision in there that the notes are to be the obligations of the Government, to be issued without limit, and mark you, redeemable in gold or lawful money on demand? Do you mean to maintain the gold standard? In certain sections you answer yes. In certain other sections you answer no. To certain men you say yes; to certain other men you say no, and you are absolutely right. Do you know—of course you do—that the phrase "lawful money" opens up the question of 1896, with all the vigor of that fateful year. For what was it that gave rise to that tremendous enthusiasm in 1896 that carried Mr. Bryan on the top wave of political popularity in the country? I speak of him with great respect, understand, with no criticism other than in this particular. What was it that gave the opportunity? Why, it was the Sherman note and two words in it. Those two words are "in coin." The obligation is exactly word for word the same as the obligation of the United States note or greenback with the exception of the two words "in coin."

If you read a greenback obligation it says, "The United States will pay to the bearer ——— dollars," and stops there; but the Sherman note said, "The United States will pay to the bearer ——— dollars in coin," and the whole excitement of the silver campaign in 1896 grew out of the policy of the Government as to the interpretation of the meaning of the phrase "in coin." If you say that "in coin" means that you can pay in silver the same as in gold, which, of course, was the legal right of the Government, and if when the holder of a Sherman note presents it to the Treasury to claim redemption in gold because it says in coin and the Treasury refuses him gold, because we have not the gold, or for any other reason, and offers silver or other lawful money instead, what becomes of your gold standard? When I demand the gold and my Government says it will not give me the gold, but pays me with silver or other lawful money, that minute the Government discriminates against silver in favor of gold, and thus silver loses the protection of the Government and rests upon itself and you are on a silver basis. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAYES. I yield to the gentleman 10 minutes. [Applause.]

Mr. FESS. Mr. Chairman, I greatly appreciate the kindness of the leader on the Republican side and the courtesy of the Democratic Members of the House. I was saying that lawful money, which is one of the redemptions of these notes, is first gold, with which may be included gold certificates, because they stand for the same, and silver, because the law of March 14, 1900, declared that there is no change in the original silver law which made silver a legal tender. Silver and greenbacks are lawful money. In other words, under the laws up to this present bill the Government has assumed the obligation of making a silver dollar worth about 50 cents in bullion and a greenback worth nothing on its face save the Government's credit, equal to gold, by obligating itself to pay out gold if necessary to preserve the current value.

This provision of the law will allow the banks to take these Federal notes and demand gold for them, and the Government has the power under this provision for lawful money to refuse to give gold and force upon the banks silver or greenbacks, for both are lawful money. If the Government will thus act, then you have the same question again of 1896. If the Government will not thus refuse gold, it does not mean so much. But the power is there to do it, if the Government so chooses, as it was in 1896.

Now, if you mean to maintain the gold standard and make it the redemption money in this bill, just observe what you are doing. Look at the burden which is put upon gold. First we have \$346,681,000 in greenbacks, with \$100,000,000 in reserve to keep them at par. This reserve fund, under law, must not be entrenched upon, even at the cost of issuing bonds. We have over \$2,000,000 of Sherman notes out of the \$156,000,000 of original issue, and we keep \$50,000,000 of gold in the Treasury to maintain them at par. Then we have over \$1,000,000,000 of gold certificates out in the country, and the gold funds must be kept without infringement to maintain the redemption of these certificates if the holders should call for them.

Then listen. We have in silver certificates and silver dollars nearly \$700,000,000, all of which since 1900 must be redeemed in gold. At least the Government is compelled to keep them at a parity. Add to the greenbacks, to the Treasury notes, to the gold certificates, to the silver certificates, to the silver dollars an unlimited amount of United States notes—Federal notes—provided in this bill, and where will you get the gold to redeem all of that? That is the question. What provision are you making for the gold?

Listen, men. Instead of your providing for an increase of gold you are keeping the gold supply out of this country by a provision in this bill. You say the Treasury note shall be receivable for customs, and customs have always been paid from the beginning in gold in order to supply our gold needed for redemption. Where on earth will you get the gold? You can not pick it off the trees; it can not be found that way. We collect it through the revenue officers in the customhouses of the country; but here, instead of doing with these notes what you did with the greenbacks, what you have done with the national-bank notes, what you really do with the certificates, both gold and silver, you make them acceptable for the payment of customs, whereby every note that you receive in payment of customs will deplete the gold to that degree. While you are providing for an increased demand for gold, if you mean to preserve it as a standard, you are cutting off the real source of its supply.

Mr. BARTLETT. Will the gentleman yield?

Mr. FESS. I will yield to the gentleman from Georgia.

Mr. BARTLETT. It is true that the national-bank note and the silver certificates can be received now for customs.

Mr. FESS. The national-bank note can not. I would not say as to the silver certificate, but am inclined to think not.

Mr. BARTLETT. They pay customs duties now in checks by a recent law.

Mr. FESS. The checks are redeemable in money which ultimately is gold.

Now, here is another question that I want to ask the Democratic Members. They will not agree with me in this, but I think it is worth while to think about it. Your tariff measure is professing to collect from imports into the country a large sum of money, and by your competitive system you promise a large increase of importations. If through the Underwood bill you increase the importations to this country to the point, which you might reach, of turning the trade balances against us instead of for us, so that we will be buying more goods from Europe than we are selling, then the balance will have to be settled in gold, the money of international exchange. If you reach that point, this country will be drained of its gold. Between the two bills, the tariff measure, which provides for

an increased importation, and the currency bill, which provides for receiving notes instead of gold for customs duties, between these two plans you are increasing the demand for gold and reducing the supply at both ends. Of course if, as I sincerely fear you are, you are planning to abandon the gold standard, it does not matter so much in either case.

Mr. PLATT. Could not the Government sell bonds as it did under the presidency of Grover Cleveland to obtain gold?

Mr. FESS. I do not believe in doing that unless it is necessary, and in this case it is plainly unnecessary. I defend President Cleveland in doing it when it was necessary to maintain the gold standard or to secure necessary money to care for the Government. I think it would have been wiser not to have made it necessary, though. What the Wilson bill of 1894 did the Underwood bill of 1913 may do. [Laughter.] There is another feature of the bill that is pretty serious to me. I want to say to my Democratic friends that I would like to vote for a currency measure. I wish to vote to assure my independence on this floor, but I want a measure that does not seem dangerous. Your bill has certain points that do seem dangerous to me. Now, what can I say about the one feature you have been so favorably and enthusiastically indorsing—the Federal reserve provision? You may be right there. It does not seem to me that you are. It is at least worth while to ask a few questions. Your point is to refuse to allow the money in the bank of my town of Xenia, Ohio, to go to New York, where it has been going; you want it to go to Cincinnati. You say that it ought to go to Cincinnati first, so it will not be out of the reach of Xenia, and, secondly, to develop Cincinnati. Now, why does it go to New York—or why does it not go to Cincinnati? Not because of some legal enactment of some legislature, but because it has opportunity to be employed in New York. Why does it not stay in Xenia? Because it is idle, much of it, much of the year. What good does money do in a bank if it is idle? Nothing. How does it in any way help the banker? Not at all. How does it help the country? It does not help it at all. What ought to be done is, the money ought to be allowed to seek the safest, the sanest, and the most profitable investment. Where would it go? To the centers. Why are you crying out against New York? Why do not you cry out against the growth of Detroit or Cleveland or St. Louis or Pittsburgh? Why is New York growing? Why is Pittsburgh growing? It is growing because all great movements in the city which need financing attracts money for the purpose. The \$2,000,000,000 to be demanded in the near future for electric utilities is a good example. The subway, next to the Panama Canal, the greatest feat of engineering in the world, is another good example. The money that is used and the work that is done are wonderful. Now, friends, you say we would not prevent its going to New York if it goes into these enterprises, but say you it goes into the gambling of stocks and we are going to prevent it. How do you know when you forbid the reserves going into gambling that your decrees are obeyed? How do you know where it goes when it leaves your hands?

The CHAIRMAN. The time of the gentleman has expired?

Mr. HAYES. Does the gentleman desire more time?

Mr. FESS. I would like to have a little more.

Mr. HAYES. I yield 10 minutes additional to the gentleman from Ohio. [Applause.]

Mr. FESS. I thank you, sir. I am glad to have that time, because this is one of the points of interest in the bill, and I want light from the men who know the bill, and I want to know whether I am wrong in this statement here. My position is this: You must not punish the innocent in the name of the guilty. If you want to punish the Stock Exchange of New York, get after them, if you have the power to do it from this floor, or let New York, which is the real power that ought to handle that question, take hold of it and solve it; but do not cripple the bank in my town in order to hit the evil in New York. That is punishing the innocent person in order to get at the guilty person. [Applause on the Republican side.] When you say money is going to New York out of these districts it is because New York demands it and New York has use for it. If it does not go to Cincinnati, it is because Cincinnati is not so active as New York and does not pay as good interest as New York, and would not take as short loans as New York, and would not therefore make use of the reserves as well as New York. A sane banking system must stand for the creation of a sound credit and then laws should be framed to maintain that sound credit in order that needed confidence in both the banks and the operators may be conserved.

Mr. SWITZER. I desire to call the attention of the gentleman as to whether or not the provision in this bill that obligations of the Government shall be payable both in gold or lawful money are not inconsistent with the provisions of the

act of 1890, which requires the money to be kept at a parity with the United States notes and Treasury notes to be paid in gold?

Mr. FESS. Does the gentleman refer to the act of July, 1890? Mr. SWITZER. Yes.

Mr. FESS. There were two laws, you know; that of July, 1890, which was known as the Sherman law and repealed in special session in 1893, and the law of March, 1900, which made gold the legal standard.

Mr. SWITZER. Are they not inconsistent when this bill provides that a Government obligation in the shape of money shall be paid "in gold and lawful money" instead of in gold?

Mr. FESS. To that, Mr. Chairman, I would say simply this, that the law of 1890 made possible the agitation over the standard.

Mr. HAYES. Mr. Chairman, I think the gentleman refers to the law of 1900.

Mr. SWITZER. Yes; the law of 1900.

Mr. FESS. The law of 1890 is what was called the Sherman Act, under which \$156,000,000 Treasury notes were issued.

Mr. SWITZER. I want to know what the gentleman's opinion is.

Mr. FESS. My opinion on that is that the law of March 14, 1900, was simply to establish by law what had already been established by custom since 1890, namely, the maintenance of the gold standard. This bill, if it becomes a law, will change that, as it provides money other than gold for the redemption of these notes.

Mr. SWITZER. Does it not change the law?

Mr. FESS. The feature of the bill touching the note issue would be inconsistent with the law of 1900 establishing the gold standard.

Mr. SWITZER. Does not the repealing section of this bill repeal the act of 1900?

Mr. FESS. In effect it does, though not in terms.

Mr. SWITZER. Then, in that event, Mr. Bryan would get in this bill what he did not get in 1896, would he not?

Mr. FESS. That is precisely what I said. Yes. In 1896 Mr. Bryan said the Government ought to exercise its option and discretion as to what a note should be paid in. This bill does exactly the same thing. That is what I tried to say a while ago. In my opinion the legal effect of this bill as written without amendment of the clause allowing other than gold to redeem these notes is inconsistent with the law of 1900, and in effect repeals the gold standard; that is, it gives the Secretary of the Treasury plenary power to refuse gold payment and force the holder to take silver, and thus place us on a silver basis.

Now I want to get back to these reserves. It seems to me when you are undertaking to prevent the money from going to the money center you are trying to do what is impossible, and I want my Democratic friends to hear this: When I spoke to one of the keenest students of finance in this country, a Democrat who is backing this law in influence, I said to him, "How can you, by law of Congress, prevent money going from my State into New York to be employed there in business?" What do you think he said to me? He said, "It will not do it. The best thing this law will do will be to disclose the hypocrisy of people who say they think it will." That is what he said to me, and he was right. You can not make water run uphill by declaring by an act of this Congress that it must. [Applause on the Republican side.]

You can not take a chip and, by the authority of the Government, stamp it a biscuit, and thereby make it a biscuit. You can not take a meal ticket and convince a hungry boy that the meal ticket is the meal, even though the Government said it was. [Laughter on the Republican side.] That is impossible. It makes no difference if the Government does say so. This Government can not say that money in my hands or in bank in my State can not and dare not leave my State. If it should say so its decree would not be observed unless that decree was in accordance with natural law. Neither can it say where it shall go. If money can be profitably employed in New York it ought to be allowed to go there, if there is better employment there for it than in Ohio, even if Cincinnati wanted it.

I understand the contention here. My friends from the far West will want a Federal reserve bank and they will probably vote for this bill, because their people think the bill will give it to them. The same can be said of the South, also of the Northwest. You can have a Federal bank in Maine, but that does not insure the profitable employment of money in business in that section, because that does not come by law or by decree. You have to observe the laws of trade, and if you undertake to counteract them, you might retard them, but you can not prevent them.

Therefore I say to you that this provision as to the Federal reserve is not what you think it will be, and I do not believe it should be put into law unless you can be assured that it can be made operative.

I would not be so unkind as to say in this magnificent presence of friends and thinkers that you are doing anything of that kind for the sake of favor at home, but it sounds a mighty sight like a good campaign proposition and a good campaign propaganda. [Laughter on the Republican side.] It sounds awfully like that, and yet I will withdraw that statement, because I may be wrong. But nevertheless this is true: This House, together with the Senate, can not counteract the laws of trade, and if New York is the center of growth, it is not because of law in this House, but it is because of the laws of trade. What are you going to do about it?

Mr. STEPHENS of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. FESS. Certainly.

Mr. STEPHENS of Nebraska. The gentleman does not mean to say that by statute we can not prevent the legal reserves of the banks from going to New York, does he?

Mr. FESS. No, I do not mean that. I mean that whatever bank has legal reserves, it will have other money. And when you follow that legal reserve, are you sure that the money you put in there is the same money?

Mr. STEPHENS of Nebraska. This bill does not prevent your bank from sending other money than its legal reserve to New York.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. HAYES. I yield one minute more to the gentleman from Ohio.

Mr. FESS. I want to say before I sit down that I do not share in the criticism that the bill has been prepared without thought. In my opinion the bill represents the keenest thinking of some of the keenest scholars on the subject. I am, however, somewhat distressed that it was made a partisan measure as it was. I wish it had been an open affair, where we could feel sure of safety in the multitude of council.

I want to congratulate the committee on the sort of bill they have brought in, but wish that some modifications might be made so that the rest of us could support it. [Applause on the Republican side.]

Mr. BULKLEY. I yield to the gentleman from Missouri [Mr. LLOYD].

[Mr. LLOYD addressed the committee. See Appendix.]

Mr. BULKLEY. I yield to the gentleman from Kansas [Mr. DOOLITTLE].

Mr. DOOLITTLE. Mr. Chairman, I have listened with some interest to the attacks of the opponents of this bill, and the more I listened the more certain I became that their diaphanous debate—and I think that well expresses it with only the requirement of casual thought and glance—is in reality a search for something in the bill to complain of and howl about. The opponents of the bill know it is a masterful piece of constructive legislation, destined to work wonders of good to all classes of the American people; and these opponents on the floor of this House will yet see, I venture to say, that their various and ridiculous positions are untenable, and that they will, to a large extent, vote for the bill regardless of party when the final roll is called. It is marvelous the discord displayed by those who think, or, rather, pose as thinking, for political effect, they are against the bill. We hear some gentlemen shouting at the top of their voices that the bill is class legislation in favor of the West, and against that we have others stating that the bill is all for the good of Wall Street, while a leader of a minority party on the floor calls it a make-believe device devoid of what he considers real worth. And with it all none of them offer anything that even they consider better.

No one has said this or any other bill is perfect; but it is as near perfect as the Democratic membership or any other membership of this House can make it. The bill is radical but rational. Their debate is transparent, ungeniue, and through it all we see their extreme displeasure at the tremendous and popular strides of progress accomplished by this great administration, hand in hand with the House and Senate. By their attacks they hope to detract from the unprecedented popularity of our President and his wise, patient, aggressive, businesslike administration. Mr. Chairman, these opponents will suffer disappointment. The people of our country have absolute confidence in the great Executive in the White House, and never before in the history of this Republic has there been greater accord among the party in power, and never before has there been so great a zeal to do something for the masses of American people, who have come into possession of their own Gov-

ernment through their votes and their champion and President, Woodrow Wilson.

But to get back to the currency bill—and in passing let me say that no other political party in the past half century has ever been able to agree on a currency bill within its own party; and it is not because the Democratic caucus approved this bill that I am for it—I am not bound by caucus action—but it is because I think this bill is brimful of merit. We are to place on the statute books a currency and banking law that will emancipate the business of America from the hands and control of Wall Street and the Money Trust and put it on a basis of individual merit and responsibility where it can not be crushed by the Money Trust and the credit monopoly, as many legitimate enterprises in the past have been crushed. As glaring instances of the methods and power of the money monopoly I have in mind the 1907 money panic, and later the receiverships for two great railway companies—the Orient and the Frisco. Every man here and every citizen of the United States remembers how the banks refused full payment on checks and how many suspended any payment at all in 1907. You remember that it came on in less than a day—almost instantly—and you know whose fault it was. It was not your home bank's fault; it was the fault of the speculating reserve banks in Wall Street and other money centers with whom the home banks carried their reserves.

The Wall Street banks had loaned so much of the country banks' reserve on deposit with them to speculators that when crop-moving time came in the fall of 1907, and the home banks began to recall their reserve deposits to meet these legitimate demands, the big speculating reserve banks could not pay them because they had loaned it out. So, as the home bank could not get its money, just so you could not get your check cashed, whether it was your own or some one else's. The home banks simply could not get their cash, and in consequence were unable to let you have yours. This Glass currency bill is an insurance policy against any such panics, as I shall presently show you.

If the Money Trust puts such huge companies as railways into the hands of receivers, what chance has smaller concerns against it? The Kansas City, Mexico & Orient Railway Co., commonly known as the Orient, is surveyed and graded almost the entire distance from Kansas City through the great agricultural and stock-raising districts of Kansas, Oklahoma, Texas, and Mexico to the Gulf of California, and several hundred miles of its lines are in operation, but its further construction is at a standstill, and has been for many months past. Why? Arthur E. Stillwell, former president of that road, in his attack on the Money and Credit Trusts gave the reason—those trusts composed of directors and stockholders in railways and other huge corporations simply did not want any more competition for the transcontinental railways, so they refused to finance his road further or to allow it to be done—our antitrust legislation the coming session will put an end to the evils growing out of interlocking directorates. And the result is that perhaps this railway may never be built and the opportunity for employment for thousands of men lost. The great expanse of territory sought to be traversed, the counties, towns, and farming communities, that for years have expected this new vein of commerce to put them into better touch with the commercial activities of the world, to enlarge their populations and properties, to give them cheaper and more satisfactory railway facilities, to increase the value of their possessions and to put the products of their institutions, fields, and feed lots nearer to market, appear due for further and continued inconvenience, disappointment, delay, and loss.

When we take the control of the money of this Nation from the hands of a few individuals and huge banking corporations and distribute it in the several regional reserve banks, as provided by this bill, not controlled by any set of capitalists, but by the Government itself, it will be impossible for any legitimate business to be made the victim of some whim or scheme of destruction hatched out in Wall Street or some other money center or even inadvertently brought about by a restricted currency. Under this bill we shall have all the money required for every legitimate enterprise, purpose, or industry, and without having to ask Wall Street's consent.

And why should Wall Street have refused to renew the notes of the Frisco Railway early this summer? Never before had there been any trouble in having them renewed, and the railway company was in excellent shape. Why? For the answer to that I will insert herein an extract from Bank Notes, a bankers' journal, published at Indianapolis, and not connected with the Money Trust. The editorial from this paper follows, and should be given great weight. It is worthy of sober reflection:

WILSON CHECKED BIG PANIC—BUSINESS SOUND.

A credit panic, carefully planned out by Wall Street, was well under way on Friday, the 13th of June, when it was stopped almost instantly

by Secretary of the Treasury McAdoo's announcement, made with full approval of President Wilson, that the United States Treasury was prepared to loan the country banks \$500,000,000 to paralyze the Wall Street gamblers.

There is apparently no doubt that big financial interests deliberately mapped out a panic to throw some of their enemies into bankruptcy and to give tariff and currency reform a black eye. For three months their paid representatives had been traveling around the country spreading alarm among bankers and business men. Trust-owned newspapers had been following them up and seconding the motion by announcing a coming shortage of money and a country-wide stagnation of business to result.

All this time prosperity was on a sounder basis than ever before. Crops, steel production, and exports had broken all records. Wall Street sulked, then planned a panic.

It hoarded gold until the money market was almost cornered and country banks were squeezed hard. Many big banks announced that money was scarce; at the same time their vaults were bulging. One of the loudest howlers had reduced its loans and increased its deposits by weakening securities until it increased its stock of money nearly \$20,000,000.

Then they began to apply the screws. Loans were refused. A great western railroad with over 7,000 miles of tracks was thrown into bankruptcy because Wall Street refused to loan it \$3,500,000, a loan that this road had often floated without difficulty.

That was on Friday, the 13th. It threatened to be a second black Friday on the New York Stock Exchange.

A panic started. The stock market almost went into chaos; many securities fell in an hour to lower prices than during the panic of 1907.

Then came the official announcement that country bankers no longer had to look to Wall Street. The United States Treasury would issue up to \$500,000,000 in emergency currency under the Aldrich-Vreeland Act to meet any crisis. This meant a Federal war against Wall Street.

There was no need of the money—after it was offered. One threat was enough.

Metropolitan banks suddenly "found" millions and dumped them on the loan market. The high call loan rate was cut in two in a few hours. One New York bank reduced its rates for time money, offered to lend freely of its surplus reserve of \$28,000,000, and in one day bought \$7,000,000 of commercial paper; the day before this bank had been the loudest calamity howler about a money shortage.

Wall Street has been given a terrific beating, and the panic has gone over our heads like a black cloud—probably for good.

Now, watch the other banking magazines jump on "Bank Notes." Not one of them will print the truth about this deliberately planned panic, because certain of the financiers who were in on the diabolical, anarchy-breeding conspiracy advertise in those publications. "Bank Notes" is for the country banker; this is the story of the panic from the country banker's side.

Shortly after the Frisco receivership and the further threats of the trusts and combinations to bring on a business depression, President Wilson came before Congress in person and delivered his epoch-making message calling on the American Congress to deliver the country from the powers of the monied interests and to set business free. Have we responded to his timely warning and patriotic request? We have, and this bill before us bears the hearty indorsement of the President, and is known as an administration measure, and will receive practically every Democratic vote and, again I predict, many Republican and Progressive votes.

I shall not enter into a discussion of the bill section by section, as you have already listened to many excellent addresses that have shown far greater knowledge of banking and currency on the part of their authors than I possess. But in passing I should like to refer to the able statement of the gentleman from Oklahoma, Hon. CLAUDE WEAVER, a member of the Banking and Currency Committee, regarding the splendid items of reform this bill inaugurates:

1. Government control is substituted for bank control. Creating a currency for a nation is the highest attribute of a sovereign power deeply affecting all the diversified interests of the social state. To surrender this power to banks or any private interests is destructive to good government and treason to the people.

The Federal reserve board consists of seven public officers appointed by the President of the United States, subject to confirmation by the Senate, and the President himself is a public officer, and if he violates his trust is subject to impeachment and removal.

2. The bill provides for the mobilization and use of the cash reserves of the banks whenever needed in times of trouble.

3. It provides as a basis of the currency, in addition to the present currency, that it shall be issued upon gilt-edge commercial paper of an established standard, issued for the agricultural, industrial, and commercial purposes, thereby promoting industrially, agriculturally, and commercially the great producing and distributing agencies of the wealth of the world.

4. The surplus money of all sections of the country under the present system has been concentrated in New York and loaned on call and on stock-exchange security. It is withdrawn and distributed over the different parts of the country equitably in proportion to business demands, thereby becoming available to the great masses of our citizens instead of being monopolized by the gamblers and stock speculators in Wall Street.

5. By withdrawing from New York this surplus money at a single blow the Money Trust is destroyed.

6. Notes or bills issued or drawn for the purpose of carrying on trade in stocks and bonds are denied the privileges of discount at the Federal reserve banks.

7. Credit facilities between different sections of the country, so long unequal, are made uniform by virtue of the power vested in the Federal reserve board to require Federal banks to rediscount the discounted prime paper of other Federal reserve banks, thereby taking from a bank that is plethora in funds its surplus to relieve another bank in a section of the country that is flaccid and drained.

Our friend embarrasses me somewhat with his big words.

8. Adequate banking facilities for all sections of our country are thereby provided to promptly and on reasonable terms meet the ordi-

nary or unusual demands for credit or currency for moving crops or for other legitimate purposes.

9. An instrument is afforded by this bill, namely, the Federal reserve board, that can deal effectively with the broad questions which, from an international standpoint, affect the credit and status of the United States as one of the great financial powers of the world.

10. The bill provides for American banking institutions and branches of the Federal reserve banks in foreign countries, thereby giving American citizens in foreign countries improved banking facilities, facilitating and expanding American trade with all the countries of the world.

11. The provision for national banks to establish trust and savings branches will enable that department of the banks to give the public far better accommodations by making loans of longer maturity than commercial banking justifies.

12. The State banks, banking associations, and trust companies are admitted to membership in the system and thereby accorded all its benefits.

13. National banks are given the power to loan money upon real estate, thereby enabling them to serve farmers and other borrowers in rural communities.

14. The independent Treasury system is abolished. The irregular withdrawal of money from circulation in periods of excessive Government revenues is avoided and the entire revenues of the Government are placed in circulation, becoming thereby available to all the people.

15. The gradual retirement of the national bank currency is provided for, thereby paying off the national debt and carrying out Jefferson's pledge—the honest payment of our debts and sacred preservation of the public faith.

And the bankers should not complain of this bill, and I certainly believe they will not seriously protest when they thoroughly understand it; I dare say I know they would not complain if they thought another 1907 panic was anywhere in sight. I know of no better example of the first workings of the bill as affecting a bank than that expressed by the distinguished chairman of the Banking and Currency Committee, the Hon. CARTER GLASS, when he showed its application to a country bank, and I shall insert that clear and simple example herein as a part of my remarks. Of course a larger or smaller bank would be affected proportionately:

Let it be assumed that a bank of \$100,000 capital (no surplus) is the owner of \$75,000 in United States 2 per cent bonds and has outstanding \$75,000 of circulation. Let it also be assumed that this bank has total outstanding deposits of \$400,000. The bank is a country bank.

How will this new plan affect this institution? In the first place, the bank in question, if it has \$400,000 of deposits, must have on hand in its own vaults 6 per cent of that amount in cash, or \$24,000, and must have 9 per cent of that amount, or \$36,000, as a balance with the reserve bank.

Under this bill this bank must have a reserve of 12 per cent instead of 15 per cent, of which 5 per cent, or \$20,000, must ultimately be placed with the reserve bank and \$8,000 may be kept either in the one place or in the other, when the whole measure has become operative at the end of three years.

As the bank has \$24,000 cash when it enters the system it is \$4,000 ahead of the amount required to be held in its own vaults. It can draw for the remaining \$28,000 required of it upon its present reserve city correspondent, with which it holds \$36,000, sending the \$28,000 check to the new Federal reserve bank. After the transaction is over its reserves will be complete and it will have \$4,000 in cash and \$8,000 in balances over and above what it needs to meet its reserve requirements.

The bank, however, must contribute \$10,000 to the capital stock of the Federal reserve bank which it has joined. If it pays this amount out of the \$12,000 surplus it will become the owner of \$10,000 stock in the new reserve bank and will still have \$2,000 surplus out of its former balances.

This bank was receiving probably 2 per cent upon the \$36,000 balances it carried, making in all \$720 a year. Assuming that the stock in the new reserve bank pays 5 per cent it will yield an income of \$500 a year. The bank, moreover, has \$2,000 of free cash still remaining, which it can loan after withdrawing it from its present correspondents—say at 5 per cent—bringing in \$100 annually. Or if it were to use this \$2,000 as a reserve upon which to build up new loans, it could lend about \$16,000 thereon, which at 5 per cent would yield it \$800. On this basis the changed situation of the bank might result in a loss of about \$120 a year or in a gain of \$580 or in anything between those two sums. The reasonable expectation would be that the bank would get a material increase in its revenue. Just how much would depend upon the extent of the loans it could make in response to demand in the community.

The bank would be able to exchange each year 5 per cent of its present \$75,000 of 2 per cent bonds, or \$3,750. If we assume that the bank sells the 3 per cent bonds it receives through this exchange at par and with the proceeds pays off the notes now outstanding against them, the effect is simply to reduce its assets and liabilities by equal amounts, at the same time releasing it from the necessity of retaining the 5 per cent redemption fund in Washington, which at once becomes available as a basis for reserve loans at home. This 5 per cent redemption fund would be on \$3,750 equivalent to about \$185. If this were loaned directly at 5 per cent, it would yield an income of \$9.25. If the \$185 were used as a 12 per cent reserve against loans, about \$1,500 of loans could be made, which at 5 per cent would yield \$75. This, if taken in connection with the showing made above, would reduce the loss to \$45 a year, or would increase the gain to \$655, with corresponding changes in intermediate points between these two extremes. If the banks had no notes outstanding against the bonds which it converted and sold, it would get fluid funds equal to the amount of the bonds thus sold, which could be loaned at 5 per cent, instead of the 2 per cent now paid by the bonds. This would be a difference of 3 per cent a year in favor of the new plan on a principal of \$3,750. On the other hand, if the bank simply paid off its outstanding notes out of the nonreserve money on hand—as in many cases it might—and held the new 3 per cent bonds as an investment, it would profit to the extent of 1 per cent over the existing situation on a principal of \$3,750 a year, or \$37.50 the first year, \$75 the second year, and so on. At the end of 20 years it would be 1 per cent ahead on its whole \$75,000 bonds, or \$750 annually. In this event it is clear that within three years the increased revenue from its bonds would offset any possible loss due to the sacrifice on the 2 per cent interest on reserves. Against this might fairly

be set off the income, if any, that it might have made by loaning the cash used to cancel its outstanding bank notes.

Summarizing, it is safe to say that upon the narrowest possible basis likely to present itself in the case of this bank the institution would, if it paid up its whole reserves under the new plan in cash, fully clear itself and make an additional revenue of from \$200 to \$500. If instead of paying up its reserves in cash it got the reserve credit by rediscounting, it might profit to a very much greater degree; how much greater can not be estimated without knowing the rate of interest in the community and the extent to which it could obtain paper eligible for rediscount.

The banks are inclined to complain about the reserve requirements, but certainly it is not unfair to require that they keep handy a few cents of the depositor's dollar as a reserve to pay that depositor when he wants his money. A reserve is a reserve and must be available at all times.

In my speech on the tariff bill I said that we had gone far toward lightening the burdens of the American people, and I am now able to say that we will have further relieved them of onerous burdens. And, Mr. Chairman, I am glad to observe that this administration and Congress has not yet completed its announced and fixed program of relief for the people. A farm-credit system is yet before us, and it is much nearer than when I mentioned in my tariff speech a farm-loan bill and my purpose to introduce one at this session of Congress. As many of you know, on June 17 I did introduce a farm-loan bill (H. R. 6158) to provide 3 per cent money on long-time loans, and provided for its repayment at 2 per cent per year, making 5 per cent per year all told, which would wipe out the entire debt in 50 years without the borrower hardly knowing it and without his having to pay out as large a per cent as he now does for interest alone. Such a law would put a family on every quarter section in the Middle West. President Wilson has already stated in a formal interview, widely published, that he would ask Congress to pass a farm-credit bill at the next regular session of Congress.

And that great statesman, for whom every man in this House has a deep affection, the Hon. Speaker CHAMP CLARK, has formally given his support and influence to Government farm credits; and as almost a guaranty that we shall have a farm loan and credit law, the Democratic caucus has instructed the Banking and Currency Committee to report in such a bill at the next regular session of Congress. I shall appear before that committee and urge the acceptance of and favorable action on my bill, with such additions as may be advisable. But whether it be my bill or some other bill I feel absolutely assured when I say we will put it into law.

In conclusion, gentlemen, let me say that the people of my native State—Kansas—a part of which I have the honor to represent here, have no banking institutions within its borders that we are afraid of—we live together and are friends—all we want is a guaranty that the big city banks will not ever again be able to bring loss and confusion to our people through the unwilling instrumentalities of our local banks and the curtailment of legitimate credit. There is nothing the matter with Kansas. A shortage in one or two crops this year can not daunt the courage of her people. I protest against the false and lurid stories recently printed in the eastern press about suffering in Kansas. It is true that we have had a light rainfall this summer and it has been hot, but we have not been in "sore straits" at any time. On the other hand, more money is coming into Kansas this year than on the ordinary good corn crop years. Our alfalfa crop, which has been planted in large quantities for several years past, is worth \$65 per acre from many fields. Our wheat crop is one of the best in our history—right at 80,000,000 bushels—and the oats crop was good. Our valuation is about \$2,700,000,000—an increase of \$43,000,000 over last year. Kansas has contributed her full share of meat and breadstuffs to feed the world. The truth about Kansas is her best praise; take her and her people as they stand, they are unmatched and matchless—the greatest domain under the stars.

What a complete emancipation of all the people from trusts, combines, and money powers when the Underwood tariff bill gets to working, the Glass currency bill is a law, and a farm-credit system is established. The possibilities and the opportunities of the immediate future are many. The outlook is roseate and bright. The people are ready. New activities in the business world have begun; continued and enlarged prosperity is with us.

MR. BULKLEY. I yield to the gentleman from Virginia [Mr. SAUNDERS].

MR. SAUNDERS. Mr. Chairman, the preparation, and passage of the pending bill, will be the answer of Congress to a universal popular demand that has become more exigent with the passing years.

From its inception our present banking and currency system has been under fire. Attention has been often called to its manifest defects, with the hope that some expert, or body of

experts, would prepare an alternative system that would rest upon some other foundation than the Nation's debt. But while many have essayed this task, their suggestions have not been approved by the business and banking community. The most ambitious of all of these schemes was the plan submitted to Congress by the National Monetary Commission, commonly known as the Aldrich bill. But this scheme which proposed to organize one great central bank, with 15 branches to cover the whole country, did not find either popular, or congressional favor. The popular objection to a central bank is inherent and deeply rooted. The fundamental difference between the Aldrich plan, and the scheme of the present bill, is that the latter utterly rejects the central-bank idea, and contemplates a division of the country, for working purposes, into 12 great divisions. In each of these divisions a Federal reserve bank is to be organized. These reserve banks are severally independent, but are subject to the supervision of a Federal reserve board, consisting of 7 members. This board has been described as the "capstone of the scheme." The composition of this board is as follows, the Comptroller of the Currency, the Secretary of Agriculture, the Secretary of the Treasury, and four others to be appointed by the President for respective terms of eight years. The personnel of this board gives ample assurance that the delicate duties imposed upon it, will be discharged with an eye single to the public good. With a view to making the appointments of a nonpartisan character, so far as possible, the bill provides that no more than two of the appointees shall belong to one political party.

Much criticism has been directed toward this feature of the bill, particularly by the big bankers of the country, who seem to apprehend that this measure will impose some limitation upon the opportunities for excessive profits which they have long enjoyed under the present system. But these criticisms are singularly lacking in merit. No banking function, in the proper sense, will be exercised by the board. Its powers are the essential and vital powers of oversight, and regulation. The chairman of the committee speaks of them as the powers that relate to examination, regulation, publication, and control. It is almost a sufficient answer to the savage criticisms which have been so directly aimed against this board, to say that the powers which are conferred upon it solely in the public interest, have, in large measure, been exercised for many years past by the Secretary of the Treasury, and the Comptroller of the Currency in the oversight, and regulatory control of the national banks. If the proposed system is to serve the purposes for which it is intended, namely the utilization of our banking resources in time of strain, so that the whole system will be tied together, one for all, and all for one, then not only must such a board be created, but it must be clothed with the very powers conferred by the pending bill. Chief among these powers is the right of the board to require that the Federal reserve banks shall rediscount the discounted prime paper of other Federal reserve banks in time of emergency.

It is one of the inherent weaknesses of the present system that "under strained financial conditions, each bank is thrown on its own resources, and in self-protection must act independently of all the rest. There is no provision whereby all can cooperate in time of danger, though it may be manifest that safety lies in a common policy of action, and cooperation. At such a time it becomes necessary in the protection and maintenance of individual reserves, for each bank in the national system to contend against every other bank, thereby dissipating and scattering the great bulk of the reserve money of the country, into a large number of small boardings, and completely destroying at the very time when strength and power are needed to retain and compel confidence, the strength and power that would be gained by unification, and massing of reserves for the mutual support of the banks, and the common good of the public."

In consequence of this and other defects in our present unscientific system, chief amongst which is the absolute rigidity of the currency which it provides, and the vast amount of reserve money impounded in the reserve safes of the national banks, and the United States Treasury, this country has been visited with frequent and dreadful panics during the last 50 years. Several times at least have these financial disasters occurred within the last three decades. At the very time when help was needed, the system found itself unable to launch a single lifeboat. No wonder that the financial experts of other countries have denounced the system in vogue in the United States as "barbarous." No wonder that our own experts, though smarting under the charge, have been unable to deny the justice of this criticism. For it has been patent to all that the "prohibition of the lending power of the banks, in the presence of unusual demands upon them, due to their lack of means to protect their reserves by the use of any satisfactory substitute

therefor, or of replenishing them through adequate rediscounting facilities" has caused them to be weakest, when they should be strongest, has curtailed their facilities, when the demand for credit was greatest. So long as the winds are fair, and the seas smooth, the most rickety and unseaworthy vessel may make headway. Such conditions are no test of the sailing powers, or reserve strength of the craft to which our fortunes are committed. The real test comes when the hurricanes blow, and the billows rise. Our currency system, sufficient under ordinary conditions, has been proved to be inadequate and insufficient when exposed to a real financial storm. If it may be fairly said in its behalf that at least it did not founder, it is further true that at such times it was water logged, and helpless. Small wonder, then, that all thoughtful men have been concerned to provide some sufficient alternative system for this fair-weather craft. Small wonder that President Taft, speaking of the currency problem, declared that it is more important than the tariff, more important than the question of trusts, and more important than any political question that has been presented.

Small wonder that bankers' associations, monetary commissions, and financial experts have in succession, suggested various remedies for an intolerable situation. Small wonder that even the Republican Party was moved to create the Aldrich commission which if it produced an impossible scheme, at least collected a valuable library for the benefit of all students of banking and currency problems. Small wonder that the Democratic Party, ever on the alert for legislation in aid of the interests of the people, committed itself in its last platform to a systematic revision of the banking laws of the United States. This bill is in redemption of that promise.

Fundamentally this measure is at variance in many directions with the Aldrich plan, but notably so in its provision for Government control, and precautions against the possibilities of undue inflation. The foremost advocates of the Aldrich scheme have been forced to admit that it contemplated "such vast credit extending power, as to be almost beyond belief, and certainly far beyond the requirements in any panic." President Wilson in his recent message happily stated the fundamental requisites of a sound and adequate currency system:

We must have a currency, not rigid as now, but readily and elastically responsive to sound credit, the expanding and contracting credits of every-day transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands, of the monetary resources of the country, or of their use for speculative purposes in such volume, as to hinder, or impede, other more legitimate, more fruitful uses. And the control of the system of banking, and of issue, which our new laws are to set up, must be public, not private, must be vested in the Government itself, so that the banks may be the instruments, not the masters of business, and of individual enterprise, and initiative.

Surely these are wise words, and it ought not to be hard to choose between a carefully worked out plan in which the control of the entire system of banking and of issue, is in the hands of the Government upon which rests the responsibility for the welfare of the whole country, and another scheme which remits this control to agencies created by, and responsive to the system itself. Strange to say however the sharpest attacks of the opposition are directed against the constitution and the powers of the Federal reserve board. The teeming imaginations of the gentlemen who are opposing this measure, have been overworked in the construction of direful pictures of woes unnumbered, to follow in logical sequence from this feature of public control, and the exercise of the power which is committed to the reserve board. This power has been described as the "power that would enable an administration to build up an invincible political machine, depress or stimulate the market, inflate the currency, favor one section of the country, and discriminate against another, and absolutely control the financial affairs of the people of the whole country."

It is needless to say that these suggested dangers are purely visionary. Theoretically in our scheme of government many things are possible, which never occur in actual practice. The time will not come, except with the failure of popular government, when a President of the United States, in the discharge of his responsibilities under this act, will undertake to hold up the whole financial system of the United States in the vain effort to further thereby the schemes of partisan politics, and of personal ambition.

The whisperings of conscience and the dictates of prudence will alike constrain the officials charged with the oversight of this vast system, upon which will hang the hopes of their country, to walk in the straight and narrow path of duty well done. Nor will another impulse to honorable action be lacking. Co-eternal with hope in the human breast is the ardent desire to hand down the rich heritage of a good name to our descendants.

Honorable men charged with the responsibilities of great position, mindful on the one hand of the interests of their country, and on the other of their own fair fame and reputation, standing well out in the open in all that they say and do in the discharge of these responsibilities, are not likely to prostitute their offices. If it is suggested that there is at least a possibility that this may take place, the sufficient answer is that this is a risk which must be taken whenever power is lodged in an individual, or an aggregation of individuals.

In aid of the reserve board, the bill creates a Federal advisory council to consist of as many members as there are Federal reserve districts. It is provided that each reserve bank, by its directors, shall annually select from its own Federal reserve district one member of this council. The meetings of the council shall be held in Washington at least four times a year, and oftener, if called by the Federal reserve board. This council is empowered to meet and confer with the reserve board on general business conditions, to make oral or written representations concerning matters within the jurisdiction of the board, to call for complete information, and to make recommendations in regard to discount rates, rediscount business, reserve conditions in the various districts, the purchase and sale of gold, or securities by reserve banks, and the general affairs of the reserve banking system.

The value of this board composed of men of affairs, skilled in practical banking, and acquainted with the conditions of business not only in their respective districts, but in the country at large, can not be overestimated. It passes belief that the reserve board, in the discharge of their delicate and difficult duties, would be unmindful of the weighty recommendations of such a board as this, or would not at all times welcome their suggestions, and often defer to their judgment. Through this advisory council, the reserve banks, to a substantial degree, will have a potential effect upon the deliberations, and policies of the reserve board.

It is true that the advisory council does not vote in the deliberations of the reserve board, and has no veto power over its orders. This feature of the bill has been the subject of acrimonious criticism on the part of many bankers. But the fundamental conception of the pending measure is a banking system free from the dominating control of that mysterious but real power, known as the Money Trust.

Having agreed upon this fundamental concept, and provided that the firm control, and steadying hand of Government authority shall at once guide and restrain the further course of banking operations in this country, it would be a manifest incongruity to subject the action of the reserve board to a veto power lodged in a council created by the very agencies intended to be restrained. The reserve board must, of necessity, be paramount and supreme, or the bill will fail in its manifest purpose. This measure is a beneficent creation, and not a malign monster, and the Democratic Party, in good faith, tenders it as the solution of a problem which has engaged the best thought of this country for many decades past. It is a constructive, not a destructive work that we present. While many abuses in the banking world have been uncovered by the investigations conducted by authority of Congress, and great potentiality for mischief lurks in the present system, we have approached our task of reformation in no spirit of hostility to the banking business. Far from it. The Democratic Party is well aware, that in this, as in all countries, now and at all times, a properly conducted banking system is necessary to the prosperity of every well-ordered community. It is our sincere desire to furnish, through this bill, an up-to-date system, and thereby promote the welfare, not only of the bankers, and of their customers, but of all the industries and interests concerned. The present system is not wholly bad, nor is it a reflection upon what is good in that system, to seek to rectify its abuses, and correct its possibilities for mischief.

The Democratic Party is not alone in its belief that reform in our present system is a crying need, nor is this the first step in that direction. The Lovering bill, and the Fowler bill were tendered some years ago to our Republican confrères by their respective sponsors, and rudely rejected. Later, that hasty enactment known as the Vreeland-Aldrich bill, provided for an emergency currency which has never been emitted. Still later, the Monetary Commission formulated the famous Aldrich bill which has declined in favor from the first day on which it was presented to the public, and is now thoroughly discredited by reason of certain very objectionable, not to say dangerous provisions which it contains, and upon which its friends insist.

One thing, at least, may be said to the credit of the national banking system; and that is that whatever may be its defects in other directions, it has given us a good dollar, one good at all times and everywhere. This fact, and it is a material fact, for the paper money of this country prior to the Civil War, was

far from satisfactory, has so much impressed the public mind that it has served to perpetuate the system, and postpone the reformation of its vital defects. No alternative system that does not provide for note issues, or bank issues, as good as the present issues, would ever be acceptable to the country, or win any decided measure of public favor. The pending measure provides that the Government shall issue Treasury notes through the banks, and solely upon the application of the banks. The provisions of the bill are that Federal reserve notes are authorized to be issued at the discretion of the reserve board, and for the purpose of making advances to reserve banks. These notes are to be the obligations of the United States, and receivable for taxes, customs, and other public dues. They are redeemable in gold, or lawful money, on demand at the Federal Treasury in Washington, or at any Federal reserve bank. Any reserve bank may make application to the local reserve agent, for such amount of Treasury notes as it may deem best. This application must be accompanied with a tender of collateral security equal in amount to the sum of the notes applied for. This collateral security must be notes and bills accepted for rediscount.

At any time the reserve board may call upon a reserve bank for additional security to protect the notes issued to it. In addition, whenever a reserve bank shall pay out reserve notes issued on its request, it shall segregate in its own vaults, and shall carry to a special reserve account on its books, gold or lawful money equal in amount to 33½ per cent of the notes so paid out by it, such reserve to be used for the redemption of said reserve notes as presented. Any Federal reserve bank, so using any part of such reserve to redeem notes, shall immediately carry to said reserve account an amount of gold, or lawful money, sufficient to make said reserve equal to 33½ per cent of its outstanding Federal notes.

Hence, it will be noted, that the foundation of these notes is of a most solid and panic-defying character. First, there is the obligation of the Government. Second there is approved collateral, equal in amount to the face value of the notes. Third, the reserve notes issued to any reserve bank, shall, upon delivery become a first and paramount lien on all the assets of such bank. Fourth, a special reserve fund of gold or lawful money is provided, to be segregated in the vaults of the bank, and equal in amount to 33½ per cent of the reserve notes paid out by it.

Who will dare maintain that the new reserve notes, so buttressed and supported, will not be as good as gold anywhere, and under all circumstances? Certainly no critic of the bill has undertaken to maintain otherwise.

A cardinal defect in our present system, recognized as such by the currency commission of the American Bankers' Association, is its lack of elasticity, or, to use their language, its absolute rigidity:

A bank, in order to take out circulation, must invest more money in Government bonds, than it is permitted to issue in currency, thereby impairing, rather than increasing its power to aid trade and commerce.

Responding to the query, whether an elastic currency should be authorized by law, the same commission declares that an elastic currency is a vital necessity in connection with the banking and currency system of the country, and should be authorized by law.

The national-bank notes could never be made elastic, for the simple reason of their fixed relation to the bonds of the United States. For this reason they must remain rigid and unalterable in amount. It has been remarked, in the course of this debate, by the gentleman from California, Mr. HAYES, that these notes, so far from responding to the demands of commerce, that is increasing in volume in proportion to the demand, and diminishing as that demand passes, actually increase, as a rule, when "the demand is least, and decrease when the demand expands. In the fall, which is the time of great currency demand, the amount of bank notes in circulation, generally decreases several millions of dollars, and in the spring, when the demand is light, the circulation has many times increased, sometimes as much as \$20,000,000 over the circulation in the fall. This, of course, is very unnatural, and the results are evil, accentuating the shortage of currency in the fall, and stimulating speculation in the spring."

When crop-moving time arrives, the demand for money frequently becomes acute. The local banks are often unable to meet this demand, and in their distress turn to the great banks in New York City, which heretofore have measurably carried the balances of the country. It is unfortunate that this has been the case, for it has tended to give an undue and preponderating influence to these banks, and create a sense of weakness and dependency in the country banks. Another feature of the present system which has tended to localize too much of the money of the country in New York, has been the increas-

ing tendency among the small banks to keep balances for reserve and exchange purposes, in the New York banks qualified as reserve agents. Hence, at times, New York has been so abundantly supplied with money that many forms of vicious and dangerous speculation have been stimulated to the great detriment of honest business. This withdrawal of funds from the local banks, and consequent congestion in New York, has an evil effect in another direction. In time of panic the country bank finds that a large proportion of its loanable funds and reserve money is tied up in New York.

The local bank may be perfectly solvent, with an ample supply of commercial paper, but commercial paper will not be accepted by its demoralized and excited depositors, and there is no efficient way in which these securities may be turned into cash, or any system of coordinated banks to which, in its distress, it may turn for aid. Single handed and alone it must fight its battle.

The currency provided for by this bill, and issued to the regional reserve banks will be responsive to the "varying commercial demands of the business community." Any local member bank needing money can carry its commercial, agricultural, or industrial paper to a Federal reserve bank, and after indorsing these securities, may discount the same, receiving notes therefor. Under the operations of this bill expansion will certainly take place, but healthy expansion is not inflation, and therefore is to be desired, not deprecated. In every direction the tide of the world's business is continually rising. To this tide, there is no ebb. Local recessions may occur, but the general movement is ever upward. The extent to which these notes may be issued, is determined by the discretion of the reserve board, acting upon the collateral that is tendered by the member banks. There are no means of compulsion that can be set in motion by the banks which tender the collateral, to compel the issue of Treasury notes. In this respect they are subject to the wise discretion of the board, reinforced by the suggestions of the advisory council.

It has been noted as a further defect of the present system, that it "lacks cohesiveness, there being no provision for co-operation among the banks composing it." In recent years the banks gradually learned the lesson that they must provide for cooperation by voluntary agreement, and in various sections of the country during the panic of 1907, these agreements saved many banks from ruin and disaster. In numerous instances menacing runs were averted by clearing-house certificates. One main purpose of this act is to knit together the national banks by a scheme of definite coordination. State banks, banking associations, and trust companies may subscribe to the stock of the appropriate reserve bank, under the conditions prescribed by the act. Once the new system is put into operation, certain very definite and positive advantages will follow.

The sense of weakness that attaches to individual enterprise, will be removed. In its place will come the confidence that follows coordinated participation in a great plan of cooperative action. Heretofore, until the formation of clearing-house associations, the individual banks fought their own battles, and established their own connections. Sometimes these connections proved to be broken reeds. A run is the most dreadful thing that can happen to a bank. The community loses its head. The depositors in excited throngs jostle each other in their frantic efforts to be the first to remove their deposits from the institution under suspicion. If continued, a run will drive any bank, however inherently sound and well conducted, to close its doors. The new system will be a prophylactic. It will steady the public mind by giving them confidence in the banks. In addition, it will furnish the member banks with "sources of strength in time of stress." Any bank short on cash, but supplied with good collateral, can secure all the money that it needs, either to meet a run, or for crop moving, by application to a reserve bank. Freed from their dependence on New York, and strengthened by their relationship to the new system, the country banks will be increasingly potent in their contributions to the growth and prosperity of the country. A simple illustration will suffice to show the steps by which a member bank will secure the funds necessary to meet a shortage, however occasioned. So far as the public is concerned, the patrons of such a bank will do business in the accustomed fashion. A, B, or C, wishing to raise funds to pay for land, to purchase goods, or to conduct any legitimate operation, commercial, agricultural or industrial, will take his notes to the local member bank, and discount them. Later, the bank may find that its supply of money is running low, dragging it for loanable funds, or threatening trouble in other directions. Formerly it turned to New York as its port in time of storm, but in the future, safety and relief will be found nearer home, in a bank with which it is intimately associated, and created for just such emergencies.

The member bank will take its paper to the regional reserve bank for rediscount. Should the reserve bank need the money with which to complete the transaction, and supply the wants of the member bank, it will take the rediscounted notes to the local Federal reserve agent, and request the issue of Treasury notes to the amount of the paper presented. Crop emergency periods have heretofore proved to be occasions of trouble and anxiety for the country banks. During these periods the cry for money with which to move the crops is urgent and insistent. Sometimes the Treasury Department has furnished essential help. Frequently, the country banks finding themselves at the limit of their loaning power, have been compelled to secure the money required for their operations, at exorbitant rates. Ordinarily this may not have been true, but in times of stress the sources of supply were uncertain and capricious. The panic of 1907 is often cited as a money panic. Business was at high tide, and crops were abundant. Out of that very abundance proceeded trouble. Called upon to furnish the needed currency, the banks approached the danger line fixed by the reserve laws in their efforts to meet the demands of their customers. In proportion to the reluctance of the banks to trench upon their reserves, and furnish additional money, the clamor for more money became increasingly violent. Suspicion and distrust stalked abroad. The banks took fright, and organizing for mutual protection, refused to provide the money needed, and in many instances, even to pay the balances to the credit of other banks. Business halted at full tide, freights ceased to move, industrial operations were curtailed, men walked the streets vainly looking for work, and distress like a pall settled over our fair land. In time the cloud lifted, but the lesson of that near disaster is not far to seek, and that lesson is that no system is fundamentally sound which, so far from affording relief under these recurring conditions, actually aggravates the mischief. It is not enough to furnish a good dollar. This is only one necessary feature of a comprehensive financial and banking system. Such a system must go a step further, and furnish an abundant currency, when such a currency is required. This is what the pending bill proposes to do through the machinery which it provides.

The reserve banks are so constructed that they will be provided with ample capital, and their business will be of the most solid and substantial character. The national banks located within a given district, will be required to subscribe to the capital stock of the Federal reserve bank of that district, a sum equal to 20 per cent of the capital stock of such national bank, fully paid in and unimpaired. No reserve bank shall commence operations with a paid up, and unimpaired capital, less in amount than \$5,000,000, and the shares of the capital stock of Federal reserve banks shall not be transferred, or hypothecated. The member banks will receive a cumulative 5 per cent dividend on their paid-in stock in the reserve bank, and a participation in certain further profits. State banks, banking associations, and trust companies, as heretofore noted, may become stockholders in these reserve banks which hold out great possibilities of profit from their legitimate operations. Should a regional reserve bank find itself in difficulties, a section of the bill provides that the reserve board, in time of emergency, may require other Federal reserve banks to rediscount the discounted prime paper of that bank. Thus the banking strength of the whole system may be mobilized when occasion requires. The regional banks provide for the wants of the member banks, while a failing, or halting regional bank is taken under the sheltering wing of the whole system. It is apparent that under the operations of this bill, in normal times, the money of the country will be localized, and distributed with far greater uniformity than exists at present; while the resources of the whole system may be concentrated at any point of danger, or center of disturbance. One feature of the pending bill, which is of particular interest to rural communities, is the provision for rediscount.

Under section 14, any notes or bills, drawn for agricultural purposes, or the proceeds of which have been, or may be used for such purposes, may be discounted by the appropriate reserve bank upon the indorsement of the member bank, these notes and bills to have a maturity of not more than 90 days. It will be noted, that by the operation of this section, long-time paper may be discounted by the reserve banks. Suppose a farmer, needing funds, obtains a four months' loan from the local member bank. At the end of 30 days this note could be rediscounted with the reserve bank, and the proceeds of the note thereby made available for further loans. Should the member bank choose to renew the farmer's loan at the expiration of four months, its own liability to the reserve bank could be discharged from other funds received in due course of business, while at the expiration of 30 days, the renewal could be rediscounted. Thus the provisions of this section serve to multiply

the loaning power of the member banks. While some criticisms have been directed toward this portion of the bill, these criticisms have proceeded, in large measure, from a pure misconception of its meaning, intent, and effect. Another feature of interest in the pending measure, and one devised for the benefit of the farmers, is the section providing for savings departments in the national banks. Any national banking association, on application setting forth that it has complied with the terms of the statute, may be authorized to open such a department. The beneficial effect of such an annex, or department in the country banks, will be clearly manifest, when it is noted that in this department loans may be made upon the security of real estate. By this provision the present limitation on national banks, with respect to loans on farming, or other lands, will be removed, and the banks will thereby be enabled to supply a long-felt want.

The farmers have always complained, and justly for that matter, that the present system discriminated against them, and extended superior opportunities for credit to the merchants and manufacturers. This bill removes that inequality, and places the farmers upon a basis of equality, in the matter of credit extensions, with the other classes of the local community. We have tried the old way and it has proved to be insufficient. With the passage of this bill, the old will be replaced with the new, and I firmly believe, the better way. This bill is an intelligent and patriotic effort to take the great underlying principles of well-established banking institutions, including our own, and upon that foundation construct a modern, up-to-date system adapted to the habits, sentiments and business needs of our people. Too long has our financial legislation been of a patchwork character, a thing for the needs of to-day, rather than for all time. This bill marks the end of tinkering with the old system, of devising emergency schemes for anticipated trouble, of putting new cloth on an old garment. That system has been weighed in the balance, and solemnly adjudged by all men to be wanting. There are none so poor to do it reverence. It has been a conspicuous success in one particular, and a failure in many others. Even its commonly ascribed merits, namely that it has furnished the Government with a market for its bonds, and furnished a bank note circulation of undoubted strength and uniform value, are offset in the opinion of the bankers, by the fact that "the artificial market maintained for Government bonds, has been so maintained at the expense of the banking development, and commercial growth of the country, both of which have been seriously retarded by the costly periodical panics, for which the defects of the banking and currency system are principally responsible." This is a serious admission by the men who have been concerned with the administration and development of this barbarous and unscientific system. No language is too severe in criticism of a system, charged by the bankers themselves with responsibility for the ruin and misery occasioned by the panics of recent years, panics which have been worse than battle, murder, and sudden death.

The pending measure is not offered as a panacea for panics. Nay, rather, it is intended to avert panics. It is a challenge to the money power. It marshals the forces of the Government in one comprehensive plan, to afford the fullest opportunity for development to every healthful scheme of commercial, industrial, and agricultural development. It stabilizes our currency, and provides that an expanding want shall be furnished with an expanding supply. It opens the door of hope, and exorcises the specters of distrust and apprehension. The very magnitude of the institutions which it creates, the relationship which it establishes between those institutions, backed as they will be by the power of the Government, will steady the public mind, allay their fears, and thus avert panics. When money is required, it will not be afforded on terms that will increase in severity in proportion to the urgency of the demand, but a key is furnished whereby unfailing springs of supply may be unlocked, should occasion demand, or panic rear its horrid head. The country will save itself by the exercise of its own powers, and will be spared the humiliation of salvation through the efforts of agencies which have taken to themselves the powers, and assumed the attributes which belong to their creator. Never again will this country know the shame of dependency on the banks of one great city for the means to move its bumper crops, or find itself facing disaster when the money needed for such a situation, is not forthcoming.

This measure will compose the minds of those timid voters who deprecate any changes in the laws which establish our tariff rates, lest in that event the offended money power might, in some mysterious way, withdraw the money needed for the conduct of our industrial enterprises, and by closing the sources of supply, bring on ruin and disaster, thus compelling a return to the old ways, and the old rates. Surely a bill that will afford the reforms provided in this measure, deserves our ardent sup-

port, and the approbation of the entire country. It makes its appeal to the thoughtful and patriotic men of all parties. Conceived in no desire for partisan advantage, intended to promote no schemes of selfish interest, designed to enlarge the operations of the banks, and enable them to perform their functions in a more helpful and beneficent fashion, this bill undertakes to meet the requirements of modern conditions. It furnishes a currency "elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings." It arranges to mobilize the reserves. It renders impossible "the concentration of the monetary resources of our country in the hands of a few, or their use for speculative purposes in such volume as to hinder, or impede, other and more legitimate and fruitful uses." It vests the control of our system of banking and issue "in the Government itself, so that the banks may be the instruments, not the masters of business."

It is the answer of the Democratic Party to a long, insistent, and clamorous public demand, and on this measure we challenge an appeal to the country.

Mr. KINKAID of Nebraska. Mr. Chairman, in my estimation, rightly comprehended, the securing of a scientific banking and currency act is one of the most important, if not the most important, of our economic questions. Some high authorities even believe it comes near to comprehending all political economic questions in one. As our country advances changes will from time to time be made for better and more scientific banking and currency laws, but, optimistic as we may become, we can hardly hope to attain soon a perfectly fair and sound money or currency. But we may more nearly approximate the goal by legislating a new system, and such should be our earnest aim. Money standards are likened to the means of measurements and are often compared to the length of the yardstick, when the fact is the length of the yardstick does not change, but the values of real moneys, and likewise their substitutes, such as paper currencies, do constantly vary in values, both from natural and artificial reasons. There can be no question but that material increase and decrease in the production of our standard of value, gold, have their corresponding effects upon the value of products, of property, of labor and, consequently, on the cost of living. The theory of the virtue of gold as a money standard is that it contains no fiat, but instead rests upon its own intrinsic value; thus, it logically follows that its value must increase and decrease under the law of supply and demand like other commodities. We have had many demonstrations and verifications of this principle. Mr. Chairman, we can not control the supply of gold, hence can not commercially regulate its value; but when legislating for a paper or credit currency we should strive to so legislate as to prevent expansions and contractions for private gain, at the sacrifice of the public, and such safeguards should be secured in currency legislation. The aim should be to preserve intact the length of the imaginary yardstick, to the end that every individual shall be secured his own and no more.

CHECKERED CAREER.

Mr. Chairman, our banking and currency laws have had a checkered career. Our aims were all right at the start for a national currency. We made a good start by our second Government bank, but the successful war made against it by President Jackson and the nonfulfillment of the promises made by President Tyler to restore it by legislation, by his refusal to sign bills passed by the Congress in fulfillment of platform pledges made during his campaign, rendered impracticable and impossible, for a long term of years, the use and enjoyment by the United States of a national paper currency or a national system of banking and currency laws. The deplorable result was that the Government was inflicted until the Civil War with State bank currencies of many varieties, most of it unsecured and irredeemable, depreciated and depreciating, fraudulent and dishonest. True, there were some highly creditable exceptions; a few of the State banks were conducted upon issued notes which they were pledged to redeem and which they did redeem and constantly maintained at par. Such banks did much for the business and commerce of the country, and in many instances rendered praiseworthy and patriotic service to the Government.

NATIONAL BANKING ACT.

Mr. Chairman, our present system, our national banking laws, constitute the solution of the combined exigencies arising out of the operation of State banks and the demands of the Civil War. The national banking act as completed by amendment the year following the initial enactment, relatively considered, was one of the greatest achievements of financial legislation. True, experience has shown that it contained defects, but it must be plain that it would have been impossible, even if a system of elasticity such as is now generally commended had been con-

ceived, to have made it acceptable and successful under the then existing exceptionally unfavorable conditions. It was necessary to be constructive from the viewpoint of the then existing environments. With the Union itself imperiled, with the large Civil War debt already incurred, daily increasing by the millions, with the consequence of greatly impaired Government credit and interest rates increasing, and, added to this, the demoralized condition of State-bank currencies, the plan evolved and adopted in these darkest hours of our Republic, by the tests made of it for now nearly 50 years, show Secretary Chase and his most active supporters entitled to have their names placed with the greatest of the architects of financial systems. For this achievement Chase could not have been more than fully rewarded by an election to the Presidency. Mr. Chairman, I regard this tribute as due the great Secretary of the Treasury and the national banking act, despite the fact that I entertain a very decided conviction that the system is fundamentally defective and unscientific. The act was the very best that was securable under the unfortunate existing conditions.

Mr. Chairman, the effect of the national-bank act was to immediately emancipate the United States from the hitherto State-bank currencies, so pernicious and demoralizing in trade, and to supply instead a national currency—honest, safe, and sound, and redeemable at par and acceptable at its face value everywhere. Not the least of the virtues of the system was that a market was made for the bonds of the Government at lower rates of interest than hitherto obtained. With this added market for bonds and the agency of greenbacks the administration was able to keep pace with the extraordinary demands. Without particularizing, the act was one of the greatest of the war measures. Its effect was like a breastwork for the preservation of the Union.

Mr. Chairman, it is clear it has been the judgment of a large percentage, if not a large majority, of the membership that banking and currency legislation should not be hurried through at this extraordinary session. It was thought at the start that it would suffice to pass a tariff-revision bill at this session. I am frank to say I have personally shared in this predilection, but for the reason only that I felt sufficient time would not be permitted to do justice to the subject. I regard it as well settled by the consensus of opinion of those who have enjoyed the greatest amount of experience and have given the subject the most careful study and attention that our present banking and currency system is fundamentally defective and unscientific. It is my judgment that a new system should be legislated for so soon as the subject may be given that careful, deliberate, and thorough consideration which its very great importance requires. I am ready to meet the question now and to remain here even until the commencement of the next session, in December, assuming enough others are so disposed, for the purpose of passing the right kind of legislation. I am thoroughly convinced that much may be done for the public welfare by the adoption of a new system which will afford an elastic currency, to expand and contract in keeping with the volume of legitimate business and otherwise meet the reasonable wants of trade. I should have liked much to have voted for such legislation in the last two previous Congresses, after much preparation had been made in the gathering of statistics and information bearing upon the subject, but factional differences rendered this impracticable.

Mr. Chairman, I regret to be impelled to the belief that the provisions of the present bill, duly enacted and put into operation, would not facilitate and subserve business transactions and business interests as it is conceived a thoroughly scientific system should accomplish. Being truly desirous of a complete change in our banking and currency system, believing the welfare of the country may be greatly advanced thereby, I shall hold myself constantly open to conviction of the merits of the different provisions; but I am now duly admonished by the action of the caucus, adhering so determinedly to the provisions of the bill as they were when it was submitted to the caucus, and what has already transpired here on the floor of the House that while it is possible I do not regard it as probable that such amendments will be secured in the House as will remove the serious objections I entertain.

Mr. Chairman, unless most of my objections to the provisions of the bill shall be removed by amendments made in the House I shall deem it a duty I owe to my constituents and the country in general to persevere in behalf of such changes as my judgment commends; I shall consider it my duty to continue with my protests that the same may be considered, with the objections of others, by the Senate, and that such weight be there given to our views as in the judgment of that body they may be entitled to receive. I am optimistic enough to feel warranted in predicting that if amendments are not made in several

material respects here in the House that the bill will be changed in most, if not all, of these respects in the Senate and that finally I shall have the pleasure of voting for a bill containing provisions, if not entirely satisfactory to me, yet not so seriously objectionable as is the bill in its present form. So long as it is my judgment that the bill is not the best that ought to be attainable by the Congress and there is another body to appeal to in behalf of improvements I shall deem it my official and constitutional duty to earnestly continue my objections in behalf of changes which commend themselves to my judgment.

Mr. Chairman, what I have said so far is with respect to commercial banking, but really I think banking and currency legislation will only have been halfway completed when we shall have duly legislated for commercial banking. In my judgment it is equally important that we promptly legislate for a rural credit system, for banks or associations or institutions duly constituted to loan money in farming communities. More than a year ago I commenced my preparation for the drafting of a bill of this kind, but a press of work then more exigent caused me to delay the matter until one or two bills had been introduced by other Members upon the same subject, since when I have been content to join with others in behalf of the desired legislation to be secured through the agency of one of these bills. If the right kind of legislation can be secured for meeting the wants of rural communities with loans at living rates of interest, such rates and terms and times of payment as are consistent with the farming industry, I shall be gratified without being entitled to be credited with the authorship of a bill. The majority party having and fully exercising, in this instance, its control over the bill, has decreed, and that in solemn party caucus, that this branch of legislation must go over to the regular session, so all that the opposition can do is to respectfully submit; but I predict that if such legislation shall not be passed at the regular session the country will hold as very derelict the membership responsible for the omission.

POLITICAL.

Mr. Chairman, I regret very much to be impelled to the conviction that it is a mere theory to be talked about and commended—not to be fulfilled—that banking and currency legislation should and would be nonpartisan. If one side, and that the majority side, makes it partisan, this renders it impossible for the minority to preserve the legislation as nonpartisan, however much they may try. Quite a number on the minority side, and a lesser number of Democrats not feeling bound by the action of the Democratic caucus, have on this floor earnestly protested against the extremely partisan way in which the bill, constructed by whom they do not know, was put through the majority-side caucus, thus binding the majority membership to its support throughout. It would seem the bill was made up for the Democratic caucus for it to adopt, and that very few, particularly in the first instance, were permitted to participate in the very exclusive council self-appointed to draft the bill.

The secrecy, mystery, surrounding the origin of the bill is, to say the least, very incompatible with present-day professions that the white light of publicity be kept upon the acts of public officials, especially the acts of our highest legislative body.

Mr. Chairman, the public interests involved in this subject of legislation are too great to justly permit of any partisan predilection prejudicing the merits of the bill in the minds of those who seek only to conserve the interests of the public. Personally I shall strive to hold myself free from any political bias, however great the provocation, and to give the same favorable consideration to the provisions of the bill as I should have felt disposed to do had it come before the House with the unanimous report of the committee composed of the different political parties.

Mr. Chairman, that the principles involved in the provisions of the bill are so very inconsistent with and repugnant to the foundation policies of the old Democratic Party should not affect the bill unfavorably. The fact that the decentralization of Federal power has always been one of the principal tenets of the Democratic Party and that the bill is the very essence of power concentrated in the National Government need not be taken into consideration by Republicans. The Jeffersonian doctrine, so often affirmed by his Democratic devotees, "The least governed the best governed"—even the pending bill constitutes an extreme example of the most governed—need not be taken into consideration. The fact that the Democratic Party is changing its front on principles need not prejudice the bill. On the contrary, if the Democratic Party is to continue in power, the only hope of the country may be that it will make a radical change of its policies.

Mr. Chairman, it can not be gainsaid that the bill constitutes an intricate network of power over the banking business very strongly centered in the Federal reserve board. Function upon

function, power upon power, is heaped upon the board. It will possess the powers expressly given it, and with it its implied powers, which may prove greater still. It will possess all its own power, express and implied, and in addition, by reason of possessing the authority to discharge from office and fill vacancies, prescribe policies, and fix salaries, it will possess all the power of the subordinate officers.

But I shall grant that this may be necessary, in a large measure, in this kind of legislation, and I am willing to go to a reasonable limit in this respect, if the bill may be improved in other respects, for the purpose of affording a fair experiment of such provisions and the kind of a new banking and currency system we have in contemplation. I appreciate great latitude must be accorded and exercised to meet the different conditions which may arise, with their various extremes and at times exigencies, the extent of which latitude could hardly be fixed by statute, and to meet which wants our present system has proved to be wholly inadequate. But I do maintain more autonomy should be secured to the subordinate officers, or that they should be more exclusive in the sphere in which they act. Dominated as the bill with its present provisions would permit, the officers lower than the reserve board should hardly be called officers. They might be more properly called clerks of the Federal reserve board.

Mr. Chairman, I entertain very serious objections to the clause that notes authorized to be issued shall be redeemable in gold or other lawful money. My objection is to the words "or other lawful money." To retain these words in the enactment, the result of the legislation must be admittedly retrogressive rather than progressive, and I think it will be agreed on all hands that the Congress is now making an earnest effort to be scientific and progressive in banking and currency legislation. Payable in gold or lawful money renders the promise a no greater one than to pay in the least valuable money or currency. I think it will be agreed that it is against sound policy to have cheaper and dearer moneys, and while such conditions may unintentionally be brought about it certainly would be unpardonable to consciously legislate therefor, which this very clause would do. By adhering strictly to the law of 1900, establishing the parity of our different moneys and currencies, we avoid any disadvantage existing in the difference of their values. Not only this, we avoid multitudes of difficulties and injustices which would result with the old condition reinstated, which the words "other lawful money" would bring about. The interests of the public and the interests of every individual in our country will be subserved by maintaining as equal in value, or on a parity, every dollar made standard or lawful money; in other words, every dollar should equal in value every other dollar authorized by law. We should have no one money or currency better or poorer than another.

Mr. Chairman, I do not coincide with the views of those who find serious objection to the compulsory requirement that national banks shall adopt the new law or forfeit the charters they now have. To permit national banks to adopt the new law or continue under the present system at their option would, in my judgment, make the success of the new act wholly impracticable. Besides this, the principle would be wrong, while adopting a new system, believed to be a great improvement upon the old, to permit a bank, or even a number of banks, to constitute an obstacle in the way of its adoption and success. It seems plain to me that the new act could not possibly succeed without being generally, if not universally, adopted by the national banks. Therefore, to give national banks their choice either to adopt the new or continue under the old system, to say the least, must result in delay and confusion, with the resulting demoralization in banking, which would spell failure for the new system, however meritorious it might be. Prudently, Congress must say whether we are to have an exclusively new national system or adhere to the old. To leave it to the option of bankers to adopt the new or to divide in the use of two systems would augment rather than decrease the disadvantages of the present system. In my judgment such a division would result in a crisis. Its success would be even far better assured if in addition to being adopted by our national banks it be also largely adopted by our State banks, but, of course, State banks must have their choice to adopt or not the new system. Essentially the system must be very generally adopted, if not entirely adopted, by national banks in order that its merits may be afforded a fair opportunity for a test.

Mr. Chairman, I am not allowed the time either to make all the criticisms I would otherwise make of the provisions of the bill or to express specifically my approval of such parts as I find acceptable. The basic principle of the bill for an elastic currency meets with my hearty approval; but, in my judgment, in order to best subserve the interests of the public, material

amendments should be made in its details. Unless such amendments shall be made in the House I shall unhesitatingly vote against the enactment of the bill and await the action of the Senate, and with confidence, too, that more or less improvement will be made by the upper body.

Mr. BULKLEY. I ask the gentleman from California [Mr. HAYES] to use some of his time.

Mr. HAYES. I yield 15 minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. KELLY of Pennsylvania. Mr. Chairman, with all others here present I have listened with great interest to the instructive speech of the gentleman from Ohio [Mr. FESS], and have appreciated it the more from noting in to-day's press that at a meeting of the Ohio bankers in Cleveland yesterday only one banker was willing to declare that he understood the contents of the Glass bill.

The bankers of this country are directly affected by this bill and should at least know its provisions, but of just as much importance is the effect upon the people, and their interests as well as those of the bankers depend upon the attitude of this lawmaking body toward this legislation.

Underneath the fact that this bill is before Congress and underneath all the speeches of this debate is the recognition of the predominant problem in America to-day. It has many phases, and some of them have already been considered, while others are yet to come before this body for action. But, however expressed, it is the same problem—that of securing a more just distribution of wealth between the factors producing it.

The production of wealth has monopolized attention largely, and America has astonished the world by her success in that direction. Crops and manufactured articles to the value of thirty billions are produced every year. Hundred-handed machines, directed by intelligent workmen, pour out a stream of all the countless products necessary to twentieth-century civilization. The increase of wealth between 1800 and 1910 was twice the entire value of the Nation in 1870. One year of modern American progress adds more to the total wealth than a century of earlier American history. The per capita wealth in 1870 was \$708; to-day it is almost \$1,400.

The problems of production have largely been solved, but the problems of distribution have been neglected, and they now confront us with a profound menace.

Concentrated wealth and diffused poverty have become national characteristics. With 96,000,000 of people and wealth of one hundred and twenty billions, 10 men have personal fortunes of three billions and one group of financiers controls twenty-two billions of dollars. While the average worker produces \$1,300 of wealth every year, after allowing for the cost of materials and necessary expenses, he gets but \$435 of the amount. Two-thirds of the wealth he produces goes to other men. As a result the average man is finding it increasingly difficult to make his income meet the actual expenses of livelihood for himself and family. Soaring prices for the necessities of life mean that he must live from hand to mouth and in constant dread of any misfortune which might prevent his ability to work for even a short period. Little children are compelled to toil while able-bodied men go idle. With all the marvelous production of wealth millions of American citizens are in poverty. With bumper crops and gigantic output of commodities, they are ill nourished, unprotected, and ill clad.

Such conditions, growing more pronounced every year, are filling the land with distrust and discontent. They vitally affect the Nation, for no nation can remain stable and secure when millions of its citizens are systematically starved in body, mind, and soul, while at the same time a few men add to their colossal fortunes through injustice and oppression.

Carlisle phrased a question and answer which applies most forcibly to the conditions of to-day:

How have you treated us, how have you taught and led us while we toiled for you? The answer can be read in flames over the nightly summer sky. This is the feeding and the leading we have had of you. Emptiness of pocket, of stomach, of head and of heart. Behold there is nothing in us, nothing but what nature gives her wild children of the desert—ferocity of appetite, strength grounded on hunger. Did you mark among your rights of man that man was not to die of hunger while there was bread reaped by him? It is among the rights of man.

It is not too much to say that concentrated wealth and widespread poverty form the greatest curse in this Nation to-day. It is the parent evil, and other evils are its offspring. It is the cause of the conflict between capital and labor. It erects a barrier between class and masses, and lends strength to the arms of anarchists and all assailants of government. It has a vital bearing on corruption in politics because some men are rich enough to buy others so poor that they are tempted to sell themselves.

That a large part of this inequality is due to financial jugglery is apparent to every unbiased and thoughtful observer. The

control of money and credit is the power of life and death. Through the exercise of that power in private hands inflation and contraction have reaped their harvest of gains to the few and losses to the many. Artificial panics have been manufactured and false booms engineered, while the masses of the people have paid the full cost. Through this control a few men in this Nation have secured a hunger hold upon the people, and it becomes the imperative duty of Congress to face the facts fairly and unafraid. To destroy so great an evil should be the first aim of every patriotic legislator. Justice and the common heritages of citizenship demand its overthrow, and that demand is at the bottom of the widespread desire for banking and currency legislation at this time.

I believe that determined and radical action is imperative, and that no milk-and-water remedies will avail. I would not in any degree lessen the regard for the rights of wealth. I believe it has its rights and should be accorded full justice. But when the confederated money interests of this Nation seek to rule the Republic, when they flaunt their power in the face of the citizenship, when they dictate the making of laws or prevent the fair and free administration of law, I maintain that the time for forbearance is over and the time to strike has come. These interests have themselves forced the issue and we must decide whether manhood or money is to rule in this Nation.

The banking and currency questions are at the very source of this problem of the distribution of wealth. The financial system determines the relative prices of commodities, and upon these prices rest in a large measure the distribution of wealth. If it be true that these questions are of such vital importance, it should follow that the political parties of to-day should have principles of action which should coincide with fundamental beliefs of the parties. But we do not see such a dividing line, and that accounts for the bitter denunciation of this measure on the part of Democratic Members and the support of its provisions on the Republican side of the Chamber. If any one thing is patent in this debate it is that there must soon come a new alignment among political parties of this Nation. There has been little said during this debate concerning principles, but there has been a great deal said about interests. There must come soon a real dividing line between the parties, and it must be a line of principles instead of interests.

To my mind, that dividing line will be that which separates the national idea from the individualistic idea and the commercial idea.

The gentleman from Georgia [Mr. HARDWICK] and the gentleman from Texas [Mr. CALLAWAY] have given able expositions of the individualistic idea, which is fundamental with the Democratic Party. They object to the centralization of authority contained in this bill and uphold personal liberty while they would enforce free competition. They have expressed the historic attitude of the Democratic Party, yet the Democratic majority in this House will vote solidly for this bill and a Democratic President gives it his complete approval and, in fact, has inspired its character.

The gentleman from Pennsylvania [Mr. BURKE] and others have given able expression to the commercial idea, which is fundamental with the Republican Party. They object to this Federal reserve board solely because it centralizes authority with the Government. They desire a central authority named and controlled by the banks, and with that provision would give full approval to the bill.

But neither of these ideas meet the demand of the aroused citizenship of America to-day. The people see and know that the individualistic idea meant simply the law of the jungle, with the strong always overcoming and overriding the weak. They saw the commercial idea following and giving all attention to these successful ones in the hope that if the few were made prosperous their prosperity would leak down on those below.

Now, the American people are turning to the national idea, the principle that this is a Nation created by the people, whose powers shall be used for the common welfare of all the people. They demand that their Government shall be used to prevent the triumph of strong-armed lust for gain, and to secure prosperity for the many, being content to allow that prosperity to find its way to the top.

In so far as the Glass bill is in accordance with that principle it is worthy of support, and where it departs from that principle it deserves only condemnation.

In its provisions it does not touch the question of enforcing fair and just dealings by individual banks. It follows here the individualistic idea in spite of the fact that the let-alone policy of the past has brought about a condition which menaces the entire fabric of the Nation.

The Pujo Money Trust investigation, one of the most important inquiries by Congress in the past decade, proved beyond

the shadow of a doubt that the concentration of credit in New York was due to combinations between great banks. That report was conclusive evidence that changes must be made in existing laws regarding banking if the liberty of business enterprise is to be safeguarded.

The uncontradicted testimony before the Pujo committee shows that one group in Wall Street has acquired such control of money and credit that, acting through 118 directors in 34 banks and trust companies, it controls total resources of \$2,269,000,000 and total deposits of \$1,983,000,000. With such power over money and credit it controls wealth of various kinds amounting to \$22,000,000,000.

The testimony further shows that many of the greatest banking institutions in the country have degenerated into instrumentalities for the control of money and credit, using the money of the people against the people themselves. This condition has been brought about through legislation and lack of legislation, and the cure must come through legislation.

All must admit that the banks render a valuable public service by safekeeping funds that are saved from earnings by economy and thrift or are temporarily idle, and at the same time loaning them out so that business undertakings may be carried out for the benefit of society. But all must also admit that banks are quasi public institutions and that their proper conduct has a vital relation with the public welfare. Justice demands that they shall not be permitted to have exclusive domination of business through the monopolistic control of credit. They are not the masters of the public but the servants, and it is the sacred duty of government to exercise control over them to the extent of making sure that the public shall be given a square deal and that the people are not left at the mercy of banks that have the power of sacrificing legitimate business to reckless and injurious speculation.

The national idea requires that very action, and I am confident that the people will be satisfied with nothing else. The Glass bill does not recognize this requirement, and as a result is a structure raised upon a shaky foundation. It is a weak measure, for however strong the building erected upon shifting sand it can not be stable and enduring.

To meet the demand of the people this bill should contain provisions for the strengthening of the present banking system so that it will inspire the unquestioning confidence of the public in its justice and in the ability of each individual bank to adequately and justly serve both depositor and borrower.

It does not require a wholesale overturning of the present system and the creation of an additional system to attain that end. The present national-bank system has shown that it has splendid characteristics of service and it has become a part of the web and woof of American business.

There is much merit in the axiom, "Prove all things; hold fast to that which is good." Our national banking system has been in use for half a century, and with the changes which experience shows to be necessary it can be made the best in the world. The defects are recognized and they can be easily remedied.

The Pujo report shows that the system of interlocking directorates has established a community of interest between banks which has practically destroyed competition and which is a vital factor in the control of money and credit. On page 140 of its final report it states:

When we find, as in a number of cases, the same man a director in a half dozen or more banks and trust companies, all located in the same section of the city, doing the same class of business, and with a like set of associates similarly selected, all belonging to the same group and representing the same class of interests, all further pretense of competition is useless. For all practical purposes of competition such banks and trust companies may as well be consolidated into a single entity. If banks serving in the same field are to have common directors, genuine competition will be rendered impossible. Besides, this practice gives to such common directors the unfair advantages of knowing the affairs of borrowers in various banks and thus affords endless opportunities for oppression.

Monopoly without the obligation of public service is always a menace to free institutions, but a monopoly of money and credit is more dangerous than any other. When it is evident that one of the chief causes for the united action of banks in the accomplishment of common purposes is in interlocking directorates it becomes a sacred duty on the part of Congress to prevent it. No new system is needed to deal with this evil, and no new system that does not deal with it will be effective. A simple provision that no director of a national bank should serve as a director of any other banking institution would cure this evil.

Added to that, a provision that boards of national banks should consist of not less than 5 nor more than 11 men, and that they should be fully responsible for every act of the bank, and a long step in the right direction would have been taken.

The concentration of money in New York City is another evil of the present system. It is dangerous because it induces speculation in Wall Street and robs the local communities of the money needed for legitimate business. Immense amounts are loaned by banks in stock-exchange loans. On November 1, 1912, 32 of the New York banks had \$240,480,000 outstanding in such loans, placed by them directly for their correspondents independently of the deposits of those correspondents. The deposits of out-of-town banks in these 32 New York banks at that time was \$493,373,000, and a large part of that sum was also used in stock-exchange loans.

This condition can be met by a change in the reserve system and the express prohibition that national banks shall not loan money on securities dealt in at stock exchanges which refuse to incorporate and submit to proper public supervision and control. The New York Stock Exchange and other similar associations are voluntary private associations that have steadily fought all attempts to subject them to such regulations of law as would provide an adequate safeguard against the methods by which stock-exchange quotations are manipulated according to the purpose of stock-gambling pools and individuals, and which costs the American people \$3,000,000,000 a year.

Another change necessary to insure safe and just banking is to prohibit bank officers and directors from borrowing from their own banks.

This practice has been a fruitful cause of bank failures, the First-Second National of Pittsburgh being a recent case in point. It is beyond reason that bank officials desiring money for speculative ventures will use proper caution in the use of bank funds, and the public, both the depositors and borrowers, should be protected against such a dangerous practice.

Another provision necessary to secure safe and just banking is the requirement that banks make public the list of assets held by them. Banks invest the money of depositors and stockholders and they have the right to know what disposition is made of their money. Not only that, but free and full publicity would benefit the banks themselves for it would add to public confidence. The list of stockholders and the assets held by the banks should be placed in a public place in the bank, where all who cared might see for themselves the investments made by the banks to which their money has been trusted.

The Pujo report shows, too, that much of the business done by many national banks is not properly banking business. They devote their energies and funds to the work of promotion, speculation, syndicating, and trustifying. They are extending their efforts in these unwarranted fields through a strained construction of the national banking act, although Chief Justice Waite declared that national banks are prohibited from dealing in stocks and bonds through the failure of the act to expressly grant that power. An express prohibition of the power to invest banking funds in such speculative securities would go a long way toward making the resources of the banks available for the needs of the legitimate business of the different communities in which they are located.

But while the banks are to-day engaging in transactions which are not a part of legitimate banking business, they are prohibited from engaging in some transactions which belong to them by right. They should be permitted to accept time drafts and bills of exchange, a provision which is one of the most commendable in the Glass bill, although an additional system of banks is not necessary in order to have its benefits.

At present the banks are not permitted to accept time drafts in spite of the fact that these bills of exchange, drawn by one bank and honored by another and bearing the names of one or more responsible indorsers, and having salable merchandise back of them, form the safest and most liquid form of credit in which funds can be invested.

Such a provision is a benefit to the banks and to business men. To-day American dealers must pay 7 per cent or 8 per cent for the money with which to discount bills, even though they borrow at 6 per cent nominally, for they must carry a portion of the loan as balance in the bank. The right to discount a bill of exchange would be a regulator of business. It would represent an actual transaction, and would be paid by the realization of money for goods sold. The use of such paper would rise and fall automatically with the needs of business, and would, in fact, assure a self-regulating currency, which in itself would be a great protection against arbitrary contraction and inflation.

The banks should also be permitted to establish savings departments by express provisions of law and not through the subterfuges which obtain at present. This department should be kept separate and distinct from demand deposits, and from its funds loans should be permitted on real-estate loans for maximum three-year periods. This right should apply also to city real estate and not be confined, as in this bill, to farm

lands alone, for the owner of a town lot should be given justice in this matter as well as the owner of farm land.

These changes would not injure, but benefit, every honestly conducted bank in this country. They would put the banking business on a safe basis and allow the banks to occupy their rightful field. I believe there is vision enough and leadership enough and courage enough among the bankers of the country to demand these remedies for existing evils. I know personally many bankers who desire the changes which will enable them to transact only banking business in a fashion which will recognize the rights of the public as well as the opportunities to make money. B. F. Harris, vice president of the First National Bank of Champaign, Ill., in a recent article in *World's Work*, sums up that thought when he says:

It is all-round good business for the banker to enlist himself as a militant campaigner in the field of public welfare and good citizenship.

But regardless of the attitude of the bankers the people of this Nation will have their way. They know the need of these reforms in banking conditions, and no private interests, however powerful and entrenched behind existing laws, can hope to succeed against the aroused majority in this land. The monopoly of money and credit in private hands strikes at the very equality upon which this Republic was founded. It is incompatible with the public safety and the common welfare, and this lawmaking body has no more sacred duty than to end the possibility of such control. It is not so much a question of establishing a new system as it is a matter of clearing away existing abuses and strengthening the good qualities of the system which is now an established part of American business and which has proved its right to survive. It is a recognition of the principle that the people of this Nation are sovereign and through the Federal Government have the power of enforcing their decrees in order to secure justice to all.

I have tried to prove that the best interests of the people demand that no one class of individuals be permitted to control credit, but that the power of government should be exerted to its full extent to prevent a few men, through the control of dominant banks, from dictating the terms on which credit can be secured.

But credit depends on money, and therefore it is of even greater importance that the control of money be vested solely in the government of the people. Money is the lifeblood of commerce. It makes it possible for men to divide the multitude of labors necessary to maintain our civilization. By means of it each man while performing his own special work benefits from the great variety of work performed by other individuals. It brings labor and capital together and associates them in productive capacity. It is the yardstick by which all products of labor are measured.

The control of this standard of value should be in the hands of the Government just as much as the control of weights and measures. Any power that can control the volume of money, increasing it or decreasing it arbitrarily to serve selfish interests, has the power of life and death over American business and industry.

If there is more money than is needed for the actual demands of trade, speculation is induced, production is overstimulated, prices rise much faster than wages, and all industry is deranged.

If there is less money than business requires, prices fall, goods are sacrificed, production is curtailed, wages are decreased and men thrown out of employment, and again all industry is deranged.

When the currency of this Nation is either inflated or contracted without reference to the demands of trade, industry is paralyzed and the people suffer, and one is as disastrous to the interests of the average man as the other.

It therefore follows that the best interests of the people demand that the volume of money be just sufficient to meet the demands of business, increasing as the demand increases and diminishing with lessened demand. The production of money must keep pace with the production of all other products of labor.

In other words, the first necessity is to have the value of money uniform from year to year, to have the standard of value retain the same purchasing price, for that means a stable price level of commodities, and security, and prosperity for the people.

And for my part, I would hesitate at no step necessary to secure that condition. I believe that the only function of a just Government is to promote the common welfare, and that any action is justified to secure that common contentment and prosperity which can only come when those willing to work can find employment at just wages, when the products of labor and the farm can find a ready market at profitable prices.

That is the prosperity we need to-day in this Nation. Not the prosperity of the few at the top, even though we admit that some of their prosperity may leak down on those below. Real prosperity means the prosperity of the many, which in just proportion will find its way to the top.

A stable price level of commodities is necessary to that prosperity and a stable price level depends on the volume of money and the freedom of credit.

It is admitted that the discount rate is a powerful factor in controlling the volume of money. It is believed that it can be kept where just enough money and ensuing credit will be used to produce a stable price level. It is presumed in this bill that the discount rate will be raised if prices should rise above the level and lowered if they fall below it. But the reserve banks do not deal with the people at all and borrowers must discount their notes with institutions not directly affected by this discount rate. The idea, of course, is that the control of discount rates to banks will affect the dealing of banks with their customers. But that in turn presupposes competition between the banks, and that brings us back to the fact that fair competition must be secured if that principle will operate.

If a system of reserve banks is deemed necessary, why do you not reach directly the ends desired by having them banks of the people and for the people. The banks object bitterly to enforced contributions to the capital of these banks. Why not have the capital stock subscribed by the people and controlled by them? Then all the powers granted would be used directly for the benefit of the public.

I believe that the ends which are declared to be desired by the passage of this legislation can be secured without the organization of reserve banks and the destruction of our present banking system and Independent Treasury. A Federal currency board, representing the Government solely, should be given the powers vested in the Federal reserve board in this bill and under requirements of law so rigid that it would use no discretionary power whatever as far as rediscounting commercial paper is concerned. The requirements could be fixed and currency issued on all Government-inspected and Government-passed securities. The Government funds would then not be in the hands of a private corporation—a system which has so many obvious disadvantages.

This board should have the power of fixing discount rates. None can deny that the present high price of commodities is due in large degree to the inflation of money and bank credits which has taken place in the past 14 years. This must be corrected, and the only way in which it can be corrected without bringing the dire evils of contraction is to vest control of the discount rate in the Federal board. Admitting that such a power is the power of life and death over industry and trade, I contend that it should be taken out of the hands of private interests which profit most when interest is high and should be lodged in the Government, representing the interests of all the people.

This control has been in the hands of private interests, and we have seen money increase 60 per cent faster than population in the past 14 years, while the prices of the necessities of life have been increasing to approximately the same degree. Bank credits have increased still more and have also affected the price of every article bought and sold.

What do the American people desire in banking and financial legislation at this time? They want the national idea recognized and the powers of Government used to promote the common weal. They want safe and independent banks, conducted on behalf of legitimate business interests, each serving its constituency adequately and justly. They do not want nor will they tolerate a central bank with its gigantic monopoly in private hands, as provided for in the Aldrich plan, and they will accept no substitute which masks the same powers and attributes, no matter what name may be given it.

They want an ample currency, adequately secured, and issued solely by the Government, so regulated as to maintain a steady price level. They want a national currency, intelligently controlled in the interests of the whole people, so that a dollar shall at all times represent the same amount of commodities and services. This bill aims to secure that kind of a currency and it is a step in that direction, even though slow and halting. Its composite character, its confused principles, and its yielding to expediency weaken it and make it certain that further steps will be necessary in the near future. It will without doubt better existing conditions, but it does not strike the blow the American people have a right to expect against the power which is desecrating their liberties, the irresponsible power of a few men over the great mass of the people. That great cause still demands champions and bitter battles; the cause age-old and never won but always winning; the cause of the throttled and thwarted and enchained against the despot and the tyrant; the

cause of the weak against the strong; the cause of every American who believes that the individualistic and commercial ideas have become outgrown and outworn and must give way to the national idea, with a government of the people, for the people, and by the people, exerting its every power to assure equal rights and equal opportunities for every man, woman, and child in the Nation. [Applause.]

Mr. GLASS. Mr. Chairman, I yield to the gentleman from Kansas [Mr. CONNELLY].

Mr. CONNELLY of Kansas. Mr. Chairman, it had not been my purpose to offer any remarks on the bill under consideration. I confess to you, and freely so, that I have no scientific knowledge on the question of banking, with which this bill largely deals. My remarks will necessarily be along the line of fundamentals, to which every Member has given some consideration. It is fundamental principles that I wish to discuss more than the intricate provisions of the measure. In the reading and consideration of so comprehensive a measure as this we are compelled to apply those standards of measures to it that we have learned to consider as basic principles. If the provisions of the measure are such that they conform to our ideals as we have set them up, we are liable to agree with them that far. If they do not, then we are prone to attempt to reason from the known to the unknown and try to arrive at a proper conclusion.

I am free to say that I have much more faith in the bill since getting a closer glimpse of its intent and its provisions than I had at the beginning. I confess that I have much faith in the honesty and ability of the members of this committee of distinguished gentlemen who have prepared it and who have defended its provisions so ably here. I have a great deal of confidence in the great leaders of the Democratic Party, some of whom I have unwaveringly followed for many years and have found them worthy at all times of this great leadership. These leaders, as well as some of the men in the Republican and Progressive Parties, whose patriotism and loyalty to the institutions of this great Government I do not doubt, have expressed a confidence in most of the provisions of this bill, and that to me is, to an extent, assuring.

I will say to you in the beginning, however, because it is true, that the bill is not in some respects what I would have made it had I been allowed to frame it. I am not one of those who feel or express the contempt for the teachings and the principles of the old-time greenbacker that has been manifested by some who have spoken here during the consideration of this measure, both in the caucus and in this committee. I am one of those who believe it possible for this Government to issue and maintain a full legal-tender paper money, limited in quantity to the needs of the country. I fear that when this bill is brought to the test that it may be found that you have exaggerated the inverted cone of your present financial system by making this money redeemable in gold, and thus make it possible for those who would profit by embarrassing the Government to gather up this money, carry it to the Treasury, and compel the Government to go out into the marts of the world to secure the gold to redeem it. I hope my fears and alarms upon this matter may prove groundless, but I am free to confess that I believe it is possible. That there are many wise provisions to the bill everyone must confess. The provision that places the supreme control of the whole system in the hands of the Government, where men who manage the monetary affairs of the country may be reached by the electorate, is to my mind so wise that I feel that I would be justified for that reason alone, if for no other, in supporting the measure. Then, again, I have faith in the future of this country and the men who will come here to make the laws when we are here no more. I believe that they will remedy by legislative enactment any defect that may show in the working of the scheme that this body, with its splendid endeavor to frame a good measure, may overlook. I believe that there is intelligence enough among the people of this country to demand that any weakness shall be remedied as soon as it begins to show in the fabric under the acid test in the great loom of experience. I believe that we have reached the happy time in our national life when men will have to appeal to intelligence in the future instead of to prejudice, as has been the case in so many instances in the years that have gone by. I believe the people of this country will not demand that the measure be perfect in all of its details upon its inception; they will only demand that it be honestly administered and promptly remedied when the weak places, if such there be, begin to show. I will not be ashamed in years to come to say that I voted for a bill that had so wide an application and was intended to ramify every fabric of our country's commercial and financial life that was in some detail imperfect. Perfection is a rare commodity. I have known but few in my life who claimed to be perfect, and not one of these would I care to imitate or make a day's journey with. The

people of this Nation are not demanding perfection. They are demanding honesty and a fair degree of intelligence.

I have spoken of my fears of the bill loading down the gold upon which it is based with too heavy a load; I would like the bill better if it made every one of these notes when issued a full legal tender for all debts both public and private, with the single exception that it should not abrogate any pledge or any contract now made by the Government. While I do not believe in gold redemption of money, I do believe that a contract made by a Congress is just as sacred and binding as contracts made by individuals, and I would never consent to violation of contracts that this Government has assumed, though under what I consider an unwise policy. I do think that future contracts should not be made in such a way as to place the Government under the possible condition of having to go out and sell bonds in time of peace to satisfy the demands of men who are unpatriotic enough to embarrass the Government for selfish gains. There are gentlemen who know the evil results of the present system who are not sure that they have exactly the right plan to remedy these evils. We see under the present system of loaning money that the fellow who borrows money must pay more for the hire than the average business will permit. We can see with conditions just right—with money drawing a fair and just rate of interest—it should be a strong indication of the prosperity of the individual, and a compliment to his ability as a business man, if it were known that he was a great borrower and was using a great deal of hired money. I find, however, that in the practice, under conditions to-day, the reverse is true, and if it is known that a man is a big borrower it is oftentimes counted against him, for there are few legitimate businesses that will justify him in hiring money at the rate of interest that for many years has obtained in this country. My idea is that if there is a just rate of interest for the loan of money it should be based to an extent upon the natural increase of the wealth of the country. *I do not know of any reason why the man who keeps his wealth or holdings in liquid assets should be especially favored over the man who keeps his holdings in other forms of property.* I do not see in this bill any particular thing that will promise any material lowering of the rates of interest that the final user will have to pay. While I believe the bill contains much more of the good than it does of the bad, and its sins that I would criticize are rather the sins of omission than sins of commission, I would like the bill better were more consideration given to these features.

Mr. Chairman, there is no ground for any class hatred in this country as between the borrower and the lender of money. You will find the banker averages very well with his neighbor in the civic and social virtues that we all encourage and admire. I do not know a banker in my county, my district, or my State that I am not proud to count my friend. I have along with other gentlemen found the friendship and confidence of my banker a valuable asset not a few times in my life. If he has fared better in the gathering together the wealth and goods of the world it is not because he is vicious but rather because he has taken advantage of the conditions, and for these he is not to blame. He is only one to the many who are engaged in other business. I have no sympathy for the sentiment that carries a class hatred. I think it has no place in the making of laws or shaping of statutes. I would approach all legislation with the common good in view and not with the idea of getting even. However, there is a great responsibility resting upon those who are intrusted with the making of financial law. I want to approach it in a spirit of fairness to the rich and the poor, the strong and the weak that should ever be shown in a task so great. I am persuaded that later on, in this Congress, the matter of farm credits should be given that rational consideration that its merit deserves. I know that in my district as well as in many of the other districts of the country, men with ample security are often compelled to pay through commissions and intermediate charges a much higher rate of interest for the hire of money than they should be compelled to pay. I want to have an opportunity to vote for a law that will not permit any class of men to stand between the Government, whose functions it is to coin money, and the user who needs it to conduct his business, and demand that they be given a rake-off in the course of the deal. I know that there are gentlemen here who look upon this proposition with some misgivings, but I believe that it is not only feasible but practical, and I stand ready to assist in every way in my power to place such a law upon the statute books of our country. I have heard some gentlemen of the opposite political faith blame the management of the Democratic Party here because this farm or rural credit plan that is contemplated has not been acted upon.

It seems strange, indeed, to see how placid were these same gentlemen through a term of 50 years that the Republican

Party failed to do these things, but who now grow so impatient in six months of Democratic rule, because the results are not already apparent. I believe that this Congress will pass a farm-credit law. I believe that the country wants it and that Congress will be responsive to the demand. I want to observe that it does not become gentlemen on the other side of the House who have so much fault to find with the way business is conducted by the Democratic majority. You profess to see great danger to the liberties of the people from the secret caucus, where representatives of a party meet to lay out their plans of procedure and make sure that they will carry out the pledges made to the people. This is another reform that has found recent lodgment in the minds of you gentlemen. You practiced this policy every day that you were in power in this country and will practice it again in all probability should the unfortunate day come when you will again be intrusted with its affairs. I have no fault to find with the honest reformer. I believe he will ever have an important place in the affairs of a republic. I submit, however, that the primary essential of the true reformer is to be willing to practice when he is in power the policies he pleads for when he is not in power.

Mr. Chairman, I represent, in the main, a great agricultural district where the sources of wealth are stock and grain raising. True, we have all of the other interests incident to the industries of such a community, such as banking and milling and mercantile business, but all are primarily dependent on the man who guides the plow. This great rectangle of land has all the elements of primal wealth in the line of agriculture. I may be pardoned in passing in saying to some of you gentlemen who live in the East, and who I fear at times get the idea that the range of great things is bounded on the west by the rolling waters of the Mississippi, that one county in the district that I have the honor to represent—Smith County, Kans.—in the year 1912 produced more corn than any five of the New England States combined. It produced more corn that year than any like amount of territory in this great Nation. We are a cosmopolitan people, where the interest of the banker, the farmer, and the merchant is so interlinked and interwoven that what affects one class quickly and surely affects the other.

These interests are so close in my country that I would hesitate to support a measure that would embarrass the bankers there. I am free to say that while I have taken some trouble to place the provisions of this bill before them I have not received a letter from a banker in my district protesting against the measure. I am therefore persuaded that they believe that this bill, which makes it possible for them to accommodate their people through the agencies of the discount features of the bill, makes it more easy for them to secure the money to meet any stringency in the times of panic; makes them less amenable to the greater banks in the financial centers, where money naturally flows under the present system; meets to a considerable measure their approval, and has their support.

Mr. Chairman, finally I want to again say that I have never held or expressed the feeling toward the teachings of these old monetary reformers that has been shown by some gentlemen who have spoken here—that old reformer pleaded for a limited full legal-tender money, composed of gold, silver, and paper money, each dollar the peer of every other dollar, and each armed with the sovereign power to walk the royal highway of commerce and slay every debt it chanced to meet. I have never held a contempt for their teaching, for I have never been able to see where it was capable of doing a wrong to any class or to any legitimate business. I know that the great majority of these men who believed in and taught this doctrine were farmers, who usually paid the interest instead of the high financier who collected it, but I have never considered that sufficient excuse for holding the theory in contempt.

These gentlemen who take so much pleasure in showing their disapproval for that class of money that they are pleased to call "gutter script" and "rag money" should quit abusing paper money for the good it has already done in the Nation's history, though it may never be called upon to do more.

In reading the history of my country I find that when Jefferson—who was, to my mind, one of the great characters of history—when he, through the eye of the sage and the patriot, saw the great possibilities of that vast empire known as the Louisiana Purchase and sought to obtain it, it was paper money that came to his rescue and made it possible for him to secure that great domain and dedicate it to freedom for all the years to come. When the haughty Britons waged a war of hatred against this struggling Nation in 1812 and sent her armies and navies here to pillage and destroy, it was paper money that again guided the pathway of our fathers and stood true in that great struggle.

When the Nation was rended in civil strife in the dark days of the early sixties, and gold had hid like a craven from the eyes and haunts of men, it was the old-time greenback that paid for provisions, equipped armies, and made it possible for Old Glory to continue to wave over a united country. It has stood in every crisis of our Nation's need as our sponsor and our friend. It has gone down into the valley and the shadow side by side with every patriot, only to be denounced and despised when the shouts of victory came. It has always been a friend in need, to help, to succor, and to save. It has never deserted humanity in the time of her distress.

Mr. Chairman, we hold no contempt for the old-time greenbacker. He thought he was right, and he had the courage to say so. He was not afraid nor ashamed to be on the losing side. It was such as he that the poet had in mind when he wrote:

And I honor the man who is willing to sink
Half his present repute for the freedom to think;
And when he has thought, be his cause strong or weak,
Will risk t'other half for the freedom to speak,
Not caring what censure the mob has in store,
Be that mob the upper ten thousand, or lower.

[Applause.]

Mr. GLASS. Mr. Chairman, I yield to the gentleman from Maryland [Mr. LINTHICUM].

Mr. LINTHICUM. Mr. Chairman, it is not my intention to take up the time of this House with a discussion of this measure in detail, for its provisions have been made plain by those who have given long months of study to the subject and who are therefore more familiar with what will be its probable operation than I am. Having kept in touch with those bankers living and doing business in my congressional district, and having always endeavored to accommodate them in all matters when it was consistent and possible for me to do so, I am sufficiently close to them to feel that if the present measure was regarded by them as one fraught with disaster to the banking interests of my city or of the country in general they would have availed themselves of their privilege to set forth their objections, and I should certainly have heard from them.

I have made a studious effort to keep the bankers of my district fully informed regarding this proposed currency legislation. I have mailed copies of the bill and the committee's report on the same far and wide throughout my district, and both in writing and in my conversation with individual members of the banking fraternity I have invited expressions of their views on the measure, stating that I would see that they were placed before those in charge of this legislation that no point worthy of consideration might be overlooked.

I have heard but little objection in my district to this measure, and the general tenor of the correspondence has been similar to that of this letter I hold in my hand, which was received this morning from Mr. William Ingle, vice president of the Merchants-Mechanics National Bank, of Baltimore. In acknowledging receipt of certain literature which I forwarded him relating to this currency legislation he says:

My offhand judgment is that the worst feature of the bill is its commitment of the Government to active banking and responsibility therefor, in that it guarantees the redemption of credit obligations. As far as Government control is concerned, I feel that as the general thought is in the air, right or wrong, once we admit that it is to be recognized we are able to very much more readily assent to many other principles found in the bill. Personally, I am in entire accord with one of its main purposes, and that is to give all sections of the country the same chance for the future, something which has been for 50 years denied under the provisions of the present banking act.

That the pending bill is the most comprehensive reform measure on this subject considered by this House within the past 50 years I realize. It is not to be expected that everybody will favor the provisions of this bill, and there is always a difference of opinion upon all important legislation; but so far as I am able to judge, I feel we have a measure which will meet the needs of our people, and I heartily indorse its passage. Furthermore, I am confident that such is not only the general opinion in my congressional district, but that of the country at large.

I regret, however, that this bill does not make provision for a system of agricultural finance, for, in my opinion, the subject is one of enough importance to have our attention at this time, and upon the need for such legislation I would like to address this House.

At a recent convention of the Associated Advertising Clubs of America, Col. Henry Exall, president of the Texas Industrial Congress, in the course of a most careful and interesting address upon the necessity of conserving the soil, raised the finger of warning when he stated that so general has our method of soil spoliation become that it has been stated upon good authority that more than half of all lands in cultivation in the United States have greatly deteriorated in the power to produce. Despite the fact that we have learned more about seed selection

and have had better agricultural implements for cultivating and for harvesting than ever before, so universally have we robbed the earth, milking without feeding, subtracting without adding, checking out without depositing, that we now produce less wheat and corn combined per acre than we did 40 years ago. In extracting everything from the earth we have failed to create a sinking fund to pay this debt and have in many instances destroyed both principal and interest.

The truth of Col. Exall's statement must be apparent to every man familiar with agricultural conditions in this country, and when one reflects upon this statement, dwells upon the gravity of the conditions which it conjures, the query which inevitably arises is, Why is this so?

CAUSES OF SOIL DEPLETION.

I do not believe that I am far astray the mark when I attribute our soil depletion to three principal causes:

First. Our wastefulness;

Second. Our failure to regard agriculture as an industry and to apply to it the business methods of such; and

Third. Our neglect to provide farmers with a financial system adapted to their particular requirements.

Through the natural alertness of our people, assisted by the educational efforts of our Federal and State Governments, our wastefulness has been in great measure checked. Literature and teaching has brought home to the rural resident dependent upon the soil for a living the realization that farming is an industry, and I am happy to say that the great majority of our farmers are managing their acres with as careful consideration of true profit and loss and with as wise regard to the financial aspects of the situation as is manifested by the most keen and enterprising business man engaged in the conduct of any industry. I am in hopes that this House will see fit to remove the last of these contributing causes by placing within the reach of our agricultural population, or assisting them in bringing within their reach, a system of agricultural credit that will enable them to have easier and quicker access to the dollar when it is required for farm purposes.

I believe that when we have done this not only will we have removed the last of the contributing causes of our present soil depletion, but we will have placed within the reach of the farmer the opportunity to make his farm a contented center of profitable industry.

To some Members of this House it may appear unusual that I, representing a congressional district in the city of Baltimore, should manifest so great an interest in a subject not immediately affecting my district, but I have a farm on the outskirts of Baltimore, and I am a farmer myself on a small scale. Furthermore, I was born and raised on a farm. For more than 50 years my father was a farmer, and we boys of the family were brought up to understand that we contributed materially to the successful management of the farm, and our counsel was invited when father considered the many problems which arose. In this way I gained an insight into the problems of agriculture, and I will say in passing that I do not believe any education gained in any institution of learning is of more practical value than those lessons of industry, thrift, and honesty which every farmer's boy has instilled in him through association with those engaged in cultivation of the soil.

Being thus conversant with the practical conditions of rural life, it is most natural that need for legislation of this kind should be so apparent to me, and I am sure it is equally so to every man who has any knowledge of farm life. I have come to learn that the prosperity of the farmer regulates that of the city dweller; that the ties of interdependence are manifold; that in no relation of society is cause and effect more strikingly illustrated. When the farmer is prosperous his prosperity invariably extends to the city dweller, and when it is at low ebb the prosperity of the city dweller is correspondingly restricted.

One of the anomalies of our financial legislation is the fact that always heretofore it has been shaped, molded, and adapted to the interests of the banks, bankers, manufacturing and commercial men, while our agricultural population have been either totally ignored or given but scant consideration. It has required a long time for us to awaken to the fact that the prosperity of those who are adding each year close to \$9,000,000,000 to our national wealth is worthy of attention.

IMPEDIMENTS OF OUR PRESENT SYSTEM.

Let us consider for a moment that the 12,000,000 farmers of the United States are actually adding each year to the national wealth \$8,400,000,000. They are doing this on a borrowed capital of \$6,040,000,000, on which they are paying annually interest charges of \$510,000,000. Counting commissions and renewal charges, the interest rate is averaged at 8½ per cent, as compared to a rate of 4½ to 3½ per cent paid by the farmer of France or Germany.

But an excessive interest rate is not the only hardship from which the farmer suffers. Countless are the cases in which the would-be borrower, often a small farmer of the best moral character, is unable to furnish the security required by institutions at present engaged in loaning in agricultural communities. In consequence he is deprived of that financial aid which is such a valuable ally of his more prosperous neighbor.

We should bear in mind that the pinch of an inadequate financial system is felt first by the small farmer or agriculturist. Inability to secure funds not only entails personal sacrifices and hardships, but neglect of the land, with consequent soil depletion, followed by diminished or restricted crops.

Farming is an industry, and the lubricant of all industry is capital. The farmer takes the seed and by labor and care and through exposing it to proper conditions of earth and air develops and converts it to food. It is an industry just as truly as that of the man who takes wood and builds it into furniture, or that of the man who takes leather and fashions it into shoes. To farm profitably requires the applied combination of intelligence, knowledge, human labor, beasts of burden, and implements of scientific husbandry. This necessitates the use of money, the investment of capital. The dollar is therefore a factor just as important and essential in successful and profitable farming as in any other industry.

It is not my present purpose to advocate any particular system of agricultural credit. At this time it is sufficient that attention be directed to the need for institutions designed to quickly furnish the farmer with financial assistance that his recurring necessities create. When we have decided that institutions of this character will prove of material assistance to our agricultural population, when we have dispensed with this preliminary phase of the subject, the wisdom of the American people may be trusted to adopt that plan which will best answer their purpose.

INADEQUACY OF PRESENT FACILITIES.

Much unjust criticism has been directed toward our present banking system and our bankers because of their failure to meet the financial needs of our agricultural communities. Those who have indulged in this criticism have quite overlooked that our present system has been built up to meet the needs of the commercial and manufacturing element rather than of the rural population. In vain it has been explained that our system of reserves in the national banks, which has been necessarily largely followed in the State banks, has tended to concentrate funds in the large institutions in the reserve and central reserve cities and has forced the banks to deal in "liquid" or easily convertible securities. The farmer's assets, not being liquid, are necessarily excluded from participation in our banking facilities, and until his assets are made liquid he is doomed to continue to be shut out from his fair and proportionate use of the great aggregations of money and credit representing the available working capital.

But even were there no restrictions to the loaning of this money for agricultural purposes the insufficiency of present conditions would be apparent. Many State banks are now loaning money on farms and in some sections securities based on farms are extensively dealt in. But these isolated instances go but a short way toward meeting our national requirements.

Let us glance for an instant at the magnitude of the field. In 1910 the value of all farm property, including land, buildings, implements, machinery, and live stock, was \$40,991,449,090. This amount represents the assets of the farmers. Upon the basis of this valuation to loan 50 per cent would require \$20,000,000,000, a total far in excess of the resources of all the banks in the country; yet, doubtless, this amount could be wisely and profitably used to bring these farms to an increased state of productivity. In 1910 there were 1,327,429 farms mortgaged and 2,361,283 un-mortgaged. In other words, 33.6 per cent of all farms in the United States were mortgaged. The rate of interest which these mortgages bore was approximately 8 per cent. It is apparent, therefore, that under our present restrictions it would be impossible for our financial institutions to loan at less than 5 per cent, which is what the European farmers are paying. Clearly, therefore, one of our needs is a means by which our farmers will be enabled to borrow the money they require at an interest rate as low as that which is aiding European farmers.

NEEDS OF THE SITUATION.

In considering the financial assistance we should extend the farmer, analysis will show that his needs may be divided into two classes: First, small loans of short-time duration; and, second, large loans of long-time duration. Many instances arise in which the farmer requires sums ranging up to \$300 for use in his work. These amounts he is generally able to repay after harvest; therefore they are merely required tempo-

rarily. There is also constant demand for large sums ranging from \$300 upward. I take it that the establishment of agricultural banks, operated under proper laws and possessing the necessary capital, will be able to meet the demands of those desiring the larger loans.

Those who have given much thought to the subject tell us that the rural bank must be a special bank, with special powers and obligations, in order to meet special requirements; that it must be initiated and operated by the farmers themselves, who know their own necessities and who will give their time to its management. Its fundamental principle must be the cooperative interest and effort of the neighborhood in neighborhood affairs, but it must also be conducted so as to insure a recognition of its sound financial standing and its unquestioned credit outside of the community to which its operations are confined.

The necessities of those requiring small loans must be met through the aid of an entirely different institution from that of a bank. Organizations or institutions patterned after those doing business in European countries, conducted along lines not wholly unlike our present building associations, will be required in order to look after the farmer without assets who desires a small loan for a short time.

In every community the man with assets usually possesses a corresponding amount of credit. He is, therefore, better able to care for his interests than the man with no assets. If we will aid in accumulating something for the man who has nothing we will have given a powerful stimulus to the basic foundation of our national prosperity.

In considering the needs of that class of our farming population having practically no assets, we should bear in mind that every man who tills the soil is, in the best use of the term, a creator of original wealth. Being a creator of original wealth, it is sound policy on our part to aid and encourage him. The difficulties confronting this class are particularly severe, and to familiarize yourself with these difficulties consider the situation of a farmer desiring a small loan who can not furnish the security desired. I want you to note how inadequate are the offices of present established institutions. I shall take a practical everyday case for example, that of David Selby, who really existed—not under the name I have given him, but in flesh and blood. There are many thousands whose experiences have paralleled his.

AN ILLUSTRATION.

David Selby was born on a farm and grew to manhood a tiller of the soil. A more industrious, steady man or better farmer never guided a plow or handled a hoe. Upon the death of his father and after the old home place had been sold, he secured under lease for a term of years with an option of purchase the best available farm he could find, comprising about a hundred acres of land. After paying a half year's rent, \$300, he had left \$500. To stock and equip his farm and have capital available until his first harvest it was necessary to pay half cash and give the dealer a chattel mortgage to secure the balance.

The farm he rented was the best his limited capital would secure. On closer examination he discovered that its soil was far from being in the condition required to produce abundant crops. He found there was as much difference in the soil of "rented" farms and "owned" farms as there was between a cab horse and a carefully groomed, well-kept racer. The soil had been so scantily replenished with fertilizer that its spots of unproductiveness suggested the hide of a mangy dog. Several of his friends, men of extensive experience, who had been friends of his father before him, came and viewed his new place. They were unanimous in the judgment that what the soil required was fertilizer and assured him that its application would more than repay the outlay necessitated. They pointed to the folly of attempting profitable farming on land whose vigor already was nearly exhausted.

It was an easy matter for his friends to tell what he should do, but the problem facing David was how to secure the funds necessary to carry those suggestions into execution. He thought upon the subject for several days and was convinced that his friends' advice was sound, that the farm required at least several hundred dollars in fertilizer, that as a result of such expenditure his crops would increase from 20 to 50 per cent within the next few years; but his capital was gone, and to secure this money he must borrow. The very word caused him to hesitate, for at once it brought before him the deep-set aversion of his father to debt in any guise for any purpose. The elder Selby had been a man of tenacious views, who feared debt more than he did the evil one. He would let the products of his field rot in the ground before he would incur a debt to purchase the necessary crates in which to ship them to market. He would suffer a short crop rather than borrow funds for

fertilizer to insure a maximum of production. In short, he inviolably adhered to his principle to deal with cash, and clung to it with the devotion of a martyr, although it entailed many sacrifices and was the author of innumerable lost opportunities. And to this persistency probably might be attributed the fact that, although he had been a hard worker all his life, a successful producer from the soil, and a systematic saver, he died comparatively a poor man. It was the fear of debt that caused David to hesitate before assuming the obligation he was already under, and only the absolute necessities of his position drove him to do so; and now the thought of plunging further into debt restrained him. He regarded the course urged upon him almost as the height of recklessness.

DEBTS FOR CONSUMPTIVE AND DEBTS FOR CREATIVE PURPOSES.

David Selby was a "good farmer" in the full meaning of that phrase. His father before him had been a "good farmer," and although both thoroughly understood the soil from which they got their living, neither had given any thought or study to the economic problems incident to agriculture.

It was a revelation, the unfolding of a new chapter in his education, when one of his father's friends explained to David that the same agricultural laws which govern in commerce control in the agricultural world; that farming was in reality an industry in which competition was becoming keener every day, and the rewards and exactions of successful management enormously multiplied. This friend made clear that debt was not always to be feared; from one point of view it was the measure of people's confidence in the debtor; that there were two kinds of debt, each as different as day from night; that debts incurred for consumptive purposes, where the money was not put to work to multiply and increase and return an additional amount to the borrower, marked the slipping back, the economic decline of the debtor, while those for creative purposes in which the money borrowed was to be multiplied and increased, placing the debtor in better position than he was before, were evidences of advancement and progress.

This line of thought was something new to David. It had never before occurred to him that such a distinction existed, but on reflection it was perfectly clear; he realized the soundness of the argument justifying debts for creative purposes. And with the recognition of this distinction came also the realization that the money he would borrow for fertilizer to multiply the production of his soil was a debt for creative purposes.

THE DYNAMIC DOLLAR.

Nor did his friend's instruction stop here. He took pleasure in explaining that in the commercial world money had two forms of employment; that a dollar used for creative purposes, which was continually reinvested and handled, became in itself an agency of force and was known as a "dynamic dollar." A dollar not so used, which remained unemployed and nonproducing, was immobile or dead, and known as a "static dollar." He pointed out that business men everywhere required the use of dynamic money; that to furnish this money banks are established, the office of which it is to make loans; that the merchant or manufacturer who did not employ the dynamic dollar was as poor a manager as the farmer who never fertilized his land. He explained that the dynamic dollar ordinarily was secured through a bank, not through mortgage of the property of the borrower, for by means of an account with a bank every dollar borrowed when not actively at work might be returned, ceasing to pay interest. A mortgage, on the other hand, gives merely a fixed amount for a stated period, an arrangement too rigid for successful commercial usage. Again, if the sum obtained on a mortgage were employed and found insufficient, an additional loan would mean a second mortgage, and then, perhaps, a third mortgage. It was plain that a commercial house or business man compelled to secure funds in this manner soon would be driven to bankruptcy.

THE SMALL FARMER VERSUS SECURITY.

When Selby finally decided to borrow money for fertilizer with which to increase the yield of his land the next question which presented itself was how and where he should get it. He knew that he was generally known as a "good farmer." He knew also that neither he nor his father had ever contracted a debt which they failed to pay. He was of good moral character, worked hard for his money, and always had been most careful to see that it was wisely expended. A few days later he drove to the county seat, where was located the only bank his section boasted. The cashier received him courteously, and to that gentleman he explained the object of his visit. The cashier complimented him upon the wisdom of his decision and expressed the hope that he would be able to accommodate him, but his first question went to the weakest point in David's case.

"What security have you to offer?" he asked. David explained that he did not own his farm. Reluctantly he admitted that even the stock and equipment were only half paid for and were mortgaged to cover the balance due. The cashier easily surmounted these difficulties by suggesting that David secure the help of several of his friends as indorsers on a note for the amount desired.

When David left the bank he went direct to the one man in the county whom he believed would help him. This man was the president of his district grange. In David's mind there was no question but that he would be glad to help him. He was a man of large means, prosperous far beyond the average, and sincerely interested in the welfare of the county. Only a few weeks before David had attended a grange meeting in which this gentleman had pointed out with impressive sincerity that the progress of every agricultural community was measured by that of its individual members; that it was the plain duty of every farmer to assist his fellow man in the upbuilding of his farm; that the owner of a good farm surrounded by poor farms was not much better off than the owner of a poor farm surrounded by good farms; hence it was to the interest of each of them to encourage improvement, to aid, if necessary, in making their neighbor's farms as valuable as possible.

David could not see how the grange president could refuse to assist him in face of these emphatic declarations in behalf of the doctrine of mutual aid.

The money he desired was needed to improve his farm, to make it produce more abundantly. Certainly in improving the value of his land he was adding to the wealth of the district in which he lived. His case was clearly and fairly within the mutual-aid doctrine, and it baffled him to foresee how the president of the grange could fail to assist him without being guilty of the most arrant hypocrisy.

The grange president listened with attentive and sympathetic ear to David's statement of his case. When he concluded, he said to him:

I sympathize with you, young man, and believe that money expended as you propose will amply repay the outlay. In fact, I have helped in quite a number of cases of this kind. The great majority have recognized their obligations and promptly met them; but in some cases I was not so fortunate, my credit was tied up, and I was put to much trouble. I am now getting along in years, and I do not wish to add to my responsibilities. I believe that you will repay this money, but, beginning this year, I resolved never to indorse another note, and to that resolution I shall adhere. Not that I am averse to doing my share toward the upbuilding of this county, for I am willing to loan you outright a third of what you require; but I do not wish again to enter upon a practice that may involve me in the indorsement of several thousands of dollars of paper and keep me continually harassed as to when I shall be released from those obligations. Find one or two other men in the county who will aid you, and I will join them in advancing the amount you need. This I am willing to do, and it is all that I can do consistently with my duty to my family and myself.

When Selby left the president of the grange he was deeply angry. It appeared to him as though he were the victim of a conspiracy. The bank cashier had pointed out how impossible it was for the bank to make the loan unless he could secure the necessary indorsements, and the one man in the county in position to help him declined to do so because of his trouble with others who had failed to meet their obligations. He was convinced that a man who had no money could get none, regardless of how good his moral character might be or how certain repayment at the time promised.

Of what value, then, was the county bank to him and those in his situation? He had always been given to understand that the bank was an institution that would aid the farmer when he needed it, but of what help was the bank unless the farmer had security to offer or friends with money willing to indorse his paper? It was self-evident that a man who had money would not need to borrow. The more he thought over the matter the more bitterly he felt, and it was several days before this feeling subsided sufficiently to allow him to consider the subject calmly.

Little by little it dawned upon him that possibly the bank cashier and the president of the grange were both sincere and prohibited by their limitations from assisting him. It was evident the county bank was not designed to offer help in cases like his. He could see now that were they to make a practice of accepting loans of such character and were not extremely fortunate it would not be long before they might be involved in interminable difficulties.

Upon reflection, too, he saw that he had no right to expect the president of the grange to indorse the paper of his neighbors. True, he was a man of large means. But he had accumulated these means through hard labor, and he owed a duty to himself and his family to conserve them through the observance of reasonable precaution. Selby admitted that he had no claim on him; that it was no more the duty of the grange president to indorse his paper than it was that of several less public-spirited men, almost as wealthy, of whom he never would have

thought of making such a request. Obviously his lack of success was owing to the fact that no institution, society, or other organization existed whose object and facilities it was to give the assistance required in cases such as his.

His experience was the subject of his reflection for a number of weeks and he made many inquiries and gained much additional information. Then he awoke to the realization that his case was not an isolated one; that there were many farmers in his district who needed precisely the assistance he sought, who had made the same efforts which he put forth, and after meeting with failure were struggling along as best they could unaided. And if he had gone further in his investigation he would have found that the same condition which he faced was true in every district of his county, in every county of the State, and in nearly every State in the Union.

REPORT OF COUNTRY-LIFE COMMISSION.

Although he did not know it at the time, the conditions of which David Selby was the victim were the same discovered by the Commission on Country Life appointed by President Roosevelt in 1909 for the purpose of calling attention to the opportunities for better business and better living on the farm. The findings of that commission, based upon a study of rural life as a result of 30 public hearings and 120,000 answers to printed questions sent out by the Department of Agriculture, were such as to induce the commission to refer specifically to the limited credit facilities of the farmer. Question No. 10 on the circular of questions was as follows:

Have the farmers in your neighborhood satisfactory facilities for doing their business in banking, credit, insurance, etc.?

The commission's views on the subject were expressed in the following language:

A method of cooperative credit would undoubtedly prove of great service. In other countries credit associations loan money to their members on easy terms and for long enough time to cover the making of a crop, demanding security not on the property of the borrower, but on the moral warranty of his character and industry. The American farmer has needed money less perhaps than land workers in some other countries, but he could be greatly benefited by a different system of credit, particularly where the lien system is still in operation. It would be the purpose of such systems, aside from providing loans on the best terms and with the utmost freedom consistent with safety, to keep as much as possible of the money in circulation in the open country where the values originate. The present banking systems tend to take the money out of the open country and to loan it in town or to town-centered interests.

Selby was not a man of broad education; the only schooling he had was that gained at the district school. He was of German extraction, but he did not know that the same problem which baffled him and brought discouragement and heartburning was the identical one with which his Teuton ancestors had struggled long before he was born. Nor did he know that in the storm and stress of their travail, through the ingenuity and philanthropy of two men—Frederick William Raiffeisen and Francis Frederick Schulze—there were evolved in the years 1849 and 1850 two systems of cooperative rural and urban credit societies destined to give to the small farmer and town resident facilities he could obtain through no other channels, the success of which systems was to place the achievements of their authors "among the greatest romances of finance."

ORIGIN OF THE RAIFFEISEN SYSTEM.

We are told that it was in 1848—the year in which the acute distress of the poor at last found vent in revolutions and uprisings throughout Europe—that the seeds were first sown of that great system of cooperative credit, whose influence on the agricultural world it would be difficult to overestimate.

The circumstances which called forth their energies were the same in each case, namely, the helpless distress of the poor. They saw, as others did, that it was the economic waste caused by want of capital which lay at the root of the evil. But they alone were able, in the face of general incredulity, to devise a remedy. The first efforts of both were of the nature of individual attempts to relieve distress in their districts. And when experience taught them that permanent amelioration could only come through self-help, it was in the direction rather of cooperative supply than of cooperative credit that they set out. They organized small cooperative societies for the purchase of necessities of life and raw materials. This, however, they soon saw was not sufficient, because the poor were already deeply in debt to money lenders. It was the presence of money lenders in their midst that led the way to cooperative credit. Relief measures were of little avail while the burden of debt remained. Their efforts were thus directed toward the establishment of credit societies, and as the outcome we have the two distinct systems.

The small agriculturist, while he needs credit and can put it to good use, suffers from the great disadvantage that he has no adequate security of the type usually required to offer. Now,

the place of material security can only be taken by personal security, by a system, in fact, by which the borrower will borrow on the security of his own character, together with that of a number of his friends, who may be willing to back their good opinion of him by guaranteeing the payment of his loan. For the success of this plan it is manifestly essential for the members of the society in general, and the guarantors of a loan in particular, to keep a sharp watch on the borrowing member to see that the loan is duly applied to the purpose for which it was granted, and that its repayment is not jeopardized by the folly or incompetence of the borrower. The situation is summed up with characteristic felicity by M. Decharme, of the French Ministère d'Agriculture, when he describes credit banks of his country as being "in communities where everybody knows everybody else, and they always ask what the man wants to borrow for, and if he says he wants 400 francs to buy a cow they watch him, and if four or five days afterwards he has no cow, they know it."

The system is, in fact, an extension of the cash-credit system of Scotland, to which, in the words of Macleod, "The marvelous progress and prosperity of that country is mainly due." Its fundamental characteristic is that the supervision of loans is conducted without expense, and conducted efficiently, because it is to the interest not only of guarantors, but of all the members of a society, to exercise the strictest vigilance.

ORGANIZATION OF RAIFFEISEN SOCIETIES.

Raiffeisen societies are organized along simple lines, and have maintained this simplicity with few changes to the present day. The organs through which the society acts are four:

1. The general assembly of the members.
2. The supervising council.
3. The board of directors, whose president is the president of the association.
4. The secretary.

The general assembly, composed of all the members, is the source of all power in the society. It elects all officers and receives their annual reports, determines the amount of money to be borrowed by the association, the rates of interest to be charged for loans, terms for which loans shall be made, salary of the secretary, and so forth.

The supervising council is, as its name implies, a supervisory board, one of the principal duties of which is the quarterly revision of the debts due the association, which it examines one by one, taking into consideration the guaranties furnished by the debtors and their sureties, respectively.

The board of directors, which meets once a month, or oftener if the business of the association requires, makes the loans. In order that it may have as wide an acquaintance as possible with the members, their characters, and circumstances, the members of this board are chosen from different parts of the district in which the society operates. It also passes upon the admission or exclusion of members.

The secretary, who is the only salaried officer of the society, is required to furnish bond. He is responsible for the cash, keeps the books, receives and pays out the money, and usually conducts all the correspondence.

Applications for loans are made to any one of the directors, who obtain information as to the object of the loan, character of the security, and so forth, sufficient to enable him at the next meeting of the board to recommend the granting or refusal of the application.

That the circumstances and character of all the members might be easily known and the members keep themselves informed as to the action of the officers and the operations of the society, Raiffeisen laid special stress on limiting each association to a local area of small extent with a population not exceeding 2,000.

In order to avoid any danger of capitalistic speculation, Raiffeisen excluded shares altogether from his banks, but in 1876 he was obliged to comply with the law which compelled cooperative societies to have foundation capital, and fixed the shares at a maximum value of 10 marks (about \$2.40). In societies where the liability is unlimited a member can not take more than one share; in societies with limited liability, however, he may take more. The value of the shares, and, in the latter case, also their number, are fixed by the rules. The shares are repayable to the members upon withdrawal from the society, and interest is paid upon them at a rate which must not in any case exceed the interest which borrowers pay upon loans from the society.

The following are the principal safeguards of loans made on personal security:

Loans are only made to members of the group and only those known to be trustworthy are admitted.

Membership is confined to persons residing within a small district, so that members are personally known to one another.

Members being mutually responsible, it is to the interest of all members to keep an eye upon a borrower to see that he makes proper use of the money lent to him.

It is to the interest of all members to help a member when he is in difficulties.

The borrower furnishes sureties or gives other collateral security for the repayment of the loan.

The borrower binds himself to apply his loan to a specific purpose which will bring in a monetary return sufficient to enable him to repay the sum borrowed and leave a profit for himself.

The whole of these safeguards are not adopted in all cases, for loans are sometimes given on the borrower's note of hand without any collateral security.

The fixing of the amount of the loan is most important where the borrowers are small cultivators unaccustomed to commercial methods, and is usually relaxed as their economic education becomes more advanced. We thus find it more generally insisted upon by the Raiffeisen banks in Austria and Italy, where they are of more recent introduction than in Germany, where the members have now become familiarized with the commercial uses of credit.

SPREAD OF RAIFFEISEN METHODS.

That the societies devised by Raiffeisen met fully the purposes for which they were created is best shown by their growth in Germany and their almost universal adoption by other nations. Out of the few small banks which Raiffeisen and Schulze started midway through the nineteenth century there has grown up in Germany a vast system of more than 15,000 separate offices, of which over 13,000 are of the Raiffeisen type. As a whole the management has been efficient, and most of the banks are on a sound financial footing, while it is claimed that there has not in either system been a single failure—a truly remarkable achievement in view of the difficulties with which they have had to contend.

From Prussia the idea extended, little by little, to all the other nations of Europe. Austria adopted it in 1851. The same year Hungary attempted its first experiments. In 1864 Belgium inaugurated its special movement by founding the People's Bank at Liege, while at the same time, in Italy, through the incentive of Signor Luzzatti, similar banks were instituted at Milan and Lodi. The example gradually became contagious, and the movement extended, with varying success, to Russia in 1866, to France in 1883, to Scotland in 1889, to Ireland in 1894, and spread to the youthful Balkan States—Roumania, Servia, Bulgaria—and finally, crossing the seas, the idea took root in Syria, under German influence, in the Antilles and India, through that of England, in Algeria, Tunis, Isle of Reunion, and Canada, through that of France.

These associations are in fact the only banks which the farmers will patronize for short-time loans in the nations where they abound in the greatest numbers. With their aid poverty and usury have been banished, sterile fields have been made fertile, production has been increased, agriculture and agricultural science raised to the highest point. Their educational influence is no less marked. They have taught the farmers the uses of credit as well as of cash, given them a commercial instinct and business knowledge, and stimulated them to associated action. They have encouraged thrift and saving, created a feeling of independence and self-reliance, and even elevated their moral tone.

The picture can hardly be overdrawn. Every traveler who visits the places where these little associations exist speaks in glowing phrases of the prosperity and contentment that prevail. They are organized on such simple lines that their management requires only ordinary intelligence. Failures have rarely occurred. In France and other countries they hold a record of having never lost a cent.

The Raiffeisen system alone has been able to utilize satisfactorily the only security which the small agriculturist has to offer, namely, his personal pledge to repay, supported by the guaranty of men of his own class and standing. It alone has been able to perform all that is demanded of an agricultural credit bank, without subsidy from charity or the State; not, indeed, without the assistance of the man of education and the philanthropist, but at least without his financial assistance, which alone could deprive it of that spirit of robust independence in which lies half its value. And this it has done, not in one country alone, or even in Europe alone, but throughout the civilized world wherever it has been tried, with a success that is beyond question and has all but silenced criticism.

NEED FOR THE DYNAMIC DOLLAR.

What is sorely needed by the American farmer to-day is easier access to the dynamic dollar. Never can this be secured so long as he persists in depositing his surplus in town-centered institutions and paying interest funds to the same sources. If the American farmers had a thoroughly organized system of mutual credit societies they would not only annually save two hundred or two hundred and fifty millions of dollars to themselves individually, but in course of time the entire debt would be transferred to the societies, the interest paid to them, an economic waste stopped, and this stupendous sum restored to agriculture. This assertion is neither fanciful nor extravagant. It is below the actual ratio obtained by a comparison with the German figures.

There is practically no limit to the amount of capital that could be advantageously employed for rehabilitating worn-out and abandoned farms, opening up new areas, and introducing modern methods of cultivation; and it is of vital importance that this capital be obtainable at once in sufficient volume and on easy terms. The world-wide problem caused by the pressure of population upon the means of subsistence now confronts the United States in the very face of its matchless natural resources and vast acreage of arable lands still remaining untouched by the plow. The \$385,000,000 of foodstuffs exported last year barely equaled 76 per cent of the annual interest charges on the debts the farmers owe.

Prior to the passage of the Morrill Act creating the Department of Agriculture it would have required no small amount of credulity to have believed it to be possible for a branch of the Government to accomplish the benefit which has resulted from the efforts of that bureau. What the Government has done in educational uplift it can do as well in financial matters. I do not mean that its efforts should be too paternalistic, but that it should aid where it is just and proper to do so.

WHAT THE GOVERNMENT CAN DO.

Through a policy somewhat similar to that adopted by European countries, our Federal Government can give aid in financing the farmer. This aid can be extended either independently of or in conjunction with that of the States. I have no doubt that within the next 12 months this House will pass some measure giving financial aid for agricultural purposes. I assume that this will be done upon the basis of agricultural population and that the State institutions which are made the depositories of these funds will come under the regulations of the Federal Government. I take it that the amount allowed each State will be distributed by the State institution among the different counties according to population; that the county institution to which it is loaned, and from which it is finally secured by the farmer, will also come under Federal regulations.

If some measure of this kind is enacted into law, as I believe it will be, I hope that provision will be made by which some portion of these funds may be allotted the several counties for the aid of institutions in those counties whose objects shall be similar to the Raiffeisen societies of Europe. In my opinion, aid of this character will prove of the greatest value to our agricultural communities, because it will go to the bottom and help those most needing help. Such cooperative, self-help societies answer the purpose of an elementary or kindergarten training to our agricultural population, imparting a valuable knowledge of how to employ money most advantageously in farm work.

By printing bulletins dealing with farm finance, by recording the progress of these cooperative societies in the different States, the various systems under which they are conducted, the regulations adopted for safety and success, our Department of Agriculture can render invaluable assistance. The wider knowledge disseminated through such publicity will eventually result in societies of this character being organized along common lines differing only in fundamental characteristics where such difference is necessary by reason of the changed conditions of agriculture in the respective communities. Through the cooperative effort of such societies many industrious farmers who suffer the need of a small amount of capital and lack specific knowledge of farm finance will gain that help and education that will raise them from the nonasset-holding class to the asset-holding class. The hardest work is always at the start. No work is more important than that done by these little societies that help a man to carefully save or wisely expend his first hundred dollars. It is the thoroughness with which they instruct him in these first lessons that give him confidence to venture further that ultimately result in establishing him on the plane of financial independence, making him the valued depositor or welcomed creditor of his community bank.

The American farmer with his assets of over \$40,000,000,000 possesses a security sufficient to obtain more than double or

treble the money he needs. The problem is merely one of placing these assets in a form that will render them negotiable and liquid in every State in the Union, in every bourse, in every exchange. When this is done we will have removed a handicap which now fetters our agricultural industry; that has placed beyond the reach of those who need it most the use of the dynamic dollar; that has rendered the dollar—the token of wealth—a scarcity among that class who are the chief producers of wealth. When this is done none will feel the stimulation more perceptibly than the small farmers, whom God must have loved "because he made so many of them." After all it is the small farmer who is carrying the burden of humanity. He is the man who feeds the world, whose labor creates the bulk of its wealth, whose prosperity and happiness should be the objects of our solicitude and care, because they so vitally and directly influence the happiness and well-being of all mankind.

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, I hope I may be pardoned for again calling attention to the manner in which this legislation originated and is being forced through the House.

First we learn from the press that the President demands the passage of a currency bill at this session. Then we hear that the President, the Secretary of the Treasury, the chairman of the Finance Committee of the Senate, and the chairman of the Banking and Currency Committee of the House are working on a bill. Then come reports of secret meetings and conferences with party leaders, and finally a bill has been introduced simultaneously in the Senate and House.

It was given out to the press that the bill had the emphatic approval of the President, was to be considered an administration measure, and that the President would expect Democrats in the Senate and House to support and pass it if they were to be considered friends of the administration.

The next step was to get the Democratic members of the Banking and Currency Committee to agree to favorably report the bill. This was done by holding many secret meetings—not of the committee, but only of the Democratic members of it. When the Republican members of the committee heard that the majority were holding secret meetings and considering the bill they demanded their right to take part in the consideration. This was refused peremptorily and without apology.

Then the bill was submitted to the Democratic caucus. There for several weeks, in secret session, the Democrats considered the bill.

Thus it comes to us, the product of secret conferences and caucuses. No man knows its authorship or origin, except that somewhere, at some time, in some manner, it was conceived and brought forth as a partisan, administration measure.

In a speech in this House, delivered by the Speaker May 10, 1910, opposing the proposition to establish a tariff board, he said:

In these latter days, through encroachments of the executive branch, the Congress has fallen from the high estate of a coordinate branch of the Government to the despicable position of an animated cash register for the executive branch. * * * Some men are so constituted that so soon as they come into the presence of the President their courage oozes out, as did that of Bob Acres.

It would be cruel to suggest that the majority now have fallen "to the despicable position of an animated cash register for the executive branch," or that any on that side have felt their courage ooze out, as did that of Bob Acres, "so soon as they come into the presence of the President"; yet the known facts with regard to the suppression of opposition and the subjugation of insurgency during the progress of this bill would far more justify the use of the language quoted now than they did when uttered.

THE CAUCUS.

But not only have the majority suffered from Executive coercion; the House and the country have suffered from caucus dictation in the formation of this bill. To an extent never before known in the history of legislation in this country the caucus rules. Such rule in its extremest exercise is openly defended by the majority. The minority have been told they have been repudiated and have no longer right to be heard in the formation of laws for the people.

This is not the exercise of right; it is a direct usurpation of power by the majority. It is a subversion of representative government. It is a direct invasion of constitutional right. The majority is charged with the responsibility of legislation, it is true, but it must be constitutional legislation; legislation under the law, legislation in which the right of free debate is preserved, legislation in which every bill considered may be tested and tried in an open forum, under established rules.

Legislation prepared in secret, to which is pledged in advance the votes necessary to pass it, is not constitutionally considered. Of what use is debate if change is not possible, if modification may not follow argument, in which judgment on merit may not be founded?

The President a good many years ago wrote a book on Congressional Government. In it he discusses the caucus. After stating that its origin as a legislative appendage was Democratic, he quotes with approval the statement that under caucus domination—

The legislation of Congress was constantly swayed by a party following, feelings, and pledges rather than according to sound reason or personal conviction.

And he adds the suggestive comment that—

It is shielded from all responsibility by its sneaking privacy.

It has great power without any balancing weight of accountability—

He says, and adds—

there is, unhappily, no ground for denying their power to override sound reason and personal conviction.

It is interesting to note that if the President has changed his mind it must have been very recently.

In the illuminating chapter entitled "Let there be light," in his book, *The New Freedom*, published within the year, the President says:

A first necessity is to open the doors and let in the light on all affairs which the people have a right to know about.

Again, he says:

What are the right methods of politics? Why, the right methods are those of public discussion; the methods of leadership open and above-board, not closeted with "boards of guardians," or anybody else, but brought out under the sky, where honest eyes can look upon them and honest eyes can judge them.

Again, he says:

I for one have the conviction that government ought to be all outside and no inside. I, for my part, believe that there ought to be no place where anything can be done that everybody does not know about.

It is said in defense that the caucus is an old institution and that the Republicans used it. If it is wrong, neither long practice nor Republican approval can justify its continuance. But, in fact, caucus usage has been confined to bills distinctively party measures, while this bill, as we have frequently heard asserted on that side, is a nonpartisan measure.

It is also said that it makes little difference how bills are made—if the people approve of them after they are passed, that is all that is necessary. "The end justifies the means." This defense of wrong is as old as history.

The majority certainly deceives itself if it thinks the people are indifferent to the manner and conduct of the business of this House. If the Cannon rules had not been thought unfair and subversive of legislative rights, the majority would not now be on that side, but on this. The people believed then that the preservation of legislative rights was an essential of free government. They believe so now. Especially in this country is it more necessary to preserve representative government than it is to pass a tariff bill, a currency bill, or any other bill.

WHAT IS PROPOSED.

It has been for some years thought best that our currency system should be changed and our national banking system revised. Acting upon this belief the Republican Party when in power provided for a commission, which for some time worked upon the subject. In the progress of their work the members of that commission secured a larger body of facts and statistics, a greater accumulation of knowledge upon the banking and currency systems of the world, than had ever been gathered before. In their report they recommended a bill known as the Aldrich bill, which, however, never received the indorsement of the Republican Party. Nevertheless the facts and knowledge thus gathered and given to the world have been worth many times what the commission cost the Government.

This bill is a patchwork, composed in part of the Aldrich bill and in part of other portions that seem to have been evolved out of the inner consciousness of somebody. It is not a development, an extension, or enlargement of our present system. On the contrary, it ignores—or, rather, discards—all our past experience and attempts to create a new and entirely theoretical system formulated by men who never by either study or experience have qualified themselves to deal with such a complex and difficult problem. It is never safe to pluck out a whole system by the roots and substitute a new and untried scheme. We can build on the old; we can modify the old; we can adjust, extend, and improve the old with safety; but we can not with safety discard it.

Nowhere has such a system as is here proposed been tried. In no nation on earth is a semblance of such a system in existence. If we were asked to adopt, or adapt the English, the

French, or the German, or the Canadian system, we might be able to determine whether it was better than our own, or could be adapted to our conditions. But we have no such criterion. Nothing can be offered as security for the bill except unindorsed promises. It is alluring as a prospectus, but there is nothing yet to rely on except placards and pictures.

If there ever was a bill requiring that public hearings should be held by the committee before action was taken, it is this bill. It should have been submitted to bankers, business men, and farmers, and their criticisms heard and considered before action was taken. The Democrats of the House gave hearings on the tariff bill. The Democratic members of the Senate committee are now having hearings on the currency bill. Why was a like course not taken by the committee on this bill?

Mr. GLASS. Will the gentleman permit an interruption?

Mr. TOWNER. Certainly.

Mr. GLASS. Does not the gentleman know that the Committee on Banking and Currency of this House had hearings for a period of two months, and every banker who asked to be heard was heard upon the general subject of banking and currency legislation? And does not the gentleman know, because it has been repeatedly stated here, that every provision of this bill was based upon the information adduced in those hearings?

Mr. TOWNER. Will the distinguished chairman of the committee say to this House that there were any hearings on this bill?

Mr. GLASS. I did not say that. I said the bill itself was based on the hearings.

Mr. TOWNER. You might just as well say that this bill is based upon all the hearings that were had in previous Congresses from the beginning of the Government down to the present time.

Mr. GLASS. It was.

Mr. TOWNER. That does not avoid the difficulty. This bill was not considered. Its provisions were not under discussion and criticism. Hearings on the "general subject of banking and currency legislation" are all very well, but the knowledge Congress wants and does not have, except as the result of individual investigation, is, What do bankers, both city and country, think of this bill? What do the business men think of it? What do the farmers think of it? When the bankers began to understand what the provisions of the bill were they voiced their protests, but they were not heeded.

Mr. GLASS. The gentleman is entirely mistaken about that. We embodied in the bill a great many suggestions made by bankers. But does the gentleman contend, simply because we did not accept all the suggestions of the bankers, that we totally disregarded their advice?

Mr. TOWNER. Oh, no. I certainly would not contend that. What I am contending for is that there should have been hearings had and ample opportunity afforded those who are to be so vitally affected by the bill, to consider and discuss it, not only for the benefit of the committee, but for the benefit of the House and the people as well.

A national conference of bankers was held a short time ago in Chicago. Certainly that conference was entitled to consideration. Certainly their suggestions ought to have been heard. There was time to have permitted that. Yet no recommendation or suggestion of theirs has, it seems, been acted upon by these gentlemen who formed the bill.

Mr. GLASS. Mr. Chairman, will the gentleman permit an interruption for a moment?

Mr. TOWNER. I would be glad to if I had the time.

Mr. GLASS. I will yield the gentleman time.

Mr. TOWNER. Very well.

Mr. GLASS. Would the gentleman be very much astonished were I to tell him that not a single material suggestion made at the Chicago conference of bankers was different from the suggestions made by those gentlemen weeks before and repeatedly considered before this bill was reported to the House?

Mr. TOWNER. That makes the offense still greater, if after hearing those suggestions you refused to adopt them.

Mr. GLASS. Does the gentleman contend that we have not considered matters properly simply because we have not adopted every suggestion made by the bankers?

Mr. TOWNER. Certainly, I do not so contend. But I do contend that this bill does not have the approval of the bankers of the country, and can not be made successful unless it does have their approval.

Mr. SAUNDERS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. TOWNER. I will be glad to.

Mr. SAUNDERS. Is it the gentleman's idea that the bankers of the United States are hostile to this measure?

Mr. TOWNER. I am quite certain of it.

Mr. SAUNDERS. I represent a district where there is a considerable number of national banks, and so far from there being any hostility in that district to it, they are all entirely satisfied with it.

Mr. TOWNER. I do not know what conditions may exist in the gentleman's district, but let me tell him what they are in my own.

WHAT BANKERS THINK OF IT.

I sent copies of the bill to the bankers of my district, all of them officers of country banks, and asked for an expression of opinion regarding it. I received 38 answers. Two only favored the bill. There were three noncommittal, and all the rest opposed it. Eighteen national bankers said they would not organize under the plan.

Mr. PETERSON. Will the gentleman yield?

Mr. TOWNER. Yes.

Mr. PETERSON. I wish to say to the gentleman that I represent a country district and I have sent copies of this bill to every banker in that district, and I have never received a protest from any of them.

Mr. TOWNER. Have you received any approval of it?

Mr. PETERSON. Yes; I have.

Mr. TOWNER. How many?

Mr. PETERSON. Quite a number.

Mr. TOWNER. I can only say the gentleman's experience is vastly different from mine.

The New York Times sent inquiries to southern and western country bankers. On one day it reported 42 responses. One approved, 2 reserved judgment, and 39 condemned. Eighteen of these also declared they would surrender their national bank charters and reorganize under the State laws rather than enter the new system. This is 43 per cent. There are now 7,473 national banks in the United States. If a like proportion should abandon their charters, over 3,000 national banks, or almost one-half, would liquidate and go out of business.

A Wisconsin banker—Mr. Frame—told the Senate committee that of 450 Wisconsin banks where opinions had been asked, 309 were emphatic in their opposition, while only two accepted the bill as it stood. Nine only would approve of it, and those with qualifications. Many bankers' conventions have considered the bill. Not one has approved it.

Mr. PETERSON. I am a banker myself and have been for 20 years, and am in close alliance with the bankers of my district.

Mr. TOWNER. I am not a banker, nor in close alliance with any bank, but I have heard from two experienced bankers of my district who said they had made special inquiry among the bankers in our State, and they had not found one banker who approved the bill. Another told me he did not believe there was a national bank in the State of Iowa which would enter the new system unless it was greatly changed.

Mr. GARRETT of Texas. Will the gentleman yield?

Mr. TOWNER. I will be glad to do so.

Mr. GARRETT of Texas. The gentleman says he is in favor of a banking bill which will be in favor of all the people, and yet during the entire argument of the gentleman he has not touched any phase of it except the side of the banker. Now, what kind of a system would the gentleman put in place of that we now have for the benefit of all the people?

Mr. TOWNER. I admit that I have so far given attention to that part of the question. I hope to deal with other parts of it in the further extension of my remarks. But I desire to emphasize the fact that this is not only a currency measure but a banking system, and that a banking system can not be operated without banks. You have endeavored to force the national banks to enter the proposed system by compelling them to go into it or surrender their charters. But you can not force them out of the banking business. They can liquidate as national banks and reorganize as State banks, and they will certainly do so if this bill is forced through in anything like the present form. The dissolution and winding up of their affairs, with enforced settlements, of thousands of national banks all over the country would bring about conditions we should dread to contemplate.

And this brings me to suggest a manifest defect in the bill. You provide in the bill that where 51 per cent of the stockholders of an existing national bank so desire they may carry the bank into the new system. But what is to become of the 49 per cent who do not desire to go into it? You can not force them into the new system. You can not force any dissenting stockholder, if he holds only one share, into the new system, and you have made no provision for taking care of him. I shall submit an amendment which will attempt to cover this defect, and I am quite curious to know what action the gentlemen who have charge of the bill will take with regard to it.

Mr. GARRETT of Texas. The gentleman need not worry about it; our action will be all right.

Mr. TOWNER. I hope so. But if you are as regardless of such suggestions in the future as you have been in the past; if you are as contemptuous of efforts made in good faith by gentlemen on this side of the House to improve the bill, nothing will be done.

A POLITICAL MACHINE.

The exclusion of Republicans from the formation of the bill, and the refusal to consider the suggestions, or listen to the advice of bankers, business men, or farmers, is perhaps partially explained when it is understood that in its main features the measure seems to have been considered from a political rather than from a business standpoint. The thought of how the bill could be formed to strengthen the administration and help the Democratic Party, rather than how to make it of practical value to the people, seems to have been uppermost in the minds of its framers.

This seeming necessity has compelled a renunciation by the Democrats of nearly every principle they were supposed to hold dear. In the first place this bill is the most extensive excursion of the General Government into business that has ever been seriously considered in this country. It is proposed as a plan to supervise the monetary affairs of the Nation in the interest of the people. In reality it is a direct embarkation by the Government in the business of banking. The Government compels the banks to go into partnership with it, furnishing part of the capital, sharing in the profits, but retaining absolute control and management. To those who have believed that country governed best which is governed least, who have thought that extensions of power to the General Government were socialistic and dangerous, who have held steadfastly to the doctrine that a surrender of individual rights was subversive of democratic principles, this revolutionary proposition must seem monstrous. I know there are those reluctantly agreeing to support this bill who agree with Herbert Spencer in his statement of the true limitations of power in a democracy:

Representative government is good, especially good, good above all others, for doing the things which a government should do. It is bad, especially bad, bad above all others, for doing the things which a government should not do.

But few of them dare even to voice a protest, much less to stand steadfastly for their honest belief.

DEMOCRATIC SURRENDER TO MONEY POWER.

It is singular that a party with a history such as that of the Democratic Party should not only make this complete surrender to the money power, but should deliberately attempt to organize and equip it as an arm of the Government, as if to make sure that it should thus be in absolute control of the people.

In the earlier history of the Nation there was a money power thus organized—a national banking system which, instead of being created and supported by the Democratic Party of that day, was opposed and finally destroyed by the fathers and sponsors of Democracy. As early as 1803 Jefferson thus expressed his disapprobation and distrust:

The Nation is at this time so strong and united in its sentiments that it can not be shaken at this moment. But suppose a series of untoward events should occur, sufficient to bring into doubt the competency of a republican Government to meet a crisis of great danger or to unhinge the confidence of the people in the public functionaries; an institution like this, penetrating by its branches every part of the Union, acting by command and in phalanx, may in a critical moment upset the Government.

It is remarkable how appropriate these words seem now, how they fit present conditions, how with a tone of authority they seem to admonish and command Democrats if they would be true to their time-honored principles not to support a measure so utterly at variance with every precept of their past.

ANDREW JACKSON AND THE BANKING POWER.

There is no more interesting chapter of American history than that which tells of the great contest Andrew Jackson waged against the money power of his day. I commend it to our Democratic friends who regard that picturesque and rugged figure as one of the patron saints of their party.

In his fight on the second national bank President Jackson, in his annual message of 1834, thus characterized the power of such an institution:

The result of the ill-advised legislation which established this great monopoly was to concentrate the whole money power of the Union, with its boundless means of corruption and its numerous dependents, under the direction and command of one acknowledged head, thus organizing this particular interest as one body and securing for it unity and concert of action throughout the United States and enabling it to bring forward on any occasion its entire and undivided strength to support or defeat any measure of the Government. In the hands of this formidable power was placed unlimited power to regulate the value of property and the fruits of labor in every quarter of the Union and to bring prosperity or ruin upon any city or section of the country.

THE FEDERAL RESERVE BOARD.

The system provided for in this bill contemplates a commission, denominated a Federal reserve board, into whose hands are committed practically all the monetary affairs of the Nation. A bare enumeration of the tremendous powers granted to this body is impressive. I give a list of them gathered from the provisions of the bill by a member of the committee, Mr. SMITH of Minnesota:

POWERS OF FEDERAL BOARD.

1. To readjust Federal reserve districts created by the reserve bank organization committee.
2. To create new and additional districts to those created by the reserve bank organization committee.
3. To prescribe regulations for establishing branch offices of Federal reserve banks.
4. To designate the three directors of the Federal reserve bank specified in this act as class C.
5. To remove any director of class B in any Federal reserve bank.
6. To designate the chairman of the board of directors of Federal reserve bank.
7. To prescribe regulations for maintenance of local office of Federal reserve board on premises of Federal reserve bank.
8. To designate the Federal reserve agent.
9. To require and receive reports of Federal reserve agents.
10. To fix compensation of Federal reserve agents.
11. To review proceedings of boards of directors of Federal reserve banks fixing compensation of themselves.
12. To remove chairman of board of directors of Federal reserve bank at pleasure and without notice.
13. To prescribe rules and regulations for permitting State banks and trust companies to become members of Federal reserve bank.
14. To pass upon applications of State banks and trust companies to become members of Federal reserve bank.
15. To establish by-laws governing applications of State banks for membership.
16. To require surrender of stock of State banking association or trust company upon receipt from Federal reserve bank of cash-paid subscription.
17. To require Federal reserve bank upon notice to suspend State banking association or trust company and make payment to suspended member for its stock.
18. To levy semiannual assessments on Federal reserve banks for expenses.
19. To examine accounts, books, and affairs of each Federal reserve bank.
20. To require such statements and reports of Federal reserve banks as it may deem necessary.
21. To permit rediscount by Federal reserve banks of paper of other Federal reserve banks.
22. To compel Federal reserve banks to rediscount paper of other Federal reserve banks.
23. To suspend reserve requirements for not more than 30 days.
24. To renew suspensions of reserve requirements for periods of not more than 15 days.
25. To establish a graduated tax upon the amounts by which reserve requirements of act may be permitted to fall below level provided for in act.
26. To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.
27. To add to number of cities classified as reserve and central reserve cities under existing law in which national banking associations are subject to the reserve requirements of this act.
28. To reclassify existing reserve and central reserve cities and to designate the banks therein as country banks at its discretion.
29. To suspend officials of Federal reserve banks.
30. To remove officials of Federal reserve banks for incompetency, fraud, or deceit.
31. To require writing off of doubtful or worthless assets upon the books and balance sheets of Federal reserve banks.
32. To suspend for cause relating to violation of any of the provisions of this act the operations of any Federal reserve bank.
33. To appoint a receiver for any Federal reserve bank for cause relating to violation of provisions of this act.
34. To determine or define the character of paper eligible for discount.
35. To fix the amount which cash reserve of Federal reserve bank must exceed outstanding demand liabilities to permit discount of paper for member banks.
36. To prescribe rules and regulations governing the purchase and sale in the open market by Federal reserve banks of bankers' bills and bills of exchange.
37. To review rates of discounts fixed by Federal reserve banks.
38. To grant or refuse applications of Federal reserve banks to open and maintain banking accounts in foreign countries and establish agencies there for the purpose of purchasing, selling, and collecting foreign bills of exchange.
39. To approve apportionment made by Secretary of Treasury of Government funds deposited in Federal reserve banks.
40. To charge interest on Government deposits at joint discretion of Federal reserve board and Secretary of Treasury.
41. To issue Federal reserve notes.
42. To call upon Federal reserve banks at any time for additional security for Federal reserve notes issued to them.
43. To assign letter or serial number to Federal reserve bank for notes issued to it.
44. To require in its discretion Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of notes issued to them.
45. To grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes.
46. To establish rate of interest to be paid on Federal reserve notes.
47. To prescribe regulations governing substitution of collateral security for the protection of Federal reserve notes.
48. To make and promulgate from time to time regulations governing the transfer of funds at par among Federal reserve banks.
49. To exercise at its discretion the functions of a clearing house for Federal reserve banks.
50. To designate a Federal reserve bank to act as clearing house for Federal reserve banks.
51. To require each Federal reserve bank to exercise functions of clearing house for its shareholding banks.

52. To prescribe period within which and regulations under which national-bank notes remaining outstanding after 20 years from the passage of this act may be recalled and redeemed by national banking associations.

53. To require Federal reserve banks to maintain lawful reserve.

54. To appoint receivers for Federal reserve banks failing to maintain lawful reserve.

55. To require examination of affairs of national banking associations as often as it deems necessary.

56. To determine salaries to be received by bank examiners.

57. To assess expenses of bank examinations upon associations examined.

58. To require examinations of national banking associations in reserve cities.

59. To require examinations of Federal reserve banks.

60. To add to the list of cities from time to time in which national banks shall not be permitted to make loans secured upon real estate.

61. To exempt savings departments of national banking associations from any and every restriction upon classes or kinds of business governing national banks.

62. To prescribe rules and regulations governing savings departments of national banks.

63. To make and publish lists of securities, paper, bonds, and other forms of investment which savings departments of national banks shall be authorized to buy, it not being necessary that said lists be uniform throughout the United States.

64. To prescribe conditions and circumstances under which national banking associations capitalized at a million dollars or more may establish branches in foreign countries.

65. To approve or reject applications of national banks to establish foreign branches.

66. To perform the duties, functions, or services specified or implied in this act.

The powers thus granted are enormous, greater than those now lodged even in the Presidency, greater by far than those committed to any board, bureau, or department of the Government. It can build up an invincible political machine, depress or stimulate trade, raise or lower the price of all commodities, inflate or contract the currency, favor one section or city and punish another, reward its friends and punish its enemies, and, in short, dominate and control all financial and political interests of the country.

In answer to this criticism it is said that any board given such powers would be too high-minded, too patriotic, too unselfish to use its powers for selfish or political purposes. The President is quoted as saying that it is unthinkable that any President should use the power of appointment of members of this board for political purposes. Let us consider the proposition for a moment.

The Federal reserve board created by this bill is to consist of seven members. To begin with, three of these are political appointments—the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency. They are members of the party in power, and their selection is inevitably determined by political and party considerations. Then, by the terms of the bill, the other four members are to be politically divided—two would be Democrats, known and recognized as such; one a Republican, and one, probably, a Progressive. Five are to be Democrats and there are to be two members of the opposition. The President will be doing only what is expected of him in thus appointing them; he can hardly do otherwise. He will not make such appointments directly "for political purposes," perhaps. But he will not violate either the letter or the spirit of the act by thus constituting a board, five of whom will be his devoted supporters, committed to his party's policy, earnestly desirous for the success and perpetuation of his administration. The board was intended to be a political board, and it is.

It is certain that under the present plan, if adopted, the control of the banking business of the country would be one of the prizes to be fought for in each presidential election. The old board would be ousted, a new board put in, and the monetary policy of the Nation would change with each administration, until an administration could so strengthen itself that neither the policy nor the administration would change.

It is the expressed belief of the majority that there has grown up in this country a money power which is even more powerful and dangerous than that of Jackson's day. Yet here it is proposed to organize and legalize a money power so gigantic and powerful that all voluntary and private associations of that character would be dwarfed into insignificance.

It is believed by them that there exists a Money Trust, which has by its secret and selfish manipulations enriched the favored and ruined the unfriendly, which has fattened on the spoils of wrecked industries, and engorged itself at the expense of the people. Yet here it is proposed to organize a Money Trust that will have back of it governmental power to strengthen its control over the finances of the Nation and enforce its demands upon the business interests of the people.

A CENTRAL BANK.

With loud and almost passionate earnestness the majority cries out against a central bank. It was bitterly hostile to the Aldrich plan, declaring it the scheme of the money power,

the invention of the Money Trust, the cunning device of Wall Street conspirators to enslave and impoverish the people.

But this bill creates a "central bank." This plan is much more centralized, autocratic, and tyrannical than the Aldrich plan. It is true we are to have 12 regional banks; but these are but the agents of the grand central board, which absolutely controls them. The power is not with them; they are not in any material matter given the right of independent action; they must obey orders from Washington.

It was said, and perhaps rightfully, that the Aldrich plan authorized a too great centralization of power, which might be used against the real interests of the people. It is a strange delusion that gentlemen indulge that by making the controlling power political it will immediately become an unselfish, beneficent institution, whose only purpose will be to serve the people.

I did not approve of the Aldrich plan. I would not support it now. But it is astonishing how enamored of it the majority is. Protesting that it is dangerous, yet they adopt and strengthen its autocratic features. Declaring it unworthy of consideration, the committee copies large portions of the bill, even to the extent of embodying in it the language, verbatim, of the Aldrich bill. If the Aldrich bill could have been patented, this bill would be an infringement. If it could have been copyrighted, this would have been an invasion.

WALL STREET CONTROL.

Very artfully the issue is made to appear as one between Wall Street and the Government; between selfish speculators on the one hand and the Government, acting for the people, on the other.

But that issue need not, and in fact does not, exist.

There is no design nor effort to put or keep the finances of the Nation in the control of Wall Street. They are not now in its control, nor need they be.

If it be claimed that the Aldrich bill placed the financial affairs of the Nation in the hands of Wall Street, which it did not do, still the issue is not drawn between the Aldrich bill and the present bill. There is no effort being made by anyone to enact the abandoned Aldrich bill. It never received the approval of either the House or Senate, nor was it ever approved by the Republican Party at any time or in any manner.

ATTITUDE OF COUNTRY BANKS.

The supporters of this bill assiduously endeavor to make it appear that this bill is in the interest of and is approved by the smaller country banks, while the bankers' opposition is confined to the larger city banks. This is far from true.

The demand for legislation and a change in our monetary system did not come from the country banks. For several years a propaganda has been carried on by the larger banks in favor of "reform." They have denounced our existing system as unsound, unscientific, and obsolete. They have created the demand for a change by filling the magazines and newspapers with denunciation of present conditions. Notwithstanding the fact that no such record of commercial development and material progress as the United States has made under the present system was ever known; notwithstanding the fact that our currency is adequate in amount, is increasing at the rate of \$150,000,000 every year, and will continue to increase with increasing demands, while every dollar is as good as gold; notwithstanding the fact that the bankers are prosperous and are receiving at least fair returns from their business, nevertheless there has been an insistent demand for change, for reform, for a new system.

The Democrats, taking advantage of this demand, have answered it by giving the bankers a new scheme—not what they wanted, but at least an answer to their demand for a change. They have succeeded in making a large part of the people believe that the present system is so bad that almost any change would be an improvement. That is the constantly reiterated and most effective argument of the majority in their support of this bill, "Try it; at least it will be better than the present system."

But the belief of the city banker was not the belief of the country banker. He has never joined in denunciations of the present system. He has never given his approval of the new plans offered, least of all to this. He does not approve it now, and he never will. He may be forced out of the national banking system, but he can not be forced into a plan which will not benefit him and which will make him a puppet in the hands of those who pull the strings, not for his benefit but for their own.

REDISCOUNTS.

In order to compensate the country banker for these evils, he is given the rediscount provisions of the bill.

The only privilege for rediscount granted to individual banks is upon their notes and bills of exchange submitted to a Federal reserve bank. The notes must arise out of commercial transac-

tions—that is, notes drawn for agricultural, industrial, or commercial purposes, and having a maturity of not more than 90 days. It is further provided that the Federal reserve board, at Washington, "shall have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act"—that is, the board shall have the right not only of interpreting and applying the language of the act as it may see fit, but shall also have the right to fix such other requirements as it may from time to time think best.

It is the almost universal declaration of country banks that they will have very little paper that can meet these requirements, and that for this reason the rediscount provision will be valueless to them.

Besides this, the country banker does not as a general rule approve of rediscounting, especially when the object is to obtain funds to reloan to borrowers. It is considered as an indication and a source of weakness. The proposition to offer this rediscounting feature as a means of furnishing funds to the banks to reloan to their customers is enough in itself to discredit the plan in the eyes of many conservative bankers.

ADDED BURDENS TO THE PEOPLE.

But it is not only the bankers who will suffer if this bill goes into effect. As usual, the principal burden will be shifted to the people.

In the first place, it will be a great expense, every dollar of which must ultimately be paid by the taxpayers. It will require an army of new Government employees, every one of whom must be paid, and paid well. Members of the Federal reserve board are to receive annual salaries of \$10,000 each, the Federal reserve agents are to be paid salaries to be fixed by the Federal reserve board, and there will be required hundreds of expert clerks and accountants whose salaries will have to be fixed and paid.

It is proposed to take up the \$750,000,000 of 2 per cent bonds now held by the national banks and used as a basis for our present national bank currency and refund them with 3 per cent bonds. That is one of the beautiful provisions of the bill—one little item of expense which the people will have to pay for this Democratic experiment, a mere bagatelle of \$750,000 each year until the 3 per cents can be paid and retired.

The Government will also be required to relinquish the tax of one-half of 1 per cent paid on national bank currency. This will add another little item of \$3,750,000 annually which it will cost the taxpayers to indulge the administration in a trial of its pet project.

These items are by no means all the burdens the adoption of this plan will impose on the people. If it were necessary to carry them, we could do so, but why inflict them if they are not necessary?

CONTRACTION OF CREDITS.

The people will not only be required to carry heavier burdens of taxation, but the enforced contraction of credits which will be necessitated by the inauguration of the new system will be a still greater infliction.

Twenty per cent of their present capital must be subscribed and paid by the individual banks to furnish the capital for the reserve banks, 10 per cent with 60 days and 10 per cent on call. This will cause a transfer from the country banks to the central banks of over \$200,000,000.

Five per cent of their deposits, or about \$350,000,000, must also be turned over to the reserve banks.

Something like \$550,000,000 must thus be raised and paid in cash by the individual banks to satisfy such demands. Where is it to come from? The banks have not got it, for it is now loaned to the people. Their present reserves can not be used, for reserves will still be required. There is but one way in which this money can be obtained. Outstanding loans must be called in and paid in order to meet such requirements, not only in the amount of cash required, but also of the amount for which it stands.

This means an immense contraction of credits, estimated by Mr. Berry, Mr. Forgan, and others as upward of \$2,000,000,000.

There is no one thing more damaging and dangerous to the business stability of the country than an unexpected and enforced payment of large amounts of outstanding credits. Final payments are seldom required or expected. There are changes, transfers, enlargements, contractions, as business conditions require within limits. But final liquidation is not the rule upon expirations of credits. A mandatory transfer of millions of cash now used as a basis for still larger millions of credit, requiring final payment of such credit obligations, can not help but bring hardship if it does not bring disaster. Never before in our country's history was anything like this attempted. What will be its effect no man can foresee, but it is bound to cause an immense amount of suffering. It will not be the

banks alone or principally that will suffer; the business man, the farmer, and the wage earner will be the first to feel its effects. To call in and demand immediate and final payment of these millions now loaned out in small amounts all over the country will bring about conditions unpleasant to contemplate.

COMPULSION.

The supporters of the Aldrich plan did not propose to force the country banks into the system. The bill made entrance optional; they could join or not, as they chose.

But the present bill forces all national banks into the system, big and little, city and country. They must join within a year or their charters will be taken from them, and they will be compelled to liquidate and go out of business as national banks. It is a "stand and deliver" bill. It has been characterized on this floor during the debate as forcing the Government to adopt the highwayman's demand: "Your money or your life."

It is contended by many that with such compulsory provision the bill is unconstitutional. In any event it is unjust and unnecessary. If the bill is a good one; if it approves itself to the bankers, they will not need to be forced in; they will voluntarily join. If the people approve of it, they will give their patronage to the banks who enter the system, and thus force all to join.

Especially when so many of the provisions of the bill are so entirely experimental; when so much which is proposed has never before been tried anywhere, it would seem only the part of wisdom to allow those who were willing an opportunity to take the risks, but not to force those who were unwilling to do so. A banker acts not only for himself, but as trustee for those whose funds he handles. It is his duty to act with caution and to consider carefully his course before he takes action in such a grave and vital matter.

Regarding the provisions of a bill introduced in 1908 by a Democrat, which bill Mr. Bryan approved, he said:

The fact that the banks enter the system voluntarily rather than under compulsion has no disadvantages, for all banks will be able to enter the system.

One wonders what were the reasons which made compulsion unnecessary then, and which make it necessary now.

THE CURRENCY SCHEME.

The primary object of this proposed legislation, we are told, is to give the country a new currency. We have already quite a variety—gold, gold certificates, silver, silver certificates, Government notes, national-bank notes, and fractional currency. But it is said we need another variety. None of these are "elastic," and we must have an "elastic" currency. Just how much of the existing currency is to be replaced by the new no one states, for no one seems to know how much is to be issued.

At first the committee fixed a limit and made it \$500,000,000. Then they increased it to \$700,000,000. But that did not satisfy the ardent supporters whose vision gladdened at the thought of a no-limit currency, and so the limit was entirely removed, and there is no man who dare commit himself as to the number of millions this bill will provide, if the scheme will work at all.

But of one thing the majority are certain, this bill will expand the currency. Mr. GLASS, the chairman of the committee, says so. That is what the party desires; that is what the President requires. There is going to be a depression following the passage of the tariff bill; factories will close, laborers will be thrown out of employment, hard times are certain to come—and come soon—unless something is done. Therefore, money must be made plentiful and cheap to tide the country over its bad days. To do this nothing is so good as expansion—more money, more business; more money, more work, more wages, more everything. Come, let us boom things! It is true it is dangerous, but we are strong, we can stand it. Even if it is bad after a time we will recover. In the meantime the Democratic Party can be kept in power. It can by this means bind the banking and moneyed interests of the country so closely to the party that they will have to support it in order to further their own interests. Certainly this is an alluring program.

The plan is to allow reserve banks to provide a 33½ per cent reserve, and as further security to deposit in Washington an amount of commercial paper accepted by it for rediscount equal to the amount of the currency to be issued. This commercial paper is to consist of notes and bills of exchange, having on the average 60 days to run. They can not exceed 90 days. Every 60 days, while this currency is outstanding, every piece of paper thus deposited must be replaced with another. In operation there would be a vast stream of bills receivable continually flowing from the banks to Washington and back again. Who in Washington is to pass on this ceaseless deluge of promises to pay rushing in from all directions—from New York, Texas,

California, and Florida? Where is the army of clerks that must handle them?

PRESIDENT WILSON'S COMMAND.

President Wilson, in his address to Congress, thus directed:

We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings.

The President is very happy in his use of general terms, but is wisely frugal as to definite specifications. No one would presume to take issue with the desirability of such a currency as the President suggests, but some of us are somewhat curious to know just what he means. He condemns our existing currency as "rigid" and says we must have a new one that is "elastic." But much depends on what is meant by "rigid," and still more on the definition of "elastic." Of course we understand that the \$761,000,000 of national-bank notes are to go; but are the \$1,000,000,000 of gold certificates to be retired? Are the \$471,000,000 of silver certificates also to go? Are the \$346,000,000 greenbacks to be supplanted? Are all these considered "rigid," and thus under condemnation?

And what is the President's definition of "elastic"? Does it mean the quality of expansion only? The bill provides for an unlimited expansion, but no provision meets the President's suggestion that the currency should shrink automatically with the "contracting credits of everyday contractions." The only way in which the new currency can be forced out of existence is by the affirmative action of the President's political board. It may order its retirement or tax it out of existence. It is given power to determine what is "sound credit." A "real need" is to be determined by the Democrats controlling such board. They are to determine what "personal and corporate dealings" are to be favorably considered and what unfavorably. The President also says the new system must "mobilize reserves; must not permit concentration anywhere." But who is to distribute the funds? Who is to say, "You have too much money here; we will transfer it yonder"? The Democratic politicians on the President's board.

Consider only these powers of the board. Now imagine it exercising such powers and handling those funds during a closely contested national campaign. Is there anyone foolish enough to think that politics would not control the action of the board at such a time and for such a stake?

MR. BRYAN'S APPROVAL.

Mr. Bryan is delighted that the currency to be issued is not bank currency but Government currency. In fact, it is neither. It is called a Government currency, but it is issued by the banks. It is made a Government obligation, but it is redeemable by the banks. It is receivable by the Government for public dues, but is not made a legal tender for the payment of debts. All other Government obligations are payable in gold, yet this currency is redeemable in anything which shall at the time be considered "lawful money."

Mr. Bryan has certainly sacrificed much to find an excuse to support this bill. He has declared over and over again that no Government currency should be issued which did not contain a legal-tender provision; but this currency has no legal-tender feature. He has declaimed many times against any form of "asset" currency, but this bill provides for an "asset" currency. He has again and again argued against any form of bank currency, yet the currency to be issued under the provisions of this bill is bank currency. He has stated from a hundred platforms that the one absolutely necessary and fundamentally indispensable provision to prevent panics was a Government guaranty to depositors, yet this bill says not a word about guaranteeing depositors.

During the panic of 1907 Mr. Bryan in an editorial in the *Commoner* strongly approved the John Sharp Williams currency bill, which he says was the result of a conference among the Democratic leaders, in which he took part. He said:

These three provisions—first, that the reserves shall be kept in the banks; second, that half of the reserves may be kept in bonds; third, that these bonds may be used for an emergency currency—will protect the country from any panic such as that through which we are passing.

The present bill contains none of these provisions. On the contrary, the reserves are not to be kept in the banks; no part of the reserves may be kept in bonds; bonds can not be used for a basis for currency.

Strong, indeed, must be the political pressure that will cause so remarkable a change of conviction within so short a time.

OTHER DEFECTS.

There are other important defects and omissions in the bill, which can not be considered for lack of time.

As usual, the farmers' interests have been almost ignored in the bill. As originally prepared, farmers' paper was discrimi-

nated against. Commercial paper, as that term is used in business, is all right; but we have reached a period when other forms and evidences of value must be recognized as a basis of credit. Much amusement was indulged in in the Democratic caucus at the expense of the insurgents, who insisted on recognition of that fact. Their suggestions were ridiculed as "pumpkin security" and "corn-tassel currency." But the people will not laugh at their suggestions nor ridicule their efforts. Provisions for ample credit accommodations for producers are found in almost all nations except our own. It is a widespread demand in this country. It is strange that place could be found for so many other provisions but that the committee should give no consideration to this most important phase of the subject. It is deferred to a "more convenient day."

The bill provides that national banks may make loans on farm lands, but it limits the term to 12 months, when everybody knows that farm loans are seldom made for a period less than five years.

The system, if adopted, will compel the country banks to give up their relations with their city correspondents, who understand them and whom they understand.

Unnecessary restrictions are placed upon the acceptance and investment of savings deposits in country banks.

It will prohibit any interest on exchange balances.

It will prevent any receipts from exchange.

It proposes to give power to a political board at Washington to fix all commercial rates of interest and discount over all our immense territory, extending from sea to sea and from the Lakes to the Gulf, for 100,000,000 people, diversified in character, habits, and occupation, at 28,000 bank counters, of all the various forms and classes of paper from day to day.

WHAT SHOULD BE DONE.

The gentleman from Texas [Mr. GARRETT] asks me what kind of a system I would put in place of that we now have for the benefit of the people.

Just now I would not discard our present system and substitute another. I have introduced bills, one of which extends the time of the expiration of our present emergency law from 1914 to 1918, that we may have its protection while we take the necessary time to perfect required legislation. The present law provides that an emergency currency to the amount of \$500,000,000 may be issued on the security of commercial paper. But in order to secure its early retirement it provides that it shall be taxed the first month 5 per cent, the second month 6 per cent, the third month 7 per cent, and so on up to 10 per cent. This money is now printed and in the Treasury of the United States, ready for use when called for.

Fortunately there has been no great emergency since the law was passed in 1908 to call this currency into existence. But there have been times when at least part of it could have been used to relieve temporary and local stringencies with perfect safety and to the great convenience and advantage of those affected. Doubtless these occasions will again arise. An elastic feature, or a provision for an elastic portion of our currency, is without doubt needed. The difficulty with the present law is that the tax is too high. In most cases, in order to tide over even a temporary shortage, it would be impracticable to retire the emergency issue in less than four months. That would make the average tax $6\frac{1}{4}$ per cent. This amount the banks can not afford to pay. To cure this defect I have introduced a bill to make the tax the first month 3 per cent, the second month 4 per cent, and so on.

With these two amendments to the existing law the country would be safe from a monetary panic, we would have a practicable elastic feature attached to our present currency system, and could with care and deliberation work out such safe and conservative changes in our banking and monetary systems as might seem necessary and wise.

I am profoundly convinced that the present bill is not only unwise, but dangerous. I believe that it will not help, but harm. I do not believe that we should at this extra session hurriedly pass a bill making revolutionary changes in the entire banking and monetary systems of the country which has not been properly prepared, which can not be fully considered, and which will, if it becomes a law, so vitally affect the interests of all the people of the United States.

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Iowa [Mr. SCOTT].

Mr. SCOTT. Mr. Chairman, I have been much interested and impressed in listening to the debate which has taken place here on the floor of this House during the last three days. The debate has been perfunctory, of course, and I apprehend will not result in any great fruit, notwithstanding it has progressed with the utmost good nature. If I had any criticism to make upon anyone concerning the conduct of this de-

bate I assure you that I would direct it against my own side of the House. I have felt at times during the last two or three days that some of my colleagues have evinced too great a degree of criticism against the Democratic Members of this House. To be sure, your bill is unsound, it is unscientific, it is inconsistent, it is indefensible, it does not appeal to reason or common judgment, but I feel confident that our friends the Democratic Members of this House have offered it in the utmost good faith. They—at least a majority of them—appear to be unconscious of its defects, and the remaining Members by confession here have made known their helplessness to change its conditions. There is but one or two matters that I shall be able to touch upon during the few minutes that are allotted to me, and before taking up that rather set portion of my remarks I want to refer to a subject that was mentioned on the floor of this House during last evening and again referred to this morning. I refer to a provision of the bill that was changed after the first draft. I advert to it because it seems to me that it goes to the very core of one of the most important provisions of this measure.

When the bill was drawn the Democratic Committee on Banking and Currency, or the Democratic portion of that committee, presented the bill with the provision that the notes therein provided for should be redeemable in gold. They went before the country at the outset under the pretense of adhering to the gold standard, which the people of this country have placed their utmost confidence in, and which I think no considerable number of them would think for a moment of now relinquishing. The bill has been changed. We have not been permitted to know why the change was made. I have asked Republican members of the Committee on Banking and Currency, but they are unable to give me information. I here and now ask the gentlemanly chairman of that committee, representing the Democratic side of this Chamber, what was the reason for writing the change in that clause?

Mr. GLASS. I will respond to my friend by saying that his premises are absolutely inaccurate. As a matter of fact, when the bill was presented to the House it was introduced by the chairman of the committee before the committee had any opportunity to see it or pass upon it, so that the Democratic members of the Banking and Currency Committee were not responsible for that particular feature of the bill as originally introduced.

The Democratic members of the committee, in considering the bill subsequently, did alter it in that particular by providing the phrase "gold or lawful money." The gentleman from Pennsylvania [Mr. BURKE] last night made believe that that was a departure from the doctrine enunciated by the act of Congress putting all of the money of the country on a gold basis. But the gentleman from Pennsylvania and my friend now addressing the House are absolutely mistaken about that, because your currency bill, the Vreeland-Aldrich currency bill, made the notes redeemable in gold or lawful money, and the bill of the Monetary Commission, known as the Aldrich bill, made the notes redeemable in gold or lawful money. Now, what is there in this?

Mr. SCOTT. The gentleman seems to have misinterpreted my question. I did not ask who was responsible for making the change. I asked what was the reason for it?

Mr. GLASS. The reason for it was that lawful money in this country is interchangeable with gold. That is the reason. It was made so by the Republican Congress.

Mr. SCOTT. I accept the gentleman's explanation.

Mr. KINKAID of Nebraska. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. SCOTT. I can not yield just now.

I have drawn a different conclusion respecting the reason for this change. It is conceded that the change was made, but I invite attention to the fact that synchronous with that change there was another provision which appeared in this bill for the first time. On page 30 we have this new provision, appearing at the same time:

Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank through which they were originally issued, or shall be charged off against Government deposits and returned to the Treasury of the United States, or shall be presented to the said Treasury for redemption.

In my opinion, Mr. Chairman, there lies the secret reason of this change. In my opinion, Mr. Chairman, once that provision was written into the bill they knew it would be impossible to gather and accumulate gold enough in the United States to redeem those notes under the forced and constant rule that you have there provided.

It is an experiment, if you please. What other country under the sun ever wrote into its law such a provision for the redemp-

tion of its notes? Was there ever such a thing done before? Can you point to a case, a country, or a Government that ever undertook it? If you can, I will be pleased to yield you time.

No; they took that provision from the laws of Canada. They improvised a process of redemption there, applicable to bank notes, not Government notes.

Mr. GLASS. Well, what other country issues notes?

Mr. SCOTT. I do not know that any other country issues notes. I believe that most countries have existed long enough and those in control of most Governments are now sufficiently wise to understand that the proper method of creating a business currency is through the agency of banks. You for the first time are now inaugurating a system of Government notes—redeemable in what? In paper.

Mr. GLASS. I will ask the gentleman how are the notes of the Bank of France redeemable?

Mr. SCOTT. The notes of the Bank of France are not Government notes; and regardless of how they may be redeemable, it does not affect the stability of the Government. It does not shake the Government credit.

Mr. GLASS. But the gentleman asked me to name some other country that redeemed its notes in that way, and yet the gentleman admitted that no other country issues notes in that way. How am I to answer the gentleman's question?

What would have been the result here had they not written in the words "or lawful money"? Twelve gigantic reserve banks issuing not \$500,000,000 in currency but with an unlimited issue of currency pouring into these banks, slowly perhaps at first, but with gathering momentum, with a constant flow through these institutions. Your 33½ per cent redemption fund lies there helpless, only to aid instantaneously in those redemptions, for the banks must have 100 per cent in gold aside from the 33½ per cent. The 66½ per cent additional must be ready at all times, constantly, daily redeeming that great volume of currency which will absorb, and which you knew would absorb, more gold than could be accumulated through any one system in this country. You knew that when the price of gold went up, if it happened to be turned away from our shores by reason of an adverse balance of trade, you would then have to turn and flee for refuge to some other class of money. That is why the words "or lawful money" were written in this bill.

Mr. HARDY. Will the gentleman yield for a question?

Mr. SCOTT. I will.

Mr. HARDY. Why is it that the gentleman and everybody else seem to think that all debts by way of deposits in national banks will never be presented for payment at one time, but yet assume that debts by way of notes are going to be presented all at once?

Mr. SCOTT. I do not assume that they will be presented all at once; but I assume there will be a constant flow and a constantly increasing flow as the business to be transacted by those notes increases.

Mr. HARDY. The gentleman—

Mr. SCOTT. I must decline longer to pursue that question. I have another proposition that I want to present here, which is possibly more of a legal than of a political nature.

I am opposed to this bill because I am opposed to creating a system of reserve banks, forcing the people of this country to put their hands into their pockets, into their private bank tills, and subscribe millions, aye, hundreds of millions, of dollars to these reserve banks, and then vesting in a politically selected agency the power to take that great accumulation of money and direct it along the lines of commercial banking in competition with those very banks.

We have heard a good deal said here with reference to this being a bank of banks. It would seem that you had not intended to confer upon these institutions the power to do a general banking business, to go into the open field and loan the reserves which you now pretend to be about to accumulate in order to retain the stability of the national banks—to loan those very reserves in competition with the members. That is what this bill does, however. We have heard a good deal about Wall Street. We have heard a good deal about preventing the banks using the reserves of the people in speculative matters; and yet this very bill vests in these reserve banks, under the almost complete control of this political board, the power to loan those reserves over their counters to the speculator upon Wall Street upon any security that they may see fit to accept, without a single limitation or prohibition in this bill against such conduct.

Mr. GLASS. Oh, the gentleman is absolutely wrong.

Mr. SCOTT. I shall be glad to be set right if I am.

Mr. GLASS. That may be a legal refinement; but I can not find it anywhere in the bill, and if it is in the bill we will be

very much obliged to the gentleman to point it out, because we can not get it out of the bill too quickly to suit us if it is there.

Mr. SCOTT. I shall be pleased to pass over a portion of what I intended to say and come directly to the point. I believe the powers of the Federal reserve bank have been projected into a field entirely beyond the limits of the proper functions of a reserve bank. My idea of the functions of a reserve bank is that it should occupy that field not efficiently covered by the present system, with reference to the matter of conserving and mobilizing our reserve banking resources. I believe that a reserve bank designed to correct the defects in the present system should be limited to those functions which pertain to the handling of our reserves. I do not believe our present banking system will be strengthened by conferring upon any separately constructed reserve system of banks the authority to engage in general commercial banking by competing with our individual banking system in the field of general commercial transactions. Indeed, I do not believe the men who framed this bill ever intended that the sphere of action of the Federal reserve bank should be so broad. That is evidenced by the remark of the gentleman from Virginia [Mr. GLASS]. They tell us that it is a bank of banks and that the functions of the member banks are not to be usurped. Does anyone believe it possible that had it been openly proclaimed that the Federal reserve banks were to be invested with almost unlimited authority to loan the money of its members to individuals and business corporations generally it would receive any considerable degree of support? And yet this bill, as it is framed, will confer upon the Federal reserve banks that very power.

Skeptical as to the real intention of the committee reporting this bill, I took occasion the other evening to ask its chairman, Mr. GLASS, whether it was intended that the Federal reserve bank by this law to be created was to have power to loan the reserve money direct to individuals and corporations other than its members. He very promptly and emphatically declared that it was not; that the reserve bank was to be a bank of banks with power to loan only to its members. Whatever the intention of the individuals who compose the committee may have been, I take it that the legislative intention will ultimately be gathered from the language of the law which is enacted; and inasmuch as my interpretation of that law is at variance with that placed upon it by the chairman of committee, I shall at the proper time offer an amendment calculated to curtail the power to which I have referred, and I shall devote the brief time that is allotted to me to an endeavor to convince the Members of this House that my conclusions with respect to the purpose of the bill are accurately drawn.

Unfortunately for the symmetry as well as the logical structure of the bill, it was not drawn as an original legislative declaration. A great deal has been said with reference to the proposed and so-called Aldrich bill. Whatever may be said as to the merits of the plan, or the sincerity of those who recommended it for enactment, the men who framed it had the courage, relying upon their own capacity and general knowledge of the subject, to draw the bill direct from the shoulder. There was no resting upon the ever-available paste pot and shears. Not so with the bill now under consideration. The freedom with which sentences, paragraphs, and whole sections found in other laws, existing and proposed, have been adopted and drawn into this bill by reference and otherwise, has not only rendered it uncertain in its construction, but has drawn into the purview of the statute subjects not intended by the committee.

What powers are intended to be conferred upon the Federal reserve bank by this bill? In answering this question I invite attention to the language of section 4 of the bill at the top of page 6. It is as follows:

Upon the filing of such certificate with the Comptroller of the Currency as aforesaid, the said Federal reserve bank so formed shall become a body corporate, and as such, and in the name designated in such organization certificate, shall have power to perform all those acts and to enjoy all those privileges and to exercise all those powers described in section 5136, Revised Statutes, save in so far as the same shall be limited by the provisions of this act.

Now, it is clear that in order to ascertain the scope of the powers intended to be conferred, we must resort to the provisions of the national banking law referred to.

Mr. GLASS. May I interrupt the gentleman right there for a moment?

Mr. SCOTT. Yes.

Mr. GLASS. I do not know what the statement of the gentleman will be or his conclusion, but I want to say that the provision in question is one of the Republican amendments to this bill in the Banking and Currency Committee, drafted by the gentleman from Minnesota [Mr. SMITH], and I am unwilling to believe that he has put over a joker on us.

Mr. SCOTT. I want to say in reply to the gentleman that I shall prove that that statement is entirely inaccurate before I

finish. That provision is found in the original draft of the bill.

Mr. GLASS. If the gentleman will examine the bill, he will find it is in italics, indicating that it is an amendment to the bill, and I know it was drafted by the gentleman from Minnesota [Mr. SMITH].

Mr. SCOTT. What print has the gentleman in his hand?

Mr. GLASS. I have the print of the bill now being considered.

Mr. SCOTT. I have the print of the bill as it was introduced. Did the gentleman inject that amendment into the original print as introduced by the gentleman from Virginia, chairman of the committee?

Mr. GLASS. Probably the gentleman and I do not understand one another. If he will refer to the bill under consideration, H. R. 7827—

Mr. SCOTT. I understand what the gentleman means. There are italics which embrace the identical language in part as it was originally introduced by the chairman of the committee. It does not represent the idea of the gentleman from Minnesota; it represents the original idea.

Mr. TOWNER. If the gentleman will permit an interruption, if he will turn to page 5, he will find the language there struck out to be the same as he is now quoting.

Mr. SCOTT. Exactly; it was in the original bill.

Section 5136 of the Revised Statutes of the United States is that section of the national banking law which defines the powers of national banking associations. Those powers are enumerated in seven separate divisions. I pass the first six divisions and invite your attention to the seventh, which, describing the powers conferred, says:

To exercise by its board of directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business of banking; by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; by receiving deposits; by buying and selling exchange, coin, and bullion; by loaning money on personal security; and by obtaining, issuing, and circulating notes according to the provisions of this title.

This seventh subdivision, discriminating nicely, enumerates five different classes of powers, namely:

Discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; receiving deposits; buying and selling exchange, coin, and bullion; loaning money on personal security; obtaining, issuing and circulating notes according to the provisions of this title.

The enumeration in separate clauses of these distinct classes of acts was not accidental. The distinction between these various classes then and now rests upon well-defined legal conception. The decisions of the courts, even at that time, had settled definitely the lines of demarcation bounding these various classes of transactions. It was well known that the power of discounting did not embrace the power to loan, and that the power to loan did not embrace the power to buy; and that the power to buy, loan, or discount did not embrace the power to issue notes. The classification and enumeration are both logical and necessary.

It is therefore quite clear that if the Congress of the United States shall, in enacting this law, say that "upon the filing of such certificate with the Comptroller of the Currency, as aforesaid, the said Federal reserve bank so formed shall have power to perform all those acts and to enjoy all those privileges and to exercise all those powers described in section 5136, Revised Statutes, save in so far as the same shall be limited by the provisions of this act," such Federal reserve bank will be empowered within the full scope of that enumeration unless limitation shall be found in the subsequent sections of the bill.

A careful examination of the bill will disclose that the only limitations of the powers conferred by section 4 are such limitations as may be incidentally contained in sections 14, 15, and 16 of the bill. Section 14 relates to rediscounts, and is so drawn that it purports to be an enumeration of grants of power which are not embraced in section 5136 of the Revised Statutes, or which enlarge those powers. The first paragraph of the section empowers the Federal reserve bank to receive from any member bank, or solely for exchange purposes from any other Federal reserve bank, deposits of the kinds specified. The second paragraph of the section provides that "upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions," and to a limited extent defines the character of such notes and bills of exchange. Paragraph 3 of the section contains further enumeration of power and limitation relative to the same acts. Paragraphs 4, 5, and 6 of the section relate entirely to the discount and rediscount of acceptances.

Section 15 relates to open-market operations. The section confers upon Federal reserve banks, under rules and regulations prescribed by the Federal reserve board, the power to purchase and sell in the open market, either from or to domestic or for-

eign banks, firms, corporations, or individuals, prime bankers' bills or bills of exchange of the kinds and maturities by this act.

Section 15 relates to open-market operations. The section also confers five other specifically enumerated powers, namely: (a) To deal in gold coin or bullion; (b) to invest in United States, State, and other bonds; (c) to purchase from member banks and sell, with or without an indorsement, bills of exchange of a certain class; (d) to establish a rate of discount to be charged; and (e) to open and maintain banking accounts in foreign countries, and so forth. None of these enumerated powers in any degree limits the powers contained in section 5136 of the Revised Statutes.

Section 16 relates to Government deposits, and provides—

That all moneys now held in the general fund of the Treasury shall, upon the direction of the Secretary of the Treasury—

And so forth—

be deposited in Federal reserve banks—

And so forth. And, further—

that the Secretary of the Treasury shall, subject to the approval of the Federal reserve board, from time to time apportion the funds of the Treasury among the Federal reserve banks—

And so forth. And, further—

no Federal reserve bank shall receive or credit deposits except from the Government of the United States, its own member banks, and, to the extent permitted by this act, from other Federal reserve banks. All domestic transactions of the Federal reserve banks involving a rediscount operation or the creation of deposit accounts shall be confined to the Government and the depositing and Federal reserve banks, with the exception of the purchase or sale of Government or State securities or of gold coin or bullion.

The paragraph of the section last quoted was taken from the proposed Aldrich bill, and was undoubtedly relied upon to perform the same function as its corresponding paragraph would have performed had the Aldrich bill been enacted into law.

Section 24 of the Aldrich bill was designed and calculated to limit the transactions of the National Reserve Association to the business of the Government and the conservation of the reserves held by its branches. It provided—

The Government of the United States and banks owning stock in the National Reserve Association shall be the only depositors in said association. All domestic transactions of the National Reserve Association shall be confined to the Government and the subscribing banks, with the exception of the purchase or sale of Government or State securities or securities of foreign Governments or of gold coin or bullion.

It will be noted that section 24 of the proposed Aldrich bill embraced "all domestic transactions of the national reserve association." It was therefore complete in its limiting power, and the exception engrafted upon it was logical and effective.

In transferring this section to the Glass bill, the committee evidently did not take into consideration the fact that the powers to be conferred upon the national reserve association by the Aldrich bill were completely and specifically enumerated in the bill, and that the powers of the proposed national reserve association were not to be conferred by reference to any provision of the national banking act. The committee also seems to have overlooked the force of the qualification which it wrote into the revised section in the Glass bill. The provision in the bill under consideration does not embrace "all domestic transactions," but is confined to domestic transactions "involving a rediscount operation or the creation of deposit accounts." Therefore the limitation of power is confined to those two classes of transactions. Now, it is quite clear that one of the most important provisions embraced in section 5136 of the Revised Statutes was that which conferred upon the national banks the power of "loaning money on personal security." That power by reference in section 4 of the Glass bill is to be conferred upon the Federal reserve banks. That power does not necessarily and, in fact, rarely involves a rediscount operation, and never creates a deposit account.

A transaction involving a simple loan on personal security is entirely foreign to either discounts or rediscunts. In the language of Mr. Justice Story in pronouncing the opinion of the court in *Fleckner against the Bank of the United States* (8 Wheat., 338)—

Nothing can be clearer than that by the language of the commercial world and the settled practice of banks, a discount by a bank means, *ex vi termini*, a deduction or drawback made upon its advances or loans of money upon negotiable paper or other evidences of debt, payable at a future day, which are transferred to the bank.

In *Newell against First National Bank of Somerset* (13 Ky. L., 775) the court said:

The word discount denotes the act of giving money for a bill of exchange or promissory note, deducting the interest.

The district court of the United States sitting for the northern district of Nebraska, presided over by an eminent judge, had occasion to define the term "rediscount." The court said:

Rediscounted notes are notes held by a bank which it indorses and procures another bank to discount.

Bouvier says:

There is a difference between buying a bill and discounting it. The former word is used when the seller does not indorse the bill and is not accountable for its payment.

In *United States National Bank v. First National Bank* (79 Fed. Rep., 296) the court said:

A rediscount by a bank of its bills receivable, though it indorses the same and becomes contingently liable for their payment, is not a borrowing of money by the bank, but has more the character of a sale.

Now, the converse of the proposition must be equally true. If a rediscount by a bank does not constitute a borrowing of money, neither does it constitute a lending of money by the opposing bank or party.

The distinction between simple loans and discounts and rediscunts is very frequently drawn by the courts in cases involving the usury laws. A note evidencing a loan and drawing interest from date at a rate in excess of the legal limit is usurious. A note discounted at a rate twice the legal interest rate is not usurious. One transaction is a loan and the other is a species of purchase.

What, then, would be the effect of this provision of the bill if enacted into law in its present condition? I assume to say that with a Federal reserve bank organized under this bill in the city of New York, for instance, any individual or business corporation engaged in stock gambling, to illustrate, may walk into the Federal reserve bank and apply for a loan of ten, twenty, or fifty thousand dollars and offer the simple promissory note of the borrower, bearing a rate of interest from date, together with an amount of stocks or bonds or other securities to be pledged for the payment of the note, and there is no provision in this bill limiting the power of the Federal reserve bank to make that loan out of the resources it may have accumulated by reason of the deposit of the reserves of member banks. I have used an extreme case, but it illustrates the fact that it is proposed by this bill not to create a bank or banks for the purpose of serving commercial banks in connection with other reserves, but to create a commercial bank empowered to compete with its members in the field of business, using the funds that by other provisions of this bill are to be extorted under the penalty of annihilation. It will not do to say that the reserve banks would not exercise this power; that is beside the question. When the Congress of the United States deliberately confers this broad power upon these special institutions we are at liberty to assume that those powers are to be exercised.

I believe that if the existing national banks are to be forced to capitalize this great system of reserve banks and to deposit hundreds of millions of reserve money therein, that this reserve money so deposited should be held at all times available for the protection of member banks. The power of the Federal reserve banks should therefore be limited, and a prohibition against their loaning to individuals and corporations, other than the member banks, written in the bill. [Applause.]

Mr. PLATT. Mr. Chairman, I yield 15 minutes to the gentleman from California [Mr. KAHN].

Mr. KAHN. Mr. Chairman—

'Tis with our judgments as with our watches—none go just alike, yet each believes his own.

If I remember aright, it was Alexander Pope who gave utterance to that wise saw about two centuries ago. That explains the whole difficulty in the enactment of currency legislation, for discussing the currency is very much like discussing politics or religion. You simply discuss and discuss and discuss, but you do not make much headway.

Every man who has a theory on the subject believes that his theory is just a wee bit better than the theory of the man with whom he is arguing the question.

I am informed that in times past there have been Committees on Banking and Currency of this House that produced almost as many opinions as to what was the true remedy for currency reform as there were members on that committee. Why, the bankers themselves do not seem to be able to agree entirely as to what they want in the way of remedial legislation. They all agree that our present system is rigid and inelastic; that something ought to be done to mend the faults of the existing banking laws; but when it comes to proposing a remedy they seem to have almost as many theories as the least-informed layman. For myself, I am free to confess that I have never been able to formulate a plan that was entirely satisfactory to myself. At that I have given the subject some study and thought and attention. But I have found that it is the easiest thing in the world for a man with little or no money to tell a man who has accumulated a plethora thereof how the latter should use and invest his capital. The former usually works out a plan, frequently utopian in character, which looks mighty good on paper; he believes it to be absolutely perfect. It probably is—in

theory. But he becomes angry and embittered when he finds that the man of means refuses point-blank to accept or adopt those theories.

And after all, the pending measure, we must admit, is founded largely on theories. Whether they will work out in practice or not the future alone can determine. Much has been said during the debate about the manner in which the bill has been framed. I believe the criticisms to be well founded. There was no need of the majority refusing the minority the right to attend the meetings of the majority members of the committee while that majority were formulating this legislation. Currency reform is not a party question. It is a scientific problem. The tariff, on the other hand, is a party question. I can readily understand that the majority of the Committee on Ways and Means might formulate a tariff bill without the presence of the minority. The principle of protection to American industries for years has been the paramount issue of the Republican Party. The principle of free trade—or as you of the majority choose to call it at present, tariff for revenue only—has been the dominant issue of the Democratic Party for many years. The two principles are entirely irreconcilable, and so it is thoroughly proper that the majority of this House, charged with the responsibility of legislating on the tariff question, should feel at liberty to exclude the minority during the deliberations on a tariff bill. But it is different with a currency bill. There are many Members on this side of the aisle who might vote for this bill if it could be amended in certain particulars. Some will probably vote for it anyway. I do not think the objections urged by the minority in their submitted views on the pending measure should have been passed over by the majority without any consideration whatever. Yes, the manner in which the bill has been framed is a subject of legitimate criticism.

We have entered upon a peculiar period in national legislation. Those who are directly interested in a proposed measure must no longer be consulted. If they, whose property interests are at stake in the provisions of a bill pending before a committee, dare issue arguments why this or that feature of the bill should not be enacted into law, they are held up to public obloquy as insidious lobbyists. Why, I have always believed that experts and specialists can throw a world of light upon the subjects which they have made their life work. We may not agree with their views, but they can illuminate the subject. If I am ill I send for a doctor. If I find myself involved in legal troubles I send for a lawyer. But if I want to revise the currency I must not, under any circumstances, listen to the suggestions of those who are directly interested in the proper solution of the difficult and possibly irritating subject—the bankers of this country. I must get my information from the uninformed, or go it blind, if I want to be an up-to-date legislator. Oh, this House is operating under a new dispensation which is developing a wonderful system for the formulation of legislation. The gentleman from Georgia [Mr. HARDWICK] was courageous enough to voice his resentment on this floor on yesterday, but he will respond to the lash of the party whip and will meekly answer "aye" when the bill comes up for final passage.

I am rather doubtful of the success of the bill for another reason than those reasons already urged by others on this floor. It has the unqualified approval of our good friend the present distinguished Secretary of State, Mr. Bryan. I want to say that I admire Mr. Bryan in many ways. But I have learned by past experience that whenever Mr. Bryan puts his stamp of approval on any proposed legislation one wants to scrutinize it with more than ordinary care. I remember his unqualified approval of the Williams currency bill in the Sixtieth Congress. That measure had been introduced in this House by the then minority leader on this floor, Hon. JOHN SHARP WILLIAMS, of Mississippi, now a Senator from that State. Mr. WILLIAMS's bill had this euphonious title:

A bill to further protect depositors in banks, to secure a safe and elastic currency, and to amend the national-bank act and previous amendments thereto.

Mr. Bryan was so enamoured of the Williams bill that he highly lauded it in an editorial which appeared in the Commoner in the early part of March, 1908. Mr. WILLIAMS was so proud of that laudation that he inserted the editorial in full in the CONGRESSIONAL RECORD of March 6, 1908. The first paragraph of that editorial reads as follows:

Hon. JOHN SHARP WILLIAMS, the Democratic leader of the House of Representatives, has introduced a bill, a copy of which will be found upon another page. It was introduced after a conference with other Democrats of the Senate and House—a conference which Mr. Bryan attended—and has the support of practically all of the Democrats. The Commoner commends this bill to its readers and to the country as a vast improvement over the present national-banking act and over both the Aldrich and Fowler bills.

The bill that was then being considered by the House was the so-called Vreeland bill, named after its author, Hon. E. B.

Vreeland, of New York, a former Member of this House. That bill was passed by the Congress and approved by the President on May 30, 1908. Under the terms of that act national currency associations not less than 10 in number, were to be established throughout the country. The law contained two general provisions. The first gave authority and provided the procedure for the issuance of emergency currency. The second important provision was the authorization of a commission clothed with the power of investigation of the money systems of the world. The vote on this bill was taken in the House on May 14, 1908, and just before the roll was called I offered the Williams bill as a substitute for the Vreeland bill. I wanted to test the temper of the Democrats of the House on the Williams bill, which had been so highly lauded by the "peerless leader" of the Democracy, who is now Secretary of State. And I mention this fact because Mr. Bryan has with similar fervor lauded the pending Glass-Owen bill.

The roll call disclosed that only 6 Democrats had the temerity to vote for the Williams bill; 93 Democrats answered "present," including Mr. WILLIAMS himself; Mr. CLARK, the present distinguished Speaker of the House; Mr. UNDERWOOD, the present popular chairman of the Committee on Ways and Means; and Mr. Burleson, the present honored Postmaster General of the United States. About 50 of the Democrats of the House abstained altogether from voting. So that out of a voting strength in the House of approximately 160 Members, only 6 Democrats were ready to stand by the measure that had been so highly lauded and commended by Mr. Bryan.

So you see I am justified in suspecting the soundness of this bill after its indorsement by such high authority.

Mr. SLOAN. Will the gentleman permit an interruption?

Mr. KAHN. Certainly.

Mr. SLOAN. The gentleman gave the action of certain leading Democrats; can he give us a statement of how the gentleman, the distinguished chairman of the Banking and Currency Committee, voted?

Mr. KAHN. He was not one of the six that voted for the Williams bill.

Mr. GLASS. I did not quite hear what the gentleman from Nebraska asked.

Mr. KAHN. The gentleman from Nebraska wanted to know how the distinguished chairman of the committee voted on the Williams currency bill in 1908. I tell him that to the best of my recollection the gentleman from Virginia did not vote for the bill.

Mr. GLASS. No; I was paired. If I could have voted I would have voted against the bill. I would remind my friend from California that he must agree that Mr. Bryan since that time has grown in public estimation. There were six votes for the bill. There were only nine votes against the bill which we are considering now, and there will be less on the floor of the House on the roll call. [Applause on the Democratic side.]

Mr. KAHN. The question as to whether the distinguished Secretary of State has increased in the public estimation is not involved in the case of the Williams currency bill. His power of reasoning now is about the same as was his power of reasoning then. At that time he was unqualifiedly for the Williams bill, and stated to Members of the House and the Senate that it ought to have the support of every Democrat, yet there were only six votes in favor of it on the floor of the House.

Mr. GLASS. But he has learned a lot since then.

Mr. KAHN. The distinguished Secretary of State is a Bourbon, and they say that the Bourbons never learn anything and never forget anything.

Mr. KELLEY of Michigan. Will the gentleman yield?

Mr. KAHN. Certainly.

Mr. KELLEY of Michigan. Does the gentleman from California mean that Mr. Bryan's indictment turned the author of the bill away from it?

Mr. KAHN. The author of the bill answered "present," and did not vote for or against the Williams bill.

Mr. Chairman, I have seen it contended that under the provisions of the pending bill the Federal reserve banks which are to be created will become competitors of the National and State banks, and that the scheme of banking it sets forth holds out the menace of inflation. Personally I do not believe those contentions to be well founded. It is contended also that the bill will again inject our banking system into the domain of politics. I believe that there is no doubt but that such danger does lurk in the provisions of this measure as it has been presented to this House. Other speakers during this debate have pointed out with much elaboration this and other defects in the bill.

The history of banking in the United States whenever politics has been permitted to enter the banking business has been a history of disaster. The decade between 1830 and 1840 is a striking illustration of that fact.

It has been recognized as an axiom that capital is timid, and to tamper with the country's credits is fraught with the greatest danger. My impression is that this bill as it now stands will cause many of our national banks to surrender their charters to the Federal Government. They will return to the State-bank systems, many under the guise of trust companies. The present system of national banks has brought stability at least to our currency. While some contend that the system is archaic, we know that it has brought a degree of soundness to our banking institutions that was woefully lacking prior to its enactment. About 7,500 national banks are in operation under the provisions of the national-bank acts at the present time. It seems to me that the pending measure, unless it can be amended so as to eliminate its dangerous features, will break down our existing system without providing an adequate substitute—a substitute that should permit above everything else the safe expansion of our currency in times of financial stress. [Applause.]

Mr. BATHRICK. Mr. Chairman, two or three evenings ago I made a speech referring to a map. Now I find they have not permission to print that map, which is a part of my address, unless I secure the unanimous consent of the House.

Mr. MADDEN. Mr. Chairman, I think the gentleman has to secure the consent of the Joint Committee on Printing.

Mr. BATHRICK. I have investigated the subject, and I find if I get unanimous consent of the House to print the map that they will be able to print it.

Mr. TOWNER. Mr. Chairman, I ask unanimous consent that the request of the gentleman may be granted.

Mr. MADDEN. That can not be done in the Committee of the Whole.

Mr. BATHRICK. Does the gentleman raise the point of order?

Mr. MADDEN. I make the point of order that we are in the Committee of the Whole House on the state of the Union, and the gentleman will have to do that in the House.

The CHAIRMAN. Not having investigated the question, it occurs to the Chair that the committee can not give an authorization to print other than what the general rules will permit. The Chair will suggest to the gentleman from Ohio that when we get in the House he get an authorization to print from the Committee on Printing.

Mr. BATHRICK. It is impossible to get the Committee on Printing to do that when I can not get them in session.

Mr. MADDEN. I believe the only authority lies with the Committee on Printing.

The CHAIRMAN. The Chair thinks the point of order is well taken.

Mr. GLASS. I understand the gentleman from California was going on until 4 o'clock.

Mr. HAYES. I yield 15 minutes to the gentleman from South Dakota [Mr. DILLON].

Mr. DILLON. Mr. Chairman, I wish that this important measure might be improved by amendments. It is a source of deep regret that the caucus has decreed that no amendments shall be allowed except those coming from the committee. If we all could approach this discussion with full freedom of thought and judgment, certainly a good law could be given to the country.

The bill commends itself in many respects. Within the last 10 years there has been an immense concentration of the people's money in the hands of the Wall Street bankers. It is said that the average daily bank clearings of the United States Steel Co. is \$75,000,000 and that the Tobacco Co.'s daily bank clearing is \$20,000,000. The life insurance companies of New York add to these banks billions of dollars of trust funds. The great railroads of the country add their millions of deposits in these same banks.

Under the national banking law the banks may keep a portion of their funds in reserve city banks. Thus a pipe line is formed through which the people's money gravitates into the banks of New York City.

The centralization of the people's money in the hands of a few financiers gives them a power that they ought not to possess. They possess the power to say who may borrow the people's money and who may not have it.

Will this bill prevent the centralization of the money in the great cities? I think it will. If we can keep our money at home, no panic can ever disturb the financial and commercial transactions in our State. If this bill will enable us to keep our money at home, it will accomplish some of the purposes claimed by its authors.

I wish the bill might strike at some of the clearing-house and stock-exchange evils, that it might prevent the interlocking of directorates of financial institutions.

The national banking law has never been of much benefit to the farmers, because the banks are prohibited from making

farm loans. What the farmer wants is a three or five year loan. A rural-credit system that would furnish to the farmers long-time loans at a low rate of interest would have materially improved the present bill. These features, however, can be added and brought into place by additional acts.

If the national banks of my State should subscribe to the stock of the regional bank, millions of dollars which are now supplying the needs of our people, forming the basis of credit, will be withdrawn and deposited in the regional bank. The loaning ability of these banks may thus be reduced. Will not this alone bring a contraction of the credit and accordingly lessen the loaning power of the local banks? I fear it will.

It is doubtful if the western bankers would care to turn over to the regional bank one-fifth of their capital and portions of their deposits for the percentage given by this bill, because these bankers can loan their money at 8 per cent. The banks do not hold 60-day farmers' paper, nor do they hold 9 months' real estate loans.

If a large portion of the small banks should fail to go into the new system this law would prove to be ineffective. The bill should be liberal enough to induce practically all the national banks to come in under its terms. If the terms are not liberal, these banks will prefer to organize under the State banking law, which, of course, would retire a portion of the national-bank circulation. It is to be hoped that the committee will permit amendments that will prove a sufficient inducement to bring into the scheme the cooperation of practically all of the national banks.

We are just commencing to legislate upon this complicated subject. This law when passed can from time to time be amended and made effective. I shall therefore vote for the bill.

CAUCUS LEGISLATION.

The country at large may approve the bill now under discussion, but the people will not, in my judgment, commend the methods used in preparing the way for its passage.

It is to be regretted that 14 Democratic members of the Banking and Currency Committee have felt the necessity of excluding from the deliberations of the committee 7 worthy members who were commissioned by this House to act on this important measure. For eight weeks the majority of the committee held secret meetings for the purpose of considering the bill, and this House, with full knowledge that the seven members were excluded and denied the right to participate in the deliberations of the committee, has acquiesced in the exclusion and indorsed the action of the majority of the committee.

From the secret chamber of the committee came mutterings of discord and strife. Individuality asserted itself. Insurgency broke loose. Those in control of the committee must keep the upper hand, and for that purpose the all-powerful caucus is called.

As a part of my remarks I read the rules governing the Democratic caucus.

DEMOCRATIC CAUCUS RULES.

PREAMBLE.

In adopting the following rules for the Democratic caucus we affirm and declare that the following cardinal principles should control Democratic action:

- (a) In essentials of Democratic principles and doctrine, unity.
- (b) In nonessentials, and in all things not involving fidelity to party principles, entire individual independence.
- (c) Party alignment only upon matters of party faith or party policy.
- (d) Friendly conference and, whenever reasonably possible, party cooperation.

RULES.

1. All Democratic Members of the House of Representatives shall be *prima facie* members of the Democratic caucus.

2. Any member of the Democratic caucus of the House of Representatives failing to abide by the rules governing the same shall thereby automatically cease to be a member of the caucus.

3. Meetings of the Democratic caucus may be called by the chairman upon his own motion, and shall be called by him whenever requested in writing by 25 members of the caucus.

4. A quorum of the caucus shall consist of a majority of the Democratic Members of the House.

5. General parliamentary law, with such special rules as may be adopted, shall govern the meetings of the caucus.

6. In the election of officers and in the nomination of candidates for office in the House, a majority of those present and voting shall bind the membership of the caucus.

7. In deciding upon action in the House involving party policy or principle, a two-thirds vote of those present and voting at a caucus meeting shall bind all members of the caucus: *Provided*, That said two-thirds vote is a majority of the full Democratic membership of the House: *And provided further*, That no Member shall be bound upon questions involving a construction of the Constitution of the United States or upon which he has made contrary pledges to his constituents prior to his election or received contrary instructions by resolution or platform from his nominating authority.

8. Whenever any member of the caucus shall determine, by reason of either of the exceptions provided for in the above paragraph, not to be bound by the action of the caucus on these questions, it shall be his duty, if present, so to advise the caucus before the adjournment of the meeting, or, if not present at the meeting, to promptly notify the Demo-

cratic leader in writing, so that the party may be advised before the matter comes to issue upon the floor of the House.

9. That the five-minute rule that governs the House of Representatives shall govern debate in the Democratic caucus unless suspended by a vote of the caucus.

10. No persons except Democratic Members of the House of Representatives, a caucus journal clerk, and other necessary employees shall be admitted to the meetings of the caucus.

11. The caucus shall keep a journal of its proceedings, which shall be published after each meeting, and the yeas and nays on any question shall, at the desire of one-fifth of those present, be entered on the journal.

The caucus now meets behind closed doors for three weeks. It proclaims by its rules that those who fail to "abide by the rules governing the caucus shall thereby automatically cease to be members of the caucus." By rule 4 "a quorum of the caucus shall consist of a majority of the Democratic Members of the House." By rule 7 "a two-thirds vote of those present and voting at a caucus meeting shall bind all members of the caucus, provided the said two-thirds vote is a majority of the full Democratic membership of the House."

These rules proclaim the binding effect of caucus dictation. The Member is graciously permitted to vote his convictions, first, "upon questions involving a construction of the Constitution"; second, with a yielding spirit it permits the Member to redeem pledges "made to his constituents prior to his election"; third, with condescension the rules allow him to comply with the "platform from his nominating authority." These are the only exceptions in which individuality is permitted. If by reason of either of these three exceptions a Member determines not to be bound by the actions of the caucus, it is made his duty "if present, so to advise the caucus before the adjournment of the meeting, or, if not present at the meeting, to promptly notify the Democratic leader in writing, so that the party may be advised before the matter comes to issue upon the floor of the House."

Behind the caucus stand the rulers, behind the rulers the dispensers of patronage. The faithful are intimidated by its decrees. They are loath to leave places in the party cotancil. They join the ranks of the rulers, and individuality is peacefully put to sleep. [Applause on the Republican side.] The individual surrenders his convictions, and the grand rush for the band wagon and the pie counter takes place.

For the purpose of strengthening the lines, the next move is to declare the bill a party measure and to proclaim that "members of this caucus are pledged to the bill to its final passage without amendments; provided, however, the Banking and Currency Committee may offer an amendment in the House." Now they go through the idle ceremony of calling the full Committee on Banking and Currency together to consider the bill indorsed by the caucus and labeled that no amendments will be allowed—a hollow pretext.

The bill now comes to the House for consideration, but under the caucus gag every amendment is to be summarily voted down. We are told by those high in authority that "abundant opportunity for debate will be offered." What is the use of offering amendments when the caucus majority have entered into a covenant with each other to vote down every amendment that might be offered? You invite amendments, but you will not consider them when offered. Can such methods be upheld by fair-minded legislators who believe in fair, open discussion? Must we condemn the boss and at the same time commend the caucus, when the bosses stand behind the caucus?

The currency bill is not a party measure. It is not a partisan theme. It affects vitally the interests of every man, woman, and child. The Republican and Progressive Members are as patriotic as those who attend the Democratic caucus. The measure goes beyond party creeds. It calls upon every Member for patriotic service in placing the common good above partisan advantage. Our highest duty to the country is to give to the people not a political-party currency bill but a people's currency bill.

We plead for an independent legislative department of Government; one that will not permit the judicial nor the executive departments to trespass upon the rights of the legislative department; one that will not allow a caucus to bind its members; one that will call upon its members to stand for individual opinions; one that will maintain the independence of its members; one that will permit its members to stand erect in their God-given rights without coercion and without caucus splints upon their legs. [Applause.]

No Member should delegate his power of legislation to any caucus. The caucus destroys individuality; it establishes tyranny; it sacrifices the best legislative instrumentality, the conscience; it makes weaklings of its members. When our forefathers established this Government they supposed the membership of this body would act independently of every influence and be guided only by conscience. They never supposed that the Members would trade, barter, or dicker in legislative matters.

They never supposed a part of the Members would secretly enter into a compact with each other to stand by a caucus decree; they never dreamed that a few Members would secretly agree among themselves to sandbag every amendment to important measures without having any knowledge as to what the amendments might be.

The bosses control the caucus and the caucus controls the legislative department of Government. Thus legislative functions are abrogated and the legislative power destroyed. The jury packer and the caucus are twin malefactors. The system is indefensible; its decrees are vicious. Yes; as vicious as the edict promulgated by King Nebuchadnezzar 2,500 years ago commanding that when the sound of music was heard his subjects should bow down to the golden image under the penalty of being cast into the fiery furnace. The caucus decree commands obedience and a complete surrender of convictions under pains and penalties of a full and complete separation from the Democratic pie counter.

Let us take off the caucus pressure and leave the Members free to exert their influence in honest, free, and open discussion, thereby placing the legislative department above the command of the caucus and thus restore it to its ancient high and lofty position, the greatest legislative body in the world. [Applause.]

MR. HAYES. Mr. Chairman, I yield to my colleague from California [Mr. CURRY].

MR. CURRY. Mr. Chairman, I rise for the purpose of having printed in the RECORD as a part of my remarks an article on sweet wines by Dr. Wiley. The article is a short one and appeared in this morning's Post.

THE CHAIRMAN. The gentleman asks unanimous consent to print as a part of his remarks a certain article by Dr. Wiley. Is there objection? [After a pause.] The Chair hears none.

MR. GLASS. Mr. Chairman, I yield 15 minutes to my colleague [Mr. BEAKES].

MR. BEAKES. Mr. Chairman, one thing which indicates how good is the Glass currency bill is the fact that while acknowledging that the present currency and banking system is inadequate, no one opposed to the bill under consideration has attempted to offer an adequate substitute for it. Summing up of the arguments so far made against it would read something like this: The present system is bad; we grant that the bill under consideration is an improvement, but it is not good enough; however, we have no bill to offer that is better, therefore we must vote against this bill. Aside from this, our Republican friends are greatly disturbed over the unanimity in the support of the bill on the Democratic side of the House. They are disturbed because the House and the President are in accord. And yet last fall they were saying:

Wilson is a good enough man, but he can not control his party. They will not follow his leadership and he will be helpless.

Our Progressive brethren are greatly disturbed because we did not put a provision against interlocking directorates in this bill. We are going to pass a bill against this evil at the first regular session which will go further than any provision in this bill can go. To ask us to put it in here would be like a doctor saying to a patient coming to him:

I will not do anything for your stomachache unless you let me at the same time straighten out that clubfoot of yours.

Mr. Chairman, I can not permit the most important legislation which Congress has passed in many years to be decided upon without raising my voice in approval of what I believe to be the greatest constructive legislation which has been before Congress in the last half century. For years the need of a new banking and currency system in the United States has been felt. The demand for reform has come to be more and more insistent, and now, I believe, no thinking man will defend our present system of banking and currency. Under it we have had periodical money stringency. Under it we have had ever-recurring panics, and quickly following our periods of prosperity we have had long bread lines in the cities, want and distress in the rural districts, tottering credit, and business failures. In a country of matchless resources we have had woeful distress. And while we have been going through these periods of panics when loans are unobtainable, when banks have been compelled to refuse to cash checks for moneys deposited with them, when factories have been closed because they were unable to pay their hands, when business enterprises have been curtailed, and the whole country has passed through a period of entire business stagnation, we have seen across the water European nations, lacking our resources, still keeping on the even tenor of their ways, their banks continuing to perform the functions for which they were intended. Why should we have acute financial panics when England, Germany, and France do not have them? Formerly

these countries passed through severe panics like our own. It ought not to be difficult to trace the reason for the breaking down of our own currency and banking system at the very times when it is most necessary that it be in good working order.

When we compare our currency system with that of other countries we find it is less elastic. The amount of currency in the country is the same whether there is much need for it or little need for it. It has been, for instance, estimated by financial experts that we need \$300,000,000 more money in the fall when the crops of the country have to be moved than we do at other periods of the year. Yet the United States has no more money in the fall than at other seasons. Other countries have a more elastic currency. Why not we?

But a mere reform of our currency will not alone suffice. It is estimated that 95 per cent of our business transactions in this country are carried on by means of bank checks, and these bank checks perform the functions of currency, falling down only in periods of panics, when they are not so easily honored. Bank checks are all that give any elasticity to our present system, but in times of stress there is a tremendous falling off in the number of checks passing through the banks, and the banks at the same time are hoarding currency so that there is an immense contraction of our medium of exchange. This is what causes business stagnation, with the ensuing want, starvation, and ruin. There is not money enough with which to do business. Money being furnished the business would go on in its usual manner. Hence, hand in hand with a more elastic currency must go a better system of banking, a system which should not cause a sudden contraction in the amount of checks used. Checks can not be used, however, unless the users have credits in the banks on which they draw the checks, and it is due to the fact that the banks in times of stress are compelled, under our present system, to contract these credits that the volume of exchange contracts so greatly and the whole machinery of commerce is thrown out of gear.

Our present system of national-bank notes was devised with the one purpose in view of selling Government bonds at a time when the United States was in the throes of a great civil war and the credit of the Government was at its lowest ebb. It was a makeshift for selling bonds to advantage. It is a surprising thing that it should have been allowed to stand for 50 years. In that 50 years commerce has vastly expanded, and I think it will be granted that the more things there are to be exchanged the more need for money to facilitate that exchange. Here, then, we have a system which calls for the issuing of more bonds when more bank notes are needed, and a constant increase in our debt, so that we may have more currency to meet the needs of our expanding commerce. It is no wonder that some speakers have been misled into the statement that a public debt is a public blessing. Under this system the more prosperous the Nation, and hence the greater volume of currency needed to distribute that prosperity, the greater debt needed, with the greater taxation to meet the interest on that debt. Under this system also for the United States to pay off its debt would so reduce the volume of currency as to cause business stagnation. Long ago we should have given up this unscientific system of national-bank note issues and sought a better system.

In practice we now have a rigid currency system except that periodically in times of stress, when more currency is needed, it is suddenly and violently contracted, adding greatly to the evils of the time and producing severe financial panics.

Under our present banking system a large part of our banking resources find their way to the three central reserve cities, New York, Chicago, and St. Louis, and more especially to New York. For instance, the 40 central reserve banks in New York City had on deposit on September 1, 1911, \$1,150,500,000, much of which was deposits of banks in other sections of the country. The banks of New York gather up the reserves of the other banks all over the country and loan them out to a great extent in call loans for Wall Street gambling. Too much of the money of the country needed by our expanding commerce is diverted to the use of Wall Street speculators. Let there be a flurry on Wall Street and a raise in interest on call money in New York and immediately all over the country there is a curtailing of local credit in the local banks and a shipment of greater reserves to New York. And the whole banking system of the country is becoming more and more dependent upon the New York banks, so that it has come about that our banking system is really controlled by a few financiers in New York. And too often when our local banks want money they find that the banks of New York are also wanting money, and their reserves held there are almost useless for the time being. Those who have fears of governmental control of the banking system should remember that we now have private control. If the Glass bill does nothing else, it completely emancipates the country bank from New York control.

This is the system we are called upon to reform. How shall we reform it? Nowhere, in my opinion, has the remedy been more clearly set out than in the language of President Wilson in his currency message:

We must have a currency not rigid as now, but readily elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands of the monetary resources of the country, or their use for speculative purpose in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and of issue which our new laws are to set up must be public, not private; must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

The Glass bill, I think, fully carries out the purposes so clearly set forth by the President. It fills also every requirement set forth in other words by Franklin MacVeagh, late Secretary of the Treasury, in his report to Congress on December 4, 1911, where he says:

The principal requirements of a new banking and currency measure are that it shall provide a practical immunity from serious panics—such an immunity as is enjoyed by the other leading financial nations; that it shall abolish the habitually recurrent ordinary stringencies in the money market, which keep relations between the bankers and the business men of the country almost continuously at sixes and sevens; that it shall remove the defects of our domestic exchanges; that it shall enlarge and develop the facilities of our foreign exchange system; that it shall properly develop the discount market; that it shall wholesomely assist in regulating the interest rates and making them uniform throughout the country; that it shall put an end to the tendency which forces our bank balances into speculative channels, and save them for regular trade and commerce. To meet the case it is necessary to have an elastic currency, available reserves, and every necessary provision and power both to permit and to check the expansion of loans.

The new banking system will also have to provide with distinctness and completeness ample banking facilities for our foreign commerce—a commerce that with the proper governmental encouragement will be world wide and world varied. It is idle to expect that we shall ever have a developed foreign commerce without a developed foreign banking system. Our present system grew up in a period of isolation.

We must provide, too, and without reservation, for a perfect equality of privilege and opportunity between National and State banks. State banks must have every advantage national banks have; and national banks must have every advantage State banks have. And this equality can not be attained unless National and State banks are on the same footing as to trust-company banking and as to savings bank functions.

This is exactly what the Glass bill does, and the machinery is so simple and easy, and the bill is founded on such scientific principles that the only wonder is that it was not evolved years ago.

Pass this bill and we shall have no more such panics as in 1907 or in 1893.

While the bill inaugurates an entirely new system of banking and currency in this country it will, I think, go into effect with but little disturbance of banking facilities. While as a whole the system is new, the various principles applied have been well worked out in other countries.

The extra currency provided is perfectly safe. It is based upon a one-third gold reserve and 100 per cent of bank paper—commercial, industrial, or agricultural paper. This paper is indorsed by the bank desiring the currency and is further backed by the entire assets of the Federal reserve bank, and payment is practically guaranteed by the Government. This is exactly the same currency as that of which the Reichsbank of Germany has outstanding \$1,300,000,000. The German currency is backed by a one-third reserve in gold and 100 per cent of bank assets, just as this currency is secured, and this German currency has been in use for years and is perfectly good. France has asset currency, and it has been well said that while the United States greenbacks or fiat currency went down to 40 cents on the dollar when there was no question that, whatever the results of the Civil War, that Government would survive, the French asset currency was worth 100 cents on the dollar when the tramp of the German soldiery was heard in the streets of Paris. The safety of this currency has been demonstrated in France and Germany. Its elasticity is secured in this way: It is issued to a bank needing it when they present as much of their current paper to be discounted as they call for in currency. All of the paper so discounted matures within 90 days, and so within 90 days as much money will be back in the reserve banks as was issued in currency. If the town to which this currency was issued still needs more currency the home bank will present more paper to be discounted and thus secure more currency for its community, but the home bank will not present paper to the reserve bank for rediscount unless its community needs more money, because the home bank discounts local notes for the interest it gets and will not rediscount to the reserve bank and thus lose part of this interest unless it needs more money to loan out. Thus is elasticity secured in the currency of each local community and the volume of currency out-

standing expands and contracts as the business needs of each community require.

The beauty of this currency lies largely in the fact that while it is thus a perfectly safe and sound currency, as good as gold, it has the merit of expanding or contracting the circulation in each community according to the needs of that community. Where there is special need of more currency, there it is forthcoming. When that need decreases it automatically retires from circulation. Thus, to again use the words of the President, it is "readily, elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings."

The second requirement laid down by the President is that it must mobilize reserves and that not in the hands of private individuals or where it can be used for speculative purposes. The Glass bill does this by the establishment of 12 regional reserve banks. The average paid-in capital of each of these banks will be over \$100,000,000, as each member bank must pay in 10 per cent of its capital stock. Every national bank must become a member of a regional reserve bank or go out of business. Any State bank may become a member if it desires on the same terms as a national bank. The only depositors of the regional reserve banks will be the member banks and the United States Government. The member banks are required to keep part of their reserves with their regional reserve bank. It is this reserve bank which puts up the 33 per cent of gold to secure currency issued. The reserves, instead of being widely scattered or in the hands of private financiers, where they may not be immediately forthcoming in times of stress, are mobilized in these semigovernment banks, where the member banks can get immediate relief. Speculation is largely guarded against, as these reserve banks will not rediscount for their member banks paper secured by stocks and bonds, the usual method of securing money for Wall Street gambling. The bank reserves are mobilized for immediate use. On them can be issued \$3 of currency for every \$1 in reserves.

This system increases the safety of banks. No bank can make any money and keep in its vaults money enough to pay all its depositors if they all want their money within a short time. So as times get tight the banks have been in the habit of loaning less and less money and hoarding up more of it to provide for emergencies, thus greatly increasing the very stringency which has caused them alarm. In tight times each bank is looking out for itself and will not rediscount the paper of other banks in distress. In the Glass bill we have the regional reserve banks, with means of putting out needed currency, formed for the very purpose of taking care of the local banks in time of stress, where they can quickly turn their good paper into money, and thus can safely loan out more of their deposits. Thus are the bank reserves mobilized for immediate use. When the regional reserve banks get in full operation the member banks will no longer fear runs upon them, and as the depositors will know that their deposits will be paid when wanted, there will be no runs on banks in this system.

This system has also made it perfectly safe to cut down the amount of reserves required to be kept. In the country banks, for instance, 15 per cent of the deposits are now required to be kept as reserve and can not thus be used. It is perfectly safe to cut this down to 12 per cent as the Glass bill does, because if more money is needed it is instantly obtainable. This cut of 3 per cent will release many millions of dollars for use in commerce and production. While it is necessary that banks keep reserves, the money so kept is of no immediate value as a medium of exchange; like the money hoarded in stockings, it is kept out of circulation.

The third requirement the President has laid down is that the control of the system of banking and issue of currency must be in the hands of the Government, and this is fully met in the Glass bill. The whole system is controlled by the Federal reserve board, which consists of the Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, and four members appointed by the President. These have control of the entire system. Each regional reserve bank is managed by nine directors, three named by the Federal reserve board, three elected by the member banks, and three, who are not bank directors, elected by the member banks, subject to the confirmation of the Federal reserve board.

This is the part of the bill to which some bankers have raised objections, claiming that the bankers themselves should control or have part in naming the Federal reserve board. And yet this governmental control is not a new thing. The direktorium (the president and directors) of the Reichsbank are appointed by the German Emperor, and the curatorium of the same bank consists of the chancellor of the Empire, the Prussian minister of finance, and three members appointed by the Bundesrath.

Bankers, brokers, bill discounters, or directors of other banks are excluded from being elected directors of the Bank of England; and while the Government does not select the directors of the Bank of England, the very class of men those who object to governmental appointment would select are excluded from the directorships in the Bank of England. I think it ought to be granted that the issue of currency should be entirely within governmental control, and I can see no reason why these reserve banks, semipublic banks, and direct repositories of Government funds should not also be within that control. Certainly governmental control, with weekly reports and everything in the light of day, is preferable to the present secret control, with no weekly reports, by private and interested financiers in New York City.

I lack time to go into the many other improvements made in our banking system. I think, however, I have said enough to indicate why I heartily favor this bill. Among other things—

First. It prevents financial panics in the future.

Second. It furnishes each community with the volume of currency that community needs.

Third. It makes banking safer and has a tendency to stop runs on a bank.

Fourth. It puts the bank reserves into use.

Fifth. It puts the Government's receipts in use as a circulating medium instead of retiring them from use, as at present.

Sixth. It provides banking facilities for our foreign commerce, a branch of the bill into which I have not had time to go, but which is of great importance in this era of expanding foreign trade.

Seventh. It permits the Government to pay off its bonds without contracting the currency.

Eighth. It provides an elastic currency, automatically expanding and contracting as business demands.

Ninth. It emancipates the local banks from the control of other banks.

Tenth. It provides money when needed to move the crops.

Eleventh. It provides for the wants of agriculture, commerce, and industry in a medium of exchange.

Twelfth. It will increase the prosperity of the United States and give added stability to that prosperity.

With the passage of the Underwood bill, which revises the tariff downward, which saves the consumer from the exactions of the protected manufacturer, and includes a graduated income tax, the fairest tax that can be levied, and with the passage at this extra session of Congress of the beneficent Glass currency bill, the administration will have started out auspiciously in the first few months on its career of constructive legislation. While in these two bills we have gone far in keeping our promises to the people, the regular session will have many other problems of progressive and constructive legislation, and I am confident that we will show the country that the Democracy is committed to a safe, progressive, constructive course which will add to the welfare of the people whom we serve. [Loud applause.]

Mr. GLASS. Mr. Chairman, I yield 45 minutes to my colleague from South Carolina [Mr. RAGSDALE].

[Mr. RAGSDALE addressed the committee. See Appendix.]

Mr. HAYES. I yield to the gentleman from Pennsylvania [Mr. TEMPLE] 30 minutes. [Applause on the Republican side.]

Mr. TEMPLE. Mr. Chairman and gentlemen, perhaps I shall not occupy the 30 minutes which have been yielded to me. My speech is not in manuscript and is therefore somewhat adjustable as to length. It partakes of some of the merits of the currency provided for in this bill, in that it is elastic.

Like others who have spoken, I regret very much that so important a measure as this one, which is intended to reorganize the whole banking and currency system of the United States, should have been made a purely party measure, because the lines by which men might be separated into groups according to their differences of opinion on banking and currency questions would not at all coincide with party lines. There has been no alignment of the voters, nor even of the party leaders, for and against the principles underlying the present bill. On the tariff question the Republican Party and the Progressive Party are both in favor of protection. The Democratic Party is now pushing to its final passage a bill avowedly drawn without thought of protection. The tariff is, of course, a party issue. Not so the banking and currency question.

The principles involved in these subjects of banking and currency have not been sufficiently discussed for the great mass of the people to reach conclusions as firmly fixed as their convictions on the tariff, and there has been no separation into parties because of differences on this question. Of course the Democratic Party has the power now, because of the binding authority of the party caucus, to put through without the aid of

Republican or Progressive Congressmen the bill now pending, though it is thoroughly unsatisfactory to some of the Democrats who will support it. We who are the Members of the two minorities, if I may use that language, have been told that our aid is not needed and our suggestions are not wanted. Nevertheless I shall make suggestions, and at the proper time offer amendments to the bill, in the hope, like the gentleman who has just taken his seat [Mr. RAGSDALE], that if they are not passed here they will be passed elsewhere, and I may possibly be able to vote for the bill after a conference between the two Houses. If I choose to vote for the bill now, I shall do so in spite of the fact that it has been made a Democratic measure; and if I vote for it, it will not be because I am a Democrat, but because in spite of the method by which it has been written and so far pushed along in the House it has decided merit. And if I vote against the bill it will be because it has grave defects which threaten to interfere with the safe working of a plan which in many respects is in harmony at once with sound economic theory and with the banking experience of the world.

The notes that are to be issued under this bill are in their nature essentially bank notes. They, in the honest language of the first draft of the bill, purport on their face to be obligations of the United States Government. That phrase, "purport on their face," has since been stricken out, but it contains a deal of truth. They do purport to be obligations of the United States, and in the last resort they are; but, nevertheless, the whole nature of the Federal reserve currency is that of bank notes.

Mr. MURDOCK. Will the gentleman yield?

Mr. TEMPLE. Certainly.

Mr. MURDOCK. The gentleman realizes that the notes are redeemable by the Government?

Mr. TEMPLE. Redeemable by the Government if there is no other redemption. Ultimately the obligation falls on the Government, but primarily on the banks. They are issued by the banks in the ordinary business of commercial banking. They are based on rediscounted short-time commercial paper, and they are safeguarded by a fixed reserve of gold or lawful money and would be much better if the reserve were gold alone.

Unlike Government paper, and unlike the bank notes issued under the existing system, the period during which a given note will circulate—that is, the life of the note—will probably be short. These notes have all the marks and characteristics of bank notes; they are bank notes; but the bank that issues them is the Government of the United States. The Government is creating a great central bank of issue with 12 branches; its capital is furnished by private persons who pay all the expenses, carry all the risks, bear all the losses, and enjoy a portion of the profits. But the management of the bank and of the 12 Federal reserve bank branches is in the hands of the Government.

Let us see. The management and control of each of the Federal reserve banks is supposed to be in the hands of a board of nine local directors. How are these nine directors elected? The first three, class A, are elected in a peculiar manner. An institution somewhat corresponding to an electoral college has been devised. All the banks in the district that enter this system are divided into three groups which shall be equal in number, and the banks in each group are to be, as nearly as may be, equal in capitalization. A practical way to arrive at the grouping would be to make a complete list of all the banks of the district, at the top the one with the highest capitalization, say twenty-five millions in the case of the New York district, and then running down to the banks of \$25,000 in the small country towns.

The banks would be arranged in the whole list according to the amount of their capitalization. Then that list may be cut into three sections, each containing an equal number of banks. The banks of the highest capitalization would be in the first section, and those of the medium capitalization in the second, and in the third section would be the banks of smaller capitalization. Each bank selects one of its own directors to be a member of what I have called an electoral college. The electors thus chosen for each group will elect one director for the Federal reserve bank, so that one director will represent the large banks, one the medium banks, and one the small banks. These three men are to be class A directors of the Federal reserve bank of the district. The directors of class B, three in number, are to be elected by the same electoral college, but must not be bank directors or officials. They are to be business men representing the commercial, industrial, and agricultural interests of the district. The three directors of class B may be removed at the discretion of the Federal reserve board.

The Federal reserve board elects the remaining three directors, one of whom is to be chairman of the board, president of the Federal reserve bank, and Federal reserve agent for that district.

Now, let us see as to the control that the Federal reserve board has in that matter.

It controls the directorate of each Federal reserve bank, as was ably pointed out by the gentleman from Ohio [Mr. FESS]. The Federal reserve board controls six of the nine directors, who are removable at its will. An attempt was made on the floor of the House, in reply to the gentleman from Ohio, to show that there was a limitation on the power of the Federal reserve board. The power referred to is defined on page 9 of the last print of the bill:

The Federal reserve board shall have power at its discretion to remove any director of class B in any Federal reserve bank if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.

An attempt was made to show that limits had been placed on this power of removal by applying to it the terms found on page 23, by which the Federal reserve board is given power to suspend officials, as follows:

(f) To suspend the officials of Federal reserve banks and, for cause stated in writing, with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

This limitation applies only to the power to remove officials. Directors may be removed at the discretion of the board. Directors are not spoken of as bank officials in common speech nor in this bill. The distinction between the two is observed on page 20 of the bill, where it is provided that no member of the Federal reserve board shall be an officer or a director. They are two separate classes.

Mr. FESS. Will the gentleman yield for a question?

Mr. TEMPLE. Yes.

Mr. FESS. Can the Federal board remove one of these three without cause?

Mr. TEMPLE. The gentleman refers to directors of class B? I should think not without cause. The bill says that the Federal reserve board shall have power, at its discretion, to remove any director of class B in any Federal reserve bank, if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.

Mr. FESS. Then, in its discretion, the cause would be determined by the removing power?

Mr. TEMPLE. It seems so to me.

Mr. FESS. Now, another question. Will the party removed under the provisions of the bill have an appeal to any power?

Mr. TEMPLE. I do not find in the bill any provision for any appeal at all.

Mr. FESS. In other words, the Federal board does control the local directors?

Mr. TEMPLE. So it seems to me; absolutely.

Mr. PHELAN. Will the gentleman yield just for a remark?

Mr. TEMPLE. Yes.

Mr. PHELAN. Just for the purpose of clearing that thing up. Even if these men are removed, the reelection is still made by the bank. The gentleman understands that, does he not, that the election of their successors to fill the vacancies are by the banks?

Mr. TEMPLE. Yes; but the gentleman does not mean to say that they will elect the same men?

Mr. PHELAN. I do not mean to say that, but they are not controlled by the Federal reserve board when the banks elect these members of the Federal reserve bank.

Mr. TEMPLE. It seems to me the power of impeachment is sometimes greater than the power to elect.

Mr. FESS. I would like to ask the gentleman from Massachusetts whether the same power of removal of directors would not be able to remove the reelected directors?

Mr. PHELAN. I think so; but I think it is ridiculous to assume that they are going through that process indefinitely.

Mr. FESS. It is ridiculous to see the influence that is now pressing certain legislation through here.

Mr. TEMPLE. If it is a ridiculous process, why should the bill confer upon this board the power to go—

Mr. PHELAN. I did not say that it was a ridiculous process.

Mr. TEMPLE. I misunderstood the gentleman.

Mr. PHELAN. I said it was a ridiculous assumption that any Federal reserve board—I do not care whether they are all Republicans—would keep on removing men from office unless there was a good reason why men should be removed from office.

Mr. TEMPLE. Well, the supposition might be that they would be mostly Democrats. [Laughter on the Republican side.]

Now, the prerogatives of the Federal reserve board, if we outline its powers, mentioning only those that are greatest and

most important, are these: They may choose three of the directors, one of whom is to be president of the bank or chairman of the board, who is to be also the Federal reserve agent and act as the official representative of the Federal board for performing the functions conferred upon the board by the act. He is appointed by the board, and his salary is fixed by the board and paid by the bank. He may be dismissed by the Federal reserve board at pleasure and without notice. That is the language of the bill.

Mr. MURDOCK. Mr. Chairman, may I ask the gentleman a question?

The CHAIRMAN. Does the gentleman yield?

Mr. TEMPLE. Yes.

Mr. MURDOCK. In the study of this plan of organization did it not appeal to the gentleman that this Federal reserve agent would be a man of tremendous power?

Mr. TEMPLE. Unquestionably. Now, the Federal reserve board has also power to suspend the officials of Federal reserve banks, apparently without notice. But it can not require their permanent dismissal without cause, stated in writing, with opportunity for hearing, and the removal can not be made final without the approval of the President.

The whole working machinery of the 12 reserve banks, including the president and 6 out of 9 directors and all of the officials, are under the control of the Federal reserve board.

It is not too much to say, then, that the real directors of these 12 reserve banks are the 7 men of the Federal reserve board. The real bank is in Washington, and the 12 institutions aforesaid in the 12 Federal reserve districts are merely branches.

But, still further, in other matters besides the organization of the bank, the Federal reserve board has great powers. It has the power each week to determine the rate of discount which each Federal reserve bank may charge.

Mr. PHELAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. TEMPLE. Yes.

Mr. PHELAN. I understood the gentleman to say that the Federal reserve board had the power to state each week the rate of discount that the Federal reserve board should charge.

Mr. TEMPLE. I said they had the power to determine.

Mr. PHELAN. That is better.

Mr. TEMPLE. That is the language I used. The Federal reserve board has the power to determine the rate of discount. The point is this: Each Federal reserve bank suggests the rate, but it is subject to review and determination by the Federal reserve board. The final power lies with the Federal reserve board.

The same Federal reserve board may permit or require any Federal reserve bank to rediscount the discounted paper of any other Federal reserve bank, subject to an interest charge from 1 to 3 per cent higher than the rates of interest prevailing in either of the districts concerned. This provision alone brings out the character of the Federal reserve board as the real board of directors of a central bank, having control over the reserves and the capital of the 12 branches, and making the reserves and capital of all available at any one place to be used in rediscounting by any one branch.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. TEMPLE. Certainly.

Mr. HARDY. Does not the gentleman feel that if one of these directors or officers of this Federal reserve board should suddenly and unexpectedly prove corrupt or should otherwise endanger the safety and welfare of the bank there should be some power vested somewhere having the right to instantaneously dismiss him and take over that property?

Mr. TEMPLE. I can hardly see how it could instantaneously appear that they are corrupt.

Mr. HARDY. True. But suppose it should develop that a reserve agent, for instance, is a corrupt man. The authority to remove him at once ought to exist somewhere, ought it not? And it would be very cumbersome to require—

Mr. TEMPLE. The power to remove such a man as soon as the charges can be proved against him ought to exist somewhere.

Mr. HARDY. And to suspend him while he is under investigation, ought it not?

Mr. TEMPLE. With certain safeguards, I should say yes.

Mr. HARDY. That power that is lodged in this reserve board, most of it at least, ought to be lodged somewhere, ought it not?

Mr. TEMPLE. Certainly that power ought to be lodged somewhere. It is lodged somewhere under the present system. What I complain of is that so many powers are lodged in the same place.

Mr. HARDY. Could that particular power be lodged anywhere else?

Mr. TEMPLE. It is now. We have no Federal reserve board and we have the means of correcting these things.

Mr. HARDY. You have it practically lodged in the Comptroller of the Currency, who is one man instead of seven.

Mr. TEMPLE. In certain extreme cases that is true. Generally the Comptroller of the Currency allows the bank to close or to get into such a condition that it has to be closed.

Mr. HARDY. My recollection is that he just sends down there and closes it.

Mr. TEMPLE. After the banks in the neighborhood have wondered for some time why he did not do it before. There is generally good evidence on which to act before he acts.

Mr. HARDY. It is not done any too soon.

Mr. TEMPLE. The Federal reserve board also determines how the deposits of the United States Treasury shall be distributed.

Mr. SLOAN. Is it not the gentleman's opinion that these removals, summary if need be, ought to be for cause, and not upon discretion? That is the point that seems to divide the gentleman speaking and the gentleman from Texas [Mr. HARDY]. It seems to me the removal ought to be for cause and not upon discretion.

Mr. TEMPLE. That is not what I think is the ground of complaint against the bill. What I complain of is that so many powers are lodged in one place and that the 12 banks are bound together in one system so closely that they become practically one institution.

Mr. HARDY. I understand the question of discretion and without cause applies directly to the directors of class B; but as to these others, as a general thing, there must be some cause.

Mr. TEMPLE. Except in the case of the most important of all, the chairman of the board, who is president of the bank. He may be dismissed at the discretion of the board and without notice.

Mr. HARDY. He is the agent, and he being so important, if you waited for time for investigation, and gave no right of suspension or dismissal in the meantime, might you not lock the stable after the horse was out?

Mr. TEMPLE. Very likely; but my remedy for that would be not to lodge so many powers in this agent of the Federal reserve board. He is the agent of the Federal reserve board for performing all its functions in the district. He is the president of the bank and one of the three directors appointed by the Federal reserve board. He holds many offices in one, and he may be removed from all of them at the pleasure of the board and without notice, all of which emphasizes the point I am trying to bring out, that the Federal reserve board has almost absolute power over the control of the 12 Federal reserve banks.

Mr. MURDOCK. May I suggest to the gentleman that if this system should prove vicious and sinister influences should be exercised by the Federal reserve board, this powerful agent in the district would naturally become subservient to this Federal reserve board.

Mr. TEMPLE. He would have to be.

Mr. HARDY. May I ask one more question?

Mr. TEMPLE. Certainly.

Mr. HARDY. Inasmuch as these powers seem to be necessary to be exercised somewhere, has the gentleman any suggestion to make in each case, as to where he would lodge each one of these powers which he objects to putting in the hands of the reserve board?

Mr. TEMPLE. I do not object to the powers severally, but they are united in one control. I object to the union of those powers.

Mr. GLASS. May I ask the gentleman to suggest again what great powers the Federal reserve agent has?

Mr. MURDOCK. I will say to the gentleman from Virginia that my understanding is he has the power to pass upon all the commercial paper which is passed up to him, for which Government money is to be exchanged.

Mr. GLASS. The board of directors of the Federal reserve bank passes upon the paper originally. The agent of the Federal reserve board, of course, must determine whether the paper to be segregated for Federal reserve notes is the right sort of paper.

Mr. MURDOCK. That is my understanding, and that is why I say he has tremendous power as an individual.

Mr. GLASS. It is not a power at all. It is a function that is performed.

Mr. MURDOCK. His veto power would be practically final. Mr. GLASS. He has no veto power. He is simply to report the result of his investigation and give his opinion, that is all. It is not a question of power, it is a question of judgment and service.

Mr. TEMPLE. I was about to call attention to the fact that the Federal reserve board determines where the deposits of the United States Treasury shall be placed, how they shall be ap-

portioned among the 12 banks. It practically controls the apportionment of all the money in the general fund of the Treasury among the Federal reserve banks. That fund is to-day \$291,000,000. The Federal reserve board may remove any part of it from one of the 12 branches to another, according to its own pleasure, being guided by the somewhat vague and general statement that in apportioning it attention must be paid to the commercial interests of the country.

Mr. PEPPER. Will the gentleman yield?

Mr. TEMPLE. I will.

Mr. PEPPER. I would like to inquire where that similar power is lodged now?

Mr. TEMPLE. I believe with the Secretary of the Treasury, who has recently demonstrated it by depositing a certain \$50,000,000 in different banks of the country.

Mr. PEPPER. The power is lodged in one man?

Mr. TEMPLE. I think so. Most of these powers are exercised somewhere, but you propose to combine them all in one place. That is the objection. It is the accumulation of power that makes this Federal reserve board dangerous. We believe in the distribution of the power in order that if anyone in whom power is vested should abuse it he will not be able to abuse all the other powers at the same time.

Of course, the Federal reserve board has power finally to decide the question as to the issue of bank notes.

Mr. PEPPER. Will the gentleman yield again?

Mr. TEMPLE. With pleasure.

Mr. PEPPER. I have been very much interested in the gentleman's criticism of the bill, and the concentration of the great many powers in the hands—

Mr. TEMPLE. There are more to come.

Mr. PEPPER. I would be glad to know if the gentleman has any suggestion as to how these powers might be distributed or divided up, or decentralized, as he suggests.

Mr. TEMPLE. I confess my inability in 5 or 10 minutes to outline a substitute for a bill which has taken the Democratic Party so long to make, for the party has been at work upon it ever since it had an idea of getting into power.

Mr. PEPPER. I would like to ask the gentleman if he knows of any other officer or any other body of the Government where some of these powers might be lodged?

Mr. TEMPLE. Not without rewriting a considerable portion of the bill.

Mr. PEPPER. Has your party formulated any bill where the views that the gentleman expresses have been carried out?

Mr. TEMPLE. The ideas that I have expressed are mostly criticism of the present bill.

Mr. MURDOCK. Will the gentleman yield?

Mr. TEMPLE. Yes.

Mr. MURDOCK. I want to say we will do it, if we do it, in open caucus.

Mr. BARTLETT. The gentleman's party will never do it at all.

Mr. MURDOCK. When our party does do it, we will not do it behind closed doors.

Mr. KELLEY of Michigan. Will the gentleman yield?

Mr. TEMPLE. Yes.

Mr. KELLEY of Michigan. From what I have read in the newspapers, I take it that a great many who favor the Aldrich bill seem to be opposed to this bill. From what the gentleman says as to the apportioning of this board, it seems to me that this is practically the Aldrich bill. I would like to know what the opinion of the gentleman is on that point.

Mr. TEMPLE. I think it is undoubtedly true, that a great many features of this bill—

Mr. KELLEY of Michigan. The gentleman said that it is practically a central bank with 12 branches.

Mr. TEMPLE. Yes; but it is altogether a different type of central bank from that in the Aldrich bill. At least I do not find any very close similarity between the central bank in the Aldrich bill and the central bank of this bill.

Mr. GLASS. If the gentleman from Pennsylvania will pardon me, I want to say that the gentleman is so fair in his response to my friend from Michigan that I would be willing to trust him behind closed doors. [Laughter.]

Mr. TEMPLE. I am highly complimented by the gentleman from Virginia.

Now, I would like to repeat that these powers which the Federal reserve board has over the Government deposits are so extensive and so minute, and unite the 12 banks so completely in one organization that it is hardly possible to describe the real nature of the Federal reserve board otherwise than by saying it is actually a board of directors of one central bank operating through 12 branches. It is a new type of central bank, but possesses most of the characteristics, many of the advantages and some of the disadvantages of other central banks, together with some disadvantages which are peculiarly its own.

One of these is found in the fact that while it is intended to be under Government control it is really under party control. The Secretary of the Treasury and at least two of the four appointive members of this board will be of one party. We may suppose that if this bill goes into effect within the next few months there will be four Democrats on the board. There is to be a Comptroller of the Currency appointed before very long, who will probably be another Democrat—

Mr. BARTLETT. He ought to be.

Mr. TEMPLE. The gentleman's hopes will probably be realized. The Secretary of Agriculture and the Secretary of the Treasury will make five Democratic members on this board when the banks start off—

The CHAIRMAN. The time of the gentleman has expired.

Mr. GLASS. I yield 10 minutes to my colleague [Mr. BRUMBAUGH].

Mr. BRUMBAUGH. Mr. Chairman and gentlemen of the House of Representatives, ever since, even before, the establishment of our National Government down to the present time the kind and character, the legal requirements, and the amount of our circulating medium, or, in other words, the currency question, has been recognized by thoughtful men as one of the most intricate problems, as well as one of the most essential problems, affecting the happiness and prosperity of the people with which the Congress of the United States has had to deal.

If, as so often stated, the circulation medium is the lifeblood of the Nation, then a brief review of the history of the growth and development of financial legislation in the United States, I take it, may well arrest our attention, invite our study, and justify a few moments of the valuable time of this great legislative body.

Mr. Chairman, as indicated, I desire briefly, on account of the time at my disposal, to review the history of past financial legislation by the Congress of the United States, concluding, if I may, by comparing the financial legislation of the past as to its importance and value in meeting the needs of the people with this great constructive financial bill which now absorbs the earnest attention of the Congress and the entire country.

It may be well to observe in passing that the currency question will never be an absolutely settled question. No currency bill ever written ever did or will contain the very last word on the subject. In a sense the currency question will always be an open question, because new occasions teach new duties, new developments will present new conditions; and that currency bill would seem to be best that best meets the people's needs of the present with reasonable safeguards for a reasonable future. That is as far as human wisdom in the past has ever been able to go or will be able to go at this present time. In fact, it is not demanded or expected of us, nor is it within the power of any body of men, however learned or wise, to perfect a currency bill for all time to come. It is for us rather, if we may, by honest, intelligent efforts to pass a bill which, in fairness and justice to all the people—rich and poor alike—will meet the needs and requirements of all the people of to-day, blending into a reasonable future of the development of our national life.

THE CONSTRUCTION OF A CURRENCY MEASURE HAS ALWAYS BEEN A DIFFICULT PROBLEM TO LEGISLATE UPON.

Every student of history knows that our financial problem is older even than the United States Government itself; and to discuss it from the beginning you must go back beyond the very formation of the Federal Government, in fact back beyond the Government even under the old Articles of Confederation, under which we first existed as a Nation before the inauguration of Washington as President.

Every student of history knows also that the financial problem has always been a very difficult problem to legislate upon.

DIFFICULTIES ENCOUNTERED IN ALL FINANCIAL LEGISLATION.

The difficulties encountered in framing a great constructive currency measure, like the present currency bill now before us, may be appreciated when we recall the great difficulties surrounding financial legislation in the past, even at the very beginning of our history and all through our history to the present time.

It was the currency question, or financial problem, that almost entirely prevented the union of the thirteen original Colonies—after a long war for independence—under the old Articles of Confederation.

It was the currency problem that caused the downfall of the Government under the old Articles of Confederation, and the same question almost prevented the States from uniting under the Constitution of the United States; and it was the opinion of so great a statesman as Senator Hayne, who matched eloquence with the great Webster in the world's most memorable debate, that it was the currency and tariff questions finally getting tangled up with the slavery question that made the

slavery question a dangerous national question, leading finally to the great conflict between the States.

It has been a hard problem to legislate upon in the past, and it is a hard problem we are grappling with to-day, because the effect of legislation on this problem reaches the very center of the self-interests of the individual man.

May I here digress to congratulate Congress and the country that we have been able to approach this great constructive financial problem this time with a calmer, cooler deliberation than has ever marked the consideration of any similar great constructive financial problem in the past.

BRIEF REVIEW OF PAST FINANCIAL LEGISLATION.

I invite your attention to a necessarily brief review of past financial legislation in the United States, because I believe a glance at the past may prove beneficial, for by the lights of the past we are sometimes the better enabled to read the needs of the present and future.

THE NATION'S FIRST FINANCIAL PROBLEM—THE CURRENCY QUESTION UNDER THE ARTICLES OF CONFEDERATION.

Our first experience as a nation with the currency problem is both interesting and instructive.

Our first financial problem grew out of our debt contracted by the cost of the Revolutionary War. It was the price of a nation's freedom. When the Revolutionary War ceased, upon the surrender of Cornwallis, there was no organized national government other than that exercised by the Second Continental Congress, by the consent of the Colonies represented therein.

This great war Congress gave us the Declaration of Independence and managed the Government during the Revolutionary War. When the war ceased the people recognized the necessity of some form of organized united government between the Colonies.

The people of the thirteen original Colonies, after four years of hesitation, discussion, and internal turmoil, together with great interstate jealousies, finally set up a form of national government under a constitution called the Articles of Confederation.

Under this form of government six different men held the highest office in the gift of the people, corresponding to the Presidency, before Washington was inaugurated President.

Under the Articles of Confederation each State was left free to regulate its own financial affairs.

The Government under the Articles of Confederation was a weak, loose union of thirteen sovereign States, largely made so by the currency of that day. This Government finally broke down in utter collapse caused by the currency question of that day. This occurred in the following manner: At the close of the Revolutionary War our national debt amounted to about \$35,000,000. This debt was of three kinds:

First. Foreign debt.

Second. The domestic debt—registered and unregistered.

Third. The State debt.

The foreign debt represented loans made to us by foreign nations.

The domestic debt represented the debt contracted by the war Congress in behalf of all the Colonies.

The State debt was the debt contracted by the individual States as such.

The fatal weakness in the Government under the Articles of Confederation was in its financial policy, or, to be more exact, in its entire absence of any financial policy. Congress or the Government could recommend anything it desired to the States, but had no power to enforce its recommendations. The Government could not induce or compel the States to collect and pay to the Government enough to keep the interest paid on the debt.

During the entire life of the Government under the Articles of Confederation the Government never was able to pay one dollar on the principal and was only able to pay \$5,000,000 on the interest.

From 1786 to 1789 the unpaid interest on the national debt had run up to over \$18,000,000.

In response to the appeal of the Government some of the States paid their quota, some paid part, and some never paid anything. Finally, in 1789 the collapse came. We had borrowed from every foreign nation that would loan us anything. We had never paid one dollar on the principal of the debt, and the debt stood against us over \$18,000,000 of unpaid interest.

The Federal Government was powerless to enforce any payment from the States except as they wished to respond. Our credit as a Nation was gone and our national debt had run from \$35,000,000 to over \$79,000,000. Washington spoke of the Government as a mere shadow without any substance of authority. The necessity of a different form of government was apparent to all, and the Nation proceeded to "mark time"

during this critical period as we passed from the Government under the Articles of Confederation to the Government under the Constitution of the United States under which we exist to-day.

FINANCIAL LEGISLATION UNDER THE CONSTITUTION.

It was in this national chaotic financial condition of the country that the delegates met in convention in Philadelphia May 25, 1787, to save the wrecked Union and to formulate a stronger union of the States and to frame our National Constitution.

FINANCIAL CONTROVERSIES IN CONSTITUTIONAL CONVENTION.

It was the financial problem of that day that had almost prevented a union of any kind under the Articles of Confederation. It was the financial problem that finally broke down in utter collapse the Government under the Articles of Confederation; and the same hard financial problem immediately thrust itself upon this convention and threatened for a long time to prevent a union under the Constitution of the United States. The turmoil of the discussion of this problem gave rise to the first well-defined political parties in this country, and this same financial problem is responsible for the location of this National Capitol Building on this hill in which we sit to-day.

It was perfectly plain to all that a nation could not be built or exist that had no financial credit with the nations of the world and that was unable or unwilling to meet and pay its debts contracted by the war that gave that nation its independence. The first concern, therefore, of the convention called to frame the new Constitution for the United States was what to do with and how to provide for the payment of our national debt.

The national debt as presented to the convention amounted to \$79,124,463, and was as follows:

First. Foreign debt, \$11,710,378, made up as follows:

Loan borrowed from the Court of France;

Loan borrowed from private lenders in Holland;

Loan borrowed from private lenders in Spain;

Unpaid interest on foreign debt, \$1,500,000.

Second. Domestic debt, registered and unregistered, \$42,414,085, made up as follows:

Debt contracted by Congress in behalf of all the Colonies during the Revolutionary War;

Two million dollars allowed and unpaid private claims;

Total unpaid interest on foreign and domestic debt, \$18,000,000.

Third. State debt contracted by individual States or Colonies as such during the Revolutionary War, \$25,000,000.

As remarked before, the Government had never been able to pay one dollar of the debt and the unpaid interest on the debt had run up to over \$18,000,000.

In regard to the foreign debt there was no division of opinion. All agreed that it must be paid in the exact terms of the contract. The discussion and consideration of the domestic and State debts divided the convention for a long while into two hostile parties. A large part of the certificates of the domestic debt had passed from the original holders into the hands of speculators, who had purchased the same at a low rate for future speculation.

DIVISION IN CONSTITUTIONAL CONVENTION ABOUT PAYMENT OF DEBT.

One party of the convention held that as the certificates of the domestic debt had been purchased at a nominal sum for the purpose of speculation, now that it was proposed that the Government assume them, it should not be paid at par, but that the holders should be paid the highest market price and interest, and in the event that the certificates were paid in full the increase of the same should be paid to the original holders thereof. This was the proposition proposed by James Madison to the convention.

The other party, led by Alexander Hamilton, contended for payment of principal and interest in full to the present holders of the certificates, and their argument was as follows:

That public credit and faith was essential to the new Government, and that there was no other way of building up public credit and faith in the new Government than by the faithful payment of public debts.

The Government had promised to pay the holders or assignees, and that the assignee stood in the place of the original holder.

While the assignee, or speculator, had purchased at a low rate, he also had taken the risk of giving good money for uncertain promises, which might or might not be kept, and that he had thereby given his support and shown his faith in the new Government and saved it from collapse at the very beginning.

The other party answered this argument as follows:

These speculators had not as a rule risked their lives as soldiers to win our independence.

That the establishment of a free government for them that made payment at all possible was a sufficient reason for a smaller payment that should represent the original loan plus part of the increase.

That even an exact justice demanded that, should the Government pay principle and interest in full, the original holder should receive part of the increase as well as the speculator.

DIVISION OVER THE STATE DEBT.

In considering the State debt this question arose: Should each State pay its own State debt or should the entire debt of all the States be assumed by the Federal Government? This was a very serious and hard problem, and threatened for a long while the existence of the convention. Finally it was agreed that, as the State debt of the various States had been contracted for the general good, it would be best to have the General Government assume the entire State debt under a system of taxation that should apply equally to all the States.

THE GENERAL QUESTION OF ASSUMPTION.

The great debates in the Constitutional Convention show that the question of the assumption of the national debt was one of the most serious and difficult problems with which that convention had to deal. Alexander Hamilton, a member and one of the great leaders of the convention, recommended that the General Government assume the domestic and State debts as well as the foreign debt. It was feared by others that to try to raise such a large sum by taxation would cause great discontent and threaten the very existence of the Government at the very beginning. After a month of very violent and bitter debate the convention acted as follows:

Fitzsimmons offered a series of resolutions by which the public debt was taken up in the committee of the whole. The first resolution, relating to the foreign debt, passed unanimously without division. His second resolution, purposing to provide for principal and interest of the domestic debt, was met by a resolution from Scott to postpone consideration thereof. This situation was met by a resolution by James Madison, who moved an amendment providing that present holders be paid the highest market price before the publication of Hamilton's report in regard to assumption and that the increase above market price be paid the original holders. Madison's resolution led to bitter debate, and was defeated by a vote of 36 to 13.

The general proposition on assumption was now put, the delegates from North Carolina not having yet arrived. It was pressed to a vote and carried by a vote of 31 to 26. In a few days the North Carolina members arrived and a motion to reconsider the vote on assumption was put and carried.

At this stage of the convention all appeared to be in chaos. Frequent threats to secede or withdraw were made by delegates from the eastern States if the General Government did not assume the State debt.

THE FAMOUS JEFFERSON-HAMILTON DINNER PARTY—THE CAPITAL LOCATED ON THE POTOMAC.

It was at this critical juncture of affairs that the famous Jefferson-Hamilton dinner party occurred. Jefferson had just returned from France. Hamilton appealed to him to exert his great influence with the delegates to save the threatened disunion of the States. A dinner party was arranged and an understanding was had whereby the location of the intended capital on the banks of the Delaware was changed to the banks of the Potomac and the required votes were obtained to carry the proposition for the assumption by the General Government of the public debt.

On the question of assumption the States had voted, previous to the dinner-party agreement, as follows:

For assumption—Massachusetts, South Carolina, New York, and New Jersey. Against assumption—Virginia, Maryland, Pennsylvania, Georgia, and New Hampshire.

VIRGINIA'S PATRIOTIC SACRIFICE.

Virginia, of all the States, had most bitterly opposed the assumption of the State debt because Virginia could easily pay her State debt by sales from the immense territory which then belonged to her, covering the present States of West Virginia, Kentucky, and a large part of Ohio and the old North West Territory. But she patriotically yielded for the sake of the Union, not only agreeing to the proposition of national assumption, but also agreeing, for the sake of the Union, to give over to the National Government a very large part of her splendid territory.

CHARGES OF INCORRECT CONDUCT.

It may be interesting to note that charges and countercharges of improper conduct and votes influenced by self-interests were generated by the violent discussion over assumption, and public

men did not escape severe condemnation in regard to their actions on this great question.

It was charged that some Members voted for their own self-interests on the question of national assumption; that some Members and their friends had been out buying up the certificates of indebtedness of the ignorant in the rural districts. Even Jefferson in his writings boldly states that this was so; that swift horsemen and boats were flying in all directions the moment the measure passed, carrying agents to buy up certificates at low prices which the Government had agreed to redeem at par. The student interested in reading an account of these stern times will find them vividly set forth in Hildreth's History, volume 4, or in Jefferson's or Hamilton's writings.

FINANCIAL PROBLEM UNDER WASHINGTON'S ADMINISTRATION.

Such was the financial problem of our Government at the beginning of Washington's administration.

Washington, before he assumed the office of President, was greatly worried over this same hard financial problem. Up until this time the two great financial leaders in our history had been the two great patriots who had, more than any others, financed the Revolutionary War and the struggling Government under the Articles of Confederation, Robert Morris and Gouverneur Morris. In fact, Jefferson spoke of them as the inventors and fathers of our financial system. The wretched financial policy of the Government had swept away the fortune of each. In fact, during the war the credit of Robert Morris was better than that of Congress. He gave his own notes, which were all paid by him in full, to the amount of \$1,400,000 to meet the colonial expenses in support of the war. He was Secretary of the Treasury for the Government the last three years under the Articles of Confederation.

In 1781 he established the Bank of North America. It is the greatest blot upon our early history that he passed the last years of his life a prisoner for debt, thus seeming to justify the charge so often made that Republics alone are ungrateful. Washington, in his anxiety, appealed to Robert Morris, and asked him how to meet this emergency.

Morris replied by advising Washington to consult Alexander Hamilton; that Hamilton could find a way out of the difficulty if anyone could. Washington therefore in selecting his Cabinet, which then consisted of but four members, made Jefferson his Secretary of State and Hamilton his Secretary of the Treasury, the other two members being Randolph, Attorney General, and Knox, Secretary of War.

Into Hamilton's hands was therefore referred the great problem of devising a new financial policy for the United States.

HAMILTON'S FIRST REPORT ON THE PUBLIC CREDIT.

After months of careful consideration, on January 14, 1790, Hamilton brought in his famous report on the public credit. This report is considered one of the most remarkable and able state papers ever written. It outlined and established the financial policy of the Government. Hamilton argued in support of his policy with brilliant, irresistible logic. He reasoned as follows: That the time must come in the life of a nation when the Government must borrow money and make loans. To do this on favorable terms the Government must establish its credit before the world. That on our sound public credit rests the future greatness of the Republic and the individual welfare of the citizens of the United States. He argued eloquently that the public debt was the price of our liberty; that the faith of the Nation was pledged for its payment. He opposed discrimination between the present and original holders of the certificates of indebtedness as unwise and dangerous, being in violation of the terms of a fair contract and contrary to the provisions of the new Constitution of the United States.

He argued strongly for the assumption of all State debts as a means of interesting the citizens in the welfare of the Government and also to prevent strife among the States.

To collect the money by taxation to meet his financial policy he presented a tariff schedule on spirits, tea, coffee, and the luxuries of life. He sums up his magnificent argument for national assumption of all debts—national, domestic, and State—with a brilliant, climactic appeal under the heading of utility and honor.

The only change made by Congress in Hamilton's plan was scaling down on the interest. Hamilton desired that principal and interest of the national debt be funded in the same manner. Congress funded the principal into 6 per cent stock and the interest into 3 per cent stock.

SINKING-FUND MEASURES.

It is claimed that Hamilton borrowed his idea of the sinking-fund measure from the British financial policy inaugurated by William Pitt. The sinking-fund measures adopted by the Gov-

ernment in the development of Hamilton's financial policy were as follows:

First. The act of August 4, 1790, dealing with the selling of public lands.

Second. The act of August 12, 1790, dealing with the duties and customs of the Government.

Third. The act of May, 1792, extending the scope of the law.

Fourth. The act of March 3, 1795, which completed the sinking-fund system.

HAMILTON'S REPORT ON THE NATIONAL BANK.

Having devised a financial policy for the Government, the next step in the evolution of the system was to devise a medium or vehicle to be used in operating that financial policy; and here again Hamilton borrowed his idea from the British Government by suggesting a national bank patterned after the Bank of England. Hamilton, in his report of December 14, 1790, recommended to Congress the establishment of one central national bank. His recommendations threw the entire financial problem again into the arena of violent discussion.

There were already in existence, before the establishment of the National Government under the Constitution, three great banks:

The Bank of North America, founded by Robert Morris in 1781.

The Bank of New York City, N. Y., founded in 1783.

Bank of Massachusetts, Boston, founded in 1783.

The opponents to Hamilton's proposition for the establishment of one central national bank argued that Hamilton, having recommended the establishment in the beginning of a monarchical form of government with a ruler for life, was attempting to set up a strong centralized government with centralization of power; that his scheme had for its object the placing of an interminable and indefinite debt upon the United States as a part of his plan for a strong central government; that the old war bank, the Bank of North America, founded by Robert Morris, having seen us through the crisis of the Revolutionary War and through the life of the Government under the Articles of Confederation, was able to answer all the purposes which could be safely delegated to the proposed national bank of the United States.

Here again Hamilton's brilliant argument carried the day and led to the establishment of the national bank, Congress accepting Hamilton's suggestions almost in toto.

THE NATIONAL BANK.

The following are some of the leading provisions as recommended by Hamilton and adopted by Congress in the establishment of the national bank:

Capital, \$10,000,000; 25,000 shares, \$400 per share.

Shares, one-fourth in coin, three-fourths in certificates of public debt; bear 6 per cent.

Sums subscribed payable in four equal shares, six months apart.

President shall subscribe for the Government \$2,000,000.

Shall hold only such lands as it needs for building or as it gets on mortgages, and so forth.

Company may sell its stock or lands, but shall trade only in gold and silver, and rate shall be 6 per cent.

No loan to State or Government above \$50,000, or to any foreign prince or government without consent of Congress.

Stock transferable; votes by stock, and so forth.

No director to receive pay except what agreed upon by general meeting; president to receive pay as stated.

Bank must furnish on demand reports to Secretary of the Treasury.

No similar institution to be established by the United States.

Branch offices for discount and deposit only may be established in different parts of the United States.

The consideration of the national bank divided Congress into two camps, known as the strict and loose constructionists.

When the bill was presented to Washington for his signature he had grave doubts as to its constitutionality and asked for written opinions from his four Cabinet members on this point.

Hamilton and Knox replied in favor of the bill; Jefferson and Randolph replied against the bill. After hesitating for more than a month, Washington finally signed the bill.

RESIGNATION OF HAMILTON AS SECRETARY OF THE TREASURY.

In 1795 Hamilton resigned as Secretary of the Treasury. He had served six years and had completed the financial policy of the Government. He had established a world-wide reputation as a brilliant financier.

NEW PERIOD OF FINANCIAL LEGISLATION—GALLATIN'S FINANCIAL REIGN.

The first great political revolution in the United States took place in the election of Jefferson to the Presidency in 1801. One of the principal causes that led to the revolution was the oppo-

sition upon the part of the mass of the people to the financial policy previously inaugurated by Hamilton.

Hamilton's financial schemes, while brilliant, were considered complicated and hard for the mass of the people to easily comprehend or understand. The mass of the people got the impression that his financial policy was dangerous to a free government and intended to bring about a monarchical form of government.

The new administration under Jefferson came in with an announced program of reform. The reform policy of the new administration was as follows:

First. Repeal of unpopular laws and monarchical tendencies.

Second. Payment of public debt entire.

Third. Repeal of internal-revenue laws.

ALBERT GALLATIN, THE NEW SECRETARY OF THE TREASURY.

Jefferson selected for his Secretary of the Treasury Albert Gallatin, a Swiss by birth, a great scholar and brilliant financier. Gallatin had opposed Hamilton's financial policy and, as a Member of Congress, had secured the passage of the bill taking the management of the sinking fund out of Hamilton's hands and placing it in a committee of Congress. Gallatin's life ambition as Secretary of the Treasury was the payment of the public debt in full, and every financial effort of his life was bent in that direction.

For the next eight years three men were practically the Government—Jefferson, Madison, and Gallatin—and the foundation upon which the success of the three depended was the financial ability of Albert Gallatin. Whether Jefferson's administration succeeded or failed depended upon Gallatin's management of the Treasury.

Gallatin set forth his financial creed or policy as follows:

America, by her location, can follow a political development of her own.

She can safely disregard remote dangers.

Her defense can be reduced to a point little above police necessities.

She can rely upon national self-interest for development of foreign commerce.

She can depend upon the industry of her citizens for internal developments.

Her capital is safest in the hands of her own citizens.

The objective point to be reached is the discharge of the public debt, the reduction of taxes, and the abolition of internal revenue.

Jefferson's great idea of reform was reduction of taxes and the payment of the public debt. How to accomplish this and still raise the revenue to run the Government was the delicate problem for Gallatin to solve.

In an exchange of letters between Jefferson and Gallatin I quote a sentence from each.

Jefferson to Gallatin:

The discharge of the public debt is vital to the destiny of our Government.

Gallatin to Jefferson:

If this administration shall not reduce taxes, they shall never be reduced. I most fully agree with you that pretended tax preparations and Army preparations against contingent war only tends to encourage war.

The new party thus planted itself against every feature of Hamilton's financial policy. By most brilliant financial management of the Treasury Department, at times against opposition from members of his own party in Congress, Gallatin evolved his system to completely wipe out the public debt and provide for the entire payment of the same by the close of the year 1817, and to do this, even in addition to the added expense caused by the Louisiana Purchase. The War of 1812, much to his regret, delayed the payment of the public debt to a later date.

THE FIRST EFFORT TO RECHARTER THE NATIONAL BANK.

When Jefferson became President he ordered Gallatin to make a thorough investigation of the national bank. The honorable, honest man reported that Hamilton had made no blunders in the management of the national bank and that the management had been entirely businesslike and honest.

When Madison succeeded Jefferson as President he retained Gallatin as his Secretary of the Treasury.

Gallatin and Madison, like Jefferson, originally had been opposed to the national bank, but later both Madison and Gallatin favored the rechartering of the bank when its charter expired in 1811.

In 1810 the proposition to recharter the bank came before Congress, and the vote in the House stood 65 to 64 in its favor. In the Senate the vote stood 17 to 17.

George Clinton, the Vice President, supposed to be unfriendly to Madison, gave the deciding vote against it, and the old

national bank went out of existence. The directors returned the original stock to the subscribers and sold the property of the bank to Stephen Girard, of Philadelphia.

Gallatin's report of November 1801, which formed a part of Jefferson's message to Congress, is interesting as showing the expenses of the Government of that day as compared with the expense account of the Government of to-day.

Yearly estimated revenues of the Government.

Imports	\$9,500,000
Lands and postage	300,000
Total	9,800,000

Yearly expenditures of the Government.

Interest and payment of the public debt	\$7,200,000
Civil expenditures of the Government	1,000,000
Military	930,000
Navy	670,000
Total	9,800,000

Gallatin's financial ability had been the hope of his party during the period of the War of 1812, and Madison, like Jefferson, had found him indispensable to the success of his administration.

HAMILTON AND GALLATIN.

Great emergencies produce great characters, and it may be worthy of notice to record that this great formative period of our history developed, during this great crisis of our national existence, our two greatest financiers, who rank with the greatest the world has ever known—Alexander Hamilton and Albert Gallatin.

Both Hamilton and Gallatin gave to the land of their adoption talents of the highest order. So eminent an authority as Prof. Taussig, of Harvard, pronounces Gallatin's memorial report to Congress the ablest state paper ever presented to Congress. He ranks equal to Hamilton as a financier, and in addition was a diplomat of the highest order. His life is pronounced one of the marvels of America.

IRONY OF POLITICS.

The irony of politics records this strange fact: Gallatin's son became, during the Civil War, a Republican and gave Secretary Chase valuable advice, while the two sons of Alexander Hamilton became Jackson Democrats, the older son being appointed by Jackson, on the day of his first inauguration as President, to succeed Henry Clay as Secretary of State, to serve as Acting Secretary of State until Van Buren could return from Europe and arrange to take the position.

FINANCIAL FOUNDATION PERIOD.

I have dwelt somewhat upon this part of our history purposely because it is the foundation of all that follows, and because the thought and purpose of these two great financial giants—Alexander Hamilton and Albert Gallatin—made up and gave shape to our entire financial policy for the first 50 years of our history as a Nation.

The position and theory of these two great financiers, I think, can be fairly summed up as follows:

Hamilton's financial policy contemplated that there should always be in existence a national public debt.

Gallatin's financial policy contemplated that there should never be a national public debt.

Hamilton believed that a national debt was a national blessing because, as he said, it thereby bound a large part of the people to the successful operation of the Government and tended to build up a strong centralized form of government.

Gallatin believed that a national debt was a national curse, and that a strong centralized form of government thus constructed would be a menace to the liberties of the people.

As to which was right or which was the greater is purely a matter of opinion and political bias or belief. Both represented the world's highest thinking on this abstruse and difficult subject. Hamilton and Gallatin will possibly stand in our history as the best all-sided developed and greatest brain product New York and Pennsylvania have ever given to our common country.

A BRIEF CATALOGUE LIST WITH PASSING COMMENT ON OUR MOST IMPORTANT FINANCIAL LEGISLATION.

Mr. Chairman, much as I should like to do so, time will not permit me to discuss step by step or even mention all our important financial legislation. I shall be compelled to content myself with a mere catalogue list, as it were, of a few of the most important financial measures showing the action of Congress in the growth and development of our financial policy and system.

GROUPS OF HISTORICAL PERIODS OF FINANCIAL LEGISLATION.

From this time on in our history it will be noticeable that our financial legislation naturally groups itself under certain periods of time rather than around some preeminent, predominating

leader of finance as formerly. The divisions most generally used by text writers are as follows:

First. From Gallatin to Jackson.

Second. Jackson and the bank struggle.

Third. Treasury-note period and final efforts to recharter the national bank.

Fourth. The Civil War period.

Fifth. Specie resumption to the present time.

FROM GALLATIN TO JACKSON.

Gallatin was succeeded by Campbell, of Tennessee, one of the coterie of Congressmen who had opposed Gallatin's financial plans and who apparently first realized how big Gallatin was mentally when he assayed to fill Gallatin's place. Campbell sent in one report and resigned.

President Madison now determined to appoint Gallatin's friend and understudy, who had been under Gallatin and to whose appointment Congress was hostile at the time he appointed Campbell. Congress now yielded and Madison appointed Dallas as the new Secretary of the Treasury.

Dallas presented an elaborate scheme to Congress. Eppes, of Virginia, Jefferson's son-in-law, chairman of the Ways and Means Committee of the House, also presented a financial measure to the House. Congress debated and defeated both measures. Dallas now demanded rechartering of the old national bank. On January 7, 1814, the House passed the bill to recharter by a vote of 120 to 38. On January 20, the Senate, by a vote of 20 to 14, agreed to the House bill to recharter the bank, Clay and Calhoun voting against it. I call your attention to the speed with which the Senate acted on great financial measures in those days. Comment is waived. On January 30, 1814, Madison vetoed the bill to recharter the national bank.

In 1816 Dallas again demanded that the old national bank be rechartered. This time the bill passed both Houses of Congress, and on April 10, 1816, President Madison signed the bill, and the national bank was with us again until its death by Jackson's veto, July 10, 1832.

GALLATIN'S DREAM COMES TRUE—THE NATION OUT OF DEBT FOR THE FIRST TIME IN ITS HISTORY.

It is only just to observe that the financial policy of this entire period up until the date of Jackson's struggle with the national bank was really the financial ideas of Gallatin being carried out through his friend and pupil, Dallas, and his successors. And in honor to Gallatin's memory and his splendid financial ability it should be recorded that it was this carrying out of his financial policy that finally brought to the country what had been his life's ambition—and the dearest dream of his life—the payment of the last cent of the public debt of the Nation; so that we had for the first time in our history a great, strong, growing Nation not owing a single cent of national indebtedness of any description. And before Gallatin's financial policy was changed, in addition to being entirely out of debt, we had on January 1, 1835, no debt and a national surplus of \$5,536,232 and on January 1, 1837, no debt and a surplus of \$37,468,859, and the surplus was growing so large and so rapidly that what to do with it became a serious financial problem in that day, Congress finally directing that it be divided among the various States.

TABLE SHOWING THE NATIONAL DEBT.

The following table, showing the public debt of the Nation at various periods, may be interesting:

1790, public debt of Revolutionary War	\$79,124,463
1811, public debt	45,000,000
1815, close of War of 1812, public debt	120,000,000
1835, Jan. 1, no public debt (surplus)	5,536,232
1837, Jan. 1, no public debt (surplus)	37,468,859
1840, public debt	2,000,000
1844, public debt	24,748,188
1848, close of Mexican War, public debt	51,000,000
1860, June 20, public debt	64,769,703
1861, July 1, public debt	90,000,000
1861, Dec. 31, public debt	524,000,000
1863, July 1, public debt	1,119,772,138
1865, Aug. 31, public debt	2,845,907,626
1913, Sept. 1	1,343,783,974

JACKSON AND THE BANK STRUGGLE.

This period of financial legislation to 1842 is known as the period of Jackson and the bank struggle. Interesting and entrancing as this period is historically, it is not intended to treat it here, because the trend of the whole matter is given consideration by the science of politics rather than by the science of finance.

RESPONSIBILITY FOR BANK STRUGGLE.

This much, however, may be proper and pertinent to recite: That three men were originally responsible for this bank struggle, which made and unmade men and parties in the United States and which controlled the financial policy of the country for a generation, and that Andrew Jackson was not one of the three. It may be added that when this terrific political strug-

gle was over, in which all the great men of the country, with scarcely a single exception, except Senator Benton, were arrayed in the most hostile political fight known to our history against Andrew Jackson, that when the fight was over the bank was dead and Jackson was victorious.

THE THREE MEN RESPONSIBLE FOR THE BANK FIGHT.

This fight started over what is known in history as the Portsmouth (N. H.) Branch Bank affair, and the three men who fired the prairie, so to speak, were:

First, Isaac Hill, ex-president of the Branch Bank at Concord, N. H.

Second, Jeremiah Mason, president of the Branch Bank at Portsmouth, N. H.

Third, Nicholas Biddle, president of the National Bank.

Hill wanted the pension-agency account transferred from the Portsmouth Branch Bank to the Concord Branch Bank. Mason resisted and interested Webster and his friends in his behalf. Hill, at this time connected with the Treasury Department, interested Ingram, Secretary of the Treasury, and Secretary of War Eaton in his behalf.

Secretary of the Treasury Ingram ordered the account moved from Portsmouth to Concord. Biddle and Mason defied the Government, and for the time won out and carried their point.

UP TO THIS TIME JACKSON NOT IN THE BANK FIGHT.

Parton, in his *Life of Jackson*, and Von Holst, the historian, both agree that up until this time Jackson had not been a partisan on either side. The fatal step, however, was taken when Biddle kicked the fat into the fire by delivering himself in a letter as follows:

The board of directors of the Bank of the United States and the board of directors of the branch banks of the United States acknowledge not the slightest responsibility, of any description whatsoever, to the Secretary of the Treasury touching the conduct of their officers in any political dealings with the bank.

Previous to this it should be noted that Mason had admitted that he had made loans to political friends and denied them to political enemies, and Clay, in his campaign for President against Jackson, had carried on extensive political operations through the Branch Bank at Lexington, Ky. Biddle, by his unwise statement and his undiplomatic personal conversation with Jackson, in which he informed Jackson that the bank could make or unmake Presidents, carried the fight to Jackson's door and plunged the country headlong into a semipolitical financial struggle that disrupted the peace of the entire country and raged with increased fury until Jackson killed the bank by his veto, July 10, 1832.

Jackson believed and said that the bank had become a huge engine of political power and determined upon its destruction.

The Whig Party took the question into their national convention and made it a straight-out party question. Against Jackson were arrayed Clay, Calhoun, Webster, Dallas, Ewing, Hayne, John Quincy Adams, and almost all the great national characters of that period, except Thomas Hart Benton, the Senator from Missouri, Jackson's chief defender.

As above noted the bank perished by Jackson's veto of the bill to recharter it July 10, 1832. The attention of those who have thought of Andrew Jackson as the chief apostle of the spoils system in our history is called to this fact: Two of these three men at the beginning of the bank fight were Democrats—Biddle and Hill. Jackson could easily have had the help of this, the greatest engine of the spoils system that ever existed, and made it a part of his party organization. Jackson not only did not do this, but demanded that this central bank and all the branch banks and all their employees stay entirely out of political contests in the country.

No public man in all history thus had presented to him a more severe temptation to use the financial system of the country for his own personal political advantage, and no man in all history ever met and overcame the temptation more grandly and more patriotically than did Andrew Jackson. [Applause.]

REMOVAL OF BANK DEPOSITS.

Shortly before the date when the charter of the national bank would expire Jackson ordered that the deposits of public money should be removed from the national bank to certain State banks.

Secretary of the Treasury Taney, of Maryland, afterwards Chief Justice of the United States, proceeded to carry out the President's order. The order for the removal of deposits led to most violent discussion in the Senate, and out of this grew the famous resolution of censure passed on the President by the Senate. The resolution of censure became at once a burning political issue all over the United States. Under the leadership of Benton it was expunged from the Senate records March 16, 1837.

THE DISTRIBUTION OF THE SURPLUS AMONG THE STATES.

On June 23, 1836, Congress passed the famous act to regulate the deposits in the State banks and to provide for the distribution of the surplus; \$37,468,859 was thus divided by act of Congress among the States.

It is generally believed that it was this action, dividing the surplus among the States, that led to the panic of 1837.

It is but fair to Jackson to state that personally he was opposed to this measure.

It was a Whig Party measure. It passed the House by a great majority, and it was thought to put Jackson in a hole, for if he did not sign it, it was believed it would defeat his friend, Van Buren, for the Presidency. To help his friend, "Little Matty," as Jackson affectionately called Van Buren, the President signed the bill.

THE SPECIE CIRCULATION.

Knowing that Congress would oppose his action, Jackson waited until the adjournment of Congress and then issued his famous specie circular order. This order was issued under authority granted to the Treasury Department by act of Congress 1816. This order was, in fact, written by Benton at the request of Jackson's secretary, Donaldson, who had been ordered by Jackson to prepare it.

The order provided that all payments for public lands after August 15, 1836, should be made in coin alone—gold or silver.

The public lands were selling at the rate of \$5,000,000 per month in depreciated paper currency and were being bought up for speculation purposes, in some cases by Members of Congress themselves.

At the next session of Congress the Senate voted to rescind this most beneficial order. This act of the Senate was killed by Jackson's famous pocket veto March 3, 1837.

PERIOD OF INDEPENDENT TREASURY SPECIE, TREASURY NOTES—PANIC OF 1837.

The distribution of the surplus among the States led to wild speculation. This, with the uncertainty caused by the constant political war on the financial policy of the Government, led to the panic of 1837. The result of this financial panic brought about the legislation authorizing the issuing of the Independent Treasury notes.

A brief summary of the legislation in regard to the issuing of Treasury notes, and the cause for issuing the same, is as follows:

1812. First issue of Treasury notes, caused by the War of 1812.

1837. Caused by the Mexican War.

1857. Financial stringency.

1860 and after. Caused by the Civil War.

FINAL EFFORT TO RECHARTER NATIONAL BANK AND THE DISRUPTION OF THE WHIG PARTY.

In the following presidential election Van Buren was defeated and the Whig Party, led by Harrison and Tyler, was victorious. The Whig Party had always stood for the rechartering of the national bank; that had been its one great cardinal principle. Nevertheless, for political expediency, the Whig Party nominated for President and Vice President candidates both of whom had voted and spoken against the national bank.

The death of Harrison and the refusal of Tyler, who succeeded him, to agree to the Whig program to recharter the national bank led to the final disruption of the Whig Party. It is but fair to record that Tyler previously, while a Whig Member of Congress, had always been consistently opposed to the national bank.

ENTIRE CABINET, EXCEPT WEBSTER, RESIGNS.

President Tyler's veto of the bill to recharter the national bank caused his Cabinet, all except Webster, to resign in a body September 11, 1841, and after the second veto of the bank bill Webster also resigned. Clay and Webster now became bitter political enemies, caused by the new financial complications.

The remnants of the Whig Party went with Clay.

President Tyler tried to go over into the Democratic Party and desired the nomination for President at the succeeding Democratic national convention. The convention refused to consider him.

Cushing, of Massachusetts, turned Democrat again and was later given an office. Webster plaintively asked, "Not where am I, but where am I to go?"

INDEPENDENT TREASURY BILL LEGISLATION.

August 6, 1846, Congress passed the Independent Treasury act. This was the great measure that Van Buren had proposed in his message to Congress in 1837, but which Congress, out of political bias, defeated. The Independent Treasury bill was bitterly opposed by the Whig Party. Congressional action on this important financial measure was as follows.

1. Proposed by Van Buren May 15, 1837. The Whig Congress defeated it.

2. The system continued without congressional sanction from 1837 to 1840.

3. July 4, 1840, Congress legalized it by act of Congress. The campaign of 1840 was then fought on this bill. Van Buren was defeated and the Whig Party won.

4. August 13, 1841, the bill was repealed by the Whigs, under the leadership of Clay.

5. August 6, 1846, it again became the law by act of Congress and has been in force ever since. It is the law of the land to-day, so satisfactory and so firmly entrenched that no party thinks of changing it in any scheme of financial legislation proposed for the future.

PROVISIONS OF THE INDEPENDENT TREASURY BILL.

The leading provisions of this great financial act—the Independent Treasury bill—are in brief as follows:

That the Government shall collect, keep, and pay out its own money through its own agents.

GOLD AND SILVER ALIKE RECOGNIZED AS COIN BY THE GOVERNMENT.

It is important to call special attention to the fact that in every financial act and provision from the beginning of the Government and also in the provisions of this great financial measure, in every case dealing with duties, taxes, revenue, and payment of obligations of all kinds, the bimetallic basis is always recognized and used by the law and the Government and that the standard is always spoken of as gold and silver coin.

The Independent Treasury act has always been regarded as among our most valuable and satisfactory financial legislation, and is considered by all to be the greatest monument that Van Buren has left to his credit as a constructive statesman.

HISTORY OF PAPER MONEY IN THE UNITED STATES.

As the necessities of the great Civil War will soon inject into our financial currency legislation paper money as a circulating medium and finally make paper money a legal tender, I may possibly be indulged for a paragraph or two—a brief statement—on the history of paper money in the United States before entering upon the consideration of the Civil War period of financial legislation.

COLONIAL TIMES.

In colonial times all the colonies had issued paper money. Massachusetts, in 1690, was the first, closely followed by New Hampshire, Rhode Island, Connecticut, New York, and New Jersey, all before the year 1711; South Carolina, 1712; Pennsylvania, 1723; Maryland, 1734; Delaware, 1739; Virginia, 1755; Georgia, 1760.

LAND AND LOAN BANK.

Massachusetts was the first colony to make an attempt to set up a bank. In 1715 John Colman, of Boston, proposed what is known as the land bank. He proposed to issue circulating notes secured by land. The general assembly defeated the plan. Later the general assembly established what was known as the loan bank, and in 1739 Edward Hutchinson started a specie bank.

The British Government was opposed to the issuing of paper money by the colonies, and by act of Parliament June 25, 1751, forbade its issue in the colonies, except for current expenses among the people of the colonies and for expense to provide against invasion.

DURING REVOLUTION AND UNDER THE CONFEDERATION.

By act of June, 1775, the Second Continental Congress authorized an issue of paper money for war expenses. For one year only paper money passed equal to gold, but it rapidly depreciated, until at the close of the year 1780 it stood 40 to 1 for gold.

In the Constitutional Convention of 1787 a motion was made to give the States power to provide for a limited paper issue, but the motion was lost and the express understanding was that paper money was never to be used as legal tender.

In 1780 the Continental Congress authorized an act to redeem paper money at 40 to 1, to be refunded by an issue of new notes payable in six years in coin bearing 6 per cent notes.

With this action paper money as a circulating medium passed out of existence in our history until the legal-tender act of February 25, 1862.

THE CIVIL-WAR PERIOD OF FINANCIAL LEGISLATION DOWN TO SPECIE RESUMPTION, JUNE 1, 1873.

A large part of the great public debt caused by the Civil War is still with us to be met by the taxpayers of the country. All know why the debt occurred, but why the debt was placed against the Government almost three times higher than it actually would have been on a coin basis of cost to the Government and the financial legislation that enabled it to be so computed and placed against the Government to be met by taxation of the citizens of the country is a most interesting study.

The tremendous daily cost of the Civil War presented to Congress and to the Secretary of the Treasury a new problem which could not be met by former methods.

GOLD AND SILVER ALWAYS COIN IN OUR HISTORY.

It should be remembered that from the beginning of our Government under the Constitution up to the Civil War nothing but coin—and coin had always been held by the Treasury and by the Government to mean gold and silver alike—was ever a legal tender for public debts.

SUSPENSION OF SPECIE PAYMENT.

The empty Treasury, the constant demand for war expenses, together with the Mason and Slidell affair and the possibility of England recognizing the Confederacy, caused the suspension of specie payment on December 31, 1861.

Congress met, therefore, to devise some other circulating medium of legal tender outside the gold and silver coin. The financial problem, therefore, became to the Government the great momentous overshadowing question of the Civil War.

LACK OF SKILLED FINANCIAL LEADERS.

Ex-Gov. Chase, of Ohio, was the new Secretary of the Treasury.

Spalding was chairman of the House Committee on Finance. Stevens was chairman of the Senate Committee on Finance.

It is meant as no reflection on these great men when it is stated that it is to be regretted that neither of them were possessed of great financial training or ability.

Chase at first had refused the offer to be appointed Secretary of the Treasury because, as stated by him, of his lack of financial experience and training.

Spalding had been connected with a small bank.

Stevens had had little or no financial experience or training.

This great tremendous financial problem was thus thrust upon and left largely to be worked out by these three untrained men, for in the entire Congress of that day there appeared to be few, if any, better qualified. It was remarked by the press of that day that there was sore need of a Hamilton or a Gallatin, as these times of all times demanded some great financial genius.

Chase began by consulting the bankers of the United States, and as a result two schemes were proposed:

First. To sell the bonds of the United States at the highest market price.

Second. To make paper money a legal tender for public debts.

It is worthy of notice here to remark that the first plan, which text writers now agree should have been the one adopted by the Government, was proposed to Secretary Chase by James Gallatin, a son of the great financier before mentioned.

The Government, under the lead of the Secretary of the Treasury, finally chose the latter plan, and started upon the policy of issuing paper money as a legal tender.

HOW AND WHY THE CIVIL-WAR DEBT BECAME SO LARGE.

During the first period of the Civil War the Government tried to prevent suspension of specie payment by two methods: First, by issuing Treasury notes of long funding period; second, the Government put out Government bonds, known as 5-20's and 7-30's.

We should note here that the interest on these bonds was promised to be paid in coin, and that coin at this time of the contract between the Government and the money lenders to the Government, as well as all through our history, had always been construed by the Government and the Treasury Department as meaning gold and silver. No other construction had ever been given by the Government or the Treasury Department to the word "coin."

PAPER MONEY MADE A LEGAL TENDER.

The above efforts on the part of the Government to prevent the suspension of specie payment were unavailing. The Government was unable to stem the tide, and finally, as before stated, determined upon the policy of issuing paper money as a legal tender.

RAPID DEPRECIATION AND THE SAD EFFECTS ON THE TAXPAYERS OF THE FUTURE.

Treasury notes soon went down to 37 cents on the dollar, and paper money went lower. The result of all this was that those who had coin to lend the Government got for every dollar of coin lent the Government almost \$3 in return of obligation and promise to pay against the Government. In other words, for every dollar lent the Government in coin they had in return therefor a demand for almost \$3 in legal-tender values, and later these money lenders got this legal tender 3-for-1 values of demand or promise to pay by the Government funded into coin-payment bonds. In the end the war debt which was thus made and which was placed against the faith and credit of the Government, to be paid by taxing the people of the future, was almost three times the real debt of the war as measured in coin values.

Later the money lenders demanded that Congress should redeem the debt in coin when coin was at a premium, principal and interest alike. Still later the money lenders demanded that Congress should construe coin to mean but one metal of the two metals it had always previously been construed to mean, and then proceeded to have Congress so legislate that that metal should bear a largely legislated premium value.

A brief list of the leading financial acts of the Civil War period is as follows:

Act of July 17, 1861: An act to authorize a loan of \$250,000,000 in coupon bonds, registered bonds, and Treasury notes.

Act of February 25, 1862: First legal-tender act. By this act, for the first time in the history of our Government, paper money was made a legal tender for debts.

Act of July 11, 1862: Second legal-tender act. This was similar to the first legal-tender act.

Act of July 17, 1862: An act providing for postage currency.

Act of March 3, 1863: Third legal-tender act. This act provides for borrowing \$300,000,000 for year 1863, \$600,000,000 for year 1864.

For this sum Congress was to issue coupon and registered bonds. These bonds to be ten-forties. Interest 6 per cent. Specified that these bonds and interest to be paid in coin and to be exempt from taxation.

The second part of the act provides, in addition, that the Secretary of the Treasury is authorized to issue \$400,000,000 Treasury notes.

One provision in this act stopped the exchange of notes for bonds after July 1, 1863. This was a very wise provision, as there was evidently a move on the part of the holders thereof to fund the whole of the legal-tender notes into bonds, which were then rapidly rising at a premium over par.

Act of April 12, 1866: An act for the singular purpose of preventing Secretary McCullough from paying off the public debt too rapidly. Under the construction put on the word "coin" and other favorable legislation, the money lenders did not want their money but wanted the obligation against the Government to continue as long as possible.

Act of February 4, 1868: An act to discontinue redeeming the United States Treasury notes.

NECESSITY FOR AND CONSTITUTIONALITY OF LEGAL-TENDER ACTS.

As legislation growing out of the legal-tender acts of Congress became a burning political issue during and for a long time after the Civil War, a word as to whether their issue was a necessity or not, and also the Supreme Court's conflicting decisions as to their constitutionality, may be appropriate to record in passing.

As to the advisability of this method of providing for the expenses of the war, it has already been noted that text writers generally pronounce it a mistake. As to whether it was necessary is a matter of individual opinion. It can hardly be said to have been a necessity in the sense that there was no other plan presented or open to the Government to meet the emergency.

CONFLICTING DECISIONS OF THE SUPREME COURT IN REGARD TO THE CONSTITUTIONALITY OF THE LEGAL-TENDER ACTS.

The fact that the legal-tender acts of Congress were from the first generally regarded as unconstitutional was either waived or admitted, but justified as a war necessity.

Secretary Chase later, when Chief Justice, held that the legal-tender acts were unconstitutional.

The constitutionality of the legal-tender acts three times came before the Supreme Court of the United States and was decided by that court once unconstitutional and twice constitutional.

The action of the Supreme Court in these conflicting decisions is most interesting to note.

The cases were as follows:

THE FIRST CASE.

STYLE OF CASE—HEPBURN AGAINST GRISWOLD. 1867.

Statement of case and decision of the court:

June 20, 1860, Hepburn gave Griswold promissory note for \$11,250, payable February 20, 1862.

March, 1864, Hepburn, having been sued on the note in Louisville, Ky., tendered payment in United States notes which were made a legal tender by the act of February 25, 1863.

Griswold refused this payment because, compared to the value in gold at the time, it would amount to only about \$7,000.

Griswold's plea was that at the time of the loan the legal-tender act of February 25, 1863, had not been passed, and that at the time of the contract of the loan, therefore, gold and silver were the only legal tenders in the United States.

The Chancery Court of Kentucky decided for the plaintiff.

Griswold then took his case up to the Court of Errors of Kentucky.

The Court of Errors of Kentucky reversed the Chancery Court of Kentucky and decided in favor of the defendant.

Hepburn then carried the case to the Supreme Court.

The Supreme Court, in 1869, decided by a vote of four to three, the Supreme Court being then composed of but seven members, that the legal-tender act of February 25, 1862, was unconstitutional. Ex-Secretary Chase was now Chief Justice of the Supreme Court of the United States, and in his decision reversed the opinion which he held when Secretary of the Treasury in 1862.

Chief Justice Chase delivered the majority opinion of the court and was sustained by Justices Nelson, Clifford, and Field. Dissenting opinion by Miller, Davis, and Swain.

SECOND CASE.

STYLE OF CASE—PARKER AGAINST DAVIS. 1872.

Justice Gray delivered the opinion of the court.

Parker being under contract to convey land to Davis for certain sums of money, the Supreme Court of Massachusetts ordered Davis to pay into court the sum of money called for in the contract and ordered Parker to issue deed for said lands to Davis.

The Supreme Court of Massachusetts decided in favor of the defendant, Davis.

Parker carried the case to the Supreme Court of the United States.

The Supreme Court of the United States, now composed of 9 members, by a vote of 5 to 4 overruled the former decision of the Supreme Court of the United States, in its first decision in the Hepburn v. Griswold case, and decided that the legal-tender act was constitutional as a war measure. It will be noticed that this decision left the subject uncertain as to the future.

Justice Strong delivered the majority opinion of the court.

THIRD CASE.

STYLE OF CASE—JULLIARD AGAINST GREENMAN. 1884.

Statement of case and decision of the court—

This case arose out of a certain transaction in the sale of cotton. Greenman offered Juilliard United States notes in payment of same. The case was carried to the Supreme Court of the United States from the United States Circuit Court of New York.

The Supreme Court of the United States, by a vote of 8 to 1, Justice Field dissenting, decided March 3, 1884, that the legal-tender acts were constitutional, both in time of peace and time of war.

Justice Gray delivered the opinion of the court.

THE EFFECT OF LEGAL TENDER ON GOLD.

Mr. Chairman, time does not permit me to review the many important financial legislative acts of this period. I shall be compelled to content myself with a general statement covering the general tendency of them all as a whole.

It should be observed in passing that the effect of this legal-tender legislation was to depreciate the currency, more than double the war debt, and cause gold to continually rise in premium above par.

In 1862 gold stood at 134. In 1864 gold reached its highest point and stood at 285 and then slowly and steadily declined, until on December 17, 1887, gold again touched par for the first time since before the Civil War. At 12 o'clock and 27 minutes, December 17, 1887, \$10,000 in gold was sold at par at the gold stock exchange in New York City.

The first legal-tender act promised payment of interest in coin, but made no promise as to the payment of the principal.

The third legal-tender act promised payment of both principal and interest in coin.

The aim and purpose from this on of much of the financial legislation was to have the Government obligations of all kinds funded into Government bonds, payable in gold or its equivalent.

The advantage of this subsequent financial legislation was, therefore, generally with the money lenders for the legal-tender acts thus funded more than doubled the amount received by the lenders for their original loan to the Government, made the public debt higher and harder to meet by taxation on the people; while it enabled the money lenders, in addition, to largely absorb and corner the coin money—gold—that these same legislative acts placed a premium value upon. Thus in reality paying the money lenders almost three to one in coin that had a legislated added purchasing power in the markets of the United States. The famous act of 1873, against silver coin, frequently referred to as "The crime of '73," and the act of February 20, 1887, retiring the silver trade dollar and other like financial legislation, were all measures tending in the same general direction.

Mr. Speaker, it is rather difficult for one whose sympathies are with the great mass of taxpaying people of the national debt rather than with the money lenders of that debt to give a history of the financial legislation of this period without saying some things which might seem partisan, and as that is not the intention of this review, I have passed by without comment the many funding legislative acts, and the acts dealing with the status of silver coin, and have limited my observations to pointing out the general tendency of the financial legislation of this period.

THE SILVER AGITATION.

I have also purposely omitted any discussion of the silver agitation of a later period because the same was political and not legislative. However, two singularly strange incidents may be recorded—one has happened, and the other may happen.

The first is this:

The advocates of silver lost while at the same time their basic principle won.

The basic principle in the argument for silver was the absolute necessity for a larger per capita circulating medium. While the fight for this principle was on no other method was known to human knowledge whereby this could be accomplished other than to restore silver to its ancient and honorable position which it had always held as coin demand payment.

The advocates of silver lost. Shortly afterwards there happened what no mortal man could have foreseen. A wheat famine, covering more than one-half of the wheat-growing region of the world, in which region lived more than one-half of the human race, made a trade demand upon us and brought the trade money balance largely in our favor. Closely following this came the discovery of great quantities of gold in the Klondike. And thus by these two unexpected methods the larger circulating medium was brought about in a way undreamed of by mortal man, so that in this unexpected way the silver advocates lost their fight while winning their cause.

The other singularly strange incident that may happen in the future is this:

Those who want a single standard, and that standard built upon the scarcer metal because it is the scarcer metal, may be compelled in the future to transfer their love and allegiance from gold to silver, for when Alaska is developed, as developed it must be some time, that great undeveloped wonderland of the world has and will furnish such an immense and inexhaustible supply of gold that the gold supply of the world is likely to exceed the silver supply of the world, and the flood criers of the future will be compelled to cry out against a flood of gold rather than a flood of silver.

ALASKA HOLDS THE GOLD SUPPLY OF THE FUTURE.

England, by a wiser policy than ours, in developing the Transvaal is from that country furnishing 40 per cent of the world's supply of gold.

When the United States becomes wise enough and sensible enough to develop Alaska, Alaska will be able to furnish 50 per cent of the world's supply of gold, as well as open up homesteads for ten to fifteen millions of people of virgin cheap farm homes.

PERIOD OF SPECIE RESUMPTION TO THE PRESENT TIME.

By act of Congress, January 14, 1875, Congress provided for specie resumption to begin January 1, 1879.

Mr. Chairman, I very much regret that time compels me to omit a review of this period without even mention of the great financial acts for funding the public debt and those great financial acts regarding silver coin like the Bland-Allison measure and other great silver legislation of this period.

Neither will I have time to call attention to recent financial legislation like the Vreeland bill and the Aldrich bill.

I shall come at once in closing to the present financial legislation now under the consideration of this Congress, the Glass currency bill.

THE PENDING GLASS CURRENCY BILL.

And now, Mr. Chairman and gentlemen, I invite your attention to a few brief observations on this present great constructive measure now before this House, the Glass currency bill.

A GREAT CONSTRUCTIVE MEASURE.

First, I desire to state that the Glass currency bill is a great constructive financial measure.

Lay this currency bill down on your study table side by side with any of the great currency bills of the past in our history and study it in critical comparison with the greatest of them and it will compare favorably with the greatest financial measures ever presented in this country or any other land.

It maps out a great constructive financial policy for the present needs and future development of the United States.

IT IS FAIR TO ALL THE PEOPLE AND IS A PEOPLE'S BILL.

Next, I wish to observe that one of the best things about this bill, if not the best thing about it, is that it is fair to all the people and it is essentially a people's bill.

It can not be truthfully labeled a bankers' bill, made by bankers for bankers, or a bill to conserve or serve any special interests of any kind.

It is fair to all the people, and therefore not unfair to the bankers or to any other class, as a class.

In fact, if there ever was a currency measure proposed in this country that could be properly called a currency bill by the people, of the people, and for the people, the Glass currency bill as presented by the Democratic caucus to this Congress at this time is that bill. [Applause.]

A BILL FOR THE TILLERS OF THE SOIL AND THE LABORERS.

Next I observe that we have here a bill for the tillers of the soil and the laborers.

For the first time in our history we have prepared a financial measure that reaches down with currency legislation to the tillers of the soil and the laboring masses. The farmers and laborers will find this bill their friend in time of stress and need. I was one of those who was glad to see farm products included in this bill as a basis for credits and loans to the farmers, and that feature of the bill is a great step, in my opinion, in the right direction.

With this measure we only need the future legislation intended and promised by the Democratic Party on farm and rural credits to give us the best currency system for the farmers and laborers and the common middle business man enjoyed by any nation on earth.

OTHER STRONG FEATURES OF THE BILL.

Other strong features of this bill that will appeal to all the people and commend the measure as wise, fair, and desirable are:

First and foremost. It places our money system—the lifeblood of trade and the people's prosperity—into the hands of the people's representatives, chosen from among the people, a board of uninterested arbitrators who can do exact justice to all the people and to the banks and business interests as well, tending thereby to bring about a better understanding and confidence where before has existed suspicion and often strife.

And here is the great overshadowing distinction between this bill and the proposed Aldrich bill:

The Aldrich bill proposed to hand over to the representatives of the banks, thereby to the banks themselves, the fate and keeping of our currency medium, and thereby the fate and happiness of the welfare of the people.

The difference between this bill—the Glass bill—and the Aldrich bill is the difference between aims and purposes headed and moving in opposite directions.

Second, and almost equal in importance. It will forever prevent the drawing in and massing together of the money from all over the United States at Wall Street, New York, for speculating and gambling purposes, or for operating that despicable system of inflating and selling, then wrecking and buying, that has caused bankruptcy of solvent honorable business, blasted homes and fortunes, and even strangling the very Government itself into bond issues in the past.

Third, and coequal with the others. It will tend to largely prevent and, we trust, make impossible real or handmade panics in the United States.

Fourth. It gives the farmer and honest business man access to money when he needs it.

This great Government of the United States that rests so largely upon the farmer and laborer proposes, in this measure to assist him, in times of need, rather than permit him to be oppressed in times of need, as formerly.

The bill, therefore, prevents Wall Street from drawing the money away from the country when and where needed.

The bill gives authority to make farm loans based on agricultural products.

The bill seeks to prevent gambling in farm products.

The bill puts the farmer, the laborer, and the little business man all on the same level with and equal with big business in any financial favors that can be properly granted by the National Government.

The bill restrains the avarice of wealth and encourages honest investment and honest enterprise by offering a helping hand and a place of refuge to which to flee from the attack of the despoiler.

WHY THIS MEASURE IS ENTITLED TO DEMOCRATIC SUPPORT.

Mr. Chairman, no human effort can be perfect, but we can honestly claim for this bill that it is an honest effort to correct

the wrongs and injustices of the past, to redeem our promises to the people, and give to the country an honest financial system, fair to all the people, rich and poor alike.

If any Democrat has any doubts about any part of this bill, he can well afford to resolve them all in favor of the bill when he considers that it has the unqualified support of the four most illustrious, trusted, and eminent Democratic leaders in the Nation.

Our illustrious President, who has won and holds the respect and admiration of his countrymen and the world, who has met and measured up to every delicate emergency with such great consummate skill and patriotic ability as to challenge the praise and receive the applause of all the people, and whose influence for better things is felt around the world. [Applause.]

His great Secretary of State, William J. Bryan, whose masterful management of that great office as the Nation's premier so richly justifies the expectations of all his friends who have loved him and followed him with unexcelled devotion all these years. [Applause.]

The great Speaker of this House, grand old Democratic CHAMP CLARK, whose name has been a synonym for Democracy for 25 years in all parts of the United States, and whose white plume, like that of Henry of Navarre, is always seen in the front of the battle wherever Democratic battles are waged. [Applause.]

The trusted, loved, and respected leader on the floor of this House, OSCAR UNDERWOOD, a man on whose intellectual brow the fires of genius brilliantly burn and of whom I can fittingly paraphrase Halleck's lines:

None knew him but to love him,
Or name him but to praise.

[Applause.]

And I want to say that when these four illustrious Democrats all join in singing the praises of this bill, in one harmonious strain it makes most sweet and exquisite music to Democratic ears.

Mr. Chairman, it is a pleasure and an honor to serve under such leadership—a leadership that is moving forward to better laws and higher plains of life and justice in the affairs of men and nations; a leadership that can hear the heartbeats of humanity above the clinking of the coin; a leadership that can recognize that the greatest asset and defense a nation can have is strong, contented, industrious, God-fearing working men and women and realize the truth of the poet's statement—

Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay.

And it is the most hopeful sign of our times that leaders of all parties are striving to put the welfare of the man above the material profit of the dollar. It is very gratifying to see this bill secure such great support from so many members of the Progressive Party. Some of us have been here, willingly, since the first day this Congress convened, ready always to help to bring to all our countrymen the benefits of the magnificent program mapped out by our great President.

It is to be hoped that the other coordinate branch of Congress, the Senate, will be able to differentiate between due deliberation and dull delay, so that we can soon, in the fullness of that joy of duty well done, meet our constituents with every promise redeemed by enacting these great measures into law.

And when we have enacted into law the great tariff bill, as passed by this House, and this great constructive currency bill, as presented to this House, we shall have served our countrymen so that it will always be regarded as an honor to have been a Member of this Congress; for if these two great measures are what we intend them to be, and fervently hope they may prove to be, we shall have had the proud honor and privilege of having a part in passing the greatest and most beneficial legislation enacted in a third of a century.

This House has realized the full obligation of every promise made the people and has fully measured up to its duty with an honest effort to redeem every promise made the people.

If there is any failure, the blame must rest elsewhere and not on those who have labored long, earnestly, and faithfully in this House to carry out the expressed mandate of the people and the solemn obligation implied in an election to this body.

We have intended to legislate so that we might lift the burden from the back of labor—so that the poor, with renewed hope, could lift up their heads into the sunlight of hope and thank God and take new courage. We have intended to legislate so that we might subdue the privilege of organized wealth, prevent legalized theft, and stop avarice from eating the bread produced by the sweat of honest toil. [Applause.]

We have intended to legislate so that we might invigorate all honest business—unchain the limbs of honest enterprise so that

in peace and safety they can sail the sea of any human industry without fearing the black flag of a pirate crew.

In truth, to make life a little sweeter, toil a little lighter, the poor man's home a little happier, and the world a better place to live upon.

We want to enact such laws as will help men more and more to be brother helpers in the race of life and less and less heartless destroyers, and thus have the laws of this great Nation patterned after the divine law of love and justice, in the spirit of the golden rule, which, translated into the human law governing the daily business affairs of men, means, I think, in this great world in the race for life, special favors to none and equal opportunities to all. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 15 minutes to the gentleman from Michigan [Mr. SAMUEL W. SMITH]. [Applause.]

Mr. SAMUEL W. SMITH. Mr. Chairman, this debate, which is sure to be a memorable one in the annals of the American Congress, would be much more interesting, instructive, and inspiring if the action of the Democratic caucus had not already disposed of this proposed legislation in advance of any discussion in the House.

It is in no spirit of criticism or unkindness that I call attention to the fact that never before since the formation of the Government has there been such a complete surrender of the individual representative rights and privileges of Members as is shown by the Democratic Members of this House in the passage of the tariff bill and as is proposed in the passage of the currency legislation.

Practically every Democrat in the House, if the press has correctly reported the proceedings of the Democratic caucus, has surrendered his right to offer amendments to this bill, save the 14 members of the Banking and Currency Committee. For illustration, there are six Democratic Representatives from the State of Oklahoma, where they have a law guaranteeing all bank depositors, and I am informed that while it is not altogether satisfactory the people of that State would not consent to its repeal.

Suppose a constituent of one of the Democratic Members of that State were to send him an amendment to this bill providing for a guaranty of all bank deposits, the Member would have to write his constituent and say, "I can not do it; I have surrendered my rights as a Representative; I have delegated the same to a Democratic member of the Banking and Currency Committee," and then what would happen if no Democratic member of the Banking and Currency Committee would offer the same?

I do not believe the people will or should sanction this course of procedure upon the part of any Member of any party. If so, let us do away with representative government, and legislate entirely by caucus.

I regret that this bill should have been made a party measure, for there was no necessity for such a course. Members of all parties were and are practically a unit in agreeing that we should have a more elastic currency; that there ought to be better means of rediscounting commercial paper and a more effective supervision of the national as well as State banks, and in the main are agreed on many of the provisions in this bill, and I think it would have given much better satisfaction throughout the country if there had been no attempt to make it a political measure.

My time, like most Members who are not on the Banking and Currency Committee, is limited; therefore I shall not attempt to discuss the bill in detail, except to say that the bill is not en-

tirely to my liking, but I am inclined to vote for it in the hope that it will be further improved when it comes to us from the other end of the Capitol for final action.

I think the bill is lacking in this most essential thing—that there is no provision guaranteeing bank depositors. I know that many bankers are opposed to it, but they should not be. Some favor it, but do not feel free at this time to express themselves. All should favor it for it is just and right, and I believe the day is rapidly approaching when it will be the law in most if not all of the States.

It is quite the custom throughout the country for banks to borrow money from State and county treasurers and from other sources and guarantee the same. Will some one explain why the individual depositor should not enjoy the same privileges and be given a guaranty for his deposits? It may not be deemed wise at this time to add such a provision to this bill. I know that it would be practically useless for a Republican to offer such an amendment, in view of the action of the Democratic caucus. However, you insist in this bill that the Government shall guarantee the bank note. Why should not the banks guarantee all bank depositors? Do this, and money will come from all the hiding places.

I fully realize the great opposition there is in this body to this proposition, but I am not discouraged nor dismayed. I have been in Congress long enough to witness as much or more opposition to the reduction of express rates, railway-mail pay, the abolition of railroad passes, telegraph and express franks, the establishment of rural free delivery, postal savings banks, and parcel post. All these and many more have been accomplished to the great satisfaction and advantage of all the people.

In passing I want to call attention to another matter that is dear to my heart, namely, postal telegraph. There must always be some one or ones to bear the brunt and take the criticism, and there are at this time those who object to the control of the telegraph by the Government in any form, but the light is shining brighter and brighter, and there are growing evidences every day that after all the years of discussion something in the way of practical legislation is soon to be accomplished.

The night-letter and day-letter telegrams are doing much to convince the people that if the Government does not own the telegraph it certainly ought to further regulate it in the interests of the people, to the end that we may have cheaper rates and better service.

I find this plank in the Democratic national platform of 1908:

TELEGRAPH AND TELEPHONE.

We pledge the Democratic Party to the enactment of a law to regulate under the jurisdiction of the Interstate Commerce Commission the rates and services of telegraph and telephone companies engaged in the transmission of messages between States.

This is certainly a step in the right direction.

I fully realize that the honor of introducing and passing such a bill will not be accorded to any one in the minority, and I therefore hope that some Democrat will introduce such a bill and that it may be speedily enacted into law.

I have said that some bankers already favor the guarantee of bank deposits. I desire to read a letter from one of these.

FIRST STATE AND SAVINGS BANK,
Howell, Mich., June 17, 1913.

Hon. S. W. SMITH, M. C.,
Washington, D. C.

DEAR SIR: I have your letter of June 15, and take great pleasure in replying thereto.

The ideas that I entertain concerning guaranty of bank deposits is derived from the operations of the Livingston County Mutual Fire Insurance Co. This is an organization of farmers. Has been in operation about 40 years for the purpose of insuring their property against loss and damage by fire and lightning. Their paid officers consist of a secretary having a salary of about \$800 a year, a board of five directors who are compensated by the day for the little work they are called upon to do in the way of adjusting losses, and a receiver in each township who collects assessments.

During the years the farmers have maintained their insurance for a small fraction of the amount charged by old line companies. They never have any considerable cash in their treasury and make assessments once and sometimes twice a year, the assessments being so small that they do not notice them. I can well remember when strong arguments were made against such insurance. Mr. A thought his neighbor Mr. B too careless and Mr. C might burn his property to get the insurance. Time has obliterated those arguments.

We have in Michigan a very efficient banking department of the State government, and I believe there has been no bank failure in Michigan nor any loss suffered by depositors in more than two years, and I do not think there will be any loss to any depositor in State banks in many years in the future. National banks are under a like supervision, which I think is quite efficient. It is not the duty of State or national governments to guarantee bank deposits. They have enough else to do. It is the duty of banks to absolutely protect depositors, and the smallest depositor should have as absolute protection as the largest.

The banks combined are perfectly equipped to protect depositors. Now, when a bank fails or shows any conditions of insolvency the bank commissioner is authorized to intervene, take possession of the bank and take steps to wind up its affairs.

I should like to have the Federal Government give its bank department ample power to levy an assessment upon all national banks,

upon some pro rata method, to raise sufficient funds to meet any deficit in any bank unable to pay its depositors in full. This done by some scheme of assessments, and I now say, based upon past history, the assessments would be so small as to cause no embarrassment whatever. The States would each work out their own guaranty upon the same plan.

I have heard a wise city banker exclaim that it was not right to ask the careful, safe banker to insure the reckless and vicious, but that is the old argument that has been exploded relative to life and fire insurance long ago.

Certainly if the bankers can not trust one another why should the people do so? Again I have heard the same banker say that anybody could start a bank under such conditions and his depository be as safe as another. That is not true under such conditions any more than now. Granting of new charters now is, and always can be, controlled and regulated to meet the best needs of existing conditions. Probably existing banks could not be compelled to accept this modification of their charters, but new banks can and I do not believe the old banks could or would think they could afford to fail to promptly accept these wise provisions. Assessments, in my opinion, would be less for many banks than they are now paying to various bonding companies to guarantee various municipal and other corporate deposits. By this scheme no assessments at all would be made until a necessity existed for the protection of depositors, and, as I have stated, if bank failures are no more frequent in the future than they have been in the past these assessments would be trifles. Bank failures will not be as frequent in the future as they have been in the past principally because of the efficient supervision of the departments.

If there is a reasonable argument that can be advanced against this method, I should like to hear it. I do not believe one can be made.

The other question respecting the source from which sufficient circulating medium can be obtained in times of stringency is very closely allied with the bank guaranty.

We have in this country at the present time a sufficient amount of circulating medium to meet our requirements. The notion seemingly entertained by some that this circulating medium leaves the country at intervals so as to create a stringency is the height of folly. It does not do anything of the kind. The only time we have a stringency is when our people become frightened and hide the money—commence hiding it in great vaults. From this the disease spreads until it reaches the old stocking and the cellar. So that, as I see it, what is needed is a provision that will not allow that hiding to distress the business interests of the country. If I am correct in my statements, the remedy will not have to be applied to any great extent, but the knowledge that we have the remedy ready for use will keep conditions usually normal.

The remedy I suggest is this: The power to coin and issue money should be strictly a governmental function. Most of our business is done on credit, and value is based upon credit in a large measure. The only true value is that which grows out of the ground or is dug from beneath its surface. When money goes into hiding and when the people will not allow the people to use the circulating medium in carrying on the business of the country, then there should be a temporary means of forcing the holders of money to release it. That, I believe, should be done in this way: If the Federal Government, through its Treasury Department, would issue and loan to national banks whatever money they required at a rate of interest, say, double the current rate, and which they could secure with municipal bonds of the species now acceptable by the United States Treasury to secure postal-savings deposits. This would at once put the national banks in a position where fright of its depositors would not close their doors, and the national banks could in turn, if necessary, assist their correspondent State banks.

The high rate of interest under such conditions paid for the loan would be willingly and gladly paid, and would with equal force insure the early return of the loan.

In fact, I believe this regulation might be in force for months and years without a dollar being called for. The knowledge to our banks and to our people that such salutary provisions had been arranged would be the quieting powder that would be almost a sure preventative against that mental disease known as panic.

You have my permission to use my communications to you in any manner that you see fit.

Very respectfully, yours,

W. P. VAN WINKLE.

So that you may know more of the gentleman whose letter I have just read, I want to say that he is the president of a successful bank at Howell, Livingston County, Mich., who has given the subjects referred to in his letter a great deal of thought and study; is an able lawyer, in politics a Democrat, and a citizen who enjoys the respect and confidence of all who know him.

It is of the greatest importance that the supervision of national and State banks be brought to the highest state of perfection. When this is done, it must be self-evident that the loss to depositors as well as from all sources will be very small. Let us insist and persist until the supervision of banks reaches, as near as possible, perfection, and then bank failures will be things of the past and there will be less and less fear and no objections from any source about guaranteeing depositors.

A short time ago a banker called my attention to the fact that he believed there was something wrong in the management of another bank and he promptly called the attention of a bank examiner to the same, who immediately visited the bank, and whose visit proved a very timely one in the interests of all concerned. I have been thinking more and more that it might be an excellent thing if the banks were compelled to guarantee the depositors, and in this way they would each, in a measure, have a supervising eye over each other, which might prove of lasting benefit to the banks as well as to the depositors.

When we borrow money at the bank it has the right and privilege to feel and know that the security which we give is of such a high order that the money which we received will be returned a hundred cents on the dollar, principal and interest.

Why should not the depositors enjoy the same right and privilege when he deposits his money with the bank?

Recently there was a bank failure in Michigan of a State bank with a capital of \$20,000 in which the cashier, during a period of about six years, wrongfully took more than \$100,000. During this time he successfully evaded the scrutinizing eye of several bank examiners; but now that it is over and it is known how it was done it will be easy to amend the law so that this can not occur again in Michigan. Our banking laws, like many others, are still imperfect. I am not a banker, but I believe it is possible, and I hope that some banker, business man, or some one will work out a plan whereby there can be a guaranty to all bank depositors and a law that will give general satisfaction, and he who does this will receive the everlasting thanks of a grateful people. [Applause.]

Mr. GLASS. Mr. Chairman, I yield 20 minutes to my colleague from Mississippi [Mr. STEPHENS].

Mr. STEPHENS of Mississippi. Mr. Chairman, the charge is frequently made that our banking and currency laws are the worst in the world. That they are inadequate, both to meet the requirements of the financial world and to properly safeguard and protect the interests of the people, is unquestionably true.

There is an insistent demand for the reform of these laws. One great reason for this demand is that abuses have grown up, either under law or because of the want of legal restrictions to prevent them, by which the great masses of the people have been forced into financial slavery.

Money is a social necessity; therefore every phase of life is affected by our monetary system. It affects society collectively; it affects every individual, no matter what his occupation or station in life may be.

Any power that can control the money and credits of a nation is dangerous and is capable of absolutely enslaving and pauperizing the millions of those who toll for a livelihood.

That such a power does exist in this country has been generally believed for a long time. It is commonly termed the Money Trust.

President Wilson, while governor of New Jersey, said:

The greatest monopoly in this country is the money monopoly. So long as that exists our old variety and freedom and individual energy of development are out of the question. The industrial nation is controlled by its system of credit. This is the greatest question of all, and to this statesmen must address themselves with an earnest determination to serve the long future and the true liberties of men.

The Money Trust became a subject of much discussion in the press of the country. Political speakers found in it an interesting theme. The people began to wake up to the importance of it. Public sentiment was aroused to such an extent that it became imperative that some action be taken to relieve the people from the bondage of financial slavery.

MONEY-TRUST INVESTIGATION.

Finally a resolution was introduced in the House providing for an investigation of the subject.

It was alleged that a small group of financiers had acquired such control of some of the great financial and industrial corporations of the country that they were, in a large measure, the masters of the finances of the entire country. It was said that they were able to use the funds and property of the great national banks and other moneyed corporations in the leading money centers to control the security and commodity markets; to regulate the interest rate for money; to create, avert, and compose panics; to dominate the New York Stock Exchange; and by virtue of their associations and business connections to wield a power over the business, commerce, credits, and finance of the country that was despotic, dangerous, and intolerable.

Further, that national banks and other moneyed corporations have been used for the promotion and exploitation of speculative enterprises and in acquiring stocks of other banking institutions, and that the funds of these institutions have been used to absorb competitors.

In other words, that the banks and moneyed institutions were in many instances being diverted from their normal functions and legitimate purposes and were being used as instruments in the hands of a few small groups of financiers for their own selfish purposes, to the end that they might grow richer, having absolutely no regard for the rights, interests, or necessities of the whole people.

A resolution was adopted in the House authorizing the Committee on Banking and Currency to make an investigation of the so-called Money Trust. The resolution was very broad in its terms, giving authority to inquire into the matters referred to, all questions relating thereto, and many others.

A subcommittee of 11 members was appointed by the Banking and Currency Committee to conduct the inquiry. The Democratic members were Hon. A. P. PUJO (chairman), Hon. W. C. BROWN, R. L. DOUGHTON, J. A. DAUGHERTY, J. F. BYRNES, G. A.

NEELEY, and myself, and the Republican members were Hon. Henry McMorran, E. A. HAYES, F. E. GUERNSEY, and W. B. HEALD.

The committee began hearing testimony on May 16, 1912, and concluded its labors on February 28, 1913.

The committee cared nothing for suspicions, surmises, or insinuations as to the existence of a "Money Trust," but it was after facts. In order to get at the facts it was necessary to call as witnesses those who were on the inside. Nearly every witness was a member of the crowd that was under investigation. The most eminent financiers, the largest speculators, the boldest manipulators of speculative enterprises, the most active participants in the effort to concentrate the control of the wealth of the country into the hands of a favored few were called to testify. So there can be no contention that the conclusions of the committee are based upon testimony that came from witnesses prejudiced against wealth or tainted with a spirit of anarchy or socialism or inspired by any feeling of ill will or desire for revenge for some fancied or real injury.

I am glad that I served on this committee. It gave me the opportunity to see and hear these men, to learn at first hand the methods used by them in acquiring such wonderful control over the finances of the country, and also to have an insight into their views of the ethics of business.

All the testimony was interesting; much of it was startling; some of it was disgusting.

Interesting, because it had to do with a subject that is of vital importance to every citizen; startling, because it told a story that shows that while the people of this Nation are politically free they are financially enslaved; disgusting, because it proves that many of the great financiers of the country are governed solely by the lust of lucre; that they have made "gain their master idol"; that in business affairs they have no sense of fairness, of common honesty, or moral shame.

Listening to the testimony of some of the witnesses—big men of Wall Street—it occurred to me that they might very well say of themselves, in the language of the Prophet Isaiah:

I have removed the bounds of the people, and have robbed their treasures, and I have put down the inhabitants like a valiant man. And my hand hath found as a nest the riches of the people; and as one that gathereth eggs that are left, have I gathered all the earth; and there was none that moved the wing, or opened the mouth, or peeped.

The testimony taken by the committee made several thousand pages of printed matter. It will, of course, be impossible for me to review this great volume. The inquiry relates particularly to clearing-house associations, to the New York Stock Exchange, and to the concentration and control of money and credit. I shall refer briefly to some of the most important features of these subjects.

CLEARING-HOUSE ASSOCIATIONS.

Clearing-house associations have been organized in many of the large cities. They are unincorporated institutions. Certain banks in a city, through the officers, get together, form the association, and formulate rules for its government.

In New York City only banks with a capital of \$1,000,000 are permitted to join. Other banks with a less capital, that are termed nonmember banks, are allowed to clear their checks through member banks. These nonmember banks have no voice in the management of the association.

The primary object of the association is to facilitate the collection of checks by banks in the same community. This object is both legitimate and useful. Mr. Sherer, manager of the New York Clearing House, stated that it would be a practical impossibility to conduct a large bank without clearing-house facilities.

That this privilege of clearing is of value to small banks is unquestionably true, but the "financial aristocracy" of Wall Street is unwilling to recognize any bank that is not in the million-dollar class. In Chicago the only requirements are that the bank shall be incorporated, either under the State or National law, and that it shall be solvent. One of the bankers of that city testified that recently a special effort had been made to get every bank to become a member.

The true function of a clearing house is to give a meeting place for representatives of all banks entitled to the privilege, so that each bank may deliver the checks that it holds against the other banks and receive in exchange the checks drawn against it, the difference in amount being paid in cash. This results in a great saving of time, expense, and labor, and reduces the risk of carrying large sums of money from place to place.

However, the clearing-house associations have exercised other powers than simply to exchange checks and pay balances. Although they have nothing to do with out-of-town checks it was learned that 91 associations require members to charge a specified rate for collecting such checks, under penalty in many of them of the payment of a fine for the first offense and expul-

sion for a second offense. This is an abuse that ought not to be tolerated, as it stifles competition and is prejudicial to commercial intercourse.

Some of these associations not only regulate exchange charges, but claim the power, and doubtless exercise it, to say to whom, for what amounts, and on what collateral loans shall be made by members.

That these associations have enormous power is indicated by the testimony of Mr. Sherer. He was asked, "If some day the clearing-house committee took it into its head that they did not think that a bank was a proper member they could end it, could they not?" to which he replied: "Yes; they could take away any bank's privilege." He said further that "banks have been closed because the clearing house has withdrawn their privilege"; also, "that the rumor that the clearing-house privilege has been withdrawn is sure to cause a run on a bank."

An illustration of the effect of the withdrawal of this privilege is found in the failure of the Knickerbocker Trust Co. It had a capital of \$750,000, and therefore was not allowed to become a member of the clearing house, but was forced to make its clearances through the Bank of Commerce, which was a member bank. Under the rules the Bank of Commerce had the right to give the trust company notice that it would refuse to clear for it any longer. This notice was given and the bank was forced to close its doors the next day, which started the panic of 1907.

This action was taken although the bank was entirely solvent, as was shown by the fact that on its reorganization it paid its debts in full and had a surplus over.

Another example of power of the clearing house to destroy solvent banks is found in the treatment accorded the Oriental Bank, which was a member of the association. It was clearing for two or three other banks, and the committee gave it notice that it must cease to do so, and forced the president of the bank to resign, although upon an investigation being made of the Oriental, at its request, it was clearly shown that it was entirely solvent.

Later the Oriental took out clearing-house certificates, as did all the banks during the panic, depositing therefor collateral to the amount of more than two dollars for one. Afterwards, and before the panic was over, notice was given this bank and others in like condition that these certificates must be retired in a very short time. This fact was published in the newspapers and so excited the depositors that a run was made upon the bank and it and three other banks were forced to close their doors within a day or two.

Mr. Hepburn, one of New York's great bankers, said that this action of the clearing house was "a great mistake." Mr. Kelly, the president of the bank, called it "a tragedy of finance." It was, because every one of the banks was solvent and paid all its debts.

As I have said, these associations are unincorporated. They are not regulated by law and the courts have no jurisdiction over them. No matter how many "sad mistakes" are made, no matter how many "tragedies of finance" are enacted, the victims must suffer, without any relief from the courts. It clearly appears from what has been said that they exercise powers too important and far reaching to be beyond the regulation and control of law.

NEW YORK STOCK EXCHANGE.

It has been said that the New York Stock Exchange is "probably one of the most important financial institutions in the world." There can be no doubt that it does exercise a very powerful influence over the finances of this country. It is a market place for the stocks, bonds, and other securities of corporations.

The exchange is not incorporated and makes its own rules and regulations without any restrictions of law. Its membership is limited to 1,100. No one can join except where there is a vacancy caused by the death, resignation, or expulsion of a member, or by the purchase of the seat of a member. Membership is much sought after, as is indicated by the fact that \$96,000 has been paid for a seat.

The exchange has become a great factor in the hands of the gambler and manipulator. It is just as legitimate to have a market place for corporate securities as it is to have one for agricultural products or any other commodity. The evil consists in the fact that its operations are not restricted to the purchase and sale of securities just as actual commodities are bought and sold, but it is used very largely for the purposes of gambling. The committee appointed a few years ago by Gov. Hughes, of New York, to investigate the exchange, said in its report that—

It is unquestionable that only a small part of the transactions upon the exchange is of an investment character; a substantial part may be characterized as virtually gambling.

The exchange does not work according to any fixed law. The natural law of supply and demand has no place in the philosophy of the exchange or of the operators of Wall Street. The thing most unexpected by the public is most likely to occur, yet nothing rarely ever happens except what has been carefully studied out. No general ever planned and prepared for a great battle with more care than do these men on the inside when they are preparing to manipulate the market in order to fleece the public.

The right of any system or organization that affects the finances of the entire Nation to exist depends in a large measure upon its honesty. I quote again from the report of the Hughes committee:

In its nature it is in the same class with gambling upon the race track or at the roulette table, but is practiced upon a vastly larger scale. Its ramifications extend to all parts of the country. It involves a practical certainty of loss to those who engage in it. But for a continuous influx of new customers, replacing those whose losses force them out of the "Street," this costly mechanism of speculation could not be maintained on anything like its present scale.

Speculation does not create wealth. One of the evils that grows out of operations in Wall Street is that it takes vast quantities of money to New York City, withdraws it from the lines of productive activity, and ties it up in speculative enterprises. Honest business suffers, monetary conditions are disturbed, and panics often result.

During that period of the year when there are no crops to move there is money lying idle in the banks. This money is sent to New York, where it is used by the speculators, and when it is needed to move crops it frequently can not be had. This necessarily affects the prices of agricultural products. It means lower prices, and is therefore hurtful to the agricultural sections.

The producer may suffer; low prices but scantily repay him for his toil; but the gambler cares little for this. His only thought is to have money with which to carry on his nefarious schemes, so that he may continue his operations that add nothing to the real wealth of the land and are utterly unfruitful and unprofitable to anyone but himself.

One of the practices of Wall Street that is productive of much harm is what is termed "short selling." By this is meant that a person sells what he does not own, hoping that the price will decline and that he can buy at a lower figure and thereby make a profit. As indicating harm that might come from this kind of business, I quote from the testimony of one of the prominent men of New York:

Q. What is the purpose of "short selling"?—A. Generally speaking, to make a profit.

Q. To make a profit by what process?—A. By repurchasing the "short selling" at a declining price.

Q. That is by selling a security that you have not got and gambling on the proposition that you can get it cheaper than the thing that is sold.—A. That is the usual process.

Q. Do you mean to say that if there is a panic raging it is a defensible thing for a man under the circumstances to sell stock that he has not got with the idea of getting it back cheaper?—A. I do think it is defensible. I certainly think it is defensible.

Q. You know that that would simply accentuate the fierceness of the panic, do you not?—A. It could not be otherwise.

It is the opinion of this man, which is simply illustrative of the general sentiment of Wall Street, that it is perfectly legitimate to add to the fierceness of a panic if the gamblers can profit by it.

Panics bring wreck and ruin; they bring suffering and misfortune; by them men are driven to suicide; people are thrown out of employment; women and children go about the streets with hungry, haunted looks upon their faces; men lose the earnings of a lifetime; and the hopes of manhood are destroyed; all these things must come that the man in Wall Street may prosper.

A terrific indictment, but one which very truly states the case, is made by a gentleman writing on this subject, when he said in referring to the operators on Wall Street, that "They have become simply forged-steel teeth on the feeding cylinder of the Wall Street thrashing machine, gathering and feeding the harvest into its clutch to be flayed and torn that the golden grain may be separated to swell the granaries of the already overrich, the chaff to be tossed aside, the straw returned to the people to fertilize their soil for another harvest; only the scattered gleanings of the fields are left to feed the toilers."

Power joined with privilege necessarily creates selfishness and wickedness and as a result frequently bring ruin, misery, and despair. There is no more shameful page in our history than that which shows that the Government has allowed such an institution with the power to blight and destroy, the power to affect the finances of the entire country, to grow up wholly unregulated and uncontrolled by law.

The Money Trust investigating committee has made some very strong recommendations on this subject. Following those recommendations I have introduced a bill which is now pending

and will be considered at the regular session. If it is enacted into law it will, in my judgment, relieve in a large measure, if not entirely, many of the evils that have resulted from the illegitimate operations of the New York Stock Exchange, and will result in bringing relief to people throughout the whole Nation. I shall not discuss that bill at this time, but intend to do so when it is under consideration.

CONTROL OF MONEY AND CREDIT.

The question that was more fully investigated than any other by the committee was that relating to the concentration of the control of money and credit. It was charged that a great power had grown up that had such control over the finances of the country that it could depress prices, affect and fix the wages of labor, regulate interest rates, and in many other ways exert baneful and hurtful influence.

After a careful consideration of the testimony the committee reported—

That there is an established and well-defined identity and community of interest between a few leaders of finance, which has resulted in a great and rapidly growing concentration of the control of money and credit in the hands of these few men.

As to the methods of effecting this control, the committee said that it is done—

First. Through consolidations of competitive or potentially competitive banks and trust companies, which consolidations in turn have recently been brought under sympathetic management.

Second. Through the same powerful interests becoming large stockholders in potentially competitive banks and trust companies. This is the simplest way of acquiring control, but since it requires the largest investment of capital, it is the least used, although the recent investments in that direction for the apparent purpose amount to tens of millions of dollars in present market values.

Third. Through the confederation of potentially competitive banks and trust companies by means of the system of interlocking directorates.

Fourth. Through the influence which the more powerful banking houses, banks, and trust companies have secured in the management of insurance companies, railroads, producing and trading corporations, and public-utility corporations by means of stock holdings, voting trusts, fiscal-agency contracts, or representation upon their boards of directors, or through supplying the money requirements of railway, industrial, and public utilities corporations, and thereby being enabled to participate in the determination of their financial and business policies.

Fifth. Through partnership or joint-account arrangements between a few of the leading banking houses, banks, and trust companies in the purchase of security issues of the great interstate corporations, accompanied by understandings of recent growth—sometimes called "banking ethics"—which have had the effect of effectually destroying competition between such banking houses, banks, and trust companies in the struggle for business or in the purchase and sale of large issues of such securities.

INTERLOCKING DIRECTORATES.

The most interesting part of the testimony on this subject was that relating to interlocking directorates. It was developed that 18 large banks and trust companies, all but 5 of which are located in New York City, had directors in 152 of the largest corporations. These corporations included banks, trust companies, insurance companies, express companies, railroad companies, steamship companies, manufacturing companies, including the International Harvester Co., the United States Rubber Co., the National Biscuit Co., and many others. These 18 financial institutions have 180 firm members and directors. In the aggregate they hold 385 directorships in 41 banks and trust companies, having total resources of \$3,832,000,000 and total deposits of \$2,834,000,000; 50 directorships in 11 insurance companies, having total assets of \$2,646,000,000; 155 directorships in 31 railroad systems, having a total capitalization of \$12,193,000,000 and a total mileage of 163,200 miles; 6 directorships in 2 express companies and 4 directorships in 1 steamship company, with the combined capital of \$245,000,000 and a gross income of \$97,000,000; 98 directorships in 28 producing and trading corporations, having a total capitalization of \$3,583,000,000 and total gross annual earnings in excess of \$1,145,000,000; and 48 directorships in 19 public-utility corporations, having a total capitalization of \$2,826,000,000 and a total gross annual earning in excess of \$428,000,000. In all, 746 directorships in 134 corporations, having total resources of \$25,325,000,000.

It was further shown that J. P. Morgan & Co. have 23 directorships in 13 banks and trust companies, having total resources of \$1,406,000,000 and deposits to the amount of \$989,000,000; 4 directorships in 4 insurance companies and a controlling stock in another, having total assets of \$1,249,000,000; 20 directorships in 12 transportation systems, having total capitalization of \$4,379,000,000; 12 directorships in 7 producing and trading corporations, having a total capitalization of \$1,939,000,000 and gross annual earnings in excess of \$899,000,000; and 4 directorships in 3 public-utility corporations, having a total capitalization of \$1,013,000,000. In all, 63 directorships in 39 corporations, having total resources of capitalization of \$10,036,000,000.

Without going into such detail as to the other 17 banking institutions it will be sufficient to give a concise statement as to the aggregate number of directors and the assets of the corporations in which some of them are interested. The First

National Bank of New York has 89 directors in 49 corporations, having total assets of \$11,393,000,000. The Guaranty Trust Co. of New York has 160 directors in 76 corporations, having total assets of \$17,342,000,000. The Bankers' Trust Co. has 113 directors in 55 corporations, having assets of \$11,184,000,000. The National City Bank, of New York, has 86 directors in 47 corporations, having assets of \$13,205,000,000. The National Bank of Commerce has 149 directors in 82 corporations, with assets of \$18,165,000,000. The Chase National Bank has 67 directors in 48 corporations, with assets of \$11,527,000,000. The Astor Trust Co. has 144 directors in 63 corporations, with assets of \$14,416,000,000. The New York Trust Co. has 74 directors in 47 corporations, with assets of \$12,408,000,000. The members of this group do not have such extensive affiliations, though some of them are quite large.

In addition to these directorships many of these institutions have directors who are also voting trustees in some of the largest manufacturing and public-service corporations, to wit, in the International Harvester Co., International Agricultural Co., Intercontinental Rubber Co., Westinghouse Electric & Manufacturing Co., and many railroad companies. By means of the system of voting trusts the right to elect the directors and thereby dictate the policy of the company is placed in the hands of these men.

Because of the power given by voting trusts and interlocking directorates there is hardly a railway corporation or large manufacturing establishment that is not dominated and controlled by this small group of financiers. While their holdings in many of these corporations is often small, yet they control them, because the corporations must look to the bankers for their capital. The bankers absolutely dictate to them as to the issuance of their securities. These securities can only be handled by large banking houses, and there is a rule among them that one bank shall not interfere with another in the handling of the securities of a customer; therefore competition is shut off. This means a higher charge for money to use in business; consequently it means a higher price for commodities or service which is paid for by the public.

These financiers exercise their power to shut off competition. They control "big business." No large corporation can be organized without their consent. No issuance of corporate securities of any volume has been made in years that was not handled by this crowd, and Mr. Morgan stated that no railroad had been built during the past 10 years that would compete for business with an existing line. They believe in cooperation; they oppose competition. Cooperation for the general good is one thing, cooperation for selfish ends is another. With them it is the same old story of the trusts and combines; the purpose is to rob and oppress the public.

The most striking instance of the immense profits of these great banks is that the First National Bank of New York. On January 1, 1901, it had a capital stock of \$500,000. The net profits of the bank for the succeeding 12 years amounted to \$61,000,000. In 39 years its dividends aggregated 18,500 per cent. It is rather a significant fact that in 1908, the year following the panic, its net profits were more than \$10,000,000, which is more than twice as much as the net profits during any year since 1901.

It is not surprising that, having such control, these men use it for selfish purposes; nor is it strange that there should be so much poverty in the land. Statistics show that there are about 19,000,000 families in the United States. About 200,000 are rich, 2,000,000 are well to do, 7,200,000 are poor, and 9,600,000 are very poor. More than one-half of these have an annual income of \$600, while more than 4,000,000 families have an annual income of less than \$400; yet J. P. Morgan, when asked how much stock he owned in one financial institution, said that it was only a small amount, about \$1,000,000.

Mr. Chairman, I have no war to wage against a man simply because he is wealthy. But no man ought to be allowed to accumulate riches by robbing and oppressing another. One of the great social dangers of the times consists in the disparity of condition of our citizenship. There is, as just suggested, a wide chasm between the extreme wealth of the few and the extreme poverty of the many.

Mr. Chairman, hours could be spent in reviewing the work of the committee, but I shall only refer to the admission of certain interested parties to the effect that conditions are such as to be a menace to the general public. Mr. George M. Reynolds, a Chicago banker, testified that—

I am inclined to think that, the concentration having gone to the extent it has, does constitute a menace.

Mr. Jacob H. Schiff, one of the largest bankers in New York, testified along the same line:

Q. Have you been an interested observer of the concentration and control of money and credit in New York in the last few years?—A. I have.

Q. You have seen it grow very rapidly, have you not?—A. Yes.
Q. And you have seen it drift into fewer and fewer hands, have you not?—A. It has drifted into fewer and fewer corporations.

The testimony of Mr. George F. Baker, who is president of one of the largest banks in New York, was also heard on this subject:

Q. I suppose you would see no harm, would you, in having the control of credit as represented by the control of banks and trust companies still further concentrated? Do you think that would be dangerous?—A. I think it has gone about far enough.

Q. If it got into bad hands it would wreck the country?—A. Yes; but I do not believe it could get into bad hands.

Q. So that the safety, if you think there is safety in the situation, really lies in the personnel of the men?—A. Very much.

Q. Do you think that is a comfortable situation for a great country to be in?—A. Not entirely.

The recommendations of the committee on the question of the concentration of control of money and credit, so far as it related to banking, included the subjects of consolidation of banks, interlocking directorates, interlocking stockholdings amongst banks, voting trusts in banks, cumulative voting in election of directors, security holding companies as adjuncts to banks, fiscal-agency agreements, underwriting of securities, investments in bonds, the conduct of officers and directors of banks, and publicity of assets and stockholders.

It was shown by the testimony that each one of these matters is an element in the system that has developed and makes possible the Money Trust. Legislation along the lines suggested in the report of the Pujo committee will break the power of this Money Trust. I have introduced a bill on this subject, following the recommendations of the committee, and I trust that it will have consideration at the regular session.

THE CURRENCY BILL.

Mr. Chairman, I shall discuss for a short while the currency bill. It does not meet my ideas on the subject in many particulars; but as it will, in my judgment, relieve the situation somewhat I shall support it. My study of the subject has led me to the conclusion that the great need of the country is "banking" reform rather than "currency" reform. Some of the provisions of the bill touch upon the former question.

FEDERAL RESERVE BANKS.

The bill provides that the continental United States shall be divided into not less than 12 districts. There will be a Federal reserve bank in each district. The stock of this bank will be held by the member banks in the district, as none but banks are allowed to subscribe for or hold this stock.

There will be a compulsory association of all national banks—that is, every national bank must subscribe for stock in the reserve bank within one year or surrender its charter as such—and a permissible association of State banks, savings banks, and trust companies, provided they comply with the provisions of this act.

No Federal reserve bank can be organized with a paid-up and unimpaired capital of less than \$5,000,000. Each member bank must subscribe to the capital stock of the Federal reserve bank a sum equal to 20 per cent of the capital stock of the subscribing bank.

Each Federal reserve bank shall have nine directors, and they are divided into three classes—A, B, and C.

Class A shall consist of three members, who shall be chosen by and be representative of the stockholding banks.

Class B shall consist of three members, who shall be representative of the general public interests of the reserve district.

Class C shall consist of three members, who shall be designated by the Federal reserve board.

Directors of class A will be chosen in the following manner: The chairman of the board of directors of the Federal reserve banks will classify the member banks of the district into three groups. Each group will contain one-third of the banks of the district. The bill provides that each bank of the Federal reserve district shall call a meeting of its board of directors and shall elect one of its own members as a district reserve elector. The name of the elector shall be certified to the chairman of the board of directors of the Federal reserve bank. The chairman prepares lists of all the electors thus named by the banks in each of the three groups and transmits one list to each elector, who is entitled to select from among the names on the list one name, not his own, as representing his choice for Federal reserve director in class A.

Directors of class B are chosen by the same electors, except that they must be selected from a list of names furnished one by each member bank. It is provided that they shall be fairly representative of the commercial, agricultural, or industrial interests of their respective districts.

FEDERAL RESERVE BOARD.

The general supervision of all the Federal reserve banks is given the Federal reserve board. This board will consist of

seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President, by and with the advice and consent of the Senate. It is provided that of the four appointive members not more than one shall be selected from any one Federal reserve district, and that the President shall have regard to a fair representation of different geographical divisions of the country. The powers of this board are very comprehensive. They will have the right to examine into the accounts and books of affairs of all the Federal reserve banks, to require reports from them showing assets and liabilities, amount of reserve and the nature and maturities of paper, to require one reserve bank to discount for another, to suspend reserve requirements, to supervise and regulate the issue and retirement of reserve notes, to suspend officials of reserve banks, to appoint receivers for such banks, and to perform all duties specified or implied in this act.

The prime purpose of the bill is to furnish an elastic currency. President Wilson, in his message to Congress recently, said:

We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of everyday transactions, the normal ebb and flow of personal and corporate dealings.

There has been much written and spoken on the subject of elastic currency. It seems to be pretty generally agreed among financiers and students of the money question that under the present system our currency lacks elasticity. It is said that there are tides in the course of trade like there are in the sea; and that our currency does not expand and contract in response to the trade tides.

What is needed is to put our currency system on a stable, businesslike, and permanent basis, giving it elasticity, yet so safeguard it as to prevent inflation of credits.

The principal defect of our national-bank system is the rigidity of its note circulation. In a broad sense the volume of notes is regulated not by the wants of trade, not by the amount or kind of commercial paper offered for discount, but by market price of United States bonds.

Even if the bonds were sufficient in amount and satisfactory in price the note circulation would still be lacking in the elasticity which should characterize a good system.

By elasticity is meant the capacity to increase or diminish in volume in accordance with the needs of the community and simultaneously therewith.

Where there is the power of elasticity, the amount of notes outstanding at any time will depend not upon the volition of either the banker or the depositor but upon the public demand. And there is no criterion of these demands so correct as the quantity of business that is done.

There are some seasons of the year when a greater quantity of currency is needed than at other times in order to take care of business, and these ebbs and flows vary in different localities and in different trades.

The demand is for a currency that will be at all times responsive to those immediate needs and that will keep pace with the business and growth of population of the country, meet every crisis, and when the crisis is safely passed go back for cancellation, so that there will be no inflation.

Our national-bank currency does not possess the property of elasticity. It remains for long periods nearly uniform in amount. In many of the great countries of the world these seasonal demands for currency are recognized, and there is an outflow and inflow of notes corresponding to the need for them.

This rigidity of our banking system produces alternations of speculation and of stringency and extreme fluctuations in the rate of interest. The losses to the country because of these things can not well be calculated.

PROVISIONS FOR ELASTICITY.

The issue of notes must be made primarily through the Federal reserve board, and it is provided that said "notes shall be obligations of the United States and shall be receivable for all taxes, customs, and other public dues."

Any Federal reserve bank may, upon vote of its directors, make application to the local Federal reserve agent for these notes and must accompany the application with a tender of prescribed security.

This collateral security consists of notes and bills of exchange arising out of commercial transactions. Such notes and bills of exchange are confined to those "issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been or may be used for such purposes."

The Federal reserve board is given the right to define the character of this paper within the meaning of the act. However, it is specifically provided that "such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities,

nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products or other goods, wares, or merchandise, from being eligible for discount."

The element of elasticity is given by these provisions. The only criticism that I have to make of this part of the bill is that I do not think that the time of the maturity of the paper secured by agricultural products is quite long enough. However, as the borrower must deal directly with the local banker, who knows him personally and who will likely be ready to extend any reasonable accommodations, he will, under ordinary conditions, be able to get an extension or renewal of his paper.

This will enable the producer to borrow money from the local bank on his agricultural products and thereby enable him to hold them for higher prices. The bank of his community will be anxious to extend these accommodations, because the note will be readily rediscounted at the reserve bank, and because it will share in part in the prosperity of the individual producers that comes from his security the highest market price for his product.

PANICS.

The proponents of this bill claim for it that it will materially lessen the chances of financial panics, if it does not entirely prevent them.

No stronger argument could be made in its favor; and if the argument be true, there is nothing that could be said for it that so popularizes it with the people.

The primary cause of a panic is the fear of the people that they can not get cash for their bank deposits. Just as soon as they realize that the bank will pay on demand their fears are allayed and the panic is over. By having the reserve bank to rediscount their paper the local bank can readily meet the requirements of their depositors, which will do much to allay any fear that may arise because of the probability of the bank being unable to meet the demands upon it.

History shows that we have never had a panic that did not originate in New York.

In the panic of 1907 we saw the entire industrial system of our country shaken and disturbed by the storm and stress of a great financial panic; values were unsettled; business was paralyzed; confidence was destroyed; industry was dormant; thousands of honest toilers were out of work and their families were suffering for the very necessities of life.

What caused it? We were in the midst of prosperity. Everything was in abundance; the fields were yielding great crops; the mines were yielding immense wealth; the factories were running to their full capacity.

The essential factor and prime cause of a commercial crisis is speculation, leading to inflated prices and the piling up of debts based upon such inflation which the debtors can not pay. Speculation thrives in New York more than anywhere else. The great reason for this is due to our system of reserves.

Under the present law the country banks are required to keep a reserve of 15 per cent, only 6 per cent of which is required to be kept in their own vaults. The remaining 9 per cent drifts very largely to Wall Street banks, where it is loaned in large sums to the speculators.

The piling up of these deposits or reserves in the New York banks lowers the rate of interest and incites speculation.

Speculators may bid up the price of stocks and the rate of interest at the same time, until a climax is reached. Then a reaction will come, stocks will fall, margins will be exhausted, traders will be sold out, banks begin to fail, and the panic is on at full blast.

Under the present law 15 per cent of the deposits of a country bank are required to be held for the protection of its depositors. However, three-fifths of the reserves may be deposited in banks in reserve or central reserve cities.

As there are only three central reserve cities, New York being one, these surplus reserves naturally concentrate there, because the banks can draw interest on them, while if kept at home they lie idle in the vaults and produce nothing.

We will understand the great opportunities afforded the speculator for obtaining funds if we consider the way the system has been worked to gather the money of the country and store it in the Wall Street banks.

One great bank is the approved agent to receive deposits of the lawful money reserves of 1,071 national banks. Another great bank receives deposits from 1,802 country banks, another from 3,108, another from 478, another from 919, another from 615, and still another from 1,233.

Thus it will be seen that the reserves of nearly all the national banks are deposited in New York.

On the face of the law on the subject of reserves, it appears that a reserve is required to be kept for the protection of the

depositors, but in reality, as I believe, the law was enacted for the benefit of the great banks of Wall Street.

Whether this be true or not, it is certainly true that the system has been used to gather in constantly increasing millions into those banks.

The ability of these great banks in New York, through their connected interests, to engage in underwriting, to finance promotion schemes, where the profits resulting from overcapitalization represent hundreds of millions of dollars, places them beyond let or hindrance from competitors elsewhere in the country.

Floating the stocks and bonds in overcapitalized transportation, traction, mining, and industrial corporations does not create wealth, but it does absorb capital. Through the agency of the great banks many millions of money belonging to the country banks have been tied up. When it has been needed and called for by the country banks it has been impossible to get it.

The reason for this is that so much money is tied up in stock gamblers' debts, and it is unavailable because the gambler can not convert his stock into cash upon the call of the bank.

On August 22, 1907, the last call before the panic, the New York banks owed the other banks of the country a net balance of \$410,000,000. The report for December 3 shows a reduction to about \$388,000,000. With all the pressure brought to bear on the national banks of New York, the other banks of the country were able to draw of their own money only a little more than \$20,000,000—only about 5 per cent of what belonged to them. They would not have been able to get this much but for the fact that the Government deposited about \$47,000,000 with the national banks of New York.

This bill provides for the deposit of reserve funds in the regional banks. This will prevent the concentration of reserves in New York. This is one of the best provisions of the bill, as it will lessen the amounts of funds to be used by the gamblers of Wall Street, which will have the effect of decreasing speculation, and thereby diminishing the probabilities of financial stringency and possible panic.

There was no serious impairment of bank resources during the panic of 1907; but there was a serious impairment of the confidence of the people in banks, because of their inability to meet the demands upon them, which was due, as I have suggested, to conditions on Wall Street.

RESERVES.

I am opposed to an arbitrary fixed reserve. Ours is the only great country that requires it. One of the evils of a fixed reserve is that it requires that the bank must hold a reserve of 15 per cent, which must either lie idle in the vaults of the bank or be sent to a bank in another section of the country. In either case the community that produced the money is deprived of the use of it.

The resources of a bank should be readily available and should be devoted to supplying the needs of the commercial community. Money was once defined as "a medium of exchange," but is now used almost altogether for reserve purposes upon which to build a system of credits.

The reserve lies idle. It can not serve the purposes of trade and commerce. It is a violation of law to use it. In times of panic there is a great scramble among the banks to build up reserve, which only tends to increase the intensity of the panic. By reducing the amount of reserve required and by keeping the reserves from concentrating in a few New York banks a decided improvement is made over the present system.

One inherent weakness of this measure is that the Government does not possess the power to put it into effect. It is altogether optional with the banks as to whether or not it shall become effective. If its provisions do not suit them, then the law is a dead letter. We may rest assured that unless the great money power believes that it is to its interest to enter the system that this law will not be put into operation. It seems to me that we might devise some laws that would do justice to the money power and at the same time see to it that the interests of the people are amply protected.

The powers of the Federal reserve board are very far reaching. No other board, official, or ruler ever was clothed with such authority. It has absolute control over the issuance of bank notes. Four of the seven members can say to whom these notes shall be issued. It is left to their discretion, and there is no power of review or court of appeal. It is with them to determine the welfare, happiness, and prosperity of every citizen of the United States. Discriminations can be made in favor of one bank against another or one section or community against another. I would prefer to have a law passed that does not give such large discretion to a few men. We must risk the honesty and good judgment of these men. If they prove unselfish, honest, and of good business judgment, it will be well; if not, we will suffer.

The world's history is full of instances of misplaced confidence, of ill-used power, of the betrayals of trust. In his message vetoing the bill to recharter the United States Bank he gave solemn warning against its powers in the hands of private persons and against placing any such powers in the hands of the President. He said:

In ridding the country of an irresponsible power which has attempted to control the Government, care must be taken not to unite this same power with the executive branch. To give a President the control over the currency and the power over individuals now possessed by the Bank of the United States, even with the material difference that he is responsible to the people, would be as objectionable and as dangerous as to leave it as it is.

This bill, however, is much better than the Aldrich bill, because it provides that the issuance of notes under Government regulation rather than by private or banking interests. While subject to the criticism just made of the possibilities of the abuse of power, yet it is less likely to come from governmental officials.

There ought to be some provision for elasticity of currency, and it could be made without the organization of reserve banks that require such a large capitalization. Under this bill every bank must subscribe an amount equal to its capital stock, one-half to be paid and the remainder subject to call by the reserve bank. This will take from each community a large per cent of its money, which can only be replaced by the number borrowing from the reserve bank. I would prefer to have money retained in the community where it belongs in order to serve the wants and needs of that community. In many sections of the country there is now a scarcity of money, and this subscription to stock the reserve bank will take away capital that is needed to develop the resources of those sections.

REFUNDING 2 PER CENT BONDS.

There are now outstanding about \$750,000,000 2 per cent Government bonds. It is proposed to refund these bonds, or at least those deposited by national banks with the Treasurer of the United States as security for circulating notes, into bonds bearing 3 per cent interest, payable 20 years after issue and exempt from all taxation. Some of these bonds are held by individuals. They are not given the privilege of refunding their bonds; it is only the banks that have the privilege. This is an unfair discrimination. It imposes an unjust burden on the taxpayers, as it will mean that it will cost the Government in interest on these bonds about \$125,000,000 more than it would have to pay on the 2 per cent bonds. It is simply a gratuity to the banks. I can not consent to any such proposition, and am opposed to this provision of the bill.

EXEMPTION FROM TAXATION.

The capital stock of the reserve banks is exempted from taxation, Federal, State, county, and municipal, except in respect to taxes upon real estate. I am opposed to this feature of the bill. The bank is organized and operated for profit, and no good reason can be assigned to show that the banks should not bear their share of the burdens of the Government, just as individuals do. The stock should not be taxed by the authorities where the regional bank is located, because its capital will be drawn, in some instances, from several States; but each member bank should pay taxes on the stock held by it.

EXCHANGE CHARGES.

The banks have raised serious objection to that provision of the bill pertaining to charges for exchange and collection of checks and drafts. There is good reason for this objection. This is a legitimate charge for service rendered. The Government requires the payment of a fee for its money orders, as do the express companies. If it is proper and legitimate on the part of the Government, it is equally so on the part of the banks. To refuse to allow such charges for the service is unjust to the smaller banks and will materially affect their profits.

INTERLOCKING DIRECTORATES.

Mr. Chairman, I have already called attention to the community of interests of a few great banking houses caused by interlocking directorates. I voted in the caucus to amend the bill so as to prohibit interlocking directorates. A resolution was passed deferring the matter at this time and instructing the Committee on the Judiciary to bring in a bill on the subject at the next session. Under the rules of the caucus I gave notice that I would vote in the House to amend the bill so as to prohibit such interlocking of directorates.

My connection with the Money Trust inquiry had convinced me that the system of interlocking directorates constitutes one of the strongest elements in the formation of the Money Trust. By such interlocking, a few men have been able to exert great influence in almost every line of industrial activity. It gives not only community of interest, but actual power of control of vast sums of money. They are able to dic-

tate to some of the largest moneyed corporations where their deposits shall be kept and with whom they shall do business. Having such control they have the power to keep down competition by refusing credit. Indeed, it virtually makes one great partnership, whose interest is to keep down competition and to kill off competition. There are many such instances.

The whole object of the system is to form combinations for the purpose of controlling big business, to utilize the money of the public, bank deposits, against the interest of the public, to engage in the business of creating pools, manipulating prices, and in many ways placing unjust burdens upon the people. I see no reason for delaying action against such a system.

Another reason why I favor action at the present time is that unless there is such a prohibition the Federal reserve banks will be organized with the system in full force. To permit this will simply mean that the Money Trust will organize some of the reserve banks and exert a very potent influence in the organization of others, and I fear that some of the good effects of the bill will be lost.

LOANS ON FARM LANDS.

Under the present law a national bank is not allowed to loan money upon real estate. This measure provides any bank, except those in reserve or control reserve cities, may loan on improved and unencumbered farm lands, but not more than 25 per cent of its capital and surplus. This provision is not of very much value, as at present there are about 25,000 banks, and over 17,000 of the State banks can loan whatever amount they choose on land, while only the national banks are prohibited from doing so. If all the State banks come into the system it will necessarily decrease the amount that can be loaned on farm lands.

AGRICULTURAL CREDIT SYSTEM.

The farmer receives less returns on his investment than any one else. In 1909 statistics show that the manufacturers had invested the sum of \$18,428,000,000. They employed 6,615,000 persons and produced \$20,627,000,000. The farmer had \$40,000,000,000 invested, while there were 12,500,000 persons employed in this work. In 1911 they produced only \$9,000,000,000.

The number of mortgages upon farm lands is increasing. In 1910 there was a mortgage indebtedness of \$3,460,000,000. Something must be done to alleviate this condition. In many of the foreign countries cooperative credit systems and rural banking systems have been inaugurated, which have proven beneficial to farmers. These systems provide for long-time loans at a low rate of interest.

The matter of interest is a question of great moment to the producing class, whose returns are both slow and small. Something ought to be done that will give them a lower interest rate. It is almost a tragedy that the speculator can get money at about one-half what it costs the merchant, the manufacturer, and the farmer. It is gratifying to know that an active interest is being taken in this subject and that the rural-credit systems of other countries are being investigated.

The toiler, the producing class, is the mainstay of any country. He is entitled to a just distribution of opportunity; and I know nothing better to be done for him than to lift from his back the unjust burdens that have been placed upon it by the selfishness and unscrupulousness of designing men, and to enable him to have a just action for his labor. Inaugurate some system that will permit him to obtain money at a lower rate of interest and the cry of "Back to the farm" will be answered, because he can pay his debts, improve the farm and thereby make life more interesting and attractive.

Mr. Chairman, if this bill does what its proponents claim, it will bring a large measure of relief. It will improve financial conditions very much. However, its effects will be alleviative rather than preventive. There is a cancerous growth upon the body politic and currency reform will not eradicate the evil. This is not said by way of criticism of the bill; but simply to say that it is only one of the remedies to be applied. War must be waged upon the trusts and combines, speculators must be prohibited from gambling in commodities, by which incalculable harm is done to the producer, the power of the Money Trust must be broken so that we may be both politically and economically free. If such warfare is successfully waged, this Government, which is the best "that ever rose to animate the hopes or bless the sacrifices of mankind," will be filled with a happy, contented, and prosperous people.

Mr. HAYES. Mr. Chairman, I yield 10 minutes to the gentleman from Oregon [Mr. LAFFERTY].

The CHAIRMAN (Mr. BRUMBAUGH). The gentleman from Oregon [Mr. LAFFERTY] is recognized for 10 minutes.

Mr. LAFFERTY. Mr. Chairman, the section of the pending measure which appeals most strongly to me is the last one,

which provides that "the right to amend, alter, or repeal this act is hereby expressly reserved."

By this bill the bankers of the country will be able to inflict upon us the present system of highway robbery a little bit more humanely than they are doing it at the present time.

The gentleman from Kansas [Mr. MURDOCK], in one of the ablest speeches ever delivered upon this floor, expressed my views exactly upon this and the other questions upon which he touched. The bill is a palliative and is not a remedy. It is but the shortest kind of a step in the right direction. I shall vote for it for that reason and not because it gives the American people anything like the full measure of relief to which they are entitled.

Is it not astonishing that nearly every Member who has talked on this measure has apologized to the House because he did not know anything about it? The secret of this wholesale confession of ignorance lies in the fact that our monetary system is being conducted in a strange and unnatural manner and not because the subject would be involved or intricate at all if dealt with upon the most elementary principles of honesty and fairness.

Let me give a few figures to show how the public is being literally robbed by the banks. The banks of the United States own all told approximately \$1,500,000,000. They have deposits of the people's money amounting to \$17,000,000,000. Yet the total stock of money in the United States is only \$3,500,000,000. Think of it! The banks have "on deposit" and loaned out at interest, of course, more than five times as much money as there is in the United States and more than ten times as much as the banks themselves own.

You have heard of the man who lived off of the interest of what he owed. The banks are creating swollen fortunes by that very process. They owe the people \$17,000,000,000, and they have this loaned out at 8 per cent.

Talk about doing business on a shoe string! That is exactly what the money power of this country is doing. No wonder it is under a continual strain; no wonder we have money panics.

The process by which panics come about is simple. A national bank opens up for business with \$1,000,000 capital stock. Soon it has deposits of \$10,000,000. The latter it loans out, except the small "reserve" of 15 per cent if a country bank or 25 per cent if a city bank required to be held in its vaults by law. One-third of its depositors conclude they want their money for some reason or other. They can not get it. The bank has not got it. The result is a panic or a bank failure.

What is the remedy proposed by this bill? It is to permit the banks to pledge in the hands of a Federal reserve agent the notes of those to whom it has loaned the people's money, whereupon the Government of the United States will issue to the bank Treasury notes to the full amount of such securities, provided that instead of holding a reserve of only 15 per cent or 25 per cent, as is required to protect private depositors, the Federal reserve banks must maintain a reserve of 33½ per cent to redeem these Treasury notes. This gives to the banks the right to immediately pay out two-thirds of the Treasury notes received from Uncle Sam, which would, of course, enable them to pay off their depositors requiring their money. In this way panics are to be prevented. It will do the work. I concede this bill will prevent money panics. But it permits the money-lending classes to continue to collect unearned millions from the farmers and laborers of America annually, just as they have been doing in the past, through the 8 per cent method, which is usury.

Do you ask me what the real remedy is? I answer it is to provide a real asset currency and not a halfway asset currency, based not upon loans to bankers at one-half of 1 per cent, as this bill provides, but based upon real estate mortgages and Government bonds deposited with the Government as security for the issuance of an asset currency to the farmers and investors of this country at a fair rate of interest, say 3 per cent or 4 per cent, whereby the finances of America would be placed upon the most prosperous and stable basis in its history.

There should be a currency adequate in amount to do the business of the country. The wealth of the United States is \$125,000,000,000. Our total money supply at present is only \$3,500,000,000, which is less than 3 per cent of the Nation's total wealth. That is why, with bountiful crops and factories running at full capacity, it was possible to have a panic in 1907. There is not money enough to do the business of the country. The clearing-house transactions last year were \$168,000,000,000. The transaction of this gigantic volume of business with only \$3,500,000,000 is equaled nowhere, to my knowledge, except on

the occasion when our Savior fed 5,000 men with 5 loaves and 2 little fishes.

How easy it would be for this Congress to provide an adequate currency for the American people and at once bring interest rates down to 3 or 4 per cent if it only wanted to do so.

I will explain how this could be done. Our national debt is approximately \$1,000,000,000. We could provide by law for the refunding of this debt, the paying off of the present bonds, and the issuing of new bonds to the public, with the provision that any person depositing one of the bonds as security should have the right to borrow Treasury notes for the full amount, not at one-half of 1 per cent, but at 3 per cent. We could make these Treasury notes redeemable in gold or its equivalent at the Treasury of the United States. Just as the Treasury notes we are by this bill loaning to the bankers, on security not so good, are to be redeemed. The citizen borrowing the money would put it in circulation, and when he wanted to redeem his bond he could do so with any notes of similar character or other lawful money.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield right there?

Mr. LAFFERTY. Certainly.

Mr. MURDOCK. Is not that proposition just exactly what we do for the banker to-day?

Mr. LAFFERTY. It is exactly the same.

Let it not be forgotten that we now have loaned to the bankers nearly a billion dollars' worth of Treasury notes, secured by the deposit of United States bonds, and the bankers are not paying one cent of interest for this gigantic loan. It may be said that they are paying indirectly 1 per cent interest, because the bonds with the circulation privilege pay only 2 per cent interest, whereas the banks could have bought bonds paying 3 per cent interest had they not desired this circulation or loan privilege. But at most it can only be said that the banks are now paying the Government 1 per cent interest indirectly for a loan of nearly a billion dollars, and all these bonds could be refunded and loans provided for directly to the people at 3 per cent upon their deposit as security.

But this is only one method of supplying asset currency to the public at 3 per cent which would be as good as gold.

The other law that Congress should pass is this: The agricultural lands of the United States, exclusive of houses and improvements, are worth \$30,000,000,000, or nearly one-third of the total wealth of the United States. We should pass a law authorizing the Federal Treasury to loan Treasury notes to the farmers at 3 per cent up to one-half of the value of their farms, thereby making the security the best in the world, and in that way plenty of money would be put into circulation. These Treasury notes should be identical in terms with those we are now loaning to the banks at one-half of 1 per cent, to wit, redeemable by the United States Treasury in gold or its equivalent. That would preserve the gold standard, would prevent any inflation or fiat money, and would take out of the clutches of the money changers nearly 100,000,000 honest, hard-working American people for whom we are supposed to be legislating.

The farmers are now borrowing approximately \$8,000,000,000 from the bankers, and are paying interest annually amounting to \$500,000,000, which is equal to the value of the annual wheat crop. The annual interest paid by the farmer to the banker is more than the cost of the Panama Canal. It amounts to \$5 per capita of the population of the United States. This interest charge does not fall altogether upon the farmer. He adds it to the cost of his products and the consumer in the city indirectly pays it. This accounts for a large part of the high cost of living.

Many other countries, including Australia and New Zealand, are now loaning money to farmers at 4 per cent and 4½ per cent. Prior to the passage of the farm loan law in New Zealand the farmers were paying 8 per cent. Following its passage the rate went down at once to 4 per cent and 4½ per cent. We should not forget that we have much to learn from these new countries. We got the Australian ballot, our best weapon in behalf of pure government, from Australia. And both Australia and New Zealand preceded us in the great reform of equal suffrage.

Suppose the following question was submitted to a referendum vote of the American people:

Shall we loan Treasury notes without limit to the bankers at one-half of 1 per cent on commercial paper of questionable value, or shall we loan these notes to the farmers and investors of this country upon Government bonds and 50 per cent agricultural land mortgages, at 3 per cent?

Does any Member of this House doubt what the answer would be?

This is not socialism. It is what will prevent socialism. But I am for laws for the public, no matter from what party they come.

New Zealand is making a profit of millions by loaning to farmers. America could build all needed rural roads with the 3 per cent interest profits.

Many of the countries of Europe aid the farmers by loans. It is one method of insuring the national food supply. In this country it would mean a back-to-the-farm movement, which is so much to be desired.

I also favor loaning city dwellers United States Treasury notes upon their homes upon the same terms. Real estate in a highly improved country like ours is the best security in the world. [Applause.]

Mr. HAYES. Mr. Chairman, I now yield 15 minutes to the gentleman from Michigan [Mr. J. M. C. SMITH].

The CHAIRMAN (Mr. GARNER). The gentleman from Michigan [Mr. J. M. C. SMITH] is recognized for 15 minutes.

Mr. J. M. C. SMITH. Mr. Chairman, I must not claim to be authority on finance, because I can not present myself as an exponent of great success in that particular adventure. Neither do I claim to excel in banks or banking, but just at this particular time the subject of our banking and currency laws is receiving public attention, and it is soon to be acted upon by this body. This may be my excuse for asking your indulgence for a few minutes to consider some of the features of our financial system. Banking, you know, as carried on in a small town is the science of receiving the money of one man and loaning it to another.

Our banking and currency laws have for a long time engaged the attention of this and other sessions of Congress and been a subject of much consideration by the financial institutions and financiers of our country. Of vital and prime importance to all the people, the producer and consumer, the employer and employee, this question also directly affects the prosperity and welfare of our Government itself. From the formation of the Republic to the present time a correct system of finance, banks, and banking has received marked attention from our ablest statesmen and thinkers. It at first engaged the attention of Hamilton, Albert Gallatin, later of Jackson, Lincoln, Chase, and other men of note and national renown. In an uncertain state it is present with us to-day in a complex form, and we can not and do not underestimate the financial policy of a great Nation. To maintain our standing among the nations of the earth our money and currency must be of standard value the world over—sound as our statutes, stable as the Government, and pure as the flag. It must have the confidence of the people. It must do justice to the capitalist, manufacturer, merchant, farmer, and to the laboring man. It should be well regarded, approved, and recommended by all, with no partiality shown to any class, and at all times and under all conditions flow unhampered and unrestrained through the channels of commerce. It should be such a system as will place our country on the highest pinnacle of sound finance and, like our Constitution, serve as a model for all nations.

Mr. Chairman, it is said that ours is the worst banking system in the world, and while I have not given full credence to that statement, I have long thought it could be improved. Some of the defects are patent and other criticisms eliminate themselves into such deep channels of scientific investigation and research as to border on the mysterious or lose themselves in the imagination. It is a complete science and should contain no uncertain element.

Criticism of our present national banking system is made by some because it was established as a war measure. That it performed a noble mission none will deny.

Many of the older people here to-day know by actual experience the condition of the country's banks and its currency prior to their establishment. All was confusion, all was chaos, and one taking a wildcat bank bill needed to be ready to start to get it cashed before the bank went out of existence. This was all changed by the creation of the national banks, and while a few have failed, it can well be said that for the volume of business transacted and capital employed the losses sustained through them are but a fraction of 1 per cent. Can any other kind of business make this good showing? Safe and sound is the rule; kind and courteous is the treatment. Millions upon millions are paid into the banks to be called for and paid when wanted, the bank doing its full share in establishing confidence between man and man. All this business is transacted with the regularity of a clock and upon a margin so small that it would be hardly noticeable in the management of many other kinds of

business, and, generally speaking, the same is true of all our State banks, savings and trust companies. Their affairs are given the fullest publicity, and I think the time will come when publicity will have its application to many of the quasi-public organizations of our Government, and if by that means watered stock and fictitious values be eliminated better results will follow.

"I am in favor of a United States bank," said Lincoln. The national bank came into existence at the time of the Rebellion, gave him great aid in his mission, and since, dotted thickly among all the people like good neighbors, have fulfilled a useful mission. Banking is not making money; it is safeguarding money; and when banks were first established they charged a fee for keeping it.

The national banks of our country do not by any means have a monopoly of the banking business, and I insert a table of the Treasury Department showing that on June 14, 1912, of the financial institutions doing a banking business 17,823 were State banks, stock saving banks, loan and trust companies, mutual savings banks, and private banks, while there are only 7,372 national banks, and that of the total deposits the national banks had only \$5,825,400,000, while there were deposited in the other banks and trust companies the sum of \$11,198,603,800. The table shows that the reserve of the national banks was 17 per cent and the combined reserve of the others was 5.1 per cent.

Statement relating to the number, capital, individual deposits, and reserve (cash on hand) of national and other banks on June 14, 1912.

Class.	Number.	Capital.	Individual deposits.	Reserve.
National banks.....	7,372	\$1,033,570,600	\$5,825,400,000	\$996,142,800
State banks.....	13,381	459,067,000	2,219,977,000	241,756,000
Stock savings banks.....	1,292	76,871,000	842,897,800	29,266,000
Loan and trust companies.....	1,410	418,985,000	2,674,578,000	182,151,000
Mutual savings banks.....	630	3,608,657,000	16,186,000
Private banks.....	1,110	22,348,000	152,494,000	7,450,000
Total.....	25,195	2,010,841,600	17,024,003,800	1,572,951,800

In adopting our financial laws or a financial policy we should avoid all chance or even experiments that are of an uncertain nature, hold fast to those principles that have been found to be wholesome and sound, and upon their basis rear a structure that will last with time, permanent in its character, and accomplish the purposes intended. To accomplish this we should first determine without question the defects of our present system and what constitutes safe banking and sound currency. Very little complaint is made about our standard of currency. Our credit, which often takes the place of money, is high and is firmly established in the public confidence and integrity. It was by credit that we established our independence, for we had little or no money at the time of the Revolutionary War. Credit was used freely and played a prominent part in carrying on the War of the Rebellion. And now nothing should be permitted that will cause or tend to cause our commercial credit at home or abroad to be tarnished. To impair our public faith is to invite public disaster. Embarrassed commercial integrity weakened the federation of the Colonies, but was fully restored by the confederation of States. One of the reasons that our Republic holds an exalted position among all the nations of the earth is that it has always kept its faith, its promises, and its credit, not only to the letter but to the intent and purpose as well. And I say without hesitation and fully realizing that this statement is counter to high authority that the best standard of money is gold, not because gold has an intrinsic value, not because gold of itself is the best money, but gold is used as money by the nations of the globe. Money is the representative of value and the medium of exchange, barter, and trade. Its value depends largely upon public confidence, the ability of the Government to make it good, and the willingness of the people to receive it and exchange their commodities for it. Our money to-day is good the world over, and no thought of impairing its value is exhibited in the bill.

Government, State, and county bonds are good upon which to base a currency as long as the credit of the Government, State, and municipality is sound and solvent, but who would want his fortune or the money received for his products or toil based upon the bonds of a nation when that nation is threatened or devastated by war? And in very recent years some of the great nations of the earth have had their very existence so threatened by war and invasion that their bonds would be poor security for sound currency or anything else. A staple currency good to-day and to-morrow, good in all kinds of peril, good at home and abroad, must have its feet resting on a safe and sufficient staple standard reserve, and in the present bill

I take it that the board of control will see to it that at all times all currency issued will be upon a safe reserve.

The general stock of money in circulation on August 1, 1913, in the United States, according to the statement of the Treasury Department issued on that day, was:

Gold coin (including bullion in Treasury)	\$606,015,613
Gold certificates	1,000,560,414
Standard silver dollars	72,173,431
Silver certificates	470,578,117
Subsidiary silver	155,408,145
Treasury notes of 1890	2,640,639
United States notes	338,623,763
National bank notes	710,891,001
Total	3,356,891,123

On August 1, 1913, there were outstanding \$750,393,191 of national bank notes, of which amount \$47,402,190 were in the Treasury for redemption purposes, leaving \$710,891,001 in circulation. There were held in the United States Treasury in trust for the security and redemption of the national bank notes August 28, 1913, \$742,101,800. In bonds, as follows:

Loan of 1925, 4 per cent	\$33,921,700
Loan of 1908-1918, 3 per cent	22,246,200
Consols of 1930, 2 per cent	604,073,900
Panama, of 1936, 2 per cent	52,962,860
Panama of 1938, 2 per cent	28,897,140
Total	742,101,800

How to retire and cancel this vast sum of \$750,393,191 of national bank notes is one of the many large and difficult problems contained in this bill. The scheme presented in the report of the committee is to retire the bonds against which these were issued and give 3 per cent bonds to the bank in the place of the bonds deposited by the bank with the Treasury to obtain and secure national bank notes for circulation. The national banks paid gold or money interchangeable for gold, as good as gold, for these United States bonds with the currency and circulation privilege. They paid not only par, but more than par for them, because of the currency privilege. The committee in its majority report say that without the currency privilege these bonds would be worth only 80 cents on the dollar in open market. The report says:

The ownership of bonds has thus inflicted a severe loss upon holders already, and something like \$30,000,000 has, according to the Comptroller of the Currency, been "written off" by the banks and must be regarded as one of the costs of carrying the note system at present in use. There is general agreement that if the circulation privilege were to be taken from the 2 per cent bonds—or, what is the same thing, if a new system of note issue were to be established which would practically displace the present system—the twos would deteriorate to a price not higher than 80.

But this is not the sole effect of changing our system of issuing bank notes or currency. The cancellation of \$750,000,000 and upward of the money of the country is so marked and would be so violent if done at once that of itself it would invite disaster. So the committee has provided that only one-fifth of the bonds held for circulation can be refunded in any one year, thereby cutting the dog's tail off a little at a time so it will not hurt so much. Instead of creating more money or a greater volume of money the act provides for eliminating so much of the money we already have in the country and substituting only a privilege in its place. To retire this vast amount of notes in this manner by law smacks of confiscation. The Government has the gold that the banks paid for these bonds. It is now proposed to refund the bonds. Then why not pay back to the banks either the gold paid for the bonds and redeem them or currency based upon that gold? This would look equitable, or leave it to the owners of the bonds to take pay in 3 per cent bonds. Since this bill was first filed the 2 per cent bonds shrunk in value for the first time in the history of our country to below par, and entailed a loss upon the holders of \$30,000,000. But, Mr. Chairman, let us take another feature of the bill; and that is, what reform does it seek to bring about and enact? If you are sick, you call a physician; he diagnoses your case and finds out what is the matter with you before administering any medicine or giving you treatment. So, before undertaking to legislate upon the important subject of banking and currency and enacting it into law, we should be certain of the need of such legislation and the effect it will have upon the country, the currency, and the banks. It is urged as a necessity for banking and currency legislation that our currency is too rigid, that it should be more elastic and respond more readily to the need and requirements of trade, and automatically appear and retire when needed and not needed. The committee report:

The bankers who urged the creation of an asset currency and the public men who recommended the issuance of additional United States notes or Treasury notes, whether protected or unprotected, were fundamentally alike in their belief that the whole trouble with existing banking lay in a difficulty in securing proper supplies of currency when needed and of withdrawing them when not needed.

And as an example the whole argument is based upon the great need of money during the period for moving the crops. Upon the face it does not seem needful to change over our whole present banking system and create more banks and turn over the control of the banking system of the United States to a control board to make our currency more elastic or to move the crops. Recently we have been shown an example of elastic currency and the use of it for crop moving, and if anyone knows of any crops to move and will report the same to Mr. McAdoo, Secretary of the United States Treasury, I am sure he will find plenty of funds available for moving the crops. Recently this official placed in the banks of the city of Washington, D. C., \$600,000 to move crops, and double this amount in the city of Baltimore, while large amounts have been distributed throughout the United States, if we can rely upon reports; and when depression threatened and money on call in New York City commenced to climb upward, then it was that the Secretary of the United States Treasury made the announcement that there were in the Treasury printed and ready for use \$500,000,000 of emergency and elastic currency, and that he would deposit it in the banks to prevent a crisis if need be, and the rates went down and the threatened financial depression subsided. Here we have emergency and elastic currency and the machinery at hand to use it when need be. This shows that emergency currency can now be issued under the Vreeland Act, and in that respect the present act seems to bear a close resemblance to the provisions of the Vreeland Act.

Suppose, for some reason or another now unknown or unseen, the Government should withdraw its deposit, just as Jackson did in 1833? What then? Or the scheme does not work out well and an election should be held upon the issues of repealing this act, and a majority is elected favorable to that issue. What then? To me it would have been better to amend our present banking laws by giving vitality to elastic currency as the first step. This can be done by allowing the Secretary of the Treasury to accept Government and other State, county, and municipal bonds for currency, the same as he does now for Government deposits and deposits of postal savings banks for currency, and in times of crisis or panic accept bills of exchange and standard commercial paper for currency. The bill should contain, in addition to the provisions for loaning on farm mortgages and the establishment of a savings department, the further right to form associations for a system of farm credits.

This can be done without creating a great central bank, which President Jackson knocked into a proverbial "cocked hat" because of the great power it would place in the hands of a few men. Here it is proposed to place the power of controlling the banks and the money of our great Republic in the hands of seven persons acting as a control board. If any provision of the Aldrich Monetary Commission Act was criticized, it was the one creating and intrusting the management of our national finances to a board of control. By the terms of this act the board is to consist of the Secretary of the United States Treasury, the Comptroller of the Currency, and the Secretary of Agriculture, ex officio, with four other members appointed by the President and confirmed by the Senate. The Aldrich Act provided that the board of control should consist of a governor, two deputy governors, the Secretary of the Treasury, the Comptroller of the Currency, the Secretary of Agriculture, the Secretary of Commerce and Labor, and 15 members to be elected by the branch banks, who shall represent the agricultural, commercial industries, and other interests. In the creation of this board there is no improvement over the Aldrich system.

Mr. Chairman, the bill contains the provisions of law for a system of banking and currency. New banking and currency laws have been wanted and needed for nearly a generation. The people expect currency and banking legislation, but that this bill if enacted into law will meet with great favor is very problematic. As for me I would prefer to amend our present law by extending and enacting into law the provisions of the Vreeland Act or similar provisions for issuing currency upon safe governmental, State, county, municipal securities and bank assets if panic threatened or in times of crisis. Why not? The Government now takes State, county, and municipal bonds as security for United States deposits and deposits of postal savings banks. It is the inherent sovereign right of the Government to coin and issue money. Why turn this right over to the dictates of a board of seven members? Again the change involves the deposit of the Government money not in the United States Treasury, but in the banks without security. Now no Government money is deposited in any bank without security. The transfer of \$220,000,000, or a considerable part of this amount, from the Treasury of the United States into any bank is something of an adventure. But the bill permits national

banks to have a savings department and to loan money on real estate, and when it is finally enacted into law it is hoped it will meet with and receive the approval of the people. The name is immaterial. It makes no difference by what name it is called. If such a system is to be adopted, let it be the greatest financial system known to the world in modern times, yielding to the demands of the people and with none other than the needs of all the people and the Nation to subserve. [Applause.]

Mr. PHELAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837, and had come to no resolution thereon.

ENROLLED BILL SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title, when the Speaker signed the same:

H. R. 7595 An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors.

LEAVE OF ABSENCE.

Mr. CARTER, by unanimous consent, was granted leave of absence for 30 days, on account of service on the Joint Commission to Investigate Indian Affairs.

RECESS.

Mr. PHELAN. Mr. Speaker, I move that the House do recess until 8 o'clock to-night.

The motion was agreed to; accordingly (at 6 o'clock and 30 minutes p. m.) the House stood in recess until 8 o'clock p. m.

EVENING SESSION.

At the expiration of the recess the House resumed its session.

CURRENCY.

Mr. BULKLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the currency bill, H. R. 7837.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, with Mr. GARNER in the chair.

Mr. BULKLEY. I yield 10 minutes to the gentleman from Connecticut [Mr. KENNEDY].

Mr. KENNEDY of Connecticut. Mr. Chairman, within the limited time at my disposal I can only consider a few of the sections of the banking and currency bill. So much has been said by the gentlemen who have already spoken on the bill that it leaves very little unsaid. I will try to put what I have to say in as few words as possible in the hope that I may add a little to the many brilliant arguments that have been made on this bill. I am in favor of the bill now before the House, because I believe a change in the currency system of the country is absolutely necessary, and the change should be made at this session. It is claimed the President is taking a keen interest in currency reform; he is criticized by some for his activity, but we must all admit he is free from corporate influences or the influence of the moneyed interests of the country, a man who is known to all the people as being absolutely fearless, working for the interests of the whole country.

I represent one of the large manufacturing and agricultural districts in Connecticut, and I believe that this bill will meet the needs of the manufacturers, business men, farmers, and the laboring men. Financial experts have been puzzled for many years trying to suggest a reform, and have presented several bills that in their judgment are most needed in our banking and currency laws. All of them failed. But there is no question that the present bill will meet the requirements. If it is passed by this Congress, there will be no financial panics, because all the people will receive benefits under the new system and will have confidence in it; and, further, because it will be next to impossible to create any artificial stringency by manipulation of the money market. From my study of the bill the most important things—the interest rates, the volume of currency, and extensions of credit—will all be controlled in the interests of

the public by a Government board. There will be no ground for the fear and distrust which usually brings on panics, because everybody will know there is enough money to go around and that enough credit will always be available to meet all legitimate needs.

Of all the public questions now before the people it is probable the average man or woman knows least about the financial question. So it is with you and with me and with 99 out of every 100 people you may meet upon the streets. But that is only another reason why the country should be educated to know good currency legislation from bad currency legislation. Some objections have been made that the present bill gives too much power to one man, and that we may some day have a man in the White House who is not as honest as the present occupant, and that he may appoint members of the board in favor of the bankers and against the people. The answer to this objection is the President appoints the members of the board, but the Senate must approve of said appointments. The people can trust the President.

Under this bill the working man will always get his pay in Government currency as good as gold and he will not be asked to accept clearing-house checks or other credit substitutes because all employers will always be able to get the currency which their business justifies.

The small business man will be able to borrow at a lower rate and to secure more adequate accommodation, because the banks will feel more free to invest in the commercial paper of local communities, knowing that they can immediately realize on this paper by rediscounting it, whenever they need to do so. The small banker will be able to do business directly with the Federal reserve bank, where he will have the same facilities as the big bank. He will be freed from his dependency upon the big banks and be able to serve his customers according to his own judgment, subject only to reasonable supervision by the Government board. It will give to the small bankers the same security it gives to the small business men, and must tend to stimulate competition in commerce and industry, and this competition in time can not fail to give lower prices to the consumer and more employment to the producer.

In fact there are several good features in this bill that appeal to me, but time does not permit me to enumerate all of them. Some of those that have struck me most forcibly are the sections forbidding any bank examiner from accepting a gratuity. Also the prohibition against an officer or director of a bank receiving any benefits directly or indirectly, or any fee of any kind in connection with loans.

Mr. McKENZIE. Will the gentleman yield?

Mr. KENNEDY of Connecticut. I can not; I have not the time. This is a great protection not only to the bank but also to the public. It prohibits directors from making money on loans that they will later have to pass upon and which would necessarily influence their judgment in favor of the person requesting the loan. The bill will operate to extend a bank's reserves, and will prevent the throwing of securities upon the market to maintain credit. It can not cause inflation of the currency. Reserve money will be held to work and the banker can lend it over and over again. Under our present currency laws it is impossible for the banks to do all the business that they will be able to do under the proposed change.

I have been informed the Secretary of the Treasury has been receiving hundreds of letters a day for the past month from all sections of the country and from all classes of people, manufacturers, farmers, merchants, miners, some bankers, and practically all of them are in favor of currency legislation as embodied in this bill. All of these letters have expressed general approval of the many features of the bill, especially that part relating to Government control. Control must be placed somewhere, and the great majority of these letters say that it is far preferable to have this control in the hands of Government officials rather than in the hands of private parties. The only objections we hear are those of a few of the big bankers who are directly affected by the bill. These men have always been in control of the finances of the country and naturally object to losing such a marvelously good thing.

Another good feature of the bill, especially to agricultural communities, is the provision made in the savings department of banks for loans on improved farming lands. This is a brand-new thing for national banks, and it will tend to keep the people's money in the places where it is owned and not concentrate so much of it in one place, while it prohibits the loaning of bank deposits for purposes of speculation in stocks and bonds. But the best feature of all is the governmental control of the national banking system.

An understanding of the nature of money and banking is necessary to a full comprehension of this big question. Money

is coin, and money is the measure of value. That is one of its chief functions. Money may also be a medium of exchange, and that is another important function, but in most transactions money is not used, for more than nine-tenths of the business of the country is done by exchange of property without the use of money in any other way than as a measure of value. This is accomplished by means of credit and the banks and clearing houses. Banking is not dealing in money, as is supposed by many people, but it is dealing in debts. A commercial bank is at one and the same time a manufactory of credit and a machine for the transfer of the ownership of property without the use of money.

This question of credits naturally leads to panics and the cause of panics. Great effort was made to minimize the importance of the recent panic by saying it was "only a bankers' panic." It is unnecessary to consider the many causes assigned for the panic. The assertion that it was a bankers' panic, coupled with the conduct of the Republicans in power at the time, is an admission of the weakness and unreliability of our present banking and currency system, for which that party is responsible. In the midst of the panic the long session of the Sixtieth Congress convened. The party in power was wholly unprepared to meet the situation, so it presented the makeshift Vreeland-Aldrich bill, and resorted to the worn-out expedient of a commission, to which the whole subject of banking and currency reform was referred. The panic of 1907 did not arise from any fear that savings banks were unsound, but from the fear that bankers had that banks might be unsound.

This brings us to the necessity for absolute confidence in the currency laws. The power to manufacture credit explains the apparently impossible fact that the banks of the country have on deposit right now more than \$13,000,000,000, which is more than four times as many dollars as the country has altogether, and thirteen times greater than the number of dollars actually held by the banks in their vaults. It is clear that these deposits are not made up of dollars, but of promises to pay dollars. These promises of the banks are evidenced by entries in pass books.

The pass book is a certificate of deposit. These bank promises are transferable by check, and it is by transferring these promises from one to another by checks in payment of bills that the great bulk of the business of the country is done, and done without the use of money. The banks issue promises to pay money on demand, and the holders of the promises check against the promises in settlement of bills. These checks in most cases are deposited in the bank. In a city like Washington or New York each bank receives for deposit many checks on other banks. These checks are cleared through the clearing house daily. There each bank trades the check it holds against the other banks for the checks they hold against it, and the difference between the sum total in each case is settled in money. In other words, it is a matter of bookkeeping. The checks are drawn against credit at the bank to pay for goods or services, and the checks are paid by an exchange of the checks by the bankers at the clearing house.

In still other words, the bankers say to each other: "You give me the checks you have on me and I will give you the checks I have on you, and we will pay the difference either way in money." It is nothing more than an extension of the plan of settling bills between merchants who present each other with bills at the end of the month and check one bill against the other, and pay the difference in money. The same thing could be accomplished by the merchants giving checks to each other, and allowing the bankers to exchange the checks between themselves. It is an exchange of property without the use of money in either case.

Confidence therefore plays an important part in any currency system, but confidence is not everything. In the recent campaign Mr. Taft said: "Confidence is everything." But that is exaggeration. It is all too well known that confidence may be misplaced, and when it is misplaced it is a bad investment. There may also be a lack of confidence without reason, and when that is the case it is a very bad investment. An unreasonable lack of confidence leads to panic, and a justifiable lack of confidence adds to the panic the additional hardships and sufferings that flow from an abuse of credit. The panic falls on all alike, the innocent as well as the guilty, the thrifty and the unthrifty.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GLASS. I yield to the gentleman five minutes more.

Mr. KENNEDY of Connecticut. Under the proposed new system panics will be impossible, because panics are based upon financial fear, and the fear itself is based upon the idea that those entitled to it may not be able to get money when they

want it. Under this bill, as I understand it, anybody actually entitled to it can get currency, and therefore no man with a deposit in bank need be afraid that the bank can not furnish currency if it is honestly and efficiently conducted. This will in turn prevent runs on banks and in preventing panics will also prevent unfair and undue contraction of credits with its consequent paralyzing effect on business and on the productive energies of the Nation. Business enterprises will have a stability unknown in the past history of the United States. Men will not be thrown out of employment wholesale throughout the country by the fright of financial and commercial panic, but finance and commerce will become steady. Men will be regularly and systematically employed. Men will not be ruined by violent and abrupt changes of values. Hundreds of thousands of men will not suddenly be thrown out of employment during these national waves of depression. There will be no national waves of depression nor undue feverish buoyancy. The consequence will be that the national energies of our people will be employed upon a firm basis that will be continuous.

One of the fundamental changes proposed under this bill is the establishment of the 12 reserve banks. The duties of these reserve banks will be to receive all capital subscribed by member banks. This would amount to not less than \$100,000,000. After the banks are started they will hold \$100,000,000 of reserves furnished by the national banks of the country and after 14 months up to \$400,000,000 of reserves. These reserve banks will also handle the current funds of the United States, amounting to from \$150,000,000 to \$200,000,000, thus making a total of about \$700,000,000 to back the new system.

The advantages to the banks of the country are so decided I can not conceive of any thoughtful bank not taking advantage of the opportunity. The advantage to our ordinary business man, as I have pointed out before, is very much greater than that to the bank, because it enables the man who is entitled to credit to obtain credit and will prevent a shrinkage of his assets by periods of financial stringency. It will also prevent his being forced into liquidation unjustly at times when he can not realize a fair value on his assets.

A few of the big banks of New York have felt inclined to insist that they should have the right to control the new system, because they think they understand the banking business better than other men. When the Interstate Commerce Commission was established the railroads were urgent in demanding representation upon the commission because it vitally affected them, but it would have been just as absurd to give the railroads control of a governing commission whose duty it is to require the railroads to deal justly with the people of the United States as it would be to give the banks control of the currency system of the country. Who will claim to-day that the railroads should be represented on the Interstate Commerce Commission?

Other great advantages to the banks under the proposed new system is that it will mobilize their own reserves and permit the surplus reserves of one bank to be made available for use by other banks by being put in a common fund available for rediscunts for the accommodation of banks needing such assistance. It will prevent a bank from being suddenly embarrassed by a run upon the bank, as such a bank would be able immediately not only to use its own reserves but would also be able to discount a large volume of its assets in the form of commercial paper and thus meet any sudden demand. In addition it could negotiate other loans by permission of the Government board, so that a sound bank could meet any unexpected demand in the form of a run or extraordinary financial pressure.

One of the great reasons, and an unanswerable one to my mind, for a change in our currency system and in favor of the present bill is the undoubted existence of a Money Trust sometimes called a "credit trust." There is no question that a Money Trust does exist in this country. No matter under what name it passes, I believe there is such a combination or concentration of credit in the United States to-day, and this bill will do more than any other thing ever attempted by any Congress in the history of the United States to strangle the Money Trust monster. The great opposition to currency legislation has come from the terrific power of this Money Trust which has been exerted to its utmost to check any legislation at the outset. To the thinking man, the very fact that these people strenuously object to this bill or in fact to any kind of currency legislation that will take the control from their hands, is sufficient to class it as the most desirable piece of legislation that could be enacted. Anybody who has studied the reports of the recent investigation by a House committee regarding the concentration or control of money and credit must come to the same conclusion, that there is a money trust or credit trust, and that we must control it or it will control us.

To prove this statement I quote below from the findings of this committee:

The concentration of control of money and credit has been effected as follows:

First. Through consolidation of competitive banks and trust companies, which consolidations in turn have recently been brought under sympathetic management.

Second. Through the same powerful interests becoming large stockholders in competitive banks and trust companies. This is the simplest way of acquiring control, but since it requires the largest investment of capital, it is the least used, although recent investments in that direction for that apparent purpose amount to tens of millions of dollars in present market values.

Third. Through the confederation of possibly competitive banks and trust companies by means of the system of interlocking directorates.

Fourth. Through the influence which the more powerful banking houses, banks, and trust companies have secured in the management of insurance companies, railroads, producing and trading corporations, and public-utility corporations, by means of stock holdings, voting trusts, fiscal-agency contracts, or representation upon their boards of directors, or through supplying the money requirements of railway, industrial, and public utilities corporations and thereby being enabled to participate in the determination of their financial and business policies.

Fifth. Through partnership or joint-account arrangements between a few of the leading banking houses, banks, and trust companies in the purchase of security issues of the great interstate corporations, accompanied by understanding of recent growth—sometimes called "banking ethics"—which have had the effect of effectually destroying competition between such banking houses and trust companies in the struggle for business or in the purchase and sale of large issues of securities.

The powerful grip of these gentlemen is still upon the throttle that controls the wheels of credit, and upon their signal those wheels will turn or stop. So, I say, if we do not act now, after awhile it may be too late.

In the words of the committee:

Far more dangerous than all that has happened to us in the past in the way of removing competition in industry is the control of credit through the domination of this Money Trust over our banks and industries. It means that there can be no hope of competition and no new ventures that could live against existing combinations without the consent of the trust that dominates the sources of credit. A banking house that has organized a great industrial or railway combination or that has offered its securities to the public is represented on the board of directors and acts as its fiscal agent thereby assumes a certain guardianship over that corporation. In the ratio in which that corporation succeeds or fails the prestige of the banking house and its capacity for absorbing and distributing future issues of securities is affected. If competition is threatened it is manifestly the duty of the bankers from their point of view of the protection of the stockholders, as distinguished from the standpoint of the public, to prevent it if possible. If they control the sources of credit they can furnish such protection. It is this element in the situation that unless checked is likely to do more to prevent the restoration of competition than all other conditions combined. This great power standing between the trusts and the economic forces of competition is the factor most to be dreaded and guarded against by all the people.

Let me say here that every time currency legislation has been proposed in this House or the Senate there has always been opposition to it. Every time an administration undertook to change the financial system of the country it has been opposed. In 1863, when the national banking system was established, some of the very same arguments that are used against this bill to-day were used, and that bill passed the Senate by only two majority, 23 to 21. They said then that there was lack of confidence. They said then that the State banks would not go into the national banking system. But they did. You say now that the national banks will not come into this reserve. They certainly will, because it will be to their advantage to come in.

In conclusion, we must keep in mind the borrowers as well as the bankers in relation to this bill. Are the bankers who object to this bill objecting in the interest of the people, or does the objection come from a selfish standpoint? We want the bankers to come in under the provisions of this bill. Let them give it a fair trial and if there are any defects discovered they can be amended. The Banking and Currency Committee and Members of this House have given a great deal of time to the preparation and discussion of this bill. It is going to pass, and after it has become a law there can be no question but the bill is in the interest of the whole people. [Applause.]

Mr. HAYES. I now yield 10 minutes to my colleague, the gentleman from California [Mr. KENT].

Mr. KENT. Mr. Chairman, I shall take but a few moments of the time of the House to state some views I have concerning currency and banking matters as affected by this bill.

I would respectfully submit that all laws, that all governments, that all forms of restraint offer but a choice of evils.

There is nothing humanly perfect but human perfection. In the coming days of our angelhood perfectness, to which we look forward with apprehension, we shall be fit to live without law, while mortal men in millennial times will be sublimated anarchists, living where there are no legal imperfections, because there will be no law.

It is in view of this basic theory that I find little patience for those who are looking for flyspecks in this bill and are over-

looking the great evils which I feel sure it will largely ameliorate.

Our present currency system is a crazy quilt of mutual and reciprocal profanities—gold, silver at a false ratio, gold certificates, silver certificates calling for 50 cents on the dollar, Treasury certificates redeemable in coin, a few outstanding "blood-stained" and pensioned greenbacks, and, finally, bank notes, which, being based on Government bonds, remind one of the struggle of the bankrupt to live on the interest of his debts.

As herdsman over this aggregation of sheep, goats, jack rabbits, white mice, and fleas stands patient Uncle Sam, saying, "You are all equal in value because I say so." Even the fiat of 90,000,000 people comes huskily in such a declaration.

We have justly complained of the trusts and combinations of the powerful and the greedy, and have seen in the ever-increasing inequality of distribution of our country's wealth a menace and a curse. Our currency system has not only aided the evil tendency, but the disproportionate distribution of currency has been much worse than the distribution of wealth, and the Aldrich bill would, in my humble opinion, have been the key-stone of this arch of centralization.

All streams of currency empty into Wall Street, to be used by the gamblers, promoters, and looters, as well as honest builders, and the streets of other great cities that indulge in Wall Street games are but extensions of Wall Street.

The western farmer, the southern planter, the miller, the miner, the lumberman, and many another possessing wealth—real wealth in terms of necessities of life—are forced to look to Wall Street for money, for their own money, to finance their exchanges, and if it is convenient to the stock gamblers of Wall Street or the wheat gamblers of La Salle Street they got their money—otherwise not.

How this centralized power has been used not only to deprive the indigent of opportunity, but those possessing real wealth of realizing on that wealth of food and goods of which they are possessed, was eloquently demonstrated in 1907.

Under our present system we can not get currency when we need it. We can not have it where we need it. Abundant harvests mean dearth and slack times mean redundancy.

Our great banking system can not be shattered; it must be conserved, helped, and encouraged. But Wall Street should not be our banking system. Our banking system must be controlled by law and the law must be construed and enforced by men, and these men must be guided by a sense of public welfare and not by the sole impulse of private profit.

I have no patience with the talk of Federal despotism—no such thing can exist. Shall we forever prefer a real Morgan-Rockefeller-Wall Street despotism to a bogey man—a hypothetical, imaginary traitor?

Institutions are not automatic. Men must operate them. We can not blame those private individuals who, finding themselves in power, work under the law to increase that power; but we can alter the law and we can replace them, in this case, with men who would face disgrace and imprisonment if they acted in their public capacity as the private individual has acted in his private capacity.

In this brief preface I wish to state that I believe this bill is a credit to its framers; that it is constructed on the lines of sound finance; that it is free from all taint of irredeemable fiat crazes. I believe it calls for the exercise by our bankers of all the qualities of caution and care without which any system would go on the rocks.

Banking—and by banking I do not mean pawnbroking in collateral loans—is a great service to society, an aid to commerce, just as railroads are. It is not an exact or a mathematical science except in part. The human element is predominant and we can not overlook it. For illustration, we might say that 25 per cent resembles chess and 75 per cent resembles poker—one calling for absolute mathematical formulas, the other percentage based on a mixture of chance and human nature.

We might well have an automatic chess player, but no one would ever try to invent a poker-playing machine.

Our bankers in village, town, and city constitute an army, expert in the needs and the abilities of their localities. Under proper control they should be enabled to broaden their usefulness. It is my belief that this bill will give them an opportunity for added usefulness.

I do not object to the mandatory feature, for the bill will prove a source of profit to legitimate banking, and those not wishing to accept its provisions should not claim the Federal brand, but, as we cowmen say, "should be vented and re-branded."

As to the constitutional argument urged by the gentleman from Iowa [Mr. Prouty], whereby he tried to show that the

bankers would be deprived of their property without process of law, that argument is finer spun than a modern skirt.

Banks can not claim the Federal good will and the Federal name without complying with Federal law. They can take their little dishes and play in the State yards if they see fit. Can the creator condition the existence of the creature?

As a matter of course this measure should be followed by a farm-credit system to aid in agricultural development by the use of fixed investment funds, for this is where such funds are needed and can be safely applied. Speculative bonds ought not to be the only outlet for the people's savings.

But this is another story and one in which current funds, the medium of exchange, should not appear. [Applause.]

Mr. HAYES. Mr. Chairman, I yield 30 minutes to the gentleman from Oklahoma [Mr. MORGAN]. [Applause.]

[Mr. MORGAN of Oklahoma addressed the committee. See Appendix.]

Mr. HAYES. I yield 30 minutes to the gentleman from Kentucky [Mr. LANGLEY].

[Mr. LANGLEY addressed the committee. See Appendix.]

Mr. GLASS. Mr. Chairman, the members of the Banking and Currency Committee of the House on this side of the aisle have reason to feel a lively sense of satisfaction over the fact that, after a general discussion of the currency bill reported to the House by the committee extending over a period of four days, no impression adverse to the measure seems to have been created.

I confess to a sense of personal gratification that my opening speech in presenting the bill to the House seems to have anticipated every objection that might, in reason, be offered; and I trust I may, with becoming modesty, express the judgment that it answered every adverse suggestion before it was made here upon the floor of the House, except, perhaps, one or two points involving, I suspect, legal refinements.

Member after Member on the Republican side has come forward to this stand and, declaring he had this or that objection to the bill, nevertheless concluded that it is so much better than the existing system he would have to vote for it upon its final passage. We, of course, think it is so much better than the existing system that it should pass the House with a unanimity that will insure its speedy enactment into law. There seems to be little serious objection to the details of the bill.

Our Republican friends apparently do not object so much to what the bill provides as to the manner of its consideration. There has been a good deal of criticism on this score, as if we had proceeded in a most unusual way and adopted unprecedented methods.

Some gentlemen who have urged this objection are absolutely sincere in their opposition to caucus processes. I have a degree of toleration for colleagues who really take that view, and to these I beg to repeat the assurance that we have not desired to make a partisan matter of this banking and currency bill in any offensive sense. But it must be remembered that we legislate through and by parties here; and I have been unable to understand how we may ever expect to overcome that defect of our American system, if it be a defect.

There has been complaint about there not having been hearings on the bill. The answer is that the bill itself is the product of extensive hearings on the subject of banking and currency reform. As soon as it became definitely known that the Sixty-third Congress would be immediately charged with the responsibility of currency legislation the Banking and Currency Committee of the House set about getting information on the subject. We had elaborate hearings, as I have already stated, to which not only were the bankers of the country invited but the select representatives of every national group in America.

The representatives of the trade-unions, the farmers' unions and granges, commercial bodies, railroad employees, the manufacturers, the credit men, specialists on the subject—all were invited to testify and did testify.

As to the consideration of the bill by the Committee on Banking and Currency, the Democratic members had conferences of their own; but there was no binding obligation upon any member to vote for any provision there agreed upon.

For weeks we carefully and diligently considered every feature of a tentative measure, discussing the alterations that were desirable and making changes that seemed to be wise. During all of that period, as I have previously indicated, I kept in constant communication and contact with the senior Republican member of the committee, assuring him that we did not care to make a partisan issue of the problem. We felt obliged, however, to proceed in the usual way.

After we had agreed on the details of the bill it was taken to a party caucus. Is that a startling procedure? Is there

anything of an unusual nature about that? Is it something so extraordinary and genuinely unique as to occasion amazement on the Republican side of this House?

Mr. PLATT. Will the gentleman yield?

Mr. GLASS. Certainly.

Mr. PLATT. I ask for information. Is it usual to take bills into caucus, discuss them there, and settle them before they have been in general debate in the House?

Mr. GLASS. It is on the Republican side. When the Republicans were in the majority it was not only usual, but almost invariable.

Mr. PLATT. I have been informed that there has only been one case on one bill.

Mr. GLASS. I never have known an important measure to pass this House relating to the currency or tariff that was not agreed on in party caucus or put through under party rule.

Mr. PLATT. Was that in caucus before going in general debate in the House?

Mr. GLASS. The Vreeland currency bill was put in the Republican caucus, and there was no debate of any description on it in the House until the day it was passed. Then only four hours of general debate were allowed instead of four days, which we have given you. [Applause on the Democratic side.]

Mr. SLOAN. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. SLOAN. As another new Member, I would like to ask the gentleman if the Payne tariff bill was considered in caucus by the Republican Party? I do not know. I was not here at the time, and I have not been informed. I do not mean the committee, but I mean the caucus of the Republican Members of the House.

Mr. GLASS. I was here, but I was not in the secrets of the Republican Party. I imagine the tariff bill went to caucus; but if not, the Republican Party of the House was then operating under rules and discipline that required every Republican Member to toe the mark or let Uncle Joe know the reason why. [Applause on the Democratic side.]

Mr. STEENERSON. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. STEENERSON. Has the gentleman ever read the resolution that was passed at the Republican caucus which agreed to the Vreeland-Aldrich bill?

Mr. GLASS. Yes; I have read it. I have it right before me, and I am going to read it to you presently. [Applause on the Democratic side.]

Mr. STEENERSON. So have I. I say the gentleman misrepresents that resolution—

Mr. GLASS. I do not misrepresent the resolution, because I have not yet referred to it.

Mr. STEENERSON. The gentleman said we were bound by the action in caucus.

Mr. GLASS. I have not said anything of the kind; but I am going to say it, and prove it.

Mr. STEENERSON. I defy the gentleman to prove it.

Mr. GLASS. I will read the resolution.

Mr. STEENERSON. If the gentleman will permit me, I will read it.

Mr. GLASS. Go ahead.

Mr. STEENERSON. This is the resolution adopted at the caucus on May 5, 1908, on the Vreeland currency bill:

Resolved, That this meeting or any adjournment thereof is only a conference and not a caucus, and shall not have the binding effect of a caucus; and that those who participate in its deliberations shall be absolutely free hereafter to act in accordance with their own judgment with reference to all matters considered before it.

That is found on page 6246 of the CONGRESSIONAL RECORD, May 14, 1908, first session, Sixtieth Congress.

Mr. GLASS. And to show just how sincere you were in that expression, when Charles N. Fowler, the Republican chairman of the Banking and Currency Committee, undertook to act on the resolution his head came off. He was removed from his position and Mr. Vreeland was made chairman in his stead. [Applause on the Democratic side.] That is how much freedom there was.

Mr. STEENERSON. Here is the RECORD before me.

Mr. GLASS. And there I have given you the real transaction as it occurred. Mr. Fowler, who had been eight years chairman of the Banking and Currency Committee, was humiliated and decapitated because he was simple enough to think your caucus resolution meant what it said.

Mr. STEENERSON. Oh, no; that is not it; I deny that.

Mr. HELGESEN. Will the gentleman yield—

The CHAIRMAN. Does the gentleman yield?

Mr. GLASS. I did not yield, but I will.

Mr. HELGESEN. Assuming that the Republicans for long years have done business along the same line Democrats are now

doing business, is it not true the Democrats have complained and criticized that method for the last 16 years?

Mr. GLASS. Yes; JOHN SHARP WILLIAMS used to rush up and down this aisle nearly every day in the session, exclaiming: "Here is another outrage you are about to perpetrate," and that is what you gentlemen are doing now when we are proposing to pass this bill.

Mr. JOHNSON of Washington. Will the gentleman yield for a question?

Mr. GLASS. Oh, no; I want to proceed.

Mr. JOHNSON of Washington. I just wanted to ask if the Democratic caucus was part of the new freedom?

Mr. GLASS. Yes; our caucus action portends the new freedom—a new freedom signaled by an achievement that no other Congress has ever exceeded. We are going to give you a revision of the tariff and pass a currency bill at a single session of Congress. That is new freedom, both industrial and financial. [Applause on the Democratic side.]

The gentleman from Minnesota [Mr. STEENERSON] talks about this resolution of his party "conference" by which nobody was bound. Let us see what Members of his own party thought of that resolution. Hear the plaint of Mr. Prince, a Republican member of the Committee on Banking and Currency of the House, with respect to this resolution that the gentleman has read:

My fellow Members, put the yoke upon you if you will.

Free to act as you please! Yet here was a Republican Member complaining that the last one of you was about to put on the yoke, and the last one of you did. The gentleman who read the resolution just now went along with the rest. [Laughter on the Democratic side.]

"Walk under the yoke," said Mr. Prince; "under buck," as the expression was at the time with respect to a yoke of oxen. He went on:

Now, the yoke may be easy and the burden light, but I want to say to you that I will not be put under the yoke. I will not assume the burden and go before my constituents and say that I am in favor of makeshift legislation; that I am in favor of discharging a committee of this House; that I am in favor of overriding the wishes of the people; that I am to be a mere tobacco sign.

Was the gentleman from Minnesota a mere tobacco sign on that occasion?

Mr. STEENERSON. The gentleman who made those remarks remained in the party, and was the chairman of a committee, and continued so during that Congress and the next. He was not kicked out of the party.

Mr. GLASS. I referred to Mr. Fowler, who was kicked out of the chairmanship of the Committee on Banking and Currency.

Mr. STEENERSON. No. I am talking about another man, who remained chairman of his committee.

Mr. GLASS. Now, Mr. Chairman, when I was interrupted I was trying to indicate just how we have proceeded with this bill; and a little further on I desire to contrast our conduct with that of certain gentlemen who have assailed us. I said we kept in constant communication with the senior Republican member of the Banking and Currency Committee, advising with him in good faith as to the provisions of the bill and asking suggestions from him. We received suggestions from him and embodied some of them in the bill that was subsequently reported here, after we had considered it in caucus and tamed some of our own members. [Laughter on the Republican side.]

Mr. SLOAN. With the yoke? [Laughter.]

Mr. GLASS. No. By convincing them of the error of their way. The bill was adopted by a vote of 163 ayes to 9 noes. We then took it to the full Committee on Banking and Currency for consideration, and there amendments were made. One of the amendments offered by my courteous friend, Mr. SMITH of Minnesota, and accepted by the Democrats was today made the subject of sharp Republican criticism here. [Laughter on the Democratic side.]

That is a simple recital of the entire procedure upon which we have been so bitterly arraigned. The gentleman from Pennsylvania [Mr. MOORE] initiated the talk about the "gag rule of the Democratic majority," and next the gentleman from Wyoming [Mr. MONDELL] performed. With a mien of injured innocence and an unctious that would have made Dickens ashamed of Uriah Heep [laughter]; with a simulation that would have driven Mr. Pecksniff, broken hearted, into oblivion [laughter], he deprecated the partisan zeal of Democratic members of the Committee on Banking and Currency and the Democratic caucus. He even tried to invest the whole thing with an air of mystery, suggesting that there was something sinister about it. He heard the question had been asked in the caucus and never answered as to "who had written the bill."

It occurs to me that if the gentleman's curiosity was acute enough to ascertain that such a question had been asked he

might have been diligent enough to have learned that it had been promptly answered. As a matter of fact, it was asked. As a matter of fact, it was answered; and it would have better comported with the usages of fair debate had the gentleman from Wyoming stated the answer along with the inquiry. There is no secret about it. Every provision of this bill which was not written by the chairman of the committee or some member of the committee was written under the immediate direction of the chairman by the expert of the committee, who had thorough technical knowledge of the subject. That is the way the bill was prepared; and, now, where is the mystery about it? After all, it is not a question as to who wrote the bill. It is a question as to what it contains; and that seems to be avoided by the critics. They all return to the same "King Caucus" plaint, which in no wise affects the merits of the legislation proposed.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. GREEN of Iowa. I will bring the gentleman to talk about the subject which he spoke of just now. By virtue of this bill the national banks will have to subscribe—

Mr. GLASS. I will come to that presently. I want to talk a little more about what your side talked about chiefly, and then I will come to the provisions of the bill, though not one of them has been successfully assailed.

Mr. GREEN of Iowa. I wanted to ask a question. Will the gentleman yield further?

Mr. GLASS. Not right now; but I will further on.

Mr. GREEN of Iowa. Very well.

Mr. GLASS. The gentleman from Wyoming [Mr. MONDELL] made much ado about the partisanship of this side of the House. He talked in a pious vein about the patriotism which should characterize the consideration and enactment of currency legislation. I am constrained to question the sincerity of the gentleman when he ventures to decry the party caucus, for of the leading figures in the Republican caucus five years ago on the Vreeland currency bill the gentleman from Wyoming [Mr. MONDELL] was one of the foremost. How can he reconcile his preachments now with his performances then? How did our Republican friends proceed on that occasion? They introduced the Vreeland bill in the House on the 13th day of May, 1908, late in the afternoon. Before 11 o'clock on the 14th day of May the gentleman from Pennsylvania [Mr. DALZELL] brought in a rule. Will my friend who interrupted me awhile ago insist that he was not bound by the rule? He voted for it.

Mr. STEENERSON. I will say to the gentleman that I voted for it because I favored it. It was an emergency measure.

Mr. GLASS. The rule read:

Resolved, That after the adoption hereof the Committee on Banking and Currency shall be discharged and the House shall proceed to the consideration of H. R. 21871—

I was a member of the Committee on Banking and Currency, and I assert here that the bill never got to the doors of the committee. Not only that, I assert that when the rule was brought in the bill had not yet come from the Government Printing Office. The rule further provided that—

Debate thereon shall be concluded at not later than 5 o'clock p. m. to-day.

[Laughter on the Democratic side.]

The time to be equally divided between the friends and the opponents of the bill. It shall be in order to offer as a substitute for the bill H. R. 16730. On the conclusion of the debate, as herein provided, a vote shall be taken without delay or intervening motion first on the question of substituting H. R. 16730, if said bill shall have been offered, and then upon the passage of the bill or the substitute in lieu thereof, as the case may be.

What did all that mean? It meant that the Vreeland bill, made the subject of caucus action by the Republican Party, was brought into the House one evening and referred to the Banking and Currency Committee, which it never reached; the committee was discharged next morning from consideration of a bill that it had never seen. Under the rule no amendments were allowed to be offered on either side of the House, and debate was to be concluded in four hours. It permitted a substitute to be offered, but actually prescribed the very text of the substitute. [Laughter.] It undertook to make the Democratic side responsible for a substitute that the Democratic side had not considered and did not favor; and when no Democrat would offer the substitute in the terms provided by the Republican rule a Republican Member, the gentleman from California [Mr. KAHN], assumed to offer a Democratic substitute to a Republican currency bill, thereby not only mocking justice but making a harlequinade of the entire proceeding.

Mr. ALLEN. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. ALLEN. Does the RECORD show whether the bill was read or not?

Mr. GLASS. I do not now recall. I once heard John J. Ingalls describe *Paradise Lost* as "that great epic poem which everybody praises and nobody reads." [Laughter.] The Vreeland-Aldrich bill, whether read or not, was that great legislative enactment that no Republican wanted, but for which all of them voted under caucus rule. [Laughter.]

The Aldrich end of it was denounced by Republicans in this Chamber and the Vreeland end of it was denounced by Republicans in the other Chamber; and when there was a legislative union of the two bad measures the composite bill represented 50 per cent of House infamy and 50 per cent of Senate infamy, according to reliable Republican testimony. [Laughter.]

The Record will show that Mr. Prince, a Republican Member, asked where he could get a copy of the bill, and Mr. FITZGERALD, of New York, declared that no copies were to be obtained. The telephones in the cloakroom got busy, and a few copies were sent up from the Government Printing Office, whereupon Mr. FITZGERALD took one of these and called attention to the fact that the paper was not yet dry on which it was printed.

That is the way the gentleman from Wyoming [Mr. MONDELL], so piously complaining of our procedure now, performed when he last had occasion to consider currency legislation. He voted for a gag rule that gave us only four hours of debate, contrasted with four days for this bill. He voted for a rule that denied both the Democratic and Republican sides the poor privilege of offering a single amendment to the bill, whereas we shall give every Republican full opportunity to offer amendments to this bill.

Should not the gentleman be ashamed of that sort of inconsistency on the floor of the House?

Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. BUCHANAN of Illinois. Was the Vreeland-Aldrich bill read and considered under the five-minute rule?

Mr. GLASS. Oh, no; never. Not only not read and considered under the five-minute rule, but they did not permit a solitary amendment to be offered to it. And yet the three gentlemen who have most bemoaned the method of procedure in the preparation and consideration of this bill were the three gentlemen most conspicuous in "perpetrating an outrage" on JOHN SHARP WILLIAMS and the Democratic Members of that Congress—Mr. MOORE, of Pennsylvania; Mr. MONDELL, of Wyoming, "Old Faithful" [laughter]; and my good and genial friend from Pennsylvania, Mr. BURKE, all of them standpatters, the last one of them toeing the mark when the whip cracked and each sneezing every time the Speaker took snuff. [Laughter.]

Mr. PLATT. Will the gentleman yield?

Mr. GLASS. Oh, yes; I always yield willingly to my friend.

Mr. PLATT. I wanted to ask why the Democratic Party should start out by taking the worst precedent of the Republicans instead of the best.

Mr. GLASS. We have not done that. I have tried to point out, in contrast, how decently we have treated you in requital of the bad treatment accorded us when your side had charge of currency legislation. We shall let you offer all the amendments you want to offer, and with great cheerfulness and consistency we will vote most of them down. [Laughter.] We shall do that, I think, because we are not willing to believe that a party responsible for the Vreeland-Aldrich bill could possibly improve this bill. [Laughter.]

The speech of my friend from Wyoming is a strange mixture of sense and, if I may say it without the least offense, nonsense. He asserts that the Federal board is given more power under this bill than any institution on earth, whereas I have shown, and no man here can show the contrary, that there is scarcely a power with which that board is invested which has not been performed by one or two Government functionaries for the last 50 years.

I challenge any Member on this floor right now to name a power conferred upon the Federal reserve board by the pending bill that has not been exercised by the Secretary of the Treasury or the Comptroller of the Currency under the national-bank act with respect to existing banks in some sense or degree for many years, except the power of note issue.

It is complained that the Federal reserve board has the option to issue notes or not to issue. Of course it has. Did not the bankers under the Aldrich scheme have the option of issuing or not issuing notes as they might please? Why not, when this is a Government issue, give the Federal board the option? When I directed attention to the fact that the Vreeland bill, for which the gentleman from Wyoming voted, vested this power with the Secretary of the Treasury alone, he insisted that I had not correctly quoted it. When I asked him in what particular I had misquoted, he said he did not have time to answer. I offered to yield him time to answer, but he has not

answered yet. Why? Because I quoted the law correctly. The Vreeland bill distinctly, in section 2, vested the Secretary of the Treasury with the exclusive power of issuing \$500,000,000 of credit currency and passing on the sufficiency of security; so that the gentleman was willing to vest with one man the very power that he protests is too great to be lodged with seven men! He talks derisively about this bill setting up a Pooh-Bah in the banking system, totally insensible of the fact that the measure which he helped put on the statute book does vastly worse in the way of concentrating control. I might aptly paraphrase his doggerel and remind him that the Secretary of the Treasury under the Vreeland-Aldrich Act is not only—

"The cook, and the captain bold,
And the mate of the *Nancy* brig,
And the boatswain tight, and the midshipmite,"
But—the whole infernal rig.

[Laughter and applause on the Democratic side.]

The gentleman sneeringly criticized the President of the United States, and rather offensively, I regret to say, intimated that Mr. Wilson has been using patronage to force currency legislation. I do not believe a word of it. [Applause on the Democratic side.] I refuse to believe that the present occupant of the White House is capable of undertaking to sway men's opinions or to coerce their actions by the use of Federal patronage. [Applause on the Democratic side.]

The gentleman from Wyoming, as did the gentleman from Pennsylvania, criticized the President for his alleged invasion of the privileges of the legislative branch by undertaking to coerce members of the Banking and Currency Committee and likewise members of the Democratic caucus. Retort to that sort of comment is easy. I might remind him, were I disposed to be disagreeable, that the preceding occupant of the White House caused his Attorney General to draw up a railroad bill which accompanied a presidential message to Congress, advising us to pass it. [Applause.] But what has all that to do with the merits of a currency bill now under consideration?

The gentleman from Pennsylvania [Mr. BURKE] discovered a mare's nest in this bill. "We have to fight over the battle for the gold standard," he exclaimed. For the first time, he said, since the Republican Party 13 years ago put a declaration on the statute books in favor of the gold standard, the doctrine has been repudiated in a currency bill. What nonsense! The gentleman seems ignorant of the fact that the national-bank notes which Federal reserve notes will gradually displace are redeemable in "gold or lawful money." He seems not to know that the Vreeland-Aldrich Act, for which he voted five years ago, requires that its emergency notes shall be redeemed in "gold or lawful money." He seems not to understand that the Aldrich scheme, which he confessedly favors now, uses precisely the same phrase as to the redemption of the notes for which the bill provides—"gold or lawful money." Even so sane and ordinarily sensible a paper as the *New York Sun* appears to be alarmed because this bill follows the national banking act and the Vreeland-Aldrich statute and the provision of the Aldrich scheme concerning note redemption. They affect to think we have made an assault upon the gold standard. What a pitiful sort of opposition to this bill that is.

My excellent friend, Mr. BURKE, found out something else. I hate to ruin his speech by calling attention to his discovery. [Laughter.] He said we have provided in this bill in behalf of the agricultural classes, for loans on unencumbered farm lands, but have discriminated against the humble laboring man in the cities; that we deny the workman the right to borrow money with which to defray the cost of his modest home. In that same speech he admitted that he was for the Aldrich bill, by reference to section 40 of which it will be noted that no loan on real estate is permitted in any one of the 47 reserve cities or the three central reserve cities of the country. Mr. BURKE being from Pittsburgh, a reserve city, thus advocates a scheme that expressly denies his humble laboring men the right to borrow money to defray the cost of their modest homes. [Laughter on the Democratic side.]

And so these astonishing inconsistencies proceed. Mr. Chairman. The gentleman from Wyoming [Mr. MONDELL] advocated the mobilization of reserves, but assailed the very provision of this bill which provided for mobilization; he advocated decentralization and assailed the very decentralizing feature of this bill. He talked about the failure of this measure to provide uniform discount rates. The Aldrich bill provided a uniform discount rate; but, if you will examine the hearings had before the Committee on Banking and Currency, you will there see that eminent bankers openly admitted that it was an impossible provision. The truth is, it was a pretense. While the bill provided that the rate of discount should be uniform, no method was devised to make the rate uniform,

whereas the open-market provision of the pending bill will enable the reserve bank to enforce its rate of discount.

Next, the gentleman from Wyoming criticized the bond-refunding provision of this bill, saying it would cost the Government \$7,000,000 per annum, whereas refunding under the Aldrich bill would not cost the Government a cent. Such simplicity, such credulity, were never witnessed before since the world was created. As a matter of fact, if there was one pretense in the Aldrich bill more obvious than many others, it was the pretense that the Government would be involved in no cost in refunding the 2 per cent bonds. Why not? The 2 percents were to be refunded into threes. Who was to pay the difference? The pretense was that the Government was to be authorized to levy a franchise tax in order to compensate itself. But the franchise tax was to come out of the Government's part of the earnings of the Federal reserve association, so that the Government was required to take its own funds with which to pay itself!

The Progressive floor leader of the House [Mr. MURDOCK], like most other gentlemen who have spoken, thought there were defects here and blunders there, and mistakes elsewhere in the bill, but graciously conceded that it was so much better than the existing system that he was inclined to vote for it, hoping that it would be improved at the other end of the Capitol. Nevertheless, he criticized the Democratic majority for an alleged violation of its platform pledges. The bill, he said, is timid, weak, halting, because it does not include a provision against interlocking directorates as promised in the Democratic platform. As a matter of fact, the Democratic platform declaration against interlocking directorates treated that subject as an antitrust proposition and did not associate it with banking and currency laws at all. And it is a trust proposition. What does the platform say on the subject? The exact language is this:

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including among others the prevention of holding companies, of interlocking directorates, etc.

So that the declaration there had no connection with or relation to the subject of banking and currency; and it is absurd to charge that the Democrats in Congress have repudiated their platform merely because they refuse to embody extraneous matter in a bill for a banking and currency system. The presiding genius of the Money Trust investigation was the employed attorney, Mr. Samuel Untermyer, of New York, who so searchingly interrogated the witnesses; and he has publicly declared that the two subjects have no relation one to the other. He goes to the extreme of saying that anybody who undertakes to associate one with the other and to complicate this currency legislation with the proposition to embody in it the Pujo recommendations "is a party marplot."

But, pray, what is the position of the Progressive Party upon currency legislation? My friend from Kansas [Mr. MURDOCK] made a speech yesterday covering seven pages in the RECORD, and it contained seven lines about currency reform. He was given the privilege of naming a member of the Banking and Currency Committee. Am I not correct in that supposition?

Mr. HAYES. He was.

Mr. GLASS. Why did he not persuade this Progressive Member to embody in some one of the numerous bills he introduced some provision against interlocking directorates? Treated as a trust question, we know very well the position of the gentleman's leader, Mr. Roosevelt, on the subject of monopoly, because it is recalled that he made terms with the great Steel Trust magnates and promised the culprits immunity before they perpetrated their crime of absorbing the Tennessee Coal & Iron Co., thus consummating one of the most gigantic industrial monopolies of the world. [Applause on the Democratic side.]

Yet, with this record of his chief staring him in the face, the Progressive floor leader here criticizes the Democratic Party upon the pretense that it has violated faith with the people and repudiated its platform because it will not embody in a banking and currency bill something that relates properly to trusts and combinations in restraint of interstate trade.

Mr. Chairman, I believe I will not further tax the patience of the House by commenting on such irrelevant criticisms of the bill. They seem to have made no serious impression. I have been gratified, as well as astonished, at the moderation of gentlemen who have essayed to criticize the bill. It is a complex question, an exceedingly difficult problem, and while I knew that we had thrashed it out among ourselves pretty thoroughly I scarcely hoped that we had made such a good job of it as the criticisms from that side of the House would indicate.

I will not proceed longer in the discussion of the matter, and I thank my colleagues for their patient attention. [Applause.]

Mr. AUSTIN. Mr. Chairman, I ask permission to print remarks in the RECORD.

The CHAIRMAN. The gentleman has that permission.

Mr. AUSTIN. Mr. Chairman, under leave to print, I submit three letters written by Mr. Henry Clifford Stuart, an able and worthy citizen of this city, on "Currency reform." I have favorably known Mr. Stuart for several years. He has given much time and study to the currency question, and I ask those seeking light on the subject to give his views careful consideration.

The letters are as follows:

2619 WOODLEY PLACE,
Washington, D. C., August 2, 1913.

Hon. R. W. AUSTIN,

House of Representatives, Washington, D. C.

DEAR SIR: The terms "currency" and "reform" are apt to mislead us.

The bills pending in House and Senate will not change our present means for exchange at all, but merely remix, relabel, and represscribe them. "Laws" are being doctored so as to give our currency greater currency; that is all.

Before "reforming" anything, it might be well to stop to consider its present form, which may have changed greatly since we last stopped to look at it, and may be entirely different from what we think it to be. Now, what is the present form of that which passes current among us, enabling us to effect our exchanges one with another?

Stop a moment and look at it. It may surprise some of us to learn that ours has come to be an out and out paper-money country; that we have come to speak of gold no longer as a "standard" but as a "base"—a base for a great volume of paper-note money, on which has been gradually superimposed a vast system of paper-credit money.

The great Nations, recognizing the insufficiency of gold even for a "base," and failing to perceive how rapidly the demand therefor is being impaired by the psychological wave now engulfing the world, are preparing for war by eagerly bidding against each other in its purchase—are buying gold, mind you; buying the "standard" at a price over and above that fixed.

Gold can be had only when it is not generally wanted, all the false promises of Governments to their peoples to the contrary notwithstanding. Its lingering connection with our present-day means for exchange is purely psychological. It is the tool financiers periodically exploit us with—nothing more.

We have already readily agreed to five hundred millions railroad-bond paper money; and we are agreed also to issue money, in any amount, on notes of hand—tissue-paper money. Would we do this if gold sufficed? I wot not. We do not yet openly admit that gold has passed, but down in our subconsciousness we are perfectly well aware that we have outgrown it, and that if exchanges depend upon it the vast activities of to-day would come to an immediate standstill, as indeed they do every time the bankers, for personal reasons, call for it.

Thus no objection is heard to paper money, the measures to give greater currency to various kinds of which are now being urged by the bankers themselves.

But what shall we say of the stupendous folly of our Government in undertaking to settle the money changers' rake off, which, in time, will absorb the whole, in gold. Where is it going to get the gold from? Issue bonds at our expense or tax us direct for its purchase?

Money of whatsoever kind is but a certificate—the certificate of the exchange relationship of labor as differently embodied. Gold, of all the most uneconomical means for exchange, would be worthless were it not for the labor behind it, and silver and other metals would not pass as small change were it not for labor and other things behind them—the fiat of a creditable Government and the consent of the people to the use of limited amounts in this way. So with paper money—it merely represents what is behind it. There can be no objection to the use of paper as money; it will always pass at par while we are confident that it is properly secured.

Nor have the bankers any objection to paper—where they control it. They only howl "flat money" and threaten dire disaster when we try to get together to instruct Government to provide and issue the means for exchange, without favor, to all entitled by proper security to its use—to all who have something to exchange.

They fear their time-honored privilege of preying upon the exchange necessities of the community may be threatened, and this is the reason for their present insolent denial of this right of sovereignty.

Now, there can be no objection to any honest means for exchange—anything that has real labor behind it in the amount represented or more—as long as it be fully adequate to the requirements of the people in no way constrains their activities, and is available to all on equal terms and without usurious charge.

Nor any objection to the banks continuing to act as agents for all parties to an exchange.

But we should most solemnly protest at making them the masters instead of the servants of the people.

We should protest at the very idea, not only of Government abdicating its right to provide the means for exchange, but of its continuing to neglect its duty so to do.

And although the bills now pending control the rates to be charged the banks by the Government, it might be respectfully suggested that some limit, however extreme, be set on the rates the people are to be charged by the banks.

This can not be done by means of usury "laws," all of which have ever been dead letters. It can only be done by freeing the supply—by naming a rate just a notch higher than the banks are to be allowed to charge at which anybody, possessing proper security, may upon demand and without commission, discount or any charge other than interest, obtain the needed means for exchange direct from Government itself.

And the Government should determine what security would be acceptable—and this should not be limited to the paper of any specially privileged classes, such as financiers and traders, but should be extended to farm lands and improved city real estate, manufacturing plants, and otherwise as widely as possible and at such proportion of their assessed value as to insure such confidence in the needed means for exchange as to give it full currency at face value without thought even of the credit of the Government behind it.

The means for exchange is a public necessity, and though it may be allowed to remain yet a while in private hands, the time has arrived when the Government must see to it that public necessity is no longer too greatly exploited.

No man wants gold save for purposes of exploitation, but all need to be assured of a never-failing means for exchange. The hawking about of gold by the financiers of the nations will not stand investigation—not in the present changing frame of mind of the peoples.

HENRY CLIFFORD STUART.

Hon. R. W. AUSTIN,
House of Representatives, Washington, D. C.

THE WHEREFORENESS OF GOLD.

DEAR SIR: Let us make a hasty, preliminary survey of this most interesting phase of the currency question.

Why is it that, failing in their attempt to have Government legalize their private makeshifts, the banks, forced to the (to them) desperate expedient of proposing that Government shall furnish a means for exchange, should insist that Government shall redeem same in gold, a thing that they themselves always promise but invariably and necessarily fail to do?

Let us consider this matter from one side only for the moment. Is it not obvious that if the banks be allowed to take a rake-off of 5 per cent only—and in so far as has yet been proposed they can charge anything they like—on the moneys the Government proposes to furnish them to trade upon, they must absorb the whole in 20 years, whether the issue be five hundred or five hundred thousand millions that the people call for?

Now, having absorbed all the money, why do they ask the Government to change it into gold? Is it not because this is the only way they can get from the Government bonds upon the people, taxing them in perpetuity?

They have no use for gold unless they can put it out at interest at once, and what way so easy to do this as to get the Government itself to take it off their hands. Hence the demand upon Government for what the Government has not got. If they really wanted gold for itself, they would ask the Government to buy and issue gold in the first place.

But the need of the people for a means for the exchange of their products remains. So having wound one silken thread around the Republic the Government issues the paper money through them again, and at the end of another 20-year period—in reality it is much shorter—they wind another, and so on until the revolution.

Might not this be one possible explanation of the white man's present state of bondage?

Faithfully, yours,

HENRY CLIFFORD STUART.

AN OPEN LETTER TO DR. SUN YAT-SEN.

2619 WOODLEY PLACE,
Washington, D. C., June 16, 1913.

MY DEAR DOCTOR: If you have ever visited a sugar plantation and happened to find an intelligence in charge of the vacuum pans, you probably learned that the man through whom this great invention came could not himself start it running until the steel of a fresh mind struck the last divine spark from his own.

While history may not look upon you as an originator exactly, you are certain to be regarded hereafter as the great adapter—the one modern who best attempted to turn the errors of the world to the good of the people—so, if but a hint be required to start China's boilers going, let me hope to do for you what the other layman did for the inventor.

I refer to the financial troubles of your country.

In throwing off the Manchu yoke the withdrawal of labor from its accustomed pursuits has disturbed the former economic level, involving a loss the equitable settlement whereof necessitates a redistribution of goods to effect which you are confronted with the need of making a sudden and extraordinary increase in your means for exchange.

You are being urged to use gold for this purpose, and the Governments of the western world have done their best to constrain your acceptance of a nominal \$300,000,000 from the private individuals who have grown fat upon and still finance them—the security for the loan to be your country and the price the bondage of your people.

To the everlasting honor of a Chinaman be it said you are the first statesman to balk at selling a people into slavery. The matter at issue is the settlement for and proper distribution of a loss, and you refuse to prostitute yourself by calling in as doctors those who live on losses.

The attitude of the Governments of the western world, which have ever betrayed their own peoples and would now serve as procurers, reminds one of the broken elephants which are used to ensnare those still free.

But you must pay the troops, you say, and settle the trumped claims despoilers would force upon you. Agreed: This can not be done severally by the people hence they depute you to do it for them collectively, requiring you to meet the other expenses of government as well.

But the troops are not asking you for gold—they have no surplus to exchange for gold. You are dealing with a loss which no one will take from you, but which must be settled by equitable distribution among yourselves. What you need is a means for distribution, a means for exchange, a means whereby you may take part of his goods away from him who did not fight to give to him who did.

Three hundred million dollars, even supposing that you really got them, might not be means enough. You may now need or be about to require more. Perhaps those who are trying to hold you up to "finance" you know this, but intend, once they have you in their power, that you shall go to them hereafter and beg for the balance necessary, when even more onerous terms will be imposed upon you.

What, with England drugging, Russia robbing, and the other powers of darkness hovering over you, it takes a mind as keen and a heart as stout as Christ's to do for the people; but as your's would seem such, why not show these gentlemen that you're no "piker" by starting "the game" yourself for \$500,000,000? I would not allow them to do even the engraving—they might alter the text.

I will not call you a "patriot"—none of the name ever had a brain sufficiently balanced to do the race any good—but assuming you to be what was once known as a "just" man, the absence of graft for yourself and your friends obviates all need of "discount"—the bonds convenient for the issuance of the currency can be sold at par.

And indeed they are worth par, for there is no finer "investment" anywhere than the 4 percents of an intelligent, hard-working, frugal, and ethically honest people, whose natural resources are barely scratched, whose national debt at the end of 1912 (Britannica Year Book) was only \$960,215,690, or less than \$3 per head for her 325,527,830 people, and who are about to establish a truly national government.

Draw a check on yourself and buy in the whole five hundred millions. No nation ever made an investment of such transcendent importance.

Being now the possessor of prime Government bonds, undepreciated by thievery of any kind, you will use them as collateral for the issue of \$500,000,000 in notes, of the denominations most useful to your people, taking very great care to make them full legal tender, so as to insure their currency, and not forgetting to first use them to take up your check, which should be immediately canceled, framed, and hung in the Treasury Department as a souvenir.

You will now proceed to pay the troops and other extraordinary expenses and thus restore the economic equilibrium which their forced departure from the paths of peace had temporarily disturbed.

You will thus have partitioned and properly distributed a loss. No one can do more, for a loss of this kind can never be made good.

You will next proceed with the foreign "claims," some partially just and others wholly fraudulent, but all of which you must settle in order to avoid the attentions of Governments whose intentions toward you are even more base than those of their subjects.

Here you are confronted with another kind of loss, largely imaginary with them but wholly real to you, which also must be distributed en toto among your own people, but which, alas, can not be settled so readily. These claimants, though living off your country, far from recognizing any obligation incurred thereby, are intent upon seizing the opportunity to mulct you for their private gain, nor are they likely under present conditions to await settlement. They demand payment at once and insist upon gold. As you have no gold, you must buy this much from the money lenders on any terms you can, thus increasing your foreign debt.

Now, at the end of 25 years the surtax you will have had to impose upon your people to meet the 4 per cent interest on the bonds you have been wise enough to buy yourself will have accumulated in sum sufficient to retire the paper money, and with this the bonds; but by this time you will have found out that this paper money is quite indispensable as a means for exchange.

When this time comes it will be easy for you, the eastern mind being more penetrating than the western, to give a most suggestive lesson by destroying the bonds, the purely imaginary necessity for which has been the reason for the 500,000,000 surtax, and asking your people what disposition they wish made of this useless hoard—whether they wish to take it themselves in exchange for the paper money of which the bonds were the superfluous symbol; whether, having found this paper money quite suitable for their own uses, they care to buy back from the foreigner the surplus products they have so sweated themselves to produce and send him in exchange for this gold; or whether they had not best apply it to the reduction by one-half of their foreign debt, in the hope of altogether eradicating this cancer in the course of another generation?

For, I repeat, you have been trying to make good a loss of a kind which can not be made good, and have only succeeded in speeding up your people, the result of which is a "surplus," which is unreal in that it has been obtained at the cost of the land and of the vitality of your people.

But it would be too great good fortune to thus easily distribute your own losses and pay debts and unjust claims at the cost of the vitality of one or two generations only. There would be nothing "modern" in this—this would be "futurist." No; you would not be allowed so to do. The fleets of the powers, which the financiers use as if they were their own, would be sent to close your ports at once. You would be cut up into "spheres of influence"—evil influence.

No! While these gentlemen are still able to play the forces of all "the powers" against the peoples, prudence demands that you should pretend to be asleep while they burglarize your house. So take the gold they would force upon you, but do not spend it. Remember that it is not yours to spend. It has only been "lent" you, and they pretend to expect you to return it.

Remember that gold is a tool only—to be used, but never lost—and that the only way to do this is to follow the example of its craftsmen.

After signing for three hundred millions in gold, take what they may actually let you have thereof, put it in your Treasury and keep it there, issuing against it note money to the full, and credit money in any amount you like, up to ten times its full amount or more, maintaining the parity fiction just as the bankers do.

Place a surtax on your people to meet the charge for the use of that for which you have no use, and when they get tired of paying tribute, and have prepared to and feel strong enough to resist the oppressors, pull the musty gold out of your strong box, add thereto the portion you signed for but did not get, and—send it back to them.

HENRY CLIFFORD STUART.

Mr. BULKLEY. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7838) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and had come to no resolution thereon.

DEATH OF REPRESENTATIVE TIMOTHY D. SULLIVAN.

Mr. GITTINS. Mr. Speaker, it becomes my sad duty to announce to the House the death of the Hon. TIMOTHY D. SULLIVAN, late a Representative from the thirteenth district of New York. I will not at this time, but I shall at some future time, ask the House to set apart a day when respect may be paid to his memory. I offer the following resolutions.

The Clerk read as follows:

House resolution 253.

Resolved, That the House has heard with profound sorrow of the death of Hon. TIMOTHY D. SULLIVAN, a Representative from the State of New York.

Resolved, That a committee of 20 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expense in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The resolutions were agreed to.

The SPEAKER announced the following committee:

Mr. FITZGERALD, Mr. WILSON of New York, Mr. MAHER, Mr. RIORDAN, Mr. GOLDFOGLE, Mr. LEVY, Mr. CONRY, Mr. PATTEN of New York, Mr. GEORGE, Mr. GOULDEN, Mr. TALCOTT of New York, Mr. GITTINS, Mr. KINKEAD of New Jersey, Mr. PAYNE, Mr. CALDER, Mr. FAIRCHILD, Mr. DANFORTH, Mr. PLATT, Mr. PARKER, and Mr. CHANDLER of New York.

Mr. GITTINS. Mr. Speaker, I now offer the further resolution which I send to the desk.

The Clerk read as follows:

Resolved, That as a further mark of respect the House do now adjourn.

ADJOURNMENT.

The resolution was agreed to; accordingly (at 9 o'clock and 42 minutes p. m.) the House adjourned until Monday, September 15, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination and survey for a lock in the proposed dam at the foot of Caddo Lake, La. and Tex., and a channel from said dam to the Red River by way of Big Pass, Little Pass, Soda Lake, Twelvemile Bayou, and Cross Bayou (H. Doc. No. 236); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of harbors and rivers at or near Chicago, Ill., including Chicago Harbor, Chicago River, Calumet Harbor, Grand Calumet and Little Calumet Rivers, Ill. and Ind., Lake Calumet and necessary connection with Calumet River, and the lake shore from the mouth of Chicago River to the city of Gary, Ind., for the purpose of reporting a plan for a complete, systematic, and broad improvement of harbor facilities for Chicago and adjacent territory (H. Doc. No. 237); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. DEITRICK: A bill (H. R. 8131) for the acquisition of a site and the erection thereon of a public building at Wakefield, Mass.; to the Committee on Public Buildings and Grounds.

By Mr. PROUTY: A bill (H. R. 8132) for the acquisition of a site and the erection thereon of a post-office building at Pella, State of Iowa; to the Committee on Public Buildings and Grounds.

By Mr. WILLIS: A bill (H. R. 8133) to regulate the installation and type of scales to be used by carriers engaged in interstate commerce and to provide rules governing the weighing of freight; to the Committee on Interstate and Foreign Commerce.

By Mr. GOODWIN of Arkansas: A bill (H. R. 8142) to authorize the construction, maintenance, and operation of a bridge across the Bayou Bartholomew at or near Wilmot, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. KENT: A bill (H. R. 8143) authorizing the Secretary of War to donate to the town of Santa Rosa, Cal., two cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. KINDEL: Resolution (H. Res. 252) to investigate the alleged dissolution of the Union Pacific-Southern Pacific Railroad merger and other matters; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FOSTER: A bill (H. R. 8134) granting an increase of pension to William B. Thurman; to the Committee on Pensions.

By Mr. GRAHAM of Pennsylvania: A bill (H. R. 8135) granting a pension to Delia White; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8136) granting a pension to Carrie Crane; to the Committee on Pensions.

By Mr. HENSLEY: A bill (H. R. 8137) granting a pension to Jane Johnson; to the Committee on Invalid Pensions.

By Mr. PALMER: A bill (H. R. 8138) granting a pension to George S. Frankenfield; to the Committee on Pensions.

By Mr. TAGGART: A bill (H. R. 8139) granting an increase of pension to James M. Brown; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8140) granting an increase of pension to Mary A. Holland; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8141) granting an increase of pension to Clem B. I. Ambler; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. LEVY: Petition of the Tompkins-Kiel Marble Co., New York, N. Y., protesting against the proposed increase of rate on drawback of marble for export; to the Committee on Ways and Means.

Also, petition of Sample & Co., L. Samuels & Co., Dryfoos, Blum & Co., the Cartwright Co., and E. Eising & Co., of New York, N. Y., protesting against the passage of legislation providing for a payment of 25 cents for rectifiers and wholesale dealers' stamps; to the Committee on Ways and Means.

By Mr. LINDQUIST: Petition of sundry business men of the eleventh congressional district of Michigan, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Interstate and Foreign Commerce.

SENATE.

MONDAY, September 15, 1913.

The Senate met at 12 o'clock m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

NAMING A PRESIDING OFFICER.

The Secretary (James M. Baker) read the following letter:

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. F. M. SIMMONS, a Senator from the State of North Carolina, to perform the duties of the Chair during my absence.

JAMES P. CLARKE,
President pro tempore.

Mr. SIMMONS thereupon took the chair as Presiding Officer and directed the Journal of the proceedings of the preceding session to be read.

The Journal of the proceedings of Thursday last was read and approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a joint resolution (H. J. Res. 130) to provide for the relief and transportation of destitute American citizens in Mexico, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Acting President pro tempore:

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement; and

H. R. 7595. An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors.

PETITIONS.

Mr. THORNTON. On behalf of certain citizens of Colfax, La., I desire to present a petition of the National Woman's Christian Temperance Union, requesting the passage of the Sims amendment to the bill (H. R. 27876) providing that it shall be a condition precedent to the payment of any and all appropriations in this act that the Panama Exposition Co. shall contract with the Secretary of the Treasury to keep the gates of this exposition closed on Sundays during the entire period of the exposition. I move that the petition be referred to the Committee on Industrial Expositions.

The motion was agreed to.

Mr. JONES. I have here a telegram from the manager of the transportation bureau of the Seattle Chamber of Commerce protesting on behalf of the shippers of the country against the

abolishment of the Commerce Court, and asking that provision may be made giving to the shippers a right of appeal from the orders of the Interstate Commerce Commission. I ask that the telegram may be printed in the Record and referred to the Committee on Appropriations.

There being no objection, the telegram was referred to the Committee on Appropriations and ordered to be printed in the Record, as follows:

SEATTLE, WASH., September 11, 1913.

W. L. JONES, Washington, D. C.:

Transportation bureau believes it represents the opinion of vast majority of shippers all over country in urging you to work for retention of Commerce Court, also for obtaining provision for right of appeal by shippers from commission's orders. Am to-day wiring chairman Senate Appropriations Committee. Ask your active assistance.

W. A. MEARS, Manager.

Mr. POINDEXTER presented a petition of the Central Labor Council of Seattle, Wash., praying for the enactment of legislation for the relief of settlers on unsurveyed railroad lands, which was referred to the Committee on Public Lands.

He also presented resolutions adopted by the Washington Bankers' Association at the eighteenth annual convention, held at Bellingham, Wash., August 9, 1913, indorsing the efforts of the National One-Cent Letter-Postage Association to secure reduction in rates on first-class letter postage, which were referred to the Committee on Post Offices and Post Roads.

Mr. PERKINS presented a petition of the San Mateo County Development Association, of California, praying for the enactment of legislation providing for the strengthening of the Pacific coast naval defense, which was referred to the Committee on Naval Affairs.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THORNTON (for Mr. BANKHEAD):

A bill (S. 3113) to provide for the construction, maintenance, and improvement of post roads and rural delivery routes through the cooperation and joint action of the National Government and the several States in which such post roads or rural delivery routes may be established; to the Committee on Post Offices and Post Roads.

By Mr. ASHURST:

A bill (S. 3114) granting an increase of pension to John W. Lively (with accompanying papers); to the Committee on Pensions.

By Mr. JONES:

A bill (S. 3115) granting an increase of pension to Olive H. Bowen; to the Committee on Pensions.

(By request.) A bill (S. 3116) authorizing the Secretary of the Treasury to receive certain individual deposits of lawful money from persons other than national banking associations, providing for reimbursement of the same, and to receive certain deposits of lawful money from any person in exchange for deposit bonds of the United States, providing for the redemption of the same, and for other purposes;

(By request.) A bill (S. 3117) to provide for the establishment of Federal reserve banks, for furnishing an adequate currency, and to establish a more effective supervision of banking in the United States, and for other purposes; and

(By request.) A bill (S. 3118) whereby the National Government assumes control over all associations that receive lawful money on credit deposit and which specifies where all deposit reserves of national banking associations shall be kept, and for other purposes; to the Committee on Banking and Currency.

By Mr. POINDEXTER:

A bill (S. 3119) to provide for the erection of a public building in the city of Port Angeles, in the State of Washington; to the Committee on Public Buildings and Grounds.

By Mr. O'GORMAN:

A bill (S. 3120) for the erection of a replica of John Quincy Adams Ward's statue of Washington; to the Committee on the Library.

By Mr. JONES:

A joint resolution (S. J. Res. 69) authorizing the Secretary of War to make donation of condemned cannon and cannon balls; to the Committee on Military Affairs.

By Mr. O'GORMAN:

A joint resolution (S. J. Res. 70) authorizing the presentation of the statue of President Washington now located in the Capitol Grounds to the Smithsonian Institution; to the Committee on the Library.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. THORNTON (for Mr. BANKHEAD) submitted an amendment proposing that the sum of \$150,000 of the unexpended bal-

ance of the appropriation heretofore made for the improvement of the Tennessee River be made available for the improvement of the Tennessee River between Florence and Riverton, Ala., etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. SHEPPARD submitted an amendment proposing that the appropriation of \$40,000 and the appropriation of \$25,000 for the enlargement, extension, remodeling, or improvement of the appraisers' stores building at Galveston, Tex., be reappropriated and made available for carrying into effect so much of the revised authorization contained in section 1 of the act of Congress approved March 4, 1913, etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. Latta, executive clerk, announced that the President had, on September 11, 1913, approved and signed the following joint resolution:

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

RELIEF OF DESTITUTE AMERICANS IN MEXICO.

Mr. CHAMBERLAIN. I ask that the joint resolution which has just come from the House be laid before the Senate.

The joint resolution (H. J. Res. 130) to provide for the relief and transportation of destitute American citizens in Mexico was read the first time by its title.

Mr. CHAMBERLAIN. I ask unanimous consent for the present consideration of the joint resolution.

Mr. NORRIS. Let us have the joint resolution read.

The PRESIDING OFFICER. The Secretary will read the joint resolution at length.

The joint resolution was read the second time at length, as follows:

Resolved, etc., That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for relief of destitute American citizens in Mexico, including transportation to their homes in the United States, to be expended under the direction and within the discretion of the Secretary of State, and to be immediately available, \$100,000. Authority is hereby granted to the Secretary of State to reimburse from this appropriation the appropriation for "Emergencies arising in the Diplomatic and Consular Service," for such sums as shall have been expended from that appropriation for purposes of relief and transportation in and from Mexico since January 1, 1913.

Mr. CHAMBERLAIN. In connection with the joint resolution, which has passed the House and for the consideration of which I ask unanimous consent, I desire to submit a communication addressed to the chairman of the Committee on Appropriations by the Secretary of State, Mr. Bryan.

The PRESIDING OFFICER. Does the Senator from Oregon desire to have the communication read?

Mr. CHAMBERLAIN. I desire to have the Secretary read it.

The PRESIDING OFFICER. The Secretary will read it.

The Secretary read as follows:

DEPARTMENT OF STATE,
Washington, D. C., September 12, 1913.

The Hon. THOMAS S. MARTIN,
Chairman of the Committee on Appropriations,
United States Senate.

MY DEAR SENATOR MARTIN: At the time the department's recommendations to Congress were made for an appropriation for the relief of Americans in Mexico, and even as late as the time when the deficiency bill containing the proposed appropriation was reported to the House, it was believed that the appropriation for emergencies arising in the Diplomatic and Consular Service would be sufficient to cover the expenses of extending relief to Americans in Mexico and transporting them to their homes in the United States until the deficiency bill had become law. Contrary to expectations the expenditures have increased more rapidly than was anticipated, until the department now finds itself with less than \$12,000 available and a daily expenditure for relief and transportation approximating \$2,000. In view of the fact that the deficiency bill is still pending in the Committee on Appropriations of the Senate, and will not become law before the available appropriations have been exhausted, it is essential that there should be placed at the department's disposal at once a sufficient sum to enable it to carry on the work of relief and prevent the hardship and dissatisfaction which a discontinuance of that work would entail. Besides the obligation resting upon this Government under existing conditions of affording a safe and speedy means by which Americans may leave Mexico and reach their homes in the United States, there are political reasons which render it of the highest importance that the work which is being carried on should not be brought to a sudden stop.

The amount already expended from the emergency appropriation since January 1, 1913, for the relief and transportation of Americans in and from Mexico is at the present moment approximately \$52,788.29. Nearly all of this amount has been expended since March 4, 1913. It is highly important that the emergency fund be reimbursed by the amount so expended in order that the department may be in a position to meet other demands upon it during the remainder of the fiscal year.

If the proposed appropriation shall be made there will be left for purposes of relief and transportation after the reimbursement of the emergency fund only approximately \$47,211.71, which will probably be inadequate for the purpose for which it is intended. It is therefore suggested that all or at least half of the appropriation proposed to be made in the deficiency bill be retained in that measure and be placed at the disposition of the Secretary of State, in case he should be called upon to afford relief and transportation to an amount in excess of that appropriated by the appended resolution.

Very sincerely, yours,

W. J. BRYAN.

Mr. CHAMBERLAIN. Mr. President, it will be seen from the reading of the communication that the department is expending at the rate of about \$2,600 a day for the repatriation of American citizens in Mexico. It is true there has been an appropriation included in the general deficiency bill of \$100,000 for this purpose, and that that bill has passed the House and is now pending before the Committee on Appropriations of the Senate. In the very nature of things it will be some time before the committee of the Senate can take that measure up for consideration. In the meantime there will practically be no money for the purposes designated in the joint resolution. If it is referred to the committee it will take some time for the committee to reach it. It is doubtful if there is a quorum of the Committee on Appropriations in the city. The matter is so urgent that I request that the Senate may give the joint resolution immediate consideration.

Mr. GALLINGER. Mr. President, under ordinary conditions I would insist that a joint resolution of this kind should go to the committee, but, as the Senator from Oregon has correctly stated, there is, perhaps, not a quorum of the committee in the city at the present time; the chairman is absent, and in view of the urgency in the matter I trust that the request of the Senator will be complied with.

Mr. SHAFROTH. Mr. President, I am a member of the Committee on Appropriations to which the joint resolution would be referred, and I will state that I do not believe there are enough members of the committee in town to constitute a quorum, but all the members of the committee with whom I have talked are heartily in favor of passing this measure; and, inasmuch as it is an emergency measure, it seems to me that it ought to be passed without a reference to the committee.

Mr. BRISTOW. Mr. President, I do not intend to offer any objection to the passage of the joint resolution and the appropriation of this money, but I feel that I should say that the policy which is being pursued by the administration in trying to induce our citizens to leave Mexico and abandon their property I think is very unfortunate. I have had letters from Mexico since that warning was promulgated, and I have talked with acquaintances of mine who have left Mexico, and they, men of reliability and high standing, tell me that it has made the lot of our people in Mexico very much harder than it was before the warning was promulgated, and they deeply regret that a policy has been adopted which makes the conditions there more embarrassing to them than they were before the policy was announced.

But, of course, the withholding of an appropriation to relieve the distress which exists would not remedy in any way the mistakes that have been made, and for that reason I offer no objection to the joint resolution.

Mr. JONES. Mr. President, without expressing any opinion with reference to the necessity of this appropriation, I desire to say as a member of the Committee on Appropriations that I think the joint resolution ought to be passed, and passed to-day.

Mr. NORRIS. Mr. President, I have no objection to the joint resolution whatever; I am in favor of its passage; but there is one provision in it that I should like to have some member of the committee explain, and that is the necessity of using out of this fund money to reimburse the expenditure that has heretofore been made out of a different fund. What is the necessity of that?

Mr. CHAMBERLAIN. I understand that that is a standing appropriation for emergencies, and it has been called into requisition for these purposes. I suppose the object is to keep that fund intact.

Mr. NORRIS. There are \$12,000 left in the fund.

Mr. CHAMBERLAIN. There are \$12,000 left in the fund.

Mr. NORRIS. The deficiency appropriation bill, it seems to me, would be the place to reimburse that fund. It might endanger the purposes of this joint resolution if so much money, about \$47,000, I understand, of the \$100,000, were to be used for that purpose. It might endanger the very object of the joint resolution in not leaving a sufficient amount to meet the exigencies of the case.

Mr. CHAMBERLAIN. In all human probability all of this appropriation of \$100,000 will be necessary for immediate use, and it will not be available for the purpose of reimbursing the fund that has been used.

Mr. NORRIS. I did not understand the Senator.

Mr. CHAMBERLAIN. I say it is barely possible that every dollar of the fund that is now appropriated under the joint resolution will be immediately used, and in the meantime when the deficiency appropriation bill comes up for consideration it may not be necessary to add to the appropriation in the deficiency appropriation bill.

Mr. NORRIS. As I understand the joint resolution, from hearing it read, it will be necessary for that fund to be reimbursed out of this appropriation of \$100,000. Of course they could use it again out of that fund if it became necessary. So to me there does not appear to be any necessity for the provision. That fund ought to be reimbursed out of the regular deficiency appropriation bill, as suggested to me by the Senator from Minnesota [Mr. CLAPP].

Mr. CHAMBERLAIN. It might be done either way. It is a matter that is in the discretion of the Senate.

Mr. CLAPP. I think it is confusing the whole thing to make provision in this joint resolution for a reimbursement which is a proper function of the deficiency appropriation bill when we reach it.

Mr. CHAMBERLAIN. I do not think that is the purpose of it. The letter of the Secretary of State is explicit and tells just exactly the purpose for which this appropriation is sought. We have to be governed by his suggestion in the matter. If the Senator from Minnesota heard his letter read he should understand exactly what is the purpose of the appropriation.

Mr. CLAPP. I heard his letter read and I am not going to object to the joint resolution, but it does seem to me that there would be less confusion if we made this appropriation direct and left any deficiency to be treated in the regular deficiency appropriation bill. However I am not going to object.

Mr. CHAMBERLAIN. If the Senator is not going to object there is no need to discuss it further.

The PRESIDING OFFICER (Mr. FLETCHER in the chair). Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE BEET-SUGAR INDUSTRY AND THE TARIFF.

Mr. THOMAS. Mr. President, during the course of the Underwood bill through the Senate I abstained almost entirely from a discussion of its various features. I believed that the progress of the bill would be retarded to the extent of the time which I might occupy and that there would be no change of sentiment in the mind of any Senator because of anything which I or anyone else might say concerning it. Believing a week ago to-night that a final vote was soon to be reached, I gave notice that I would to-day consider Schedule E of the bill in its relation to the beet-sugar industry, and although at the time I anticipated that there would be but a slender attendance upon the floor, I felt that my remarks then submitted would not interfere with the due progress of the measure in the committee of conference.

Mr. President, I do not think that any measure of so comprehensive a character as a national tariff bill can be so adjusted or framed as to command the unqualified support of all the members of a body so large as this. There are so many local as well as general conflicting considerations, so many points of view to which the mind is drawn, and so many interests in conflict with each other, that men must harmonize, and can harmonize only, by the common surrender of some things, accompanied by the common acceptance of others. Hence the bill which is now in conference, like all others of similar character, represents the composite acquiescence of the majority of the Senators in this body. We have supported it, and intend to support it, because it is a measure demanded by the people, a measure promised by the dominant party, and a measure the consensus of which is fairly satisfactory to every man upon this side of the Chamber.

If I had my way, Mr. President, I would make many commodities which have been placed upon the free list the subject of a revenue tax, not because they need protection, not because of a desire to extend that system any further than the policies or principles of the Democratic Party demand, but because I believe in the principle of a tariff for revenue. I believed during the course of the bill, as I believe now, that a small revenue duty upon such a commodity as sugar places no particular burden upon the consumer and brings a revenue to the Government, enabling it to meet its demands with as little burden as possible to the citizen. But there is no question in my mind that the great majority of the people throughout the country desire that this commodity, with some others, shall be placed upon the free

list and thereby withdrawn from the arena of politics, where for many years they have played a prominent and scandalous part, exercised an improper and pernicious influence upon public opinion, and brought the good name of Congress and of many men in public life into disrepute.

And I may say here if this great piece of legislation has gone to an extreme in the application of the policy of revision downward to the protected interests of this country; if, in fact, any industry has been jeopardized, which I do not concede, it is due to the fact that the extremes of protection have heretofore found expression in legislation; and the men who legislated the Payne-Aldrich bill upon the statute books of the country are more responsible than we are for any extreme we may have reached in the other direction, for it goes without saying that when the pendulum swings too far in one direction it may swing too far in the opposite one. An outraged public opinion due to the enactment of the Payne-Aldrich law produced that revulsion which, if it has found too extreme expression, has its justification in the scandalous abuse of the power of taxation by the then dominant party in the interest of the protected industries of the Nation.

Mr. President, I shall not occupy the time of the Senate by indulging in many general observations upon the question of tariff legislation. These have been the subject of much discussion during the past three months with but little benefit to us or to the country at large. I prefer, without further delay, to consider the particular subject of Schedule E and the relation of that schedule to the sugar-beet industry for the purpose of correcting, if I can, some of the erroneous statements and assertions which have been so often repeated upon this floor in connection with that important topic.

I have listened to a number of very able discussions of the effect of Schedule E upon the sugar industry of this country and to the reasons which have been assigned for the conclusions pressed upon public attention by Senators upon the other side of the Chamber. I have not interrupted, because I have felt that interruptions would only prolong and aggravate discussion, without leading to any definite or satisfactory result. I have felt that it would be better to take up these matters at a more appropriate time, consider them together, examine their character, and determine their soundness. I believe, Mr. President, that when I have finished I will have demonstrated to the satisfaction of the country that much of the argument which has formed the basis of opposition to this schedule, in so far as it relates to beet sugar, is unfounded, and proceeds from assumptions which, when examined, have no existence in fact.

Perhaps the statement which has been iterated and reiterated upon the floor of this Chamber more than any other by the op-

ponents of this schedule is that the American Sugar Refining Co., with other cane-sugar refining concerns, have combined for the destruction of the beet-sugar industry in this country by the removal of existing duties, and that any injury to that industry must necessarily redound to the benefit and advantage of the cane-sugar refiners of the country. We have been told many times that these people were enlisted, and had for years been enlisted, in a crusade against the sugar-beet industry, recognizing in it a formidable competitor and one which must ultimately control the American market, and therefore, for their own protection, this industry must be destroyed through the elimination of all tariff duties which protect and promote it. That the conspiracy, if successful, would result transiently in a reduction of price to the consumer, but ultimately in a cane-sugar monopoly having the American market entirely at its mercy and certain of thorough and continued exploitation.

This assertion has been so frequently made and repeated that it would be remarkable if it has not found lodgment somewhere and accepted in some quarters as an unquestioned fact.

I assert, Mr. President, that the interests of the American Sugar Refining Co. and of the beet-sugar refining companies are mutual and not competitive; that they are practically identical, and have been so ever since 1902, and that they will continue to be so until and unless the Government of the United States, through the courts of justice, dissolves the relation existing between them. Hence the assertion that the refiners are seeking to insidiously destroy the beet-sugar industry through a removal of sugar duties is simply pretense and nothing more. The Hardwick committee, Mr. President, was in session for a good portion of the Sixty-second Congress. It was charged with the duty of thoroughly investigating the question whether a Sugar Trust existed in the United States. It took an enormous amount of testimony with reference to the sugar industry in this country. It summoned witnesses from every section and heard both sides of the controversy. On February 17, 1912, it made its report wherein the control of the beet-sugar industry by the American Sugar Refining Co. was established beyond peradventure.

On pages 12 and 13 of that report appear tables which give the proportions of interest acquired by the refining company with leading beet-sugar companies, which I ask leave to here incorporate in the RECORD.

The PRESIDING OFFICER (Mr. FLETCHER in the chair). In the absence of objection, permission is granted.

The matter referred to is as follows:

From 1909 to the present time the situation has not been greatly altered, as will be observed from the following tables furnished your committee by the American under date of October 11, 1911:

American Sugar Refining Co.

Names of companies.	Beet-sugar investments.				Book value of present holdings, Oct. 1, 1911, after depreciation for sales and dividends.		
	Par value.	Original cost.	Common shares.	Preferred shares.	Common shares.	Preferred shares.	Total book value.
Michigan Sugar Co.	100	\$3,547,895.43	30,555	20,438	21,074	20,438	\$2,428,958.21

Mr. THOMAS. I shall not take up the time of the Senate in reading this report. Suffice it to say that from all the testimony offered before this committee by both sides it appears that in 1911 the beet companies in which the American Sugar Refining Co. is so largely interested produced about 54 per cent of all the beet sugar in the United States, while the interest of the refining company in these companies was about 41 per cent. As a result of that hearing—

Mr. NEWLANDS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nevada?

Mr. THOMAS. Certainly.

Mr. NEWLANDS. Will the Senator permit me to inquire how large an interest the American Sugar Refining Co. had in the beet-sugar companies to which he refers?

Mr. THOMAS. The tables to which I have referred give that interest seriatim. It approximates 42 per cent of the whole; but in conjunction with that interest were the individual and corporate interests of others acting with the American Sugar Refining Co. and so identified with it as to make its control complete.

Mr. NEWLANDS. I will ask the Senator whether he does not think that this explanation is the probable one of the effort of the American Sugar Refining Co. to obtain a large interest in the beet-sugar company to which he refers? It was a fact at that time that the duty on sugar was a high one, a protective duty. The American Sugar Refining Co. found the beet-sugar industry a formidable rival, and it sought a large interest in the beet-sugar companies with a view ultimately of controlling that industry and depriving it of its competitive character; but was it not clearly to the interest of the American Sugar

Refining Co., and is it not clearly to the interest of that company to-day, if possible, to dispose most effectually of that competitor by practically putting it out of business and preventing and discouraging the production of beets at all? Was not the effort to get an interest in the beet-sugar business simply the best available effort it could make under the circumstances, this high duty existing to control—not to destroy, but to control—the competition of a formidable rival, and is not its present policy in the line of effectually destroying that competitor by taking away the customs duty which incidentally operates for its protection?

Mr. THOMAS. Mr. President, I prefer to reply to my friend from Nevada as I proceed. I think I shall be able to demonstrate, in the course of my remarks, that the action of the American Sugar Refining Co. was precisely the action of every other interest which sees and fears the rise of a competitor. It reached out and obtained control and possession of it, since which time it has operated the controlled concern entirely in its own interest and perhaps in the interest of the other co-operating stockholders. It has certainly given no indication of a purpose to destroy the industry in which it invested \$23,000,000 and from which it is deriving huge returns.

I was about to say that one result of the Hardwick investigation was the institution by the United States of a suit in the District Court for the Southern District of New York for the dissolution of what is popularly called the Sugar Trust. I hold in my hand the bill of complaint in that case, consisting of 217 pages. Its allegations are all in line with the charge that the various defendants, representing practically all of the sugar industries of the country—cane sugar, beet sugar, and so forth—were united in a common and controlled enterprise in violation

of the provisions of the celebrated Sherman Act. I shall not refer to this formidable document further than to place in the RECORD the names of the defendants. These are:

The American Sugar Refining Co., Washington B. Thomas, Arthur Donner, George H. Frazier, Horace Havemeyer, Henry E. Niese, Henry C. Mott, Samuel C. Hooker, Samuel Carr, Edwin S. Marston, Edwin F. Atkins, Charles H. Allen, Joseph E. Freeman, the American Sugar Refining Co. of New York, the Franklin Sugar Refining Co., William W. Harrison, William W. Frazier, jr., Spreckels Sugar Refining Co., Western Sugar Refining Co., John D. Spreckels, Adolph B. Spreckels, Alexander F. Morrison, William H. Hannam, John D. Spreckels, jr., California Sugar Refinery, the National Sugar Refining Co. of New Jersey, James H. Post, Thomas A. Howell, Frederick H. Howell, Frederick D. Mollenhauer, George R. Bunker, Henry F. Mollenhauer, J. Henry Dick, Nathaniel Tooker, National Sugar Refining Co., the New York Sugar Refining Co., Mollenhauer Sugar Refining Co., the W. J. McCahan Sugar Refining Co., the Cuban-American Sugar Co., Robert B. Hawley, Colonial Sugars Co., Alameda Sugar Co., John L. Howard, Union Sugar Co., Spreckels Sugar Co., Utah-Idaho Sugar Co., Joseph F. Smith, Thomas R. Cutler, Amalgamated Sugar Co., David Eccles, Lewiston Sugar Co., the Great Western Sugar Co., Chester S. Morey, the Sterling Sugar Co., the Morgan County Construction Co., the Billings Sugar Co., Scottsbluff Sugar Co., Michigan Sugar Co., Charles B. Warren, Iowa Sugar Co., Carver County Sugar Co., the Continental Sugar Co., Menominee River Sugar Co., and Horace Havemeyer, Louisine W. Havemeyer, Adaline H. Frelinghuysen, and Electra H. Webb, individually and as executors of and trustees under the will of Henry O. Havemeyer, deceased.

It will be seen from this list that practically all of the sugar refiners and all of the individuals engaged in the refining industry are combined here as common defendants in a suit brought by the Government of the United States for alleged violation of the antitrust act.

That suit is still pending, undetermined; but between the time of its institution and the opening of this special session the Government had taken 2,346 closely printed pages of testimony, every line of which substantiates the existence of an identity of interest, complete and absolute, except in so far as the power of the Government to destroy it is concerned between the most of the beet-sugar and cane-sugar refineries of the country.

Let me go back for a moment to the commencement of the beet-sugar industry in America, or, rather, to the time when it had acquired a successful standing and bade fair to become a commercial rival of the American Sugar Refining Co. This was in 1902, about which time Mr. Havemeyer, as the representative in control of the American Sugar Refining Co., determined either to crush or to control that industry; and he at once proceeded, in characteristic fashion, to do so.

The American Sugar Refining Co. authorized an additional issue of \$25,000,000 of stock. It was sold practically for cash. At the same time vast quantities of cane sugar were rushed from the seaboard into the interior at discriminative rates to the company. This sugar was stored in the freight houses of the railway companies in great centers like Kansas City, Omaha, and other places where beet sugar was obtaining a foothold. After the arrival of these great consignments the price of sugar was lowered to the extent of 1½ cents per pound and dumped on the market in competition with the sugar of the beet men. The result was, as a matter of course, to demoralize and disorganize the beet-sugar market, and bankruptcy stared in the face what had been a prosperous and profitable industry.

The usual result followed. The master hand, with tremendous capital behind it, forced a compromise upon terms dictated by itself. They involved the control of the beet-sugar industry by the powerful combination which up to that time had existed for years without a rival, and the American Co. proceeded to make the arrangement permanent by securing control of the scattered beet-sugar companies and welding them into large units of enormous capitalization.

Shortly after this time Mr. Havemeyer wrote to Mr. Chester S. Morey, of the city of Denver, a prominent merchant, a man of wealth and of great business ability, a letter which I shall read. This and virtually all the letters which follow have been taken either from the report of the Hardwick committee, from the testimony in the Government case, or from that taken by the Senate lobby committee.

Mr. Havemeyer's letter to Mr. Morey bears date December 18, 1902, and is as follows:

DEAR SIR: It occurred to me to-day that you might probably be willing to assume a confidential relation between me and my associates in reference to a possible purchase of the stocks of the different sugar corporations in your State, perhaps the Lehi Co., and perhaps the companies of which Mr. Eccles is president—

I think these were in Utah and Idaho.

You would have to employ somebody, of course, in your interest and of absolute integrity to keep thoroughly informed of the stocks of these different companies and advise by telegram or letter, as the case might be, of the quantity and the rate.

It might be that you would prefer some participation in such purchases. If so, it would be necessary to state before you assume the relation what percentage, if any, of the purchase you would like, or the option on; no other party whatever to be aware of this relation but yourself.

It is fair to Mr. Morey to say that upon the stand he testified that nothing was done under the provisions of this letter, but shortly afterwards he began to acquire stock in the various companies in his State engaged in the production of beet sugar, for the interest and in the name of Mr. Havemeyer, who was equally active in all the other beet-sugar States. From that time to this, at every step that has been taken either in the enlargement of the beet-sugar industry, in the contraction of the industry, in the disposition of its product, or in the publicity given to its operations, the influence of the American Sugar Refining Co. has been potent; and its president up to the time of his death, Mr. Havemeyer, was consulted upon every possible occasion.

It is hardly necessary to take time to go into detail upon this subject although the testimony is abundant and overwhelming. I shall offer, but not in chronological order, some further correspondence relating to it merely to show how intimate was the relation and how complete the control at all times of the American Sugar Refining Co. of most of the beet-sugar companies.

On May 25, 1909, Mr. Morey wrote to Mr. Washington B. Thomas—who, by the way, was the successor of Mr. Havemeyer in the American Sugar Refining Co.—urging the latter not to come to Colorado while the tariff matter was before Congress. He said:

MAY 25, 1909.

MY DEAR MR. THOMAS: * * * Referring to your proposed visit to Colorado in June: No doubt you will feel that while this tariff matter is before Congress it would not be wise for you to visit Colorado as the information would doubtless be telegraphed all over the country and might be used against us by some of the Senators who are so bitter against the Sugar Trust. However, you understand the situation, and know best what to do.

Respectfully, yours,

C. S. MOREY, General Manager.

MR. W. B. THOMAS,

President, 117 Wall Street, New York City.

Mr. Morey was and is the general manager of the Great Western Sugar Co., of New Jersey, which operates in the Western States, including my own. Is it not remarkable that Mr. Thomas, this vindictive enemy of the beet-sugar industry, anxious to crush it, to destroy it, to undermine it, because of its threatened and its active and actual competition, should be warned not to come to the State of Colorado because his presence there, in view of pending threatened tariff legislation, might be misconstrued? Surely had such been his purpose he would have hastened to Denver and advertised his presence, to the end that it might aid in bringing about that result.

Here is another and later letter written to Mr. Thomas by Mr. Morey, and found on page 1903 of the testimony. This is merely an extract:

DENVER, COLO., March 16, 1911.

MR. W. B. THOMAS,

American Sugar Refining Co., New York, N. Y.

MY DEAR MR. THOMAS: * * * I find they are all very much interested in the meeting of beet-sugar manufacturers which will be held on the 30th of March at Chicago. I think we will have a very full attendance at that meeting, and at that time we hope to organize a beet-sugar association which will take the lead in trying to prevent a reduction in the tariff.

Yours, very truly,

C. S. MOREY, President.

Is it not remarkable that the president of a beet-sugar company should write to the president of the American Sugar Refining Co. informing him that the beet-sugar people were about to effect an association, the purpose of which was to prevent any interference with or change in the existing tariff, if, as a matter of fact, they were opposed to each other and were in deadly conflict, the one seeking to survive and the other seeking to destroy through the agency of tariff legislation?

Mr. Havemeyer has done some writing himself in this connection. His letters show how constant his influence has been exercised upon the western beet-sugar industry. I call attention to a significant little piece of correspondence cropping out in the lobby hearings. I read from page 1267 a letter dated May 1, 1905, written by Mr. Havemeyer to Mr. Morey:

[Personal.]

MAY 1, 1905.

MR. C. S. MOREY, Denver, Colo.

DEAR SIR: I think the wisdom of keeping our affairs to ourselves—"Our affairs," not somebody else's—not antagonistic affairs—is certainly clearly exemplified in Mr. Patterson's publication. If it becomes generally known that the American Co. has a controlling inter-

est in the Colorado factories, I fear Mr. Gove's expedition will be of slight influence.

I therefore recommend that you employ Mr. Gove personally and pay him out of your own money. Let him understand (and if he has gone, write him to that effect) that it is your own personal enterprise. Any disbursement for his account I hereby pledge myself personally liable for.

Yours, truly,

H. O. HAVEMEYER.

The answer is dated May 9, 1905, to Mr. Havemeyer:

[Personal.]

GREAT WESTERN SUGAR CO.,
Denver, Colo., May 9, 1905.

Mr. H. O. HAVEMEYER, New York.

DEAR SIR: * * * Referring to yours of May 1 about Mr. Gove's expedition: Whatever harm can be done has already taken place. I will follow out your instructions about advising him that he is in my personal employ, but when he is placed on the stand in Washington I am afraid the real facts would be brought out.

Respectfully, yours,

C. S. MOREY.

The harm, if any, was mutual. It affected a common interest. Mr. Havemeyer evidently feared that public opinion would frown upon his domination of the beet-sugar industry if the fact were clearly revealed. He preferred secrecy. They all do. The fact that he was fearful of the public thought is the strongest possible evidence of his complete mastery of the sugar world.

I do not wish to weary the Senate nor unnecessarily burden the CONGRESSIONAL RECORD with too many items of documentary evidence upon this subject, but I think it is of the greatest importance that the identification of these two interests with each other should be made as complete as possible in order to expose the hobgoblin which beet sugar has created for the purpose of diverting public sentiment and befooling the country with the notion that there is antagonism between two great, diverse sugar interests upon the subject of the tariff, with one of which the Democratic Party is identified. Hence, I will refer to some additional correspondence relative to the subject as rapidly as possible. I may say that the lobby hearings are prolific in material of this sort; and if that investigation has done nothing else, it has certainly served to expose the unity of ownership and of interest between the cane-sugar and the beet-sugar refineries of the country.

Mr. Morey, on the 19th day of March, 1911, had some correspondence with Mr. Cutler, the general manager of the Utah-Idaho Sugar Co., on the general subject of beet sugar and its connection with the tariff. I read the concluding paragraph of his letter, from page 1372 of the lobby hearings:

In talking with Mr. Horace Havemeyer he expressed himself as very anxious that we should go ahead with this work, even if we have to pay the larger part of the expenses ourselves. The more I learn about the probabilities of what will be done when the next Congress meets the more I feel that we must all be up and doing, and a matter of 1 cent or 2 cents per bag should not be considered one moment if anything can be done to strengthen our position.

Here, again, Mr. Havemeyer expresses himself through his general manager.

Again, on page 1374, Mr. C. C. Hamlin, who was at one time in charge of the lobby here, writes to Mr. Warren, of the Michigan Sugar Co., and, referring to Mr. Truman G. Palmer, says:

Mr. Palmer is now at work on the necessary data. He will take the question up from the standpoint of its being a refiners' propaganda and also from the agricultural end.

Here, Mr. President, is the first intimation in this correspondence of the origin and purpose of this so-called conflict between the cane refiner and the beet refiner:

Mr. Palmer * * * "will take the question up from the standpoint of its being a refiners' propaganda."

Now, let us proceed as rapidly as possible with this correspondence.

On the 17th of November, 1911, Mr. Hamlin wrote to Mr. Clark, who is a large producer of beet sugar in the State of California, a letter which appears at page 1377 of the lobby hearings, giving a list of the companies which are to be represented in the proposed beet-sugar association then forming to resist tariff reduction. I shall not stop to read the list, Mr. President; but they include the names of practically every beet-sugar company controlled by or having a community of interest with the American Sugar Refining Co. In other words, at that date the companies owned and controlled by the American Sugar Refining Co., according to Mr. Hamlin, were uniting with other beet-sugar companies for the common purpose of resisting tariff legislation and contributing to a common fund to defray the expenses of the association. And Senators would have us believe that these interests were in deadly and desperate conflict with each other.

I call attention, at page 1386, to a telegram sent by Mr. Hamlin to Mr. Cutler as late as 1912, March 2. He says:

Get interviews in your local papers bearing upon effect of free sugar on beet-sugar industry, and wherever possible have it carried through

local representatives of Associated Press. The fact that this is a refiners' victory over farmers and manufacturers should be emphasized. Will it be convenient to meet in Washington for executive committee meeting about the middle of March?

C. C. HAMLIN.

On the next page there is a telegram from Mr. Warren to Mr. Hamlin:

DETROIT, MICH., March 7, 1912.

C. C. HAMLIN,

902 Union Trust Building, Washington, D. C.

Have received no call for executive committee meeting. Think it is important that a full committee meeting be held in Washington shortly. We must have more publicity. The public thinks this bill is a blow at the Sugar Trust, and the public must be taught to understand that it is a blow at the domestic industry and a positive benefit to the trust.

CHAS. B. WARREN.

In November of the previous year Mr. Hamlin wrote Mr. Cutler, of Salt Lake City, that it had been suggested at the Chicago meeting that affidavits be secured to show that the American Sugar Refining Co. had recently reduced its holdings and asking if Mr. Cutler could make such a showing as to his company. Mr. Cutler replied that there had been no reductions of these holdings in his company.

At pages 1390 and 1391 are letters from Mr. R. W. Kelley, president of the Holly Sugar Co., I think, of Colorado, to Mr. Hamlin and Mr. Morey upon the same subject. I will not take time to read them, but ask to incorporate them in my remarks.

The PRESIDING OFFICER. Without objection, permission is granted.

The letters referred to are as follows:

[R. W. Kelley, president; Michael Gavin, vice president; J. C. Mitchell, secretary and treasurer; S. W. Sinsheimer, general superintendent; Remsen McGinnis, auditor. Factories: Swink, Colo.; Holly, Colo.; Huntington Beach, Cal.; C. A. Johnson, manager.]

THE HOLLY SUGAR CO.,

26 Beaver Street, New York, February 6, 1912.

C. C. HAMLIN, Esq.,

Union Trust Building, Washington, D. C.

MY DEAR MR. HAMLIN: I desire to do what I can to help you in heading off the movement to reduce the tariff on sugar.

I inclose copy of letter I have just sent to Mr. C. S. Morey.

If you will show me in what direction I may help you in Washington, or how I can ask the gentleman named in the letter to Mr. Morey to direct their endeavors, I shall appreciate it. I hope to be in Washington before the end of the month, and I have some friends in the House and Senate who, I think, have sufficient confidence in me to rely upon my statements, and I may be enabled to enlist their favorable consideration of our position.

While I think it would be better to retain the tariff altogether, it might be advisable to take advantage of the unpopularity of the American Sugar Refining Co. et al., and, if the reduction seems to be inevitable, to move for a reduction in the price on the refined sugar, leaving the tariff on raw sugar where it is, or, at all events, calling for a less reduction in the tariff on raws than on refined. It is not impossible that if the refiners thought we were likely to take a step of this kind they might relax their efforts toward a reduction. This idea has only occurred to me in thinking over the situation, and I have not discussed it with anyone, and simply mention it at the moment for what it is worth.

Will you kindly send me any reports or literature issued by the Government bearing on this subject, sending, if possible, one set to this office and one to our office in the Boston Building at Denver, Colo.

With best regards, believe me, yours, very truly,

R. W. KELLEY, President.

Attached to that by letter fastener, as delivered to the committee, is the following carbon sheet, which appears to have been signed with ink "R. W. Kelley," which is marked "Exhibit Hamlin 33-A," and across the sheet is marked in large letters "Copy," and the carbon is as follows:

HAMLIN CORRESPONDENCE EXHIBIT 33-A.

NEW YORK, February 6, 1912.

C. S. MOREY, Esq.,

President Great Western Sugar Co., Denver, Colo.

DEAR MR. MOREY: While in Chicago Monday I saw Mr. G. G. Nicholson, vice president of the A. T. & S. F. Ry. Co., about enlisting his aid in defeating the attack upon the beet-sugar interests through the tariff. He expressed a willingness to do everything possible to help us, and asked if you could name specific men that they could talk to. It would be advisable, as it was useless to waste efforts in trying to convince men who were already convinced. Messrs. Britton & Gray are their attorneys at Washington, and Mr. Nicholson said that he would advise them to call on Mr. Hamlin or Mr. Palmer.

I also saw Mr. Darius Miller, president of the C., B. & Q. R. R. Co. He has promised to do anything he could if we would advise him in what specific direction he could be useful.

If you or Mr. Hamlin will advise me in this particular, I will take the matter up again with Mr. Miller. Meantime I have no doubt he will, if the occasion offers, speak a good word, but I think it would be better to ask him to do some specific thing if he can.

I have an engagement with Mr. Nichols, vice president of the Great Northern Railway, for to-morrow morning, and will, I am quite sure, enlist his support.

I am sending a copy of this letter to Mr. Hamlin at Washington, asking him to act as pilot in my endeavors.

Yours, very truly,

R. W. KELLEY, President.

Mr. THOMAS. We come now, Mr. President, to a lot of printed matter which was prepared by the beet-sugar lobby and sent to the newspapers during the winter and spring of 1912 for publication, and which was generally published in all sections of the country. The articles are repetitions of each other and it is only necessary therefore to refer to one of them.

I read from page 1422. This was sent to "every agricultural paper in the United States" and, of course, at the expense and by the direction of the sugar lobby with which the American Sugar Refining Co. was fully identified:

The American Sugar Refining Co., the Federal Sugar Refining Co., Arbuckle Bros., and other refining interests, all located on the seaboard, who have absolute control of the sugar-refining industry in this country and also some of the large cane-sugar planters in Cuba, are now endeavoring to influence public opinion and are making an effort in Congress to bring about a further reduction of this tariff in order to prevent further development of the beet-sugar industry. These refining interests import raw sugar from tropical countries and refine it.

The circular then goes on to recite the very injurious and destructive consequences to the sugar-beet industry by the accomplishment of this very reprehensible purpose.

I now refer, and I must do so very hastily, to the testimony of the vice president of the American Sugar Refining Co. before the Hardwick committee. He was asked whether the holdings of his company had been reduced in the beet-sugar companies, and his reply was that they had been slightly reduced "for reasons of policy." That would indicate that whatever the reduction may have been, even though slight, it had been a politic one, and doubtless the transfer had been made to perfectly politic hands.

It was asserted no later than last week upon this floor that the American Sugar Refining Co. had admitted its adverse interest in this subject and its sympathy, if not its identity, with the policy of free sugar. In refutation of this assertion I call attention to a letter written by Mr. E. F. Atkins, the vice president of the American Sugar Refining Co., and sent to every member of the Committee on Finance on May 10, 1913. He says:

THE AMERICAN SUGAR REFINING CO.,
New York, May 10, 1913.

COMMITTEE ON FINANCE.

United States Senate, Washington, D. C.

GENTLEMEN: In view of the repeated assertions that this company is in favor of free sugar, we beg to submit to your committee a copy of the statement which we made to the Ways and Means Committee of the House of Representatives at its hearings upon the sugar schedule on January 15, 1913.

We desire to take this opportunity of reiterating our statement that while favoring a reduction in the present duties upon sugar we are opposed to the abolition of all the duty for the reason given to the Ways and Means Committee.

Yours, respectfully,

AMERICAN SUGAR REFINING CO.
By E. F. ATKINS, Vice President.

This is accompanied by a printed copy of the testimony of Mr. Atkins, which was given before the Ways and Means Committee of the last Congress January 15, 1913. It is very brief, and I ask to have it printed in my remarks.

THE PRESIDING OFFICER. Without objection, leave is granted.

The matter referred to is as follows:

Testimony of Mr. Edwin F. Atkins before the Ways and Means Committee of the House of Representatives, January 15, 1913.

MR. ATKINS. Gentlemen, in connection with the consideration by your committee of the tariff on sugar, this company desires to submit the following statement:

JANUARY 15, 1913.

THE COMMITTEE ON WAYS AND MEANS.

House of Representatives, Washington, D. C.

GENTLEMEN: In connection with the consideration by your committee of the tariff upon sugar, this company desires to submit the following statement:

The American Sugar Refining Co. wishes to be recorded in favor of a reduced tariff upon sugar. It is our belief that a moderate reduction which is not so great as to endanger the domestic and insular industries or to reduce such sources of supply would accrue to the benefit of the consumer, and would neither increase foreign values on raw material nor increase the refiner's margin of profit per pound.

Foreign values are regulated only through the law of supply and demand; short crops will always advance prices, as excessive crops will depress them, regardless of tariffs. Such conditions can not be regulated by legislation, but a reduction of duty upon imported raw material would be followed by a corresponding reduction of prices in refined sugar in the United States. The benefit to the refiners would arise from increased consumption through a lowering of prices.

We urge the retention of the small differential duty as a protection upon refined sugar, if protection is to be accorded to any industry, and the continuance of the present color standard as the most practicable distinction between raw and refined sugars for customhouse classification. The present differential or protection of 7½ cents per hundred pounds is but seventy-five one thousandths of a cent per pound upon granulated sugar, and should be retained, if not increased in order to cover the waste resulting from the process of refining, as well as the higher cost of labor and materials in this country.

We are opposed to the abolition of all duty upon sugar for the following reasons:

It would at once destroy one of the largest sources of revenue, some fifty million dollars, for the substitution of which no provision has been made.

It would cause the termination of the Cuban reciprocity treaty, under the provisions of which a preferential rate of 20 per cent is accorded to Cuban sugars, and Cuba gives preferential rates upon goods coming from the United States of 20 to 40 per cent. Under this treaty the United States buys practically all the Cuban sugar crop at a price considerably under the world's parity, and sends to Cuba in exchange upward of sixty million dollars' worth of merchandise, the greater part of which was formerly imported from Europe.

Free sugar would open the United States markets to the importation of refined beet sugars from Europe, upon exactly the same terms as raw sugars, in competition with domestic refined, and we should expect to see, as formerly, large imports of this class of granulated sugar from Germany and Austria.

Russia pays a bounty of 71 cents per hundred pounds upon her exports, but as countervailing duties are assessed in practically all countries, including the United States, she can not export beyond a limited amount. The removal of the countervailing duty in the United States would admit Russian sugars to this country at far below their cost of production, to the great injury of all other sugar interests.

In our opinion, the first effect of free sugars while present production is maintained would be to drop prices here to or about present bond values. So low a price would destroy the Louisiana industry, also the beet-sugar industry in many localities, and particularly east of the Mississippi River, which is not protected by a long railroad haul against sugars coming from the Atlantic and Gulf ports. It would carry the price of Porto Rican and Philippine Island sugars far below their cost of production and make Hawaiian production unprofitable. Thus our present sources of supply would be largely curtailed, for under normal crop conditions these domestic and insular sources of production are now furnishing upward of 1,800,000 tons, or half our supply. Once this production was so reduced foreign prices would advance until they reached a point where domestic producers could again enter the field. How long a time this would require is problematical. Meanwhile disaster would be widespread and consumers would get but a temporary benefit.

Respectfully, yours,

THE AMERICAN SUGAR REFINING CO.,
By EDWIN F. ATKINS, Vice President.

Now, Mr. Chairman, it is not the idea of our company to suggest a rate to you. You have a great deal of valuable information from all sources in regard to production and I have no doubt will be able to reach a compromise measure, if that is your wish, by which all interests may be cared for. They all have a right to live; few have a right to demand the present high rates of protection.

MR. HARRISON. I would like to ask the witness a question. Mr. Atkins, you are the vice president of the American Sugar Refining Co., which is popularly known as the Sugar Trust?

MR. ATKINS. It is sometimes referred to as that.

MR. HARRISON. Do you appear here representing the sentiment of the directors of that company?

MR. ATKINS. Yes, sir; with their authority.

MR. HARRISON. Are you in favor of free sugar?

MR. ATKINS. I am not, and our company is not.

MR. HARRISON. I wish to ask you further whether you know of the campaign which has been conducted by Mr. Frank C. Lowrey as secretary of the Wholesale Grocers' Association in favor of a reduction in the duty on sugar?

MR. ATKINS. I have occasionally received a pamphlet expressing Mr. Lowrey's views on the subject.

MR. HARRISON. It has been suggested also that the campaign conducted by Mr. Lowrey was at the instigation of the American Sugar Refining Co.; is that true?

MR. ATKINS. It is untrue. One reason why I appear before this committee is to clear that matter up, not only with your committee, but with the whole country. We are opposed to free sugar for the reasons that are given here. We are, however, desirous of a reduction in the tariff.

MR. HARRISON. What is the extent of the interest of the American Sugar Refining Co. in the beet-sugar plants of the United States?

MR. ATKINS. We hold not so much as we had at one time. At present I think it is—

MR. ATKINS'S SECRETARY. It is given at page 100 of the hearing before the Hardwick committee. Would you like to have it?

MR. HARRISON. No; I will not trouble you for that.

MR. ATKINS. It was \$23,000,000, the par value. It is since somewhat reduced. It is approximately \$22,000,000, the par value now. We have disposed of some holdings.

MR. HARRISON. Have you any interest in many cane-sugar manufacturing?

MR. ATKINS. None whatever in any source of production with the exception of the beet sugar already published.

MR. FORDNEY. I would like to ask a question, Mr. Atkins. You would like to see the differential retained between Cuban and other foreign sugars?

MR. ATKINS. The preferential, I guess you mean?

MR. FORDNEY. The preferential; yes.

MR. ATKINS. Yes, sir; I would.

MR. FORDNEY. You produce sugar in Cuba, do you not?

MR. ATKINS. Yes.

MR. FORDNEY. How much sugar do you produce there annually?

MR. ATKINS. Not very much; about 22,000 tons.

MR. FORDNEY. How many acres of a plantation have you in Cuba, Mr. Atkins?

MR. ATKINS. Well, I have between 25,000 and 30,000; much of this is in pasture land.

MR. FORDNEY. What is your investment in the sugar plant? What does it amount to, if that is a better question?

MR. ATKINS. Value or cost?

MR. FORDNEY. Well, put it either way; cost, we will say.

MR. ATKINS. Well, I suppose possibly a million and a half dollars.

MR. FORDNEY. You would be willing to have free sugar from Cuba if we would retain the duty on sugar from foreign countries?

MR. ATKINS. I would not ask such a thing.

MR. FORDNEY. You have asked it, before this committee?

MR. ATKINS. Never.

MR. FORDNEY. Did you not ask free sugar at the time Cuban reciprocity was advocated?

MR. ATKINS. No, sir. I asked for a larger preferential than we got. We got a preferential of 35 cents, but I asked for 50 cents. We could not get that, and we took 35 cents a hundred.

MR. FORDNEY. It was my recollection that you wanted free trade between Cuba and America at that time, but perhaps you are right. But certainly your interests in Cuba give you some special interest in that preferential with Cuba, do they not?

MR. ATKINS. The interests of the sugar refiners in this country and the producers in Cuba are identical. The sugar refiners can buy their sugars in Cuba as long as the sugar gets that preferential.

MR. FORDNEY. Then the small amount of sugar that you produce in Cuba has nothing to do with your advocating a low rate of duty?

MR. ATKINS. I would like to see the preferential maintained, and we all hope it will be, refiners and producers alike.

Mr. THOMAS. Mr. Atkins not only says he and his company are favoring a duty on sugar, but he repudiates any and all connection or identification with the companies of which Mr. Frank C. Lowry, who seems to be so obnoxious to gentlemen on the other side, has at all times represented and been identified with. True, he favors a reduction of existing duties—who does not?

I think I can say, Mr. President, without the slightest hesitation, that the identity between the American Sugar Refining Co. and every sugar refining company that it controls and the leading beet-sugar companies of the country is complete, that their interests are the same, and that they have a common purpose in securing and perpetuating a duty upon sugar; and that the assertion that the two interests are in conflict with each other is nothing but a pretense artificially created, deliberately manufactured and concocted to influence public opinion upon this great question and to deter the majority in this body and in the House from legislating the expressed will of the people at the polls into the statute books by charging that we are connected or identified in interest or policy with one of the greatest and perhaps the most obnoxious monopolies in the United States.

This fraud was well constructed. It was staged with fine scenic surroundings, but it has deceived no one familiar with the facts. We shall hear more of it from the stump, but it will occasion little, if any, further disturbance here.

I pass now, Mr. President, to the consideration of another fiercely controverted question, and that is the production cost of beet sugar in Germany and the production cost in America. We have been told that the beet-sugar industry would be destroyed as a result of competition, which our industry can not meet, with the cheaper labor, the more effective appliances, and the larger percentage of sugar production in the beets of foreign countries, and particularly in Germany, if the tariff were removed; that our higher-paid labor, our better-paid farmers, and our greater cost of refining makes competition on equal terms impossible.

The production cost of any article, as we know, Mr. President, is not capable of practical demonstration. It depends upon many things, which, in turn, depend upon many others. There are differences in the cost of production of the same article in the same country. There are radical differences in the cost of production in the same factory, in the same plant or institution, at different periods. The element of efficiency, or the lack of it, always plays a prominent part in the problem. Hence, we can only approach the result by general comparisons and statements. There is considerable lack of material on this particular subject, largely because of the conspicuous reluctance upon the part of the sugar-beet companies of this country to furnish fairly and squarely the items making up the cost of production. We have their tables, but not their books; the proceeds of their products, but not of their by-products. They have been very reluctant to make their showings before the investigating committees.

In this connection I wish to refer to a significant piece of testimony brought out in the lobby hearings upon this subject. I refer to a letter of Mr. Truman G. Palmer to Mr. Hamlin, who is par excellence the beet-sugar lobbyist of the Nation. He is the \$10,000 a year man. His principal claim to eminence is his possession of a complete sugar library. He has perhaps been more conspicuously identified with the various sugar tariff bills that have been considered, some of which have been enacted into laws, than any other man perhaps who has been mentioned in these proceedings. He is the author of *Sugar at a Glance* and other imaginative works of economic fiction. On page 1468 of the lobby hearings he writes Mr. Hamlin:

The chairman also directed me to secure costs of production from American factories. As soon as that hearing is out I will issue a circular letter calling attention to it. Mr. Hardwick is determined to have costs of production, and there is no way out of it, but I believe it can be more favorably done in this way than as though each factory were subpoenaed direct by the committee.

Mr. Palmer feels obliged to comply with the committee's requirements, but he proposes to wait "until the hearing is out," when he will proceed by circular letter.

His method of complying with the requirement of that great committee would be to correspond with his own people. He did not care to bring them face to face with cross-examiners, but would wait until that was impossible. The better method, in his view, and doubtless one conforming more evenly with the nature of his peculiar business, was by correspondence or by conference to secure returns more in harmony with his theories than would result from the ruder but more effective methods of public inquisition. It is evident that the fruits of his proceeding are worthless.

So we are somewhat handicapped at the threshold of this question by lack of complete material. I have seen a great many statements of the cost of production; there are a great many in this record; but I have not up to this time discovered any which reveal the actual profit in dollars and cents realized by any of these companies upon the capital actually invested or the percentage of actual profit upon gross income. That, I think, would give us some idea of the cost of production. It is otherwise difficult, if not impossible, to ascertain the various items that are a proper charge against expense account. For example, Mr. Oxnard has given us some notion of the cost of the lobby and its acceleration of public opinion. He has expended hundreds of thousands of dollars and destroyed his books as well. Is this expenditure charged against the cost of sugar production? Do the enormous salaries which are paid to the managers, to the presidents and vice presidents, treasurers and secretaries of these huge combinations figure in the cost of production? Are the profits realized on the by-products—and I shall come to that subject later—deducted from the cost of production? Are other elements of profit which nearly all these companies enjoy considered in determining the cost of production? We do not know; but when we consider the enormous profits that are shown in bulk by some of the information that has been secured by the courts and the committees we can form a very fair estimate of what the profits are, although we may not be able to determine all the elements of cost.

Primarily, what has been the price of beets to the grower? In all discussions of this subject when legislation is pending or proposed the interest and the welfare of the laboring man and of the producer of the raw material become very, very conspicuous. During the intervals they are important only when they assert the right to increasing returns. It would seem on occasions like this as though these tremendous industries were created and operated not in the interest of those who own them but for the benefit and the welfare of other classes and conditions of men, and the suffering and the injury that must come to them as a consequence of change is the chorus of every song of despair and of disaster that has been chanted upon this floor.

The farmer gets a price for his beets which I hope is fairly remunerative, but nothing like what has been asserted here. The factory pays what the grower can force him to pay, and not a cent more.

I was very much pleased a day or two ago to hear the commendation by the Senator from Wisconsin [Mr. LA FOLLETTE] of Mr. Roy G. Blakey, who is the best-posted and perhaps the first authority upon the subject of beet growing and of beet sugar. Upon this subject Mr. Blakey says, at page 241 of his work, *The Beet-Sugar Industry*:

There seems to be little reason to think that the price paid the farmer for his beets is much affected by the trust in any direct way. In any case the factory owners pay only so much as is necessary to get sufficient tonnage to run their factories, and the price they must pay is largely determined by profits which the farmer can make by devoting his resources to other lines.

This statement is absolutely true. The fact that the farmer can use his land for the production of other crops, the fact that these crops are remunerative gives him the opportunity to assert a modified degree of independence in his relation with the sugar refineries and to obtain a fair measure of profit for the products of his toil.

These companies, Mr. President, have in their career demonstrated that wherever they could do so they have held the farmer down to the lowest possible compensation, and have yielded only when the power of the producer in combination has asserted itself.

I am familiar with the conditions in my own State, and I assume them to be similar to those of the other States where this industry is carried on. If, therefore, I refer to conditions in my own State, rather than to others, it is because I am more familiar with them and not because they are at all unique.

After these refinery interests, or a great many of them, had been acquired by the American Sugar Refining Co., and before the general consolidation of them, which subsequently took place, trouble arose between the producer of beets and the purchaser of beets. Mr. Morey, the Fidus Achates of Mr. Havemeyer, on the 5th day of February, 1903, addressed that gentleman in New York upon the subject as follows:

In a confidential talk with Mr. Austin, who for the past two years has been in charge of the agriculture station at Loveland, and who, I presume you are advised, has left to take charge of the factory which you are constructing in Idaho, said to me: "Mr. Morey, you will never get the interests in northern Colorado in the proper shape to handle the acreages and the laborers until they are all in the hands of one company." The more I see of the situation here the more I am inclined to think he is right about it.

That has a most familiar sound, Mr. President—"the more I see the situation here the more I am inclined to think that he is

right about it." On the heels of that letter came this telegram from Mr. Havemeyer to Mr. Morey on the 16th of February, 1903:

Can not pay more than four half for beets.

Mr. Morey replies on the 17th:

I am in receipt of your telegram of the 16th, which reads: "Can not pay over four half for beets." I can assure you that I have never approved paying more than this price first, last, and all the time, and aside from two factories which have contracts for a higher price, there will be no advance over 4.50 without the matter being first submitted to you.

During this controversy the farmers revolted. They organized and then had the audacity to demand \$5 or no beets. Then Mr. Morey wrote Mr. Havemeyer:

Inclosed please find a couple of clippings, which explain themselves—

This letter is dated December 28, 1903—

We have thought best to let the farmers cool off a little and are not taking any hand in the matter of their meetings *aside from having some of our good farmer friends present to keep us posted and also counsel the farmers to be sensible and moderate in their demands.* After they get through with their meetings we shall probably be called on to meet them, and then the real struggle will come. My own feeling is that we shall not make any further advance in the price of beets, even if half of the factories in northern Colorado remain idle next season.

We have heard a good deal in this discussion about idle factories consequent upon the reduction or the removal of this tariff; but here is a positive assertion by the factory owner that the farmer shall receive starvation prices for his beets and the factories shall close rather than comply with a requirement that commands a decent profit. Mr. Morey continues:

However, that is just my personal opinion. The others may not agree with me; and if we get in too tight a place we shall consult with you before making any change whatever in our contracts.

Mr. Morey again writes to Mr. Havemeyer on the 2d of January, 1904, as follows:

I dislike very much to send you the inclosed letter, as well as to state to you that from all of the factories I am hearing about the same complaints that this letter indicates, namely, that farmers are not going to raise beets excepting in such cases as they have contracts. No new contracts have been signed amounting to anything at any of the factories, although our field men have been at work several days. I feel a good deal discouraged over this matter. I have felt all along that we would fight it out along the line we had laid down, namely, \$5 delivered at the factory and \$4.75 on the cars. I am not willing to yield yet.

Mr. Havemeyer replies to Mr. Morey, January 4, 1904, as follows:

Yours of December 28, bearing upon the price to be paid for beets, at hand. I would not make the farmers any offer of \$5. After they have talked their talk and said what they are going to do and not going to do, I would wait until they offered you a contract for \$5. I would let it all come from them—

Wise Mr. Havemeyer—

If they know that you will give \$5, it is a basis on which they will trade. I would not reveal what I would give.

But, Mr. President, these gentlemen came to the terms of the farmers most reluctantly, and because they had to; not because it was just for them to do so; not because they were willing to pay the prices which have been advertised so loudly and so boastfully by Senators who have espoused their cause upon this floor.

We now pass to 1906, and find the same old struggle. Mr. Morey writes to Mr. Havemeyer on January 20, 1906, as follows:

Inclosed clipping will give you something of an idea of the unreasonable position taken by the farmers in northern Colorado. I have had meeting after meeting with these people and thought everything was arranged to their satisfaction, but the beet growers in the vicinity of Fort Collins are a pretty hard proposition to handle. I believe, however, that we shall win out in the end, and am holding firm to our first contract, which is identical with that of last year, notwithstanding what the papers say.

Again, the farmer prevailed through organization and ability to utilize his land remuneratively in other directions. And, again, the controversy returns with each succeeding year.

On February 4, 1907, Mr. Morey writes to Mr. Havemeyer, as follows:

I beg to advise you that I spent Saturday last all day with the executive committee of the Beet Growers' Association.

We perceive now that the farmers have found the value of organization and are "fighting the devil with fire."

After consulting the different agricultural men and managers just before the meeting and getting from them the present condition of affairs, I decided to stand absolutely firm on our contract. The committee tried very hard to get some small concession, but I believe if we ever yield to them in any particular they will always run the business, and I am reasonably well satisfied we shall get all the beets we want, or at least enough for a fair run.

Here is a letter a few days after, on February 9, 1907, from Mr. Morey to Mr. Havemeyer:

It begins to look now as though we should have to back down and yield to the farmers or close one and possibly two of the large factories next season. In the event that we yield to the demands of the farmers

we are forever after at their mercy: in the event we should be obliged to close two of the larger factories we would barely be able to earn our dividends on preferred stock.

Mr. President, it is quite apparent from this chronicle of complaints that from year to year the companies declined to pay a greater price than they offered upon the pretense that they could not afford to do so; that they were paying all that was possibly commensurate with the character of the business. They had the same tariff then which they now have. The tariff under which they proffered these prices is the identical tariff under which they yielded to the demand that they could not overcome. Suppose the farmers had been unable, Mr. President, to raise anything but sugar beets—that they could not have turned their land to other purposes—what, then, would have been their condition? Precisely that of the workmen in the great manufacturing of the country, bound to the chariot wheels of modern industry by tariff legislation and compelled to accept what is offered or starve. I discover the loss of no battle by farmers after their association was completed and after their teamwork had become effective, since which time the beet grower has got, as he always will get, what he has been able to force from the hands of the purchaser.

But, Mr. President, there are different rates with different companies in the same States. I have here the rates in the Arkansas Valley of my State, where the American Beet Sugar Co. has its factories, and those in the northern part of the State, where the Great Western Co. is dominant. The Rocky Ford tariff is \$5 a ton for beets carrying 12 per cent of sugar or under, and 33 cents for each additional per cent, with the pulp free to the grower. The Great Western pays \$5 for 14½ per cent, and 25 cents for each additional unit of sugar in the beet, with no return of pulp, and yet each protests that it pays all that it can afford. I have a table, which I ask leave to print in my remarks, showing the difference in cost of beets under the two quoted schedules of 0.374 of a cent per pound and \$1.68 per ton on sugar if purchased at the highest rate mentioned in the schedules, which I ask leave to print in this connection.

The PRESIDING OFFICER. In the absence of objection, permission to do so will be granted.

The table referred to is as follows:

Table showing difference in cost under quoted schedules.
ROCKY FORD.

Per cent of sugar per ton.	Per cent, in pounds.	Cost per ton.	Cost per pound.
			Cents.
12.....	240	\$5.00	2.03
13.....	260	5.333	2.05
14.....	280	5.666	2.02
15.....	300	6.00	2.00
16.....	320	6.333	1.98
17.....	340	6.666	1.96
18.....	360	7.00	1.94
19.....	380	7.33	1.93
20.....	400	7.66	1.91

Average of above 1.984 cents per pound.

Twenty per cent beets, at 2.08 cents per pound, equals \$8.32 per ton.

GREAT WESTERN.

Per cent of sugar per ton.	Per cent in pounds.	Cost per ton.	Cost per pound.
			Cents.
15.....	300	\$5.00	1.66
16.....	320	5.25	1.64
17.....	340	5.50	1.62
18.....	360	5.75	1.60
19.....	380	6.00	1.58
20.....	400	6.25	1.56

Average of above, 1.61 cents per pound.

Twenty per cent beets, at 1.66 cents, equals \$6.64 per ton.

Mr. THOMAS. There is a peculiar feature, Mr. President, of these price schedules. The higher the price the farmer gets per ton on account of the larger percentage of sugar in the beet, the lower the price to the purchaser for the sugar content. To illustrate, beets carrying 15 per cent, or 300 pounds, per ton of sugar cost 1.66 cents per pound at \$5 for the beets, while those carrying 20 per cent, or 400 pounds, per ton of sugar cost 1.56 cents per pound at \$6.25 for the beets. The farmer receives a larger sum for his beets, but the purchaser pays him less for his sugar. In other words, the farmer, instead of receiving a higher, in fact receives a lower price for his sugar content as the percentage of sugar in his beets increases, but no account is made of this important fact in the reports and state-

ments that are made to the committee and assuming to give data relating to cost of production.

There are other profits to the refiner, Mr. President, beside that derived from sugar of which we have heard nothing. There is the sale of seed to the beet grower; and who knows what profits result from the chemical analyses, from tare, and from by-products? I have reason to believe that the cost of beet-sugar production does not exceed \$2.50 per ton of beets. I shall show presently that Mr. Henry T. Oxnard in 1899 expected to reduce it to \$2 per ton. It is the boast of the beet-sugar manufacturer that the human hand does not touch the commodity from the time of slicing until the sugar emerges at the farther end of the factory into the bag that receives it. The process is automatic and as a consequence the cost of the product is reduced to a minimum.

I refer to some other by-products which are profitable. There is from 25 to 35 per cent of pulp to every ton of beets, which for forage is worth from 50 to 60 cents per ton; figured at 25 per cent with a value of 50 cents a ton, there are 12½ cents per ton as a by-product upon the pulp. There is 5 per cent of sirup to every ton of beets, which sells at the factory for \$7 per ton, or 35 cents a hundred pounds, making a total by-product profit of 47½ cents per ton upon every ton of beets for these items only, which, of course, should be deducted from the total cost of the raw material used.

I have shown, Mr. President, what prices are paid beet growers in this country, and to say that they average \$5.50 a ton is to overstate the case for the beet-sugar refiners, but I shall put it at that.

I now turn to Germany. I have here a report of the imperial bureau of statistics of the German Empire for 1912. I have had translated the pages referring to the price paid for beets. I shall not, of course, ask to incorporate this into the RECORD, but I wish to emphasize the conclusions which are here reached as to the returns to the farmer. The average price per long ton to the beet growers of Germany was \$6.07 in 1912, the minimum being \$5.44 and the maximum being \$6.38. This page gives the amount paid in each of the districts or provinces of the Empire where the industry is carried on. Of course, a long ton contains 240 pounds more than a short ton, which is the basis of bargain and sale of this commodity here; but there are other advantages to the German grower which more than compensate for the difference.

Behrens & Son, of Hamburg, a recognized authority, fix the price in 1911 at from \$5.32 to \$6.70 in the district of Stettin, and in Posen at from \$5.59 to \$6.49 per ton.

I now read from the balance sheet and trade report of the Dieschau factory for 1911 and 1912:

We have followed the example of other factories and have increased beet prices per thousand 40 cents per 100 kilos for 1912-13, viz: \$5.80 per long ton, shipment by end of October; \$6.04 per long ton, shipment first half of November; \$6.28 per long ton, shipment from November 16 to close of factory. Rebates for freight will be paid as usual—

That is a sort of rebate I think we can all subscribe to—

The beet growers will receive additional payments if the profits of the stockholders amount to more than 6 per cent. During the past year, 1911-12, we have made additional payments to beet growers as per contract, at the rate of 89 cents per ton, and we have voluntarily paid our regular shippers an additional rate of 79 cents per ton.

In addition, there is 40 to 60 per cent of free pulp together with free seed.

These statements, Mr. President, should be the basis of comparison, and I am here to assert that the beet grower of Germany, with his so-called cheaper labor, gets as much per ton for his beets, and with free pulp and participation in profits and free seed derives a greater profit than the beet grower of America has up to this time been able to wring from the reluctant hands of the overcapitalized combinations with which he has to deal. Yet the cost per pound of sugar to the refiner of Germany neither handicaps nor destroys him.

I have here a table which I ask, Mr. President, to have inserted in the RECORD, and which I will not stop to read, showing the American and European prices for sugar during July, 1911. This table shows the retail price at the German cities of Berlin, Magdeburg, Hamburg, and Cologne. For the first two cities the price was \$2.87 and in the last city \$2.67 per hundred pounds. If the factories, after paying as much for their beets as are paid here, returning freight and pulp, after making these allowances and rebates, can make a profit on sugar retailing at \$2.87 sufficient to insure 6 per cent on their capital, with divisions of excess with the beet grower, why can not the beet-sugar refiner in this country, at a less expense, as I have shown, market his product at the same price and make a handsome profit upon the capital invested? I make no question, Mr. President, but that he is perfectly capable of doing it.

The PRESIDING OFFICER. In the absence of objection, the table referred to will be printed in the RECORD.

The table referred to is as follows:

Table showing American and European prices for sugar during July, 1911.

	Retail price per pound.	Import and internal revenue taxes levied per pound.	Retail prices less taxes levied per pound.

Mr. THOMAS. The cost of production, as I have said and as I will show before I get through perhaps more emphatically than I have thus far, is less in America than in Germany, while our methods of production are constantly improving, our machinery is being made better, the efficiency of our workmen is constantly increasing, and the competitive faculty aroused to the highest point with effort to earn profits upon manufactured capital keeps the American refiner abreast of competitors all over the world.

I have a letter written by Mr. W. A. Orton, pathologist in charge of sugar-plant investigations of the Agricultural Department, which I ask leave to here insert, and who says that the cost of growing beets is higher in Germany than in America:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY,
Washington, D. C., May 28, 1913.

Mr. F. T. WEBBER,
Las Animas, Colo.

DEAR SIR: Your recent letter to Mr. J. A. LeClerc, making inquiry as to sugar-beet raising in Germany, has been referred to this office for reply.

The following items have been taken largely from a confidential report in this office rendered by an Americanized German, whose facilities were such as to enable him to secure what we believe to be thoroughly accurate data concerning the beet-sugar situation over there. Average tonnage, sugar content, etc., are taken, however, from ordinary statistics as published in the sugar journals of Europe.

The average yield of beets for the five years from 1906 to 1910, inclusive, was 13.18 short tons per acre, the sugar content of beets being 17.1 per cent, and the actual recovery in 88 per cent sugar being 15.55 per cent. The average cash price paid the farmers for beets was \$4.70 per ton, but to this must be added pulp equivalent to a market value of from 45 to 60 cents more, and the seed equivalent to about 10 cents per ton of beets produced, making the total returns of the farmer from the factory from \$5.25 to \$5.50 per ton of beets. In addition to this, farmers holding shares in the cooperative factories would receive dividends also.

In Saxony, the most advanced beet-sugar Province in the Empire, land ranges in price from \$250 to \$500 per acre. However, rents over there are correspondingly much lower than here. For example, land of the above value rents in large holdings at from \$8 to \$9 per acre per year. In small holdings the rental is larger, ranging from \$10 to \$16 per acre. The usual rental periods there are much longer than here, ranging from 12 to 18 years, sometimes reaching 50 years; that is to say, practically the tenant's entire working life.

The average investment for implements is from \$10 to \$14 per acre. The average investment in live stock runs from about \$14 to \$21 per acre.

On the regulation farms, where 50 per cent of the plowed land is in grain and 33 per cent in beets, from 29 to 54 head of stock are kept per 160 acres. Farms of this type usually spend from \$14 to \$15 per acre per year for labor, this average being spread over all the land owned.

The heaviest fertilizing expense is put on the beets. On two typical farms the average cost for fertilizing beets was a little over \$25 on the one and a little over \$20 on the other, while for wheat the values were slightly in excess of \$12.50 and \$11.50 per acre, respectively—averages for 10-year period.

On large tracts plowing is frequently done by steam, usually under contract, contract costs ranging from \$3.20 to \$3.60 per acre for deep plowing (18 to 24 inches) to from \$2.30 to \$2.80 for shallow plowing.

Contrary to the usual belief, the cost of growing beets is higher over there than here. Analyzed broadly, it is as here shown:

	Mini- mum.	Maxi- mum.
Fertilizing.....	\$20.00	\$25.00
Teamwork.....	14.00	18.00
Hand labor.....	18.00	25.00
Rent and interest.....	9.00	14.00
Total.....	61.00	\$2.00

The returns for a 15-ton crop, allowing also for feeding value of the tops, will range from \$75 to \$85 per acre, thus leaving a good margin of profit above the minimum cost and a probability of slight profit above the maximum cost. Of course, some farmers will raise more than 15 tons per acre occasionally; however, not of an average.

Considering the agricultural industry as a whole, the American farmers as compared with the Germans produce more than twice as much value per individual engaged in the industry, and that in spite of the more intense methods of cultivation followed over there.

Trusting that this supplies you with the desired information, I am,
Yours, truly,

W. A. ORTON,
Pathologist in Charge of Cotton and Truck Disease
and Sugar Plant Investigations.

So far, then, as the production of beet sugar is concerned, I assert without fear of successful contradiction that it is produced in this country as cheaply as if not more cheaply than anywhere else in the world; and it follows, if that be true, that a tariff is not necessary to its existence, and that is the topic which I now desire to discuss for a few moments, because if, in fact, a duty is essential to beet production, its continuation may be justified in view of the fact that the industry has progressed under existing law—not that it should be permanent, not that it should be an established feature of Democratic legislation, but simply, if necessary, that these people who complain so loudly of governmental disfavor should be let down as easily as possible in view of existing conditions. But it is not essential to the survival of the industry.

Mr. Havemeyer, at a meeting of the shareholders of the American Sugar Refining Co., January 8, 1902, made this statement:
